CO-OPERATION NOT COMPETITION IS THE LIFE OF TRADE

Lumber World Review

THE LUMBER REVIEW
FOUNDED 1897

CONSOLIDATED JANUARY 1912

THE LUMBER WORLD
FOUNDED 1905

Volume XXXI
Number 1

CHICAGO, JULY 10, 1916

Single Copies Fifteen Cents
Two Dollars a Year

UNIVERSITY OF ILLINOIS LIBRARY

THE INTEREST FELT BY RETAILERS in the Cypress Trademark is being graphically evidenced by the rapid increase in the orders received by Cypress mills which stipulate

"THIS ORDER IS PLACED WITH YOU WITH THE UNDERSTANDING THAT EVERY PIECE OF STOCK SHIPPED WILL BEAR THE OFFICIAL TRADEMARK OF THE CYPRESS ASSOCIATION."

PUTTING THIS CONDITION ON YOUR ORDERS, Mr. Dealer, does a lot more for you than merely put you on the honor roll of progressive and foresighted merchandisers; it is assurance that you realize the truth of the modern doctrine that a satisfied customer is your best investment, or, to quote a famous Cypress maxim,

"THE ONLY PERMANENT SAFETY FOR THE SELLER IS CONTINUOUS SAFETY FOR THE BUYER."

MAKING THE CYPRESS TRADEMARK A CONDITION on your orders also guarantees YOU against inferior lumber or irregular grading, because the Cypress trademark is legally registered and thoroughly protected, and its use is permitted only by mills which are in thorough *and acknowledged* accord with the broad principles of intensive merchandising which have come to be regarded as the hall-mark of the Cypress Association; these advanced principles of merchandising lumber are as the pocket compass and the wrist-watch to the ambitious wayfarer—not only keeping us headed straight, but also constituting Cypress a safe and profitable companion for those who choose to travel with it.

(Continued on pages 8 and 9)

Yellow Pine Lumber Service Plus

Our yellow pine lumber service and quality has satisfied and gratified so many lumber dealers that you will be taking no chances when you send us your order, no matter how large it may be.

Our five large mills at Huttig, Ark., Mansfield, La., Campti, La., Montrose, La., and Nacogdoches, Tex., are equipped with the best railroad facilities and the finest sheds for loading, so that shipments of yellow pine lumber may be loaded and forwarded even in the most severe weather.

The lumber dealer who spends his money with the mill operator is entitled to the very best consideration and service at the hands of the mill operator, and so it has always been our policy to look after the interests of our customers carefully and intelligently.

We are extremely careful in regard to matching grades and forwarding shipments on time. Let our methods be of benefit to you. You'll not regret sending us an order.

It Costs You No More in the Beginning and It's Cheaper in the End

Our price list quotes prices on all grades of yellow pine lumber DELIVERED to any point on any railroad in America. Send for this list today.

Creosoted Timber For Everybody

An Important Message to Lumber Dealers

Fence posts decayed at ground line. (Courtesy U. S. Forest Service)

Fence posts made of soft green timber will rot in the ground and tumble down in a couple of years. Hardwood fence posts are more expensive, but they too rot in a comparatively short time.

But—

Dip your softwood or hardwood fence post into a tank of a hot suitable creosote or apply the creosote with a brush and you will get a fence post which will be rot-proof for many years; in fact, it will be practically permanent.

Creosote oil is recognized as the best wood preservative.

The only reason creosoted fence posts have not been generally used is because the ordinary creosote oil has been difficult to obtain in a condition suitable for ready handling on a small scale.

Commercial creosote oil is used in great quantities by the large creosoting plants throughout the country. These are specially equipped to handle and treat timber on a large scale, by complicated heating, vacuum and pressure systems.

The modern, up-to-date farmer and builder, however, does not have the advantages of the pressure plants, and is confined to the simpler methods for the treatment of his fence posts and other timbers.

Barrett's Grade One LIQUID Creosote Oil

To meet the demand for a creosote that anybody can use, without expensive apparatus, we have developed a special refined grade known as Barrett's Grade-One Liquid Creosote Oil.

This is a uniform standardized material of superior quality. It is free from water and is liquid and ready to use at all times. Further, it has maximum penetrating power. Briefly, it is a pure coal tar creosote, refined with the practical problems of the average user in mind.

Lumber dealers can make good profits by dipping or brush treating fence posts and other wood that is to be used in damp places. The cost of creosoting is more than offset by the labor cost of replacing rotten posts or timbers.

Dealers should also carry Grade-One Creosote Oil for sale to consumers of lumber.

Booklet and further information free on request.

Decayed in braces at joint where moisture tends to collect. (Courtesy U. S. Forest Service)

He Who Looks Before He Leaps

THE CYPRESS-OK TRADE-MARK will be looked for in vain on the product of "hurry-up and realize" manufacturing; all that you or the consumer need to do is to verify the fact that the CYPRESS-OK trade-mark is on every piece of CYPRESS-OK, and you will know without further question that THAT in truth is "The Wood Eternal," and that it has been manufactured properly, and is ready to meet the confidence of the buyer.

THE FULL FORCE OF ALL THIS is likely to be dramatically evident when the entire public of the United States is suddenly instructed EXACTLY HOW TO GET—and make sure they get—exactly the kind and quality of CYPRESS-OK, "The Wood Eternal," that they have been educated to WANT. Experience in other lines of manufacture proves the extreme difficulty of selling the public an unlabelled commodity when they have been taught to identify quality by some familiar symbol. The substitute offered may or may not be of equal quality, but if it is, the buyer cannot be sure of it; he therefore BUYS BY NAME, and looks for the identifying mark before he accepts the goods; if you went to buy a camera and asked for a "KODAK" and the dealer offered you another camera called the "KADOK" and told you it was just as good, you wouldn't accept it, would you? YOU WOULD WALK OUT and go where they wouldn't even TRY to fool you, wouldn't you? So it will shortly be with CYPRESS-OK, "The Wood Eeternal."

IF ANYBODY THINKS that CYPRESS-OK does not "start things" in the lumber industry, it may be some satisfaction to know that a publication of the standing, as well as the restricted and limited circulation, of the Christian Science Monitor, in a recent article on Protecting Lumber Buyers quoted, without credit, as the core of its argument, the phrase "When every board is a promissory note, etc." This definition originated in one of the reports anent the CYPRESS-OK trade-mark, at a CYPRESS-OK meeting about nine months ago, and has since been used as a text all over the country. If a little phrase cropping out of a CYPRESS-OK meeting spreads like that, it is pretty sure that the vital ACTION of trade-marking itself will spread at least as effectively.

WE DO NOT URGE, BUT SUGGEST FOR YOUR OWN PROTECTION, that the sooner our retailer friends systematically, from this moment, place the above stipulation on all their CYPRESS-OK orders, the better insurance they will give themselves of future comfort and stability in their relations with the consuming public.

Be One of Those Who Are Helping T

Napoleon was the one man of his period producing highest efficiency

Napoleon did not drive, he led.

Napoleon made an ounce count for a pound, by weighing it on efficiency's scales.

THE STORY OF EFFICIENCY:

In working out efficiency to get lumber to you on record time of the quality you require, there are two great principles that work for you—capital, and the ability to accomplish. To get the capital, the ability to accomplish is the fundamental—the real asset, and covers that wide range of efficiency developed through the training of master minds.

The highest efficiency is only obtained through the direction of men who accomplish things, and prove that they "have themselves in hand."

It never pays to use a highly developed muscle "fit" for the "splendid tasks," to sort lath.

It never pays to urge a weakling into a man's job.

From the men in the timber to the man at the head of this company there is a cordial relationship, which brings out every atom of the real spirit of co-operation.

The "slackers" have no fixed place in the conduct of any department of this company's operations, nor is there a straining overload put upon the men who sense the real value of an efficient record.

No orders go forth from our lumber mill managers to hurry this or that order on record time, to the detriment of men's abilities or quality of stock—the suffered waste is too great.

Anticipated hurry produces the results desired, on every single hurry-up order, large or small. Consequently the men at the mills and in the executive and administrative departments of this company rely upon the ability of the foremen who are prepared, at all times, to **clear the decks** in an efficient way, to produce rush orders, and deliver same on record time.

This simple statement means the fruition of years of specializing in manufacturing quality lumber, and making record shipments, with the greatest regard at all times, for the personal contentment, and indeed, the happiness of the men who are directing every branch of this company's work.

The human element in this nation-wide organization is of consequence greater than all else, and it is the human element only that can drive the wheels and promptly deliver the one hundred per cent of quality and excellence of lumber.

The greatest authority on efficiency makes the statemen that "the man is at his best and produces his greatest measure of efficiency when he is carrying a ninety-eight per cent steady load of understandable result producing under conditions that render to him reasonable comfort and happiness."

Mr. Lumber Dealer:

The foregoing is more important to you than you may imagine. It means service—prompt service, and it means vastly more, "THE STANDARDIZATION OF LUMBER."

The basic analysis of efficiency in lumber manufacturing is knowing what to do and how to do it best on one hundred per cent standard.

There is always a leader that sets standards.

The standardization of the lumber industry—that part of the industry which has to do with Long and Short Leaf Yellow Pine Lumber and Oak Flooring, has been the one great aim of this company since its inception, and its ten large mills advantageously located, with respect to all milling conditions and transportation, have set standards that appeal to every lumber dealer in this country.

But beyond all this is the service rendered to you, **Mr. Lumber Dealer,** and that service has been obtained only by the direction and control of those forces of efficiency which have made it possible to ship you one hundred per cent standard lumber on record time, assorted as you want it.

There is a salesman in your territory, authorized to quote you the lowest prices we are making, and will give you complete information on our stocks, from structural timbers to lath.

An inquiry to us brings a quotation or salesman to you when you want one.

QUALITY
SERVICE
CAPACITY

MEANS MUCH TO RETAILERS:--

The "Exchange" mill companies spend a substantial additional amount more than necessary to make QUALITY stock, uniform grades, highest manufacture and closest inspection. We do not *add* the word QUALITY to our stock:—WE BUILD IT IN. *Costs us more.*

SERVICE:—Our selling organization follows closely the policy of taking orders for stock on hand only, for immediate release, and as a result, most of our orders for regular stock are completed within one to five days after receipt at mills. (70 per cent of all kinds of orders in January 1916 were shipped during January). *Costs us more.*

CAPACITY great enough, but not too big. 9 plants cut about 750 to 800,000 feet of lumber per day, and every foot of it good lumber.

All this means IN-BUILT VALUE TO THE DEALER. *Costs us more to produce,* but our claim departments are very little expense to us, and we are able to sell with less expense to our mills, because the right kind of stock is quite a bit of a salesman itself, and works without charge. Besides, the satisfaction of doing business on a SQUARE, ROCK SOLID—HONEST—FAIR BASIS is certainly SOME satisfaction.

IF YOU HAVEN'T LINED UP ALREADY FOR "EXCHANGE QUALITY-SERVICE-CAPACITY," YOU'LL FIND A NEW MEDICINE FOR SICK Profit and Loss accounts, and increased satisfaction in selling the best, in commencing NOW.

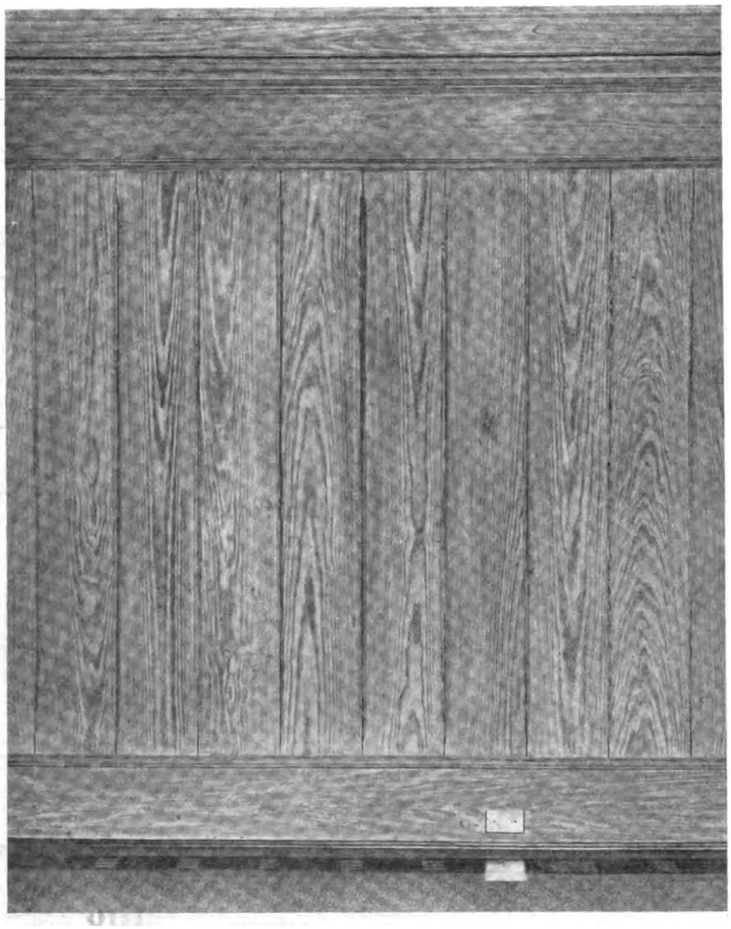
Unique Effects



are procurable through the use of wood for Interior Finish, which cannot be obtained with the use of other materials. It is the realization of this fact by homebuilders and architects that has occasioned the freer use of wood in the interior of modern homes.

NORTH CAROLINA PINE

is peculiarly fitted for this purpose—it has a varied and beautiful grain structure, is easily worked, practically free from resin or pitch and readily absorbs stains, paints and enamels.

The cut above shows a section of the side wall of the living room in the North Carolina Pine Bungalow in the Grand Central Station, New York, and serves as a poor illustration of the artistic effects that may be obtained. The finish of this room is Silver Grey stain and has attracted marked attention.

Dealers who are working for permanent trade carry in stock and recommend to their customers

Douglas Fir Lumber Company

Manufacturing Merchants **Portland, Oregon**

IN THE EARLY DAYS

lumber was a word used to describe things that were useless or of little value. The Lombards were the money lenders of the middle ages. A Lombard-room was a room used by pawn brokers to store their pledges consisting of household goods and things of cumbersome or bulky nature. Later such space was termed "lumber room." Lumber, therefore, represented in those days nothing of consequence.

NOW

we know lumber as timber sawn into the form of beams, joists, boards, planks, and especially that which is smaller than heavy timber. The word brings to mind boards of even running thickness and width, clear, straight, strong, durable, with grain or figure, according to species, that will harmonize with any setting. Lumber now occupies a place in civilization that makes it indispensable to mankind, keeping step with every progressive move in manufacture. Ours is the lumber of the modern kind.

We know that we know lumber as it is now known.

We want you to know that we not only know lumber but know how to make it.

One little order will prove we can make good.

THE AFFAIRS OF THE LUMBER WORLD may have a very blue cast and, as to purpose, may look very aenemic and spineless to the virile and full-blooded men who are endeavoring to steer the lumber ship through the narrows of the "dog days" inactivity;" BUT—to the observer, who is standing on the "side lines" and looking the whole field over, as we are doing now, through "OUR WIDE EAST WINDOWS," there do not seem—to us—to be any MORE than the USUAL number of items of trouble on the trial balance, and THOSE items of trouble are counter-balanced by MANY items of HOPEFULNESS and many signs of better things to come.

We wish our readers to take us seriously about this viewpoint and not to conclude at a jump that these lines are being dictated in the physical and mental quiet of "after lunch," for on the contrary these words are happening into sentences in the desperate hour of hunger, just before the sun comes straight on the sill of the south door.

Here are some of the reasons for our hopes:

Whatever may happen in the end, the reclassification question is at this moment entering the "last half of the ninth inning" and the bases are full of swift-footed runners, with a good batter on the home plate and a fairly weak pitcher in the box of the opposition.

The board of governors of the National Lumber Manufacturers' Association is going to convene tomorrow and settle a lot of things that need settling and which they want to settle and which should BE settled.

In spite of the amusingly weak protestations of a few "on-the-fence" editors, it looks very much as if all of the details of hardwood inspection would be worked out to suit all parties concerned.

The great Southern Pine Association "School of Salesmanship" has met and legislated and gone its enthusiastic way, leaving a heavier and deeper mark for good in the lumber mind than has ever before been accomplished by ANY gathering of lumbermen.

The rain is falling upon the just and the unjust alike, and the belated green stalks of corn are reaching up into the hot sunshine all over the land for life and strength, and we have a right to say—having knowledge—that when the actual details of the July, 1916, crop report are in your hands, you will find that our prospects throughout the farming districts of the United States are vastly better than they were a month ago.

Added to all these things, it really looks as if the beginning of the end had come in the war in Europe, not to speak of what our recent show of force—weak though it may have been—seems to have accomplished for the Mexican situation.

On top of all this it seems that the reactionaries who believe in the

fetish "Supply" and "Demand" have come to life, are going to take the situation in hand and of their own INDIVIDUAL MOTION reduce the production of lumber, until probably when we come to sell a few boards —by and by—there will be a little bit of PROFIT in the transaction!

Anyway you look at it, the lumbermen of the land have got on hand more 'unfinished business' than any other line of trade in America, for in the last two years we have STARTED more things than in the previous twenty-five years of our history, and it is absolutely all rot to emulate the example of Lot's wife by changing any policies, or abandoning the doing of what has been begun; and so what is the use of feeling discouraged and down-hearted over anything, even if the days ARE hot and other people are taking our vacation.

And—MAYBE—after all, possibly nobody has protested or shown pessimistic tendencies, and perhaps these lines of type are only printed in advance of the POSSIBILITY of such happenings. Who can tell?

At all events, we have said our say about what we believe SHOULD be the mental condition of our public, and have based our statements upon what WE believe to be the facts, and have done this entirely to our OWN satisfaction, whether it pleases anyone else or not.

And Great Was the School of Salesmanship!

NO SINGLE ACTIVITY OF A LUMBER MANUFACTURERS' ASSOCIATION has produced as much net benefit to the association as has the "School of Salesmanship" of the Southern Pine Association, held in St. Louis on June 26, 27 and 28, 1916.

Sitting down now on our "Wide East Window" ledge and gazing at the paragraph above, coolly and collectively, it looks like a large assertion, but the cold-blooded, analytical fact still remains that it is an absolute truth. There is no poetic—or otherwise—license in the statement.

This gathering at St. Louis was accompilshed at the suggestion of Harry T. Kendall, chairman of the committee on sales and distribution of the Southern Pine Association, assisted by the loyal co-operation of all the members of that committee and by the activity and co-operation of Secretary-Manager J. E. Rhodes and by Wallace J. Ferry, the advertising manager of the association, all of whom have been working on the job to make it a success since the great mass meeting of the association held in New Orleans in February, from WHICH time dates the first suggestion of having a "School of Salesmanship."

It was conceivable from the first that the gathering in St. Louis would be of moment; and those who had great vision and could project themselves into the future believed that the meeting would be a success; but we doubt if anybody, DIRECTLY or REMOTELY connected with the enterprise in this effort to produce the "School of Salesmanship," ever thought that in those June days set aside to devote to the art of selling things, the act would in any sense be considered the laying of a cornerstone. It was that VERY THING—the foundation of an activity which will redound to the credit of Mr. Kendall and his associates as long as yellow pine lumber is a marketable commodity in this country.

Speaking of "corner stones," reminds us that—NOW—the yellow pine edifice should stand four-square upon its feet, for it is true that it NOW has a solid abutment under each corner of the yellow pine association house. In rounding out this thought, we can but refer to the impromptu speech of H. H. Snell, of Birmingham, made at the last session of the "School of Salesmanship" in the American Theater, St. Louis, when he referred to the fact that in the past there was to be considered in the distribution of yellow pine lumber the MANFACTURER, the WHOLESALER and the CONSUMER; but that NOW there had come to stay ANOTHER element which in all the future would have to be reckoned with, namely—the SALESMAN.

So there you have the four pillars supporting the superstructure of a perfectly well-balanced association in commercial life—the Manufacturer of yellow pine, the Wholesaler of yellow pine, the Salesman of yellow pine, and the Consumer thereof.

By the act of the Southern Pine Association in its "School of Salesmanship," the salesman becomes a quantity to be reckoned with in every movement for the distribution of yellow pine in the future.

Already the two cities of St. Louis and Chicago are speculating as to the possibility of securing the second annual "School of Salesmanship" of the Southern Pine Association, for there certainly will be a second annual meeting, and many more annual meetings.

Of course, these meetings cost such an enormous sum of money that it would not be well to compute it. We happen to know of one concern that brought in twenty of its salesmen to attend this meeting at St. Louis, who considered the four or five thousand dollars spent for the undertaking a very fine investment.

In closing this editorial mention of the first "School of Salesmanship," let us observe that the vigorous and unanimous protest at the custom of disposing of yellow pine lumber by the "in transit" plan of selling and the consequent discouragement which the protests of the salesmen made whenever this subject was mentioned should compel the most skeptical to consider this school a valuable thing, even if it did nothing but HELP mitigate that ONE evil.

Good-bye To Hired Spell-Binders.

WITHOUT SPECULATING AS TO THE REASON FOR the belief that is in us; without affirming or denying our motives or admitting that we have motives to be affirmed or to be denied, we wish to register the fact that we are considerably tired of hired "spell-binders." There was a time when we needed them, and needed them very much, but by precept and example they have educated us until we OURSELVES know how to do those things.

So what is the necessity for robbing the vaudeville stage and the charming Chautauqua circuit of these lions of oratory who are supposed to attract us to the annual meetings of lumber associations in order that we may have other things done to us after the spell-binder has hypotized us.

There is nothing at all personal about this statement. The spell-binders we have in mind are delightful gentlemen; but in the language of the street, we suggest that they be told "to run along and sell their papers" elsewhere, for have we not our own Putman, and Moorehead, and Woodhead and Seidel and Kendall and Snell and Boykin and Watson and Rhodes and Sterling and Von Schrenk and Hines and Goodman and Keith and Boyle and Langille and Millard and Gerrans and exactly four hundred others whom we cannot mention for lack of room?

We have been especially impelled to say this thing, after having recently listened to a man of national reputation who insisted that there was utterly no kind of propaganda worth the match that would destroy it—except just only the PERSONAL MAN; that there was nothing in so-called advertising, whether that advertising be in the country weekly, the national magazine, the country paper or on bill-boards.

The man who said these things is so nationally well known that we will not mention his name but we are obliged to him just the same, for he has furnished a substantial platform upon which we proudly stand and say: "Good-bye, Mr. Spell-Binder, good-bye."

If Lumber Production is Reduced, What Then?

WE HAVE HAD ONE ANSWER TO OUR letter sent out three days before we went to press with this issue of the LUMBER WORLD REVIEW, which was devoted to inquiries in regard to the present stock of lumber, at twelve hundred sawmill plants in the United States, and that particular answer came in personally. Not personally conducted, mind you, but physically-personally.

We will let our vocative and vociferous friend have a seat in the "Wide East Window" and speak for himself:

"What is all this hullaballoo you are kicking up about the necessity for shutting down the mills? Suppose John sits quietly by and sees Bill and Tom and Dick shutting off production. What then? I will tell you! Just about the time the lumber producers are beginning to see some return for all their labor, John's mill will begin to hum night and day, and he will hunt up a few white leaded small mills that have been in storage and start THEM up—and then,—there you are! Don't tell ME that manufacturing lumbermen ever did the RIGHT thing at the RIGHT time. It is their business to do the RIGHT thing at the WRONG time. So you, my optimistic friend, are out a lot of ink, and space, and stamps and white paper. Good DAY."

The Hemlock Advertising Campaign.

WE CONGRATULATE THE NORTHERN HEMLOCK and Hardwood Manufacturers' Association on its campaign throughout the hemlock consuming country, in 158 so-called country newspapers, which have a combined circulation of nearly one million in the states of Wisconsin, upper Michigan, Illinois and Minnesota.

The association is doing this advertising for the benefit of eighty retail lumber dealers.

The association has also placed advertising with three farm papers, a builders' paper, two box papers and an architects' journal, but OUR interest centers around the increase of trade that will come to these eighty retailers from advertising in their local newspapers.

The so-called "country newspaper" has, in our opinion, increased 50 percent in efficiency during the last five years and we hope that the hemlock people, predicating their action on the broad policies of the Southern Cypress Manufacturers' Association, will be willing, when this campaign is over—which has been "launched in the interest of eighty retailers" in 158 newspapers—to tell us ALL—frankly—just how effective and how profitable was the campaign.

An Immediate Necessity for Curtailing Lumber Production

A Series of Important Questions Propounded to Lumber Manufacturers in All Sections of the United States

By BOLLING ARTHUR JOHNSON

A remarkably peculiar condition pervades every line of lumbering in the United States.

Each branch of the lumber business in this country is definitely sure that it is worse off than its neighbor; and as "Thoughts are Things" each branch of the business has—much to its confusion—a fundamental truth to hold in its lap and caress.

We seem to rejoice in our separate desperate conditions.

For the last ninety days we have been playing "give away whist" with our lumber and yet we seem to sit and look at our empty hands and wonder what has become of the cards.

You cannot eat your cake and have it, and we all know that—and YET—we have attempted that gastronomic impossibility for nearly six months.

The entire country has made more lumber than there was any POSSIBILITY of marketing—on the present demand—and the time has arrived when the LUMBER WORLD REVIEW proposes to attempt to find out just WHY this is being done and to enter a protest against the folly of proceeding further in the direction of lumber making unless there shall spring up that unforeseen "dog-days miracle"—a lumber DEMAND—along with the harvesting of oats, the turning yellow of the wheat in the fields, the second plowing of the corn, the scream of the fife and the tom-tom of the picnic drum, the sirocco heat of summer—and at a time when people not only do NOT hope for or PLAN for the building of houses, but try the BEST they know how to forget that there ARE such things as walls and roofs—in their endeavor to get out in the open to fish and to wallow in the surf.

AN URGENT LETTER HAS BEEN WRITTEN.

We are tired of listening to rumor and gossip and the vari-colored rot that pervades the atmosphere as to what the manufacturing lumbermen of the United States propose to do about running "short time" until the "depression is over"; so we have provided a WAY whereby ALL may know the consensus of opinion of the twelve hundred leading lumber manufacturers of the United States,—provided those manufacturers have enough interest in that question to themselves answer a letter, a copy of which we print on Page 20.

Our intention in submitting this list of questions to the lumber manufacturers is to obtain definite information regarding the lumber output at the present time and for the immediate future probabilities and to obtain information regarding NORMAL output and to obtain DEFINITE information regarding "running time" under NORMAL conditions as compared with what is CONSIDERED running time right now in July, 1916; and if, POSSIBLE to get definite information as to what each manufacturer expects to do regarding his running time in the immediate future.

WHY DO WE ASK THESE QUESTIONS?

We ask these questions of the individual members of the National Lumber Manufacturers Association and of the very few worth-while manufacturers who are not members of the National Lumber Manufacturers Association BECAUSE if a man does not ask he shall not receive; BECAUSE the greatest courtesy that a trade newspaper can do its clientele is to accomplish just such service as this!!

If the manufacturing lumber trade of the United States wishes to save itself—in the building wood line at least—it can DO so, even YET, by REDUCING PRODUCTION.

If it does not care to do that and if each manufacturer expects to run his mill full time and let his NEIGHBOR do the shutting down—then—in our opinion he might just as well telephone his measure to the undertaker and go and stretch out in the shade somewhere and make his peace with the world.

WHAT IS THE MATTER WITH THE LUMBER MANUFACTURERS?

Having a fair command of language—both sacred and profane—we might be able to tell you the trouble right on this printed page, were such a thing legally permissible. It might not pass through the mails without violating the law!

We will tell you a few LITTLE things, though, in a rather pale and aenemic manner, so that the lumber trade may, in a WAY, diagnose its OWN case, feeling that when we all know what is the matter there will be an ADDED chance to prescribe for the patient.

The lumber manufacturers in every section of the United States are making more lumber than the demand justifies. The best place to preserve lumber is in the tree and while all lumbermen know this, ninety-nine out of a hundred are doing the EXACT OPPOSITE of this by turning trees into lumber when they POSITIVELY know that the LUMBER is NOT NEEDED or WANTED!!

We have tried hard for several years to make the lumber manufacturing trade of the United States believe that its prosperity lay in the direction of securing a wider and better market for boards, rather than in paying attention to what we believed to be the old fetish of "supply and demand," but in this we have not prevailed.

The manufacturing lumberman DOES believe that supply and demand control the market, and practically always WILL believe it,—and YET as a matter of fact—is acting just NOW as if he had never heard of such a thing as "supply and demand." This is the condition we want to try to help rectify.

We are not giving you EXCUSES for this attitude upon our part but REASONS, and we will prove our position in a few lines of type.

It has come to our notice from a careful inquiry in the large centers, where the business is controlled by a comparatively few large retail yards, that there is a disposition upon the part of dealers and in many cases an actual arrangement to forego buying for the immediate wants of the retailer by the simple method of exchanging stocks, one with the other. This is having a tendency to decrease the stocks on hand in such centers, which should account to every manufacturer for the lack of demand from the large cities.

There is a well defined rumor that at least one retail lumber association secretary has—as is his privilege, of course—informed his membership that they should refrain from buying just now—that "lumber is going lower."

These two facts alone ought to encourage the lumber manufacturer to make as few boards as possible during the period upon which we are just entering, even if there were no OTHER reasons in sight.

On top of all this, we want to ask right here, in this public spot, why it is that manufacturing lumbermen, generally, should any longer even hesitate to make a general arrangement AMONG THEMSELVES to bring about such a control of the amount of their product as would guarantee them 6 percent interest on the money they have invested? If you want to buy engraving, it costs you from 8 percent to 200 percent more than it did a year ago; if you want to buy chemicals you will find that they have in all cases doubled in price and in many cases increased ten-fold over a year ago; if you want to buy print paper, there is not a paper mill in the United States that would contract to sell it to you twelve months ahead at the present market price; if you want to buy leather you will have to stand a 40 percent increase over a year ago; and we might go on and add to this list of facts until we worked ourselves into a state of commercial hysteria over the conditions—but what we have said in the fore part of this long sentence is quite sufficient background for the statement—that if you want to buy boards go and put your OWN PRICE on them, load them up and carry them home.

We have something less than two dozen lumber manufacturing associations, with their secretaries and statisticians, their traffic and scientific experts and their trade extenders, and their building code makers; and on top of that, over one hundred and fifty retail lumber dealers' associations, wholesale dealers' associations, lumbermen's clubs and the like, each working at its little exploitation task all over lumber land; and the best that we can do, as a business proposition today, is to cut down the forest, leave two-thirds of the tree somewhere along the road to rot and sell that portion which is left for less than it costs to log and manufacture it.

All of these things being true,—and we trust no one will take exception either to the facts or to our right to make the assertions—we actually wonder how the manufacturing lumber trade has for so long been able to escape the commercial detention hospital—and we PROPHESY that if this condition keeps up MUCH longer our trade will be regulated in a governmental way, whether we WISH it regulated or NOT.

Digitized by Google

WE NEED UNIFORM INFORMATION CONCERNING "CURTAILMENT."

If there is one thing above another that the lumber manufacturers of the United States need at the present time it is some sort of uniform information concerning "curtailment of product"; and if the manufacturer of lumber will answer our questions we will get the information; and if they do not answer the questions, they will NOT get the information, for there is no means of collating the information except by a nationally circulated lumber trade newspaper like the LUMBER WORLD REVIEW, and this is why we assume the task.

All of the information available at the present time is of a rather ragged sort, almost wholly from the yellow pine manufacturing district, and is printed herewith for what it may be worth. We print it with the avowed intention of keeping the type standing in order that this information may be revised from issue to issue, but that task we can perform only if the manufacturing lumbermen themselves take any interest in the proposition.

Here is the information to which reference is made:

COPY OF THE LETTER

Lumber World Review

IF YOU WILL PLEASE HAVE THESE SHEETS PUT IN YOUR TYPEWRITER AND THEN DICTATE AN ANSWER TO EACH QUESTION A SUMMARY OF ALL THE ANSWERS WILL BE RETURNED TO YOU—PERSONALLY—AND WILL ALSO BE USED IN FUTURE EDITIONS OF THE LUMBER WORLD REVIEW.

Gentlemen:

QUESTION NO. 1—We are endeavoring to find out—IN YOUR INTEREST—if "supply" and "demand" control the lumber market—as it is conceded they DO control all OTHER markets. We would not insult YOUR intelligence by suggesting that you do not already know that the "supply" of an article of commerce affects the "demand;" BUT, just at this critical moment when a falling off in the "supply" of lumber in stock is the ONLY thing that will help to patch up a badly broken market, will you talk to us frankly for the national LUMBER GOOD and permit us to utilize the information in an IMPERSONAL way.

QUESTION NO. 2—We are going to give back to you by letter and through the columns of the LUMBER WORLD REVIEW a summary of the EXACT FACTS as to stock conditions; so will you tell us on the "A" line below how much lumber of all kinds you had on hand, in feet, January 1, 1916, and on the "B" line how much lumber you had on hand July 1, 1916?

"A" Lumber on hand January 1, 1916.....

"B" Lumber on hand July 1, 1916.....

QUESTION NO. 3—How many "saws" of all kinds in ALL your MILLS had you in operation January 1, 1916?

QUESTION NO. 4—How many "saws" of all kinds in ALL your MILLS have you in OPERATION right NOW?

QUESTION NO. 5—How many days per week and how many hours per day did you run your sawmills in the month of January, 1916?

QUESTION NO. 6—How many "days" and how many "hours" per day did you run your sawmills during the month of June, 1916?

QUESTION NO. 7—It is ALLEGED that there are actually a FEW sawmill operators who believe THEIR mills should run full time and that all the rest of the sawmills should run SHORT time, in order that all the lumber business MAY be helped to a competency. EXACTLY how MANY such OPERATORS are there in your NEIGHBORHOOD and what reasons do they give for piling up lumber which they know they have got to sell at a LOSS?

QUESTION NO. 8—Attached is a proof sheet of what will either be used as a leader for an article upon the "General Shutting Down of Sawmills in the United States," or as an editorial for our issue of July 10. It will be printed just as proof has been furnished to you, but just for our own INFORMATION will you please be good enough to criticise our position in the matter?

QUESTION NO. 9—Will you note the rather formidable list of mills who are running "short time" that we shall publish in our issue of July 10 and tell us what you think about it?

QUESTION NO. 10—Will you write us at your earliest convenience and give us any other MARKET facts and ideas on the general conditions of the lumber trade in your locality?

Yours very truly,

BOLLING ARTHUR JOHNSON,
EDITOR AND PUBLISHER,
LUMBER WORLD REVIEW.

Sabine Lumber Co.	Colfax	Running 5 days a week.
Tremont Lumber Co.	Winfield	Running 5 days a week.
Weaver Bros.	Weaver Spur	Running 5 days a week.
Weaver Bros.	Boyce	Running 5 days a week.
Weaver Bros.	Couchwood	Running 5 days a week.
Urania Lumber Co.	Urania	Running 5 days a week.
Victoria Lumber Co.	Victoria	Running 4 days a week.

MISSISSIPPI.

Bienville Lumber Co.	Forest	No curtailment. Normal product 100,000 per day; now cutting 150,000; will take off night run in 10 days.
Batson-McGehee Co.	Millard	Running night and day, from 3 to 5 nights a week; curtailing 100,000 feet per week.
Bay Springs Lumber Co.	Bay Springs	Normal Product 635,000 per month; running 4 days per week; curtailing 135,000 feet per week.
Bentley & Emery	Richton	Normal product 3,000,000 per month; not curtailing.
Cybur Lumber Co.	Picayune	Running days only, 5 per week; curtailing 300,000 per week.
Crosby Bros. Co. Stillwell-Crosby Co.	Canton	Mills closed down. Was producing 3,600,000; normal product 4,800,000.
Cotton State Lumber Co.	Meehan Junction	Running full time day only; 125,000 feet per day. Was down 11 months in 1915.
Eastman, Gardiner Co.	Laurel	Running 9 hours per day curtailing 150,000 feet per week.
Enochs Lumber Co.	Fernwood	Shut down through June.
Finkbine Lumber Co.	Wiggins	Shut down June 24 for 3 weeks, 105,000 feet per day, normal.
Griffin, J. M.	Blodgett	Normal product 1,500,000 feet per month; shut down for 30 days June 15.
Gray, C. L., Lumber Co.	Meridian	Will curtail.
Homochitto Lumber Co.	Bude	Will shut down 1 day in the week, curtailing 150,000 per week.
Lumber Mineral Co.	Arbo	Burned.
Marathon Lumber Co.	Laurel	Curtailing 1 day a week.
Moore-Haggerty Lumber Co.	Hattiesburg	Curtailing 1 day a week.
Major-Sowers Lumber Co.	Epley	Curtailing 1 day a week.
Mississippi Lumber Co.	Quitman	Curtailing 1 day a week.
Newman, J. J., Lumber Co.	Sumrall Hattiesburg	Curtailing 1 day and 1 night, each plant, amounting to 525,000 feet weekly.
Richton Lumber Co.	Richton	Curtailing 1 day and 1 night each week; amounting to 120,000 feet a week.
Rosa Lumber Co.	Picayune	Curtailing 1 day and 1 night, 100,000 feet a week.
Ship Island Lumber Co.	Sanford	Curtailing 1 day a week.
Sumter Lumber Co.	Electric Mills	No curtailment; normal product 4,000,000 a month.
Vinegar Bend Lumber Co.	Vinegar Bend	Curtailing 1 day a week, 100,000 feet a week.
Wausau-Southern Lumber Co.	Laurel	Shut off night run—running days only.
White, J. J., Lumber Co.	Columbia	Losing 15% of time account of bad luck.

TEXAS.

Angelina County Lumber Co.	Keltys	Running 5 days a week.
Beaumont Saw Mill Co.	Beaumont	Running 5 days a week.

Circulation in Dry Kilns

By HARRY D. TIEMANN, Consulting Engineer in Kiln Drying, Recently Associated With the New England Westinghouse Company

In Four Parts—PART III.

Copyrighted, 1916, by the LUMBER WORLD REVIEW.

The term "casehardening" refers to a condition very common in kiln-dried lumber and frequently met with in air-drying, in which the outer shell has become "set" in an expanded condition and has dried more rapidly than the interior portion. It is used to describe two distinctly different conditions, one in which the exterior shell is dry and hard, while the interior is still wet, the other in which the wood is thoroughly dry, but in which permanent stresses exist which have followed as a result of the first condition. The first condition is transient, and may be designated as "temporary casehardening," whereas the other may be distinguished as "permanent casehardening."

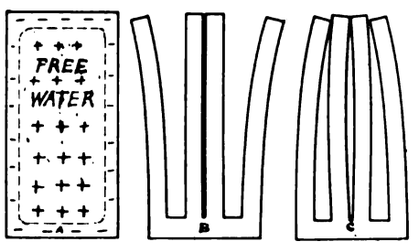

FIGURE 1—FIRST STAGES IN CASEHARDENING—THE FIGURES REPRESENT A DISK CUT ACROSS THE TIMBER PERPENDICULAR TO THE GRAIN.
(A) SURFACE DRIED BELOW THE FIBER SATURATION POINT AND IN A STATE OF TENSION. INTERIOR CONTAINING FREE WATER AND IN COMPRESSION. TENSION STRESS INDICATED BY MINUS SIGN (—); COMPRESSION BY PLUS SIGN (+).
(B) IF DISK A BE IMMEDIATELY SAWED BY FIVE SLITS, AS SHOWN, IT WILL AT ONCE SPRING INTO THIS SHAPE.
(C) IF B BE NOW DRIED IN AN OVEN OR WARM ROOM, THE TONGUES WILL FINALLY BEND INTO THIS SHAPE AND REMAIN SO PERMANENTLY.

The effects of this condition of the wood are of two kinds, first, in regard to the retardation of the *tranfusion of the moisture* from the inside through the casehardened shell to the surface; and, second, with respect to *stresses* which exist in the wood.

When some species of wood become surface dried evaporation appears to be greatly retarded, due to the dry shell surrounding the wet interior.

The internal stresses induce "honeycombing" or "hollow horning" and warping of the wood, also cupping when the wood is resawed.

HOW DRYING TAKES PLACE IN WOOD.

The drying of a solid piece of wood must necessarily take place at the surface, and the moisture in the interior portion must pass through successive layers of the wood until it reaches the surface, where it evaporates. Just how this passage of moisture from the interior to the surface takes place is not known. It should be noted in this connection that endwise drying takes place very much faster than crosswise of the wood fiber. A study of the microscopic structure of the wood shows the reason for this. In porous woods with open vessels, such as red oak, the free water in the open pores, which are really minute tubes, will pass longitudinally through them as it will through a bundle of capillary tubes; but in woods where these vessels are closed, such as white oak or black locust, this action is much retarded. The transfusion of the moisture crosswise, however, must take place through the successive cell walls. While the cells are full of free water this process is rapid, probably taking place by simple capillarity through minute openings in the membranes of the cell walls. But as soon as the water columns become broken and air spaces intervene, this capillary process appears to cease and transfusion occurs by absorption of the cell walls themselves.

That is probably why casehardening so greatly retards the drying of the interior.

THE STRUCTURE OF WOOD AND HOW THE MOISTURE IS CONTAINED.

To understand the physical phenomena which occur when wood casehardens, it is necessary to clearly appreciate how the water is contained in the wood and the significance of the "fiber saturation point."

It will not be necessary for this purpose to have a complete knowledge of the microsocpic structure of wood, but some idea of its structure must be appreciated.*

Wood is made of closed cells arranged somewhat like the cells of a honey-comb, running lengthwise of the tree, but mostly from fifty to a hundred times as long as wide. In the soft woods these are mostly of one kind known as "tracheids" (or, commercially, as "fibers" in the pulp paper industry), and are of fairly uniform size. In "hardwoods," however, there are several kinds which differ enormously in size. The largest ones are fused into long tubes or "vessels" and are plainly visible to the naked eye, forming the pores seen in a piece of red oak, for example. The smallest cells, or *wood fibers*, which form the bulk of the dense portions of the hardwoods, can only be seen by use of the microscope, being as small as the finest hairs. The walls of the contiguous cells have thin spots distributed over them known as "pits." These pits, however, are not perforations through the walls. The cell walls comprise the wood substance, the density of which is one and a half times as heavy as water. This wood substance is very hygroscopic; that is to say, it absorbs and loses moisture from and to the air according to the relative humidity present. Thus at about the humidity of summer in this climate, it retains about 14 or 15 percent of its dry weight. In a heated house, at about 30 percent humidity, it will retain 4 to 5 percent moisture. In absorbing and losing moisture the cell walls swell and shrink, causing the "working" of wood after it has been dried.

THE FIBER SATURATION POINT.

With nearly all woods there is a point beyond which the cell walls will not contain any more moisture and where swelling ceases. This is called the "fiber saturation point," and lies between 20 and 30 percent of the dry weight of the wood. This does not mean that the wood itself will cease to take on moisture at this point, for moisture will continue to be absorbed, the excess appearing in the form of water and occupying the cell cavities and small capillary spaces in the wood. Thus, green wood contains moisture in two conditions, as free water in the pores and capillary spaces and as hygroscopic moisture absorbed in the cell walls.

Green wood sometimes contains as much as 250 percent of its dry weight in moisture, only

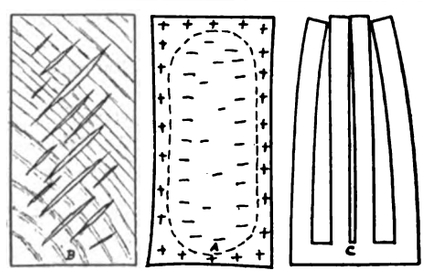

FIGURE 2—FINAL STAGE IN CASEHARDENING AND HONEYCOMBING—THIS IS THE CONDITION OF PERMANENT CASEHARDENING.
(A) PERMANENT INTERNAL STRESSES REMAINING AFTER THE WOOD HAS COMPLETELY DRIED. TENSION STRESS INDICATED BY MINUS SIGN (—) AND COMPRESSION BY PLUS SIGN (+). COMPARE WITH FIGURE 1 A AND NOTE THAT THE STRESSES HERE ARE COMPLETELY REVERSED.
(B) HONEYCOMBING RESULTING FROM THE STRESSES SHOWN IN A; THE STRENGTH OF THE WOOD ACROSS THE GRAIN WAS INSUFFICIENT TO RESIST THE INTERNAL TENSILE STRESSES AND THE FIBERS HAVE SEPARATED ALONG THE MEDULLARY RAYS.
(C) IF DISK A BE SAWED BY FINE SLITS, AS SHOWN, IT WILL IMMEDIATELY ASSUME THIS FORM AND BIND ON THE SAW.

25 percent of which is contained in the cell walls, the excess 225 percent being in the form of free water. More often the total moisture ranges from 50 to 70 percent of the dry weight, as in green birch or maple.

THE PROCESS OF CASEHARDENING.

As a green piece of wood dries, shrinkage as a rule* does not begin until the fiber saturation point has been reached. If the conditions of drying are such that the evaporation from the surface exceeds the rate at which the water in the center transfuses outwardly, the free water on the surface will all disappear before the inner water can take its place. The water films or columns thus become broken with air in between, so that the remaining water has to pass out gradually by seepage along the cell walls and further transfusion of the free water from the inside is thus retarded. This is the first stage of casehardening.

*See article by the writer "Principles of Kiln Drying Lumber" in LUMBER WORLD REVIEW of January 25 and February 10, 1915, in which the structure of wood is illustrated by photomicrographs.

*In some woods, notably western red cedar, a collapsion of the cell cavities begins to take place as soon as drying begins, which causes the stick to appear to shrink at once. This is not true shrinkage, however, as it is a totally different phenomenon. Eucalyptus "blue gum" appears to begin to shrink at 80 to 90 percent moisture, due to a form of collapse.

Digitized by Google

As drying then progresses beyond the fiber saturation point, the outer shell tends to shrink, but is prevented from doing so by the wet interior. Strong tension stress is therefore set up in the outer surface with compression in the inner portion. This condition is shown by Figure 1-A, which represents a disk sawed across a plank of wood at this stage.

If this disk be immediately slotted, as shown at Figure 1-B, by running five parallel saw cuts nearly through, and breaking away two of the tongues thus formed, the outer prongs will at once bend outwardly as shown in the figure. This indicates temporary casehardening, due primarily to a dry surface and wet interior. If this disk be then placed in a dry room where it will dry out, it will finally assume the form shown at Figure 1-C.

Wood is a plastic substance when hot and moist. When dry it becomes very much harder, stiffer and stronger than when wet. Consequently, when a stick of wood is bent while hot and wet, and then dried in this position, it will rigidly retain the form into which it was clamped when drying. This well known principle, made use of in wood bending, also applies in the case of casehardening. The outer shell which drys first below its fiber saturation point

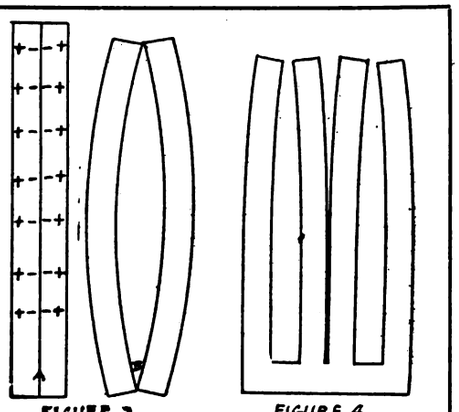

FIGURE 3 FIGURE 4

FIGURE 3—END VIEW OF A CASEHARDENED BOARD—(A) INTERNAL STRESSES, MINUS SIGN (—) IS TENSION AND PLUS SIGN (+) IS COMPRESSION.
(B) FORM WHICH THE BOARD WILL ASSUME AFTER RESAWING.
FIGURE 4—TEST FOR INTERNAL MOISTURE—NOTE THE BENDING OUTWARD OF THE CENTER TONGUES UPON EXPOSURE TO DRY AIR. THEY WILL ULTIMATELY TURN INWARD AS IN FIGURE 2 C.

and thus tends to shrink, is prevented from so doing by the wet interior. As it continues to dry it hardens in this expanded condition. (See Figure 1-A.) The interior now continues to dry very slowly and tends to shrink, but is in turn prevented from doing so by the hardened outer shell which has "set" in its expanded condition. The result is that the stresses within the block are now reversed, the outer shell being in compression and the inner portion in tension, as shown in Figure 2-A (compare with Figure 1-A). If the tensile strength of the wood across the grain is sufficient to withstand these stresses, the wood will dry in this condition containing permanent internal stresses, but if it is weak it will yield to the tension stresses and split open as shown in Figure 2-B, usually along the medullary rays. This is the explanation of honey-combing or "hollow horning."

A peculiar physical property which accentuates this result of permanent casehardening is the fact that *the slower wood dries, the greater is the shrinkage.* Consequently, not only does the stress result from the expanded set condition of the outer shell, but also from the fact that the interior tends to shrink more than the shell, due to slower rate of drying.

The phenomenon of collapse* also probably enters into this honey-combing in certain species, such as western red cedars, causing excessive shrinkage of the interior portion.

PROOF OF STRESSES IN CASEHARDENED WOOD.

To prove that the stresses exist permanently, as explained in the casehardened wood, it is only necessary to take a disk A, Figure 2, and slot it, as described before. The prongs will at once turn inward, as shown in Figure 2-C, frequently with such force that it is difficult to remove the piece from the saw. This disk will remain definitely in this condition as long as it is kept dry.

If the plank was not throughly dry when the disk was sawed, as shown in C, these prongs will close up still further as the disk dries. Compare this figure with B in Figure 1 when the stresses were temporarily of the opposite kind.

From this explanation it is perfectly plain why a casehardened board will cup when resawed, as in Figure 3. For the same reason, when articles are manufactured from casehardened wood, they are very apt to warp and give trouble. The two inner tongues of the slotted disk give an excellent indication of whether the interior of the wood is dry. If the interior is not dry, the tongues will show little or no tendency to bend on the saw, but after remaining in a dry room for a short time they will begin to bend outwardly as shown in Figure 4.

They will finally, however, bend inwardly as shown in Figure 1-C, as the disk dries out. If they remain parallel in a dry room it indicates that the wood was thoroughly dry (that is corresponding to the room condition) when the disk was cut. The explanation of the behavior of these tongues as described above is significant. In my first article of this series (see LUMBER WORLD REVIEW of May 10, 1916), I mentioned that drying should take place uniformly from the opposite faces and that if drying took place from one face only the board or stick would tend to cup—*not* with the first dried face as the concave surface, as might at first be supposed, but just the reverse. The surface which dried first will become the convex surface.

This phenomenon is exactly what takes place in the two parallel tongues of the pronged disk and the explanation is as follows: The outer surfaces, being exposed to the air, dry first below their fiber-saturation point, and these surfaces dry in a stretched condition, being held by the resistance of the rest of the tongue to bending. That this is so is shown by the slight bending of the tongues outward. (Figure 4.)

The dried surface hardens in this stretched condition. The rest of the tongue subsequently dries more slowly and shrinks more than the outer surface; consequently the curvature ultimately becomes reversed and the tongues bend inwardly as shown in Figure 1-C. The rapidly dried surface of a board or stick (dried from the green condition), therefore tends to be convex and *not* concave.

This action is often of considerable consequence in the drying of wood, especially of material sawed into blanks for manufacture after drying.

REMOVAL OF CASEHARDENING.

A clear understanding of the nature of casehardening will, with a little thought, suggest a means by which it may be removed. In fact it is not only possible, but entirely practicable, on a large scale to eliminate casehardening, provided it has not gone to the extent of causing honey-combing. Very recently I discovered the method which I will now describe.

The only condition of permanently casehardened material which is of serious consequence is that it contains internal stresses. If these can be removed, the trouble will be overcome. With a knowledge of the distribution of these stresses it is evident that if we soften up the external shell containing the compressive stresses, so that it becomes plastic, the stresses will readjust or neutralize themselves and disappear. It has been pointed out that wood substance becomes plastic when hot and moist. Therefore if the casehardened wood be placed in steam or in hot moist air for a while, sufficient time only to soften up the external shell, the result will be accomplished. The temperature necessary probably varies with the different species, as some become much more plastic than others at the same temperature.

The time of exposure necessary will vary with the degree of casehardening, but it is astonishing how quickly the result is obtained, usually in from ten minutes to half an hour in saturated air at 180 degrees to 200 degrees F. One great advantage of this treatment is that

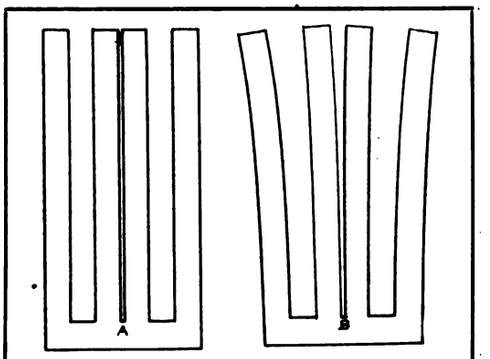

FIGURE 5—TEST DISKS FOR REMOVAL OF CASEHARDENING—IN A THE STRESSES HAVE BEEN ENTIRELY NEUTRALIZED AND CASEHARDENING ELIMINATED. IN B, THE PROCESS HAS BEEN CARRIED TOO FAR AND THE CONDITION HAS BEEN REVERSED.

since the moisture need penetrate only the outer surface, it very quickly re-evaporates. Moreover, it can be done on any scale whatsoever.

Probably the simplest way is to place perforated steam pipes in the kiln or in a separate room into which the truck can be run, arranged in such a way as to produce a maximum circulaton through the pile of lumber. High pressure steam and plenty of it should be available.

For a couple of truck loads of lumber each about 16x8x5 feet in size, a 1½-inch pipe with boiler pressure steam (80 to 100 lbs. gauge) should be used having in all about eighty ⅛-inch holes properly distributed, and this should be opened up full.

The temperature should be allowed to rise as rapidly as possible, and the steam turned off again after the proper time, which must be determined by experiment for a given kind of material and conditions. Drying conditions should then be re-established as soon as possible and the load left in the kiln for a day or two.

For 2½-inch black walnut at about 5 to 6 percent moisture, I have found that steaming in this manner for half an hour, the temperature rising from about 130 degrees to 180 de-

*See article by the writer "Problems in Kiln Drying Lumber," in LUMBER WORLD REVIEW for September 25, 1915.

Digitized by Google

grees during this time, gives satisfactory results. In from one to three days' time the absorbed moisture will have entirely evaporated and the material will be as dry as before steaming.

No fear need be had of injuring the finest woods by this treatment, and it is so simple that it is within the reach of everyone who has a dry kiln. There is no danger whatever of checking the wood, since the surface is already in compression, and all stresses are relieved thereby and not augmented.

If the process is carried too far a reversal of stresses may be produced. This can be readily determined by cutting the pronged disk. If stresses are reversed, the outer prongs will bend outwardly as shown in Figure 5-B. If exposure has been correct, the prongs should remain parallel as shown in Figure 5-A.

The test disks should not be cut until the moisture has re-evaporated.

Doors, Sash and General Millwork Review

Current Conditions of the Country's Market

By LUCIUS E. FULLER

At this time of the year in the door and millwork industry there is usually more or less dullness, and July thus far is not an exception to the rule. Orders for stock goods are unusually light, most of the business booked being special bills. However, there are a few stock doors and glazed sash going out in small lots, and there is a prospect that this indifferent volume of business will continue well through the month. Some of the local houses report a fair amount of inquiry but traveling men say that farmers are quite busy in the fields and that building throughout the agricultural section is of modest proportions. Recent reports from the territory immediately surrounding Chicago indicate excellent prospects but rather poor retail business at the moment.

The Excellent Crop Prospects.

The crop situation is one of the most favorable factors to be reckoned with at this season. The government crop report issued last Friday makes a much better showing than had been anticipated. Large areas of winter wheat were killed during the cold weather, and the acreage was therefore known to be greatly reduced. In spite of this fact, however, the report shows a probable average of nearly 15 bushels to the acre, and a total crop of winter wheat of 489,000,000 bushels, as compared with a crop last year of 660,000,000 bushels. Spring wheat makes a much better showing, with an average estimated outturn of 15.1 bushels to the acre and a total estimated crop of 270,000,000 bushels. The total wheat crop as estimated for this year will be 759,000,000 bushels, as compared with over 1,000,000,000 bushels last year, which was a record crop. The corn condition is reported at 82, and the estimated yield 2,866,000,000, which is 200,000,000 bushels short of last year, when there was another record corn crop. The oats condition is excellent, being placed at 86.3 and with an estimated total yield of 1,317,000,000 bushels. The general prospect, therefore, for trade appears to be most encouraging, as the farmers will be inclined to buy more liberally, and one of the first results to be observed will be in building and making improvements.

The Factory Outlook.

Business at the sash and door centers of the middle northwest is reported fairly large. The distributing houses in that territory have sold heavily during the late winter and spring and their current requirements on the factories are therefore rather heavy, which makes prosperous conditions at the producing points. Most of the work in hand, however, is in the way of special bills, as is usually the case at this season. Doors are in fair demand, and the factories manufacturing the hardwood veneered product are running reasonably full.

Firmness in Prices.

One of the noteworthy features of the current sash and door trade is that there is little or no price-cutting going on. The various components of finished millwork are all firm in price and labor is paid high wages. The window glass situation is strong, and this alone influences distributers in holding their prices firmly. Discounts are on the basis generally adopted on May 5, which were 70 percent on No. 1 and 2 white pine doors, 68 percent on No. 3, and 75 percent on glazed sash. In lots of 100 openings or more the discounts are 72 and 77 percent respectively.

THE JULY CROP REPORT.

The government crop report for July 1, issued July 7, is the first important crop report of the year, showing, as it does, the prospects for all of the crops. It had been anticipated that the 1916 crop of wheat would fall short of that of 1915, as there was known to be a greatly reduced acreage, so that there is no surprise expressed because of the lower estimate on winter wheat, which is 26 percent less than the crop last year. Spring wheat makes a better showing in the July report, with an estimated yield nearly as large as the estimate of July 1, 1915, which was 295,000,000 bushels. Prominent features of the report follow:

Condition of winter wheat, 75.7; estimated bushels per acre, 14.8; total estimated yield 489,000,000 bushels; 1915 crop, 660,000,000 bushels.

Condition of spring wheat, 89; estimated bushels per acre, 15.1; total estimated yield, 270,000,000 bushels; 1915 crop, 345,163,000 bushels.

Total all wheat estimated, 759,000,000 bushels; 1915 crop, 1,004,277,000 bushels; condition July 1, 79.9.

Corn—Condition July 1, 82; estimated yield, 2,866,000,000 bushels. In 1916 the actual yield of corn was 3,026,000,000 bushels and in 1914 the yield was 2,673,000,000 bushels.

Oats—Condition July 1, 86.3; total estimated yield 1916, 1,317,000,000 bushels. Last year the oats yield was 1,517,000,000 bushels and in 1914, 1,141,000,000 bushels.

The Window Glass Situation.

Conditions in the window glass market are unchanged from the last report and the market continues strong. Stocks of glass are considerably less than last year, the American Co. reporting that its warehouses contain 550,000 boxes less than a year ago. Prospects for a continuance of favorable conditions now prevailing are excellent.

Trade in the Middle Northwest.

Conditions as reported by the factories and distributing houses of Minneapolis and St. Paul are exceptionally good. The factories there are doing a good business in special work and they are finding more or less demand for their stock items as well, but it is mostly for local delivery. The crop situation in the northwest has improved and prospects for late summer and fall trade are decidedly favorable.

Features of Eastern Trade.

The factories and wholesale houses in the east are generally reporting a better demand for their goods than they had believed would be shown at this season. The factories are busy getting out regular and odd work for buildings that have reached the stage where the material is needed. A good trade is reported at Baltimore, where building operations are of encouraging proportions. Distributers in the Metropolitan district are having a good demand for all tiems, and building oprations there are going ahead actively.

The Pacific Coast Situation.

The door factories at Tacoma and elsewhere in the northern section along the coast are running at normal speed and find that they are able to dispose of their products for eastern shipment without difficulty. At San Francisco and throughout that district the demand for pine doors in both the finished and knock-down product is keeping up strongly, and considerable new business is coming forward from eastern and middle western jobbers.

Two Door Men on the Coast.

Among the sash and door men who attended the triennial conclave of the Knights Templar at San Francisco last month were L. L. Abbott, of the Roberts Sash & Door Co., and William L. Sharp, formerly manager of the old firm of E. L. Roberts & Co., this city. Mr. Sharp was elected to the eminent position of grand sword bearer in the Grand Commandery of the United States. Both gentlemen were feeling unusually happy upon their return to the city, July 1, owing to the fact that the drill corps of the Englewood Commandery, of which they are members, won the first prize, a $5,000 solid silver libation set, in the prize drill, which was contested for by many commanderies throughout the country. The Englewood boys also won the pennant, which is contested for every three years by the various commanderies. Messrs. Sharp and Abbott visited among their old friends in the sash and door trade of the west and reported a good run of orders at hand.

Southwestern Trade Prospects.

A satisfactory volume of business is being done by the local sash and door factories at both St. Louis and Kansas City. Few orders are coming from the country. Most of the business now being done comes from the local trade. This is caused by the backwardness of the work on the farms and the farmers are not ready to make improvements. It is likely to get better, however, at almost any time. The leading concerns are looking forward to a good, active demand shortly, as crop conditions are improving and the prospects for trade are in harmony with them.

General News of Associations and Clubs

NORTH CAROLINA MANUFACTURERS.

The North Carolina Pine Association held its regular monthly meeting at the Monticello Hotel, Norfolk, Va., Thursday, June 22, with thirty-five members present. This was not as large a representation as had been expected, mostly on account of the rather depressed condition of the market. It is noted that when demand is good and prices are strong the attendance at these meetings is usually large, but with a weak market, when every member ought to attend for the purpose of ascertaining conditions, the attendance is light.

The meeting was called to order by President A. R. Turnbull. He called upon Secretary W. B. Roper for a report of the meeting of the National Lumber Manufacturers' Association at Chicago and this was added to by the report of President Turnbull, who also attended.

One of the principal matters discussed at the meeting was the appointment of a committee, composed of John M. Gibbs, Charles Hill and W. B. Roper, who were instructed to investigate the manufacture of ready-cut houses, with the objects in view of establishing a plant at Norfolk and the organization of a stock company. President Turnbull stated that Mr. Roper and himself had lately had a conference with a gentleman in New York regarding the project and that they were very favorably impressed with the idea. Other manufacturers had also received it with favor. The committee is expected to report on the subject at a later meeting.

An invitation from the Southern Forestry Congress for the members to hold its July meeting at Asheville during the session of the congress there July 11 to 15 was received and it was decided to hold the meeting at Asheville, but the date was not fixed, being left to the president and secretary.

CONVENTION DATES.

July 11-15—Southern Forestry Congress, Asheville, N. C.

July 12-13—Pennsylvania Lumbermen's Association, Williamsport, Pa. Semi-annual meeting.

July 11-15—North Carolina Pine Association, Asheville, N. C. Monthly meeting.

July 25—Georgia-Florida Sawmill Association, Jacksonville, Fla. Monthly meeting.

August 8-10—National Commissary Managers' Association, Hotel La Salle, Chicago. Seventh annual meeting.

August 23-25—National Association of Box Manufacturers, Belmont Hotel, New York, N. Y. Midsummer meeting.

(Later the same date was fixed—July 11 to 15.)

An export committee was appointed to look into the export lumber trade, consisting of J. L. Camp, F. E. Waters and C. I. Millard. This was the result of communications received from the American Steel Export Co., of New York, and from the manager of the American department of the Reconstruction Exposition, Paris, France. The New York concern advised that it had opened up a department in connection with its regular business for the purpose of handling lumber and other supplies destined to South American points and requested prices on North Carolina pine and names of mills in position to ship stock into that territory.

A. T. Gerrans, chairman of the inspection committee, stated that the question of adopting the southwestern standard of manufacture and matching had been thoroughly discussed by his committee and recommended that a representative be sent to various points in the northern and eastern states to investigate thoroughly and ascertain what the buyers were getting.

R. A. Parsley, Wilmington, N. C., favored the adoption of the southwestern method of matching. Many of the members also spoke on the subject. The recommendation of the inspection committee relative to appointing a representative to visit the northern and eastern states was adopted and a man will be secured at once to make the investigation.

A vote of thanks was extended to the embargo committee, of which C. I. Millard is chairman, for the good work done in handling the embargo situation for the North Carolina pine manufacturers.

PRODUCTION AND MOVEMENT OF NORTHERN PINE.

Minneapolis, Minn., July 7.—Production of northern pine lumber for the first five months this year totaled 206,633,256 feet as compared with 172,926,425 feet for the corresponding period of 1915, an increase of 33,706,831 feet. Shipments, however, were larger than production, the total for five months being 397,373,692 feet as against 257,068,644 feet, a gain of 140,305,043 feet. As reported by Secretary H. S. Childs, of the Northern Pine Manufacturers' Association, May production was 113,701,997 feet or 5,000,000 feet more than in May, 1915. May shipments for the current year amounted to 94,374,802 feet, or 25,000,000 feet in excess of May shipments of last year. Production for May this year is the largest month of 1916, and was the first month showing production in excess of current shipments, allowing stocks to accumulate.

Organization of California and Inland Empire Pine Manufacturers

A conference of lumbermen manufacturing western pine in the entire territory comprising Idaho, Montana, eastern Washington, eastern Oregon and California, was held at McCloud, Cal., on June 20 and 21. The conference was arranged for by Harold D. Mortenson, of Klamath Falls, Ore. president of the California White & Sugar Pine Manufacturers' Association and by Frederick F. Sayre, manager of the California Sugar & White Pine Co., and resulted from a trip through the western pine producing district of California by the pine experts of the two sections. The visitors were headed by George Shields, chief inspector of the White Pine Manufacturers' Association, of Spokane, and he was accompanied by five superintendents of plants located in the Inland Empire. The party visited the principal California mills during a period of two weeks and wound up their trip at McCloud. Here they were met by a number of manufacturers operating in California and an informal conference was held, which may result in the consolidation of the several manufacturers' organizations.

The experience which the Inland Empire lumbermen enjoyed at the various mills in California has been of great benefit to them and will undoubtedly result in a unification of grades as between the Spokane district and California mills.

The Western Pine Manufacturers' Association has invited the California manufacturers to become a part of its grading bureau and this matter will be decided upon at the midsummer meeting of the California men to be held at Bend, Ore., during the first week in August.

The visiting lumbermen were entertained at the new hotel at McCloud and also at the handsome summer residence of John H. Queal, president of the McCloud River Lumber Co. Mr. Queal's residence was not occupied, as his family was absent and the lumbermen were invited there for the conference.

Manager Fred F. Spencer, of the McCloud River Lumber Co., expressed the pleasure of the McCloud lumbermen of having the outside lumbermen as guests. The sentiment was responded to by A. W. Laird, of Potlatch, Idaho.

Harold D. Mortenson, president of the California White & Sugar Pine Manufacturers' Association, presided at the conference. J. P. McGoldrick, of Spokane, explained what the Inland Empire manufacturers had accomplished by organization. George Shields, chief inspector, stated that he had not found any great difference in the grades made at the mills of the two sections, but he said that there should be brought about uniform grades. He believed it possible to make uniform grades in the two territories.

Thomas A. McCann, of the Shevlin-Hixon Co., Bend, Ore., expressed his hope that one great association of western pine manufacturers could be brought about which would take in the manufacturers of that product throughout the entire western country from New Mexico to Montana. He thought it might be convenient to establish headquarters at Portland, Ore. The local organizations could be continued and would devote themselves to the solution of their own local problems. He expressed his belief that the time had arrived to form a general association in order to bring about uniformity in manufacture, sizes, grades and nomenclature, so that eastern buyers would not be confused in buying pine from different sections of the west.

W. C. Landon, of Klamath Falls, formerly of Wausau, Wis., said that when he came to the west he had been surprised to find no organization of manufacturers of California pine but he was now glad to see that one has been formed, as there was a great opportunity offered to forward the industry in unifying grades and selling methods.

W. R. Thorson, of Tuolumne, Cal., favored one large organization, but said that the local associations could take care of their own local problems.

A. W. Laird expressed his belief that many of the differences in grading now existing between the two sections could be adjusted and he believed co-operation to be necessary. More had been accomplished in the Inland Empire during the last three years than ever before. He predicted that the demand would be rather quiet during the next month or so and hoped that manufacturers would hold their prices firmly. The labor situation alone was almost sufficient to prevent over-production, but to this should be added mutual confidence. He thought that everything pointed to a good business in the future.

D. H. Steinmetz, of Sonora, Cal., suggested that the inspectors from the two sections should confer together further, and this was decided upon.

President Harold Mortenson outlined the work of the new California association. He said that already 660,000,000 feet of production out of 850,000,000 feet had been signed for membership. He had all along hoped that there could be one general association for both the California and Inland Empire manufacturers.

T. A. McCann invited all of the California manufacturers to attend the meeting at Bend in August and Mr. Mortenson stated that the Inland Empire attendants would be invited to come down to Klamath Falls after the Bend meeting for a visit.

Lumbermen who attended this conference were sanguine that its results would be of great benefit to the western pine industry and that finally the union of the two associations would be effected.

GUM MANUFACTURERS IN SEMI-ANNUAL

Enthusiasm Shown in Advertising Campaign—Unanimous Vote to Increase Assessment—Gratifying Increase in Membership

Memphis, Tenn., June 24.—A well attended and interesting meeting of the Gum Lumber Manufacturers' Association was held at the Hotel Chisca in this city today. It was the regular semi-annual meeting and the reports presented were of a most satisfactory character.

When President Harry B. Weiss, of George C. Brown & Co., Memphis, called the meeting to order there was an attendance of seventy-nine members and visitors, a fact which alone speaks for the increased membership and the growth of enthusiasm in the association.

INCREASED ASSESSMENT FOR ADVERTISING.

The report of the advertising committee was submitted by John W. McClure, chairman. He stated that the revenues for the current year would be $21,000, but the board of directors had considered that this was about $2,500 less than they should have for the advertising campaign starting July 1. Chairman McClure said that the directors had personally guaranteed this deficit, but according to the by-laws there could be made an assessment of 15 cents a thousand or an increase of 5 cents a thousand over the present assessment and asked the meeting to authorize the increase. The proposed increase in the assessment was carried unanimously.

R. M. Carrier, of Sardis, Miss., chairman of the technical research committee, called the attention of the members to the suggestions made by his committee two years ago and the good results that had followed in the better manufacture and better care of gum lumber. He said that the committee desired to urge upon the members to exercise still greater care, as the inauguration of the new advertising campaign would make it necessary to have everything right up to standard.

Secretary John M. Pritchard presented a statement showing the total stocks of gum lumber in the hands of members of the association.

B. F. Dulweber, of the Kraetzer-Cured Lumber Co., Moorhead, Miss., and Cincinnati, made the statement that while the stocks of some of the items on hand were apparently large, there were others that were very light and that the greater part of the stocks on hand was not ready for shipment, being mostly green and that there was comparatively little stock now ready for delivery to the consumer.

Fred K. Conn, of the Bayou Land & Lumber Co., Yazoo City, Miss., also expressed the opinion that the stocks of dry gum were very light and that there was no reason for any cutting of prices. He said that the stocks averaged only about 1,000,000 feet to each member, whereas a normal stock of 4,000,000 feet to each member could be carried without trouble.

T. W. Fry, of the Chas. F. Luehrmann Hardwood Lumber Co., St. Louis, made a most valuable report on relative values of the different items of gum lumber. Mr. Fry is chairman of the differential committee which has this matter in charge. The report was so illuminating to the members that it was decided to have it issued in pamphlet form in order that all might give it more careful study and that nothing be given out for publication until it was before the members in printed form.

MEMBERSHIP INCREASES FIFTY PERCENT.

Fred K. Conn, chairman of the membership committee, congratulated the association on having passed through a period of depression so successfully. He said, however, that while there was a splendid increase in the membership, there is needed greater activity in extending the markets for gum, as well as for more members. The following new members have joined since January 1: W. P. Brown & Sons Lumber Co., Louisville, Ky.; the Crittenden Lumber Co., Crittenden, Ark.; I. M. Darnell & Son Co., Memphis Tenn.; R. J. Darnell, Inc., Memphis, Tenn.; Dugan Lumber Co., Memphis, Tenn.; East Carolina Lumber Co., New Bern, N. C.; D. H. Hall Lumber Co., New Albany, Miss.; H. H. Hitt Lumber Co., Decatur, Ala.; Holly Ridge Lumber Co., Louisville, Ky.; Issaquena Lumber Co., Issaquena, Miss.; Long-Bell Lumber Co., Kansas City, Mo.; Massee & Felton Lumber Co., Macon, Ga.; J. F. McIntyre & Sons, Inc., Pine Bluff, Ark.; Mossman Lumber Co., Memphis, Tenn.; W. B. Nichols, Clarksdale, Miss.; Penn Sumter Lumber Co., Philadelphia, Pa.; Penrod, Jurden & McCowen, Memphis, Tenn.; Russe & Burgess, Inc., Memphis, Tenn.; Southern Pine Lumber Co., Texarkana, Tex.; Sunflower Lumber Co., Clarksdale, Miss.; Mississippi Hardwood Co., Fort Worth, Tex.; Chickasaw Lumber Co., Demopolis, Ala.; Colfax Hardwood Lumber Co., Colfax, La.; Ward Lumber Co., Chicago, Ill., and Albert N. Thompson & Co., Memphis, Tenn.

Chairman Conn said that this was an increase of 50 percent and all are good concerns, but there are many large manufacturers who are not yet members and these should be secured.

SECRETARY PRITCHARD'S REPORT.

The report of Secretary John M. Pritchard, of Memphis, stated that the European war had resulted in the loss of a market for between 70,000,000 and 80,000,000 feet of gum lumber annually, which left the American market overstocked, with only a moderate demand. However, the members of the association had found outlets for their product, had discovered new buyers and had increased the volume of gum lumber sold in the United States by about 100,000,000 feet. He believes that still greater results could be brought about. If arrangements had only been made for keeping up the advertising campaign right along, more profitable results would have been obtained recently. He considered that the time had now arrived when general advertising is necessary, competition is active and there must be a still larger demand for gum lumber to take care of the increase in production.

E. A. Lang, chairman of the advertising committee, had reported to the board of directors that in order to inaugurate the campaign, a larger revenue would be required and the board of directors had adopted the following resolution:

"Resolved, That any amount required in excess of what can be spared from the treasury of the association, which may be required in connection with the campaign referred to, shall be borne by the members of the board of managers pro rata and shall be payable at times and in amounts in accordance with a call from the secretary; this amount to be a credit against future dues."

Secretary Pritchard said that the members of the board had always shown their loyalty to the association and had always been ready to go into their pockets if necessary to carry out any association plans. However, he did not believe that the members should permit the board to bear this extra burden. Secretary Pritchard also referred to the stock report compiled at intervals by his office and uged the members to respond more promptly to the requests for information.

Since January 1, about 250 inquiries for gum had reached the secretary's office, mostly from new users and these inquiries involved about 30,000,000 feet of lumber. This alone made the work of the association of great value to the members. Secretary Pritchard said that it was the intention of the association to send out a list of its membership to all consumers of lumber in the United States and Canada.

GENERAL BOYLE DELIVERS ADDRESS.

General L. C. Boyle, of Kansas City, Mo., was called upon to tell about the work of the Federal Trade Commission. His address was along the line of addresses previously made before other organizations. He especially commended the members of the Gum Lumber Manufacturers' Association for their work and said that they should keep on in their discussion of costs, co-operation and other essentials with a view to still further broadening the demand for gum lumber and its products and believed that this was the intent of the Federal Trade Commission.

The convention adjourned at 3:30 p. m. in order to give the members an opportunity to visit the Memphis Country Club, where various golf contests were indulged in.

WORLD'S SALESMANSHIP CONGRESS PROGRAM.

The World's Salesmanship Congress, which will be held July 10 to July 13 at Detroit, Mich., will, as heretofore announced, devote one of its sessions, that of the afternoon of July 12, to the discussion of lumber salesmanship. The program has been completed, and is as follows:

W. E. Brownlee ....."Welcome"
President Detroit Lumber Board of Trade.

M. B. Nelson ....."Direction of Salesmen"
Sales manager, Long-Bell Lumber Co., Kansas City, Mo.

R. B. Goodman .....
....."Influence of Salesmen on Product"
Secretary and treasurer, Goodman Lumber Co., Goodman, Wis.

Frank N. Snell—
"Salesmen's Hotels, Expenses and Wages."
General manager, Louisiana Red Cypress Co., New Orleans, La.

Harry T. Kendall .....
....."Sales Schools, Courses and Books"
Sales manager, Kirby Lumber Co., Houston, Tex.

Alex Hamilton...."Ethics of Salesmanship"
President National Association Traveling Lumber, Sash & Door Salesmen.

In addition to the above, an address will be delivered by Edward Hines, of Chicago, on Tuesday morning on the subject of "Loyalty," and on Tuesday afternoon Secretary George E. Watson, of the Southern Cypress Manufacturers' Association, New Orleans, La., will speak on "Price Maintenance."

It is expected that Robert H. Downman, of New Orleans, president of the National Lumber Manufacturers' Association, will preside at the lumbermen's session Wednesday afternoon.

BUFFALO LUMBERMEN AT PLAY.

Buffalo, N. Y., July 7.—The Buffalo Lumber Exchange followed an old custom on June 27 in taking the Crystal Beach steamer for the Canoe Club for its annual outing. This step was made necessary by the receipt on the part of each member of a very ominous yellow invitation formed and figured after the fashion of a phonograph record, and either that or the general inclination of the people brought out about fifty, including a number of ladies. It is getting quite popular to invite the ladies, and their presence increased the use of the fine tennis court attached to the club house.

The usual games were well taken care of, not excepting some very lively billiard games inside and the uproarious exercising of the institution piano. The Buffalo lumbermen sing well, if they do sing something like a cyclone, when they all get started together. The baseball game was in quite regulation style, and it was well played, even if one old member did say that it was entirely without feature. This remark probably means that nobody threw the ball over the next fence, or fell down in passing third base. The home run did not materialize, but the double play did and the war upon the umpire, Henry I. George, was as constant as usual. Let it be said, however, that Henry I. George made an umpire that not even I. N. Stewart could walk upon for any length of time. When he said "out" it was out, and would have been if there had been fifteen nines, instead of two, arguing with him. A. W. Kreinheder and I. N. Stewart, both being bloated city officials, made up the aggregation, but Stewart picked the best men and won, 20 to 15, in an entire nine-inning game.

Hugh McLean always manages the table at the Canoe Club, he being an old member, with summer residence nearby, and his Restigouche salmon was quite as toothsome as on former occasions.

NATIONAL MANUFACTURERS TO MEET.

The annual meeting of the stockholders and directors of the National Lumber Manufacturers' Association will be held at the Congress Hotel, Chicago, July 11, 1916, at which time officers for the ensuing year will be chosen and other important business transacted. President Downman has called meetings at the same time and place of the advisory committee of the trade extension department, the advisory committee of the Inter-Insurance Exchange, and the stockholders of the Forest Products Exposition Co., in order that all phases of national activity may be considered.

By authority of the board of directors, the National Lumber Manufacturers' Association has joined the Chamber of Commerce of the United States, and President Downman has been designated a national councilor of the chamber.

The stockholders of the National Lumber Manufacturers' Association have elected A. T. Gerrans, New Berne, N. C., as a director, to fill the vacancy caused by the death of James A. Freeman, and A. R. Turnbull, Norfolk, Va., succeeds Capt. Nathan O'Berry, Goldsboro, N. C., who has resigned as a director. The directors have chosen John W. Blodgett, of Grand Rapids, Mich., as treasurer, a position vacant since the death of Mr. Freeman.

TEXAS LUMBERMEN PROTEST INCREASED INSURANCE.

That the lumbermen of Texas would not be found wanting in the contest being waged by the organized insurance interests of that state when the matter of increased insurance rates came up for hearing before the state fire insurance commission, was a foregone conclusion. Among those who appeared at the hearing on behalf of the lumber interests were Thomas A. Griffith, of Dallas, president of the Texas Lumbermen's Association; F. L. Hillyer, of San Antonio; Ernest Steves, of San Antonio and G. A. Zimmerman, of the Wm. Cameron Co., Waco.

In his statement before the commission, Mr. Zimmerman said that the present rates were high enough. If the insurance people desire a penalty placed on shingle roofs and wooden construction, the greatest natural resource of Texas will be materially damaged and building development arrested. Mr. Zimmerman also opposed the general advance as suggested by the insurance companies of 33⅓ percent. He further said that if the wooden shingle is penalized, not only will the price of substitutes be raised by reason of the law of supply and demand, but the supply thereof will not be sufficient for the needs. Mr. Zimmerman was cross examined by Attorney Thompson, representing the insurance interests, regarding the conflagration hazard in using shingles. Mr. Zimmerman stated that he had never seen any figures showing that shingles were responsible for any particular percentage of conflagrations. He also stated that in the matter of replacing the shingles by other kinds of roof the original investment must be taken into consideration. He said that his experience had been that the companies did not make careful inspection of their risks and the insurance attorney objected to this statement.

Mr. Hillyer stated to the commission that he was not there in defense of the shingle or the lumber business particularly, but he did not believe that an additional charge should be made at this time which would penalize the small home owners and put an additional financial burden upon the class of people who cannot afford it. He opposed a penalty on shingle roofs and made the statement that if the companies had to have more money that they should raise the rates on the classes of risks that could afford it. He severely criticised the methods used by the insurance companies. Mr. Hillyer said that he did not believe in the public policy of allowing a charge against the poorest class of homes such as would result if the additional penalty on shingle roofs be imposed.

HARDWOOD MANUFACTURERS' STOCK REPORT.

The monthly report of stocks of oak, poplar, chestnut and cottonwood lumber on hand at mills reporting to the Hardwood Manufacturers' Association of the United States, is a most elaborate compilation and only an index of its contents can be presented herewith.

In plain white oak there were stocks on hand May 1 at the eastern mills of 22,606,000 feet, and at the southern mills of 15,425,000 feet, a total of 38,031,000 feet. On June 1 there were stocks at the eastern mills aggregating 7,798,000 feet, and at the southern mills aggregating 15,350,000 feet, a total of 39,468,000 feet. This shows an increase of 2,226,000 feet, or about 7 percent.

In plain red oak there were 3,406,000 feet on hand May 1 at the eastern mills and 13,508,000 feet on hand at the southern mills, making a total of 16,914,000 feet. On June 1 there were on hand 3,623,000 feet at the eastern mills and 12,866,000 feet at the southern mills, making a total of 16,489,000 feet. This shows an increase on June 1 of 6.3 percent in the eastern mills and a decrease of 4.4 percent at the southern mills.

Quartered white oak shows an increase of one-tenth of 1 percent at the eastern mills and 4.4 percent at the southern mills. Quartered red oak shows a decrease of 1.7 percent at the southern mills and 4.4 percent at the eastern mills.

Poplar, manufactured at the eastern mills, shows a decrease in stocks of 801,000 feet, or 5.7 percent. In chestnut, manufactured at eastern mills, the report shows a decrease of 5½ percent in stocks and in cottonwood manufactured at the southern mills an increase of 9.3 percent in stocks for the month.

FACTS ON WOOD CONSTRUCTION.

The National Lumber Manufacturers' Association has just issued its engineering bulletin No. 2 on "Heavy Timber Mill Construction Buildings," by C. E. Paul, construction engineer. The pamphlet which consists of seventy-two pages, gives complete detailed information regarding mill construction, with drawings and photographs illustrative of each step in the work, together with formulas and designs adaptable to various types of construction. The edition was printed as a special number for the members of the National Fire Protection Association.

WEST COAST ORDER FILE.

The weekly report of order file and shipments of the West Coast Lumbermen's Association for the week ended June 24, was issued June 27 and gives the figures from 10 operating mills, having a six-day, 10-hour capacity of 75,290,000 feet of lumber and an actual production of 56,324,762 feet. During that week the shipments exceeded the orders by 8,754,000 feet; the cut exceeded shipments by 5,471,000 feet, and the production exceeded the orders by 10,492,000 feet.

For rail trade, only, the figures were:

	Cars
Orders on hand June 17	5,677
Orders accepted week ending June 24	1,628
Total	7,305
Orders shipped week ending June 24	1,684
Balance of orders on hand	5,621

For the cargo trade the orders on hand June 17 were 56,016,602 feet for domestic shipment and 26,695,012 feet for export. Orders were accepted for shipment during the week ended June 24 for 1,489,500 feet domestic trade and shipments were made to the domestic trade during the same week of 4,314,431 feet, leaving a balance of orders on hand, June 24, of 51,236,671 feet. In the export trade there were accepted during the week ended June 24 orders for 3,643,000 feet and shipments were made of 605,000 feet, leaving a balance of orders on hand for export of 29,733,012 feet.

PITTSBURGH LUMBERMEN HOLD OUTING.

One of the most enjoyable outings that the lumbermen of Pittsburgh ever held was on Saturday, June 17, at Idlewild Park, about thirty-five miles from town. The party, which was composed of 250 lumbermen and their employees, went in special cars and took on many lumbermen from the towns along the route.

The committee in charge of the affair was composed of J. P. Garling, J. W. Rodgers and C. B. McCreight, representing the wholesalers and H. E. McBride, W. H. Williams and Carl Van De Vort, of the retailers.

A baseball contest between the wholesalers and retailers was won by the wholesalers in three innings. Another game headed by J. B. Montgomery for the wholesalers and E. A. Debolt, for the retailers, was won by the retailers. A third contest called the "championship" was led by C. B. McCreight for the wholesalers and W. E. Ahlers for the retailers. This was captured by the wholesalers in a game of five innings.

WEST COAST SHINGLE GRADING.

The shingle branch of the West Coast Lumbermen's Association states that it has received inquiries lately for shingles from Russia, China, Japan and the Society Islands, all of the inquiries containing the suggestion that markets could be developed in these countries with a little practical promotion work on the part of the shingle manufacturers.

The governing board of the shingle branch of the association has yielded to the request of many retail dealers from all parts of the United States that it extend the trade-marked "Rite-Grade" service to various popular shingle plants and an announcement has gone out to the trade to the effect that extra clear and extra "A" shingles can now be purchased under the Rite-Grade brand of quality guarantee.

In order to avoid possible confusion the manufacture of the former Rite-Grade select shingle will be discontinued. A revision of the grading rules has been made covering the extension of Rite-Grade service as follows:

18"—Rite-Grade Perfects—random widths, but not narrower than 3"; twenty courses to measure full 9" when green. To be strictly clear and vertical grain and free from sap.

16"—Rite-Grade Perfects—random widths, but not narrower than 3"; twenty-five courses to measure full 10" when green. To be strictly clear and vertical grain and free from sap.

16"—Rite-Grade Perfects—6/2 random widths, but not narrower than 3"; twenty-five courses to measure full 8¼" when green. To be strictly clear and vertical grain and free from sap.

16"—Rite-Grade Extra Clears—random widths, but not narrower than 2½"; twenty-five courses to measure full 10" when green. Ninety percent to be clear, remaining 10 percent admit slight defects 12" or over from the butt.

16"—Rite-Grade Extra "A"—random widths, but not narrower than 2"; twenty-five courses to measure full 8¼" when green. Eighty percent to be clear, remaining 20 percent admits defects 10" or over from butt.

16"—Rite-Grade dimensions—5" wide. Made under specifications for above 16" grades; must be strictly clear.

All shingles must be well manufactured.

18"—Rite-Grade shall be packed 20-20 courses to the bunch, 5 bunches to the M.

16"—Rite-Grade shall be packed 25-25 courses to the bunch, 4 bunches to the M.

Dimension Rite-Grade shall be packed 24-24 courses to the bunch, 4 bunches to the M.

All shingles to be packed in regulation frame 20" in width. Band sticks not less than 19½" long.

Openings shall not average more than 1½" to the course.

Every bunch shall be branded with full name of the grade as stated in these rules.

Color of wood is not a defect.

All shingles to be packed in straight courses.

One inch under and over in length admitted.

Any shingle not over ¼" off parallel shall be considered parallel.

Not over 4 percent off grade admitted for discrepancy in inspection.

NATIONAL HARDWOOD ASSOCIATION.

The monthly report of inspection for May, 1916, of the National Hardwood Lumber Association has come to hand since our last issue. It shows inspections made by salaried inspectors during the month of 9,774,076 feet and by fee inspectors of 3,617,290 feet, a total of 13,391,316 feet. The monthly bulletin shows that the following applications for membership have been received since the last issue of the bulletin:

Arthur J. Zipp Lumber Co., Grand Rapids, Mich.
Johnson Lumber Co., Milwaukee, Wis.
Nadeau Brothers, Nadeau, Mich.
Little Lake Lumber Co., Forsyth, Mich.
Flambeau River Lumber Co., Ladysmith, Wis.
C. C. Collins Lumber Co., Rhinelander, Wis.
J. S. Stearns Lumber Co., Odanah, Wis.
Geo. W. Hartzell, Piqua, Ohio.
Weaver Bros., Shreveport, La.
Caflisch, Spicker, Alling & Co., New York, N. Y.
E. L. Edwards Lumber Co., Dayton, Ohio.
Travis Lumber Co., Grand Rapids, Mich.
S. B. Vrooman Co., Ltd., Philadelphia, Pa.
A. M. Richardson Lumber Co., Helena, Ark.
Carr Lumber Co., Pisgah Forest, N. C.
Crossett Lumber Co., Crossett, Ark.
Gall Lumber Co., Ltd., Toronto, Ont.
Johnson-Tustin Lumber Co., Memphis, Tenn.
S. C. Major & Co., Memphis, Tenn.
Stratemeyer Lumber Co., Cincinnati, Ohio.
Hines Lumber Co., Memphis, Tenn.

SCHOOL OF SALESMANSHIP AT ST. LOUIS

New Idea in Lumber Conventions Attended by More Than Five Hundred Lumbermen —Valuable Contributions to Lumber Knowledge by Distinguished Lumbermen and Sales Experts—Will be a Permanent Feature

St. Louis, Mo., June 28.—One of the most unique gatherings and one without parallel in the history of business competition in the commercial world, was the School of Salesmanship, which was in session for three days, June 26, 27 and 28, at the American Theatre, this city.

Representatives of the great yellow pine manufacturers, under the auspices of the Southern Pine Association, united for the purpose of showing not only to the lumber salesmen, but to wholesalers, retailers and others interested in the lumber industry, the many undeveloped opportunities for increasing lumber sales and promoting trade expansion.

It was the first time that nearly all competitors in one product joined in an effort to increase its sales.

An opportunity was given to show the best methods for realizing their opportunities, to get in closer touch with their fellow salesmen by exchanging ideas, to get the manufacturers and salesmen closer together, so all might have a clearer understanding of methods of manufacture and sales, and to show the evils of incorrect cost accounting.

When it is taken into consideration the loss of time, orders, etc., of the five hundred salesmen gathered together in St. Louis at the School of Salesmanship, it is estimated that the cost of the meeting to the Southern Pine Association and the firms which sent their men to attend was nearly $75,000.

MONDAY MORNING'S SESSION.

Harry T. Kendall, of the Kirby Lumber Co., chairman of the committee on sales and distribution of the Southern Pine Association, called the meeting to order promptly at 9:30. Rev. Dr. W. C. Bitting, pastor of the Second Baptist Church, gave an invocation.

George W. Funck, president of the Lumbermen's Exchange of St. Louis, was introduced by Chairman Kendall, and on behalf of the Lumbermen's Exchange and the City of St. Louis, welcomed to the city all those attending the meeting. He introduced Julius Seidel, president of the Julius Seidel Lumber Co., and Snark of the Universe of the Concatenated Order of Hoo Hoo, to make the welcoming address.

MR. SEIDEL'S WELCOME.

Mr. Seidel extended a hearty greeting in behalf of the city of St. Louis and also the St. Louis lumbermen. He said it had been a long time since there had been such a gathering of lumbermen in St. Louis. It was like a home-coming to have the lumbermen back again. He said everything would be done to make them enjoy themselves if there was any time left, for the program is a long one.

Mr. Seidel said it was quite proper to make a strong appeal for the use of woods where formerly there was an individual kind used. He said St. Louis was primarily a white pine market and he knew the industry's progress after the southern pine woods were introduced and found their way to this market.

Mr. Seidel then presented a large wooden key to Mr. Kendall, with the remark that he gave him the key to the city, but he did not give him a night latch. He also presented a gavel, the handle of which and the turned part was made of long leaf yellow pine, denoting immense strength. The other part of the gavel was made of maple, denoting endurance. On the end, there are the letters, "S. O. S.," which refer to the body of men assembled and denote intelligence. Mr. Seidel concluded by saying this was the initial meeting, but these meetings must be continued, and he hoped the next meeting would be held in St. Louis. He wanted it to be known that St. Louis will always welcome the association and will do everything it can to bring it back.

Chairman Kendall responded to Mr. Seidel and said the hearty welcome was appreciated. He said St. Louis was the one place to come to. He then stated that the School of Salesmanship given under the auspices of the Southern Pine Association had a purpose which should be understood. Mr. Kendall then read a statement covering briefly what was to be done in St. Louis.

Charles S. Keith, organizer and first president of the Southern Pine Association, was introduced by Chairman Kendall.

CHARLES S. KEITH'S ADDRESS.

Mr. Keith did not have a prepared address, but said the Southern Pine Association was first organized for the purpose of educating its individual members and educating the public. "We were then confronted with the impression," Mr. Keith continued, "that there existed in the minds of the people in this country that there was a 'lumber trust.' And yet all of us know that for the past ten years, no man in the business has really made a dollar. We first undertook to educate the public that there was no 'lumber trust.' We undertook to do this in a campaign of publicity in advertising and presenting the facts of our industry before the Federal Trade Commission. We have accomplished our purpose. We haven't seen anything in the papers now for over a year about a 'lumber trust.' I think we have educated the public as well as the Federal Commission that there is no 'lumber trust.' "

Concluding, Mr. Keith said that there was a time

CHAIRMAN H. T. KENDALL, OF HOUSTON, TEX.

when it could be said that competition was the life of trade, but it was not so today. There must now be co-operation and a working together. There were no secrets in the lumber business and the more a fellow salesman was helped the better.

SECRETARY RHODES ON ASSOCIATION MATTERS.

J. E. Rhodes, secretary-manager of the Southern Pine Association, New Orleans, told "What the Southern Pine Association Is." He stated that it was a corporation organized under the laws of Missouri for the purpose of selling certain service to subscribers. The service of the association is sold like that of a mercantile rating agency to any person who desires it, but it is of a special value to the manufacturers and wholesalers of southern pine only. He then told what the association stood for; told of the inspection service, of the statistical service and other services. He said that one of the most recently appointed committees is that of sales and distribution, under whose auspices the school of salesmanship is being held. While the association has established the various departments mentioned, it seemed highly desirable to bring about the co-ordination of the sales representatives with this whole field of activity.

MR. KREBS SPEAKS ON CHARACTER JUDGING.

Stanley L. Krebs, of the Institute of Mercantile Art, Philadelphia, gave an address on "Character Judging As a Business Asset." Mr. Krebs attributed great economic importance to good salesmanship, and particularly to the United States under the conditions arising from the war. "Salesmanship is a science today," declared Mr. Krebs, "and when I use the word 'science' I use it in exactly the same way as I would speak about the science of chemistry or the science of astronomy.

"The world is doing just five things. That simplifies the work of the world. Every man, if he is creating happiness, is doing one of those five things and the purpose of everything is human happiness. Human happiness is the highest motive we can work for, and when you are selling goods to a customer you are creating happiness. These five things are production, distribution, government, education and religion, arranged in the order of their business importance or the relative monetary investment. Every man and woman is engaged in one of these activities. If he is not, he ought to be locked up, because he tends to spread human misery by the thing he is doing, if he is not doing one of these five. There are five normal human activities, there are five permanent necessary fundamentals, always present, elements in salesmanship. First, there must be the salesman, and then there must be a customer. These are the two human elements, the salesman trying to persuade the customer to think as he does about his merchandise or his proposition. Then we have the goods, the money and the sale."

MONDAY AFTERNOON'S SESSION.

The afternoon session opened with the reading of quite a number of questions that had been handed in for answer. They were answered briefly by Dr. Herman von Schrenk, the consulting engineer of the association.

M. B. NELSON'S ADDRESS.

An address on "Co-operation with Distributers and Consumers," was presented by M. B. Nelson, general sales agent of the Long-Bell Lumber Co., Kansas City. "There is no other manufactured commodity produced in the world to which as little thought and study is given to the merits of its uses or promotion by the manufacturers and distributers, as is given to lumber," he stated, "especially yellow pine." The sales organization, he said, was more to blame for this than any other department of the business. He mentioned how the association could be used for business ends; how it could disseminate information to the retailer and others; could organize the architects, engineers and builders in large cities and towns, where the consumption of lumber is governed by these three. Every salesman should be familiar with the building code of every city in his territory, and if there is anything in the code that is detrimental to the interests of the lumbermen, the salesmen in that section should get together and organize for the purpose of seeing that the discrimination is corrected. The retailers and consumers should be impressed with the fact that while the association is organized and maintained by the subscribers, it is organized for the purpose of benefiting the retailers and consumers of lumber, and they are requested to make use of it in any direction they will be benefited. The Southern Pine Association should be made the first of its kind, not only in the United States, but in the world. It can be done if all will set about it and pull together.

FINISHING YELLOW PINE.

An address not on the set program on "What is the Best Method for Finishing Yellow Pine for Interior Use," was given by R. H. Brooks, manager of the Arkansas Soft Pine Bureau, Little Rock. He stated that few laymen understood that there are species of long and short leaf, loblolly, etc., and that each of these is a specific wood for specific purposes. Nearly every one regards all southern pine as a hard, resinous wood suitable for interior use only in cheap buildings, where low cost takes precedent over artistic effect. "Does it therefore not seem to you, gentlemen," Mr. Brooks said, "that there are a great many things which you can tell your dealer friends about finishing that many of them do not know and which would be of great value to them as merchants as well as to you as salesmen? Isn't it also true that by taking this

Digitized by Google

information to your trade, and at the same time letting your customers know that you sell a wood best adapted to finishing, that the dealer will become so interested in what the stock will do for his customers, that your price will be a secondary consideration?"

Secretary-Manager Rhodes next read an address by H. S. Gardner, consulting engineer of the National Paint Manufacturers' Association, Washington, the writer being absent. It consisted of a number of lantern slides showing the painting and finishing of yellow pine. The slides were thrown on a screen while the descriptions were being read by Mr. Rhodes.

MR. BARRETT ON SALESMANSHIP.

An address on "Salesmanship" was made by D. M. Barrett, editor of the Salesmanship's Magazine and also general chairman of the World's Salesmanship Congress to be held in Detroit, Mich. The speaker gave a lot of information in what he said. He told of the attributes that go to make a salesman. He stated that salesmanship was the act of growth. He went after the foes of big business, showed the ignorance of the public generally in regard to matters of this kind. Mr. Barrett held the attention of his audience during his rather lengthy address and when he had finished, they wanted more.

ADVANTAGES OF A TECHNICAL EDUCATION.

The closing address of the afternoon was made by S. C. Robinson, Columbus, Ohio, on "Advantages of a Technical Education in the Lumber Business." He told of the technical training he had received

MANAGER J. E. RHODES, OF NEW ORLEANS, LA.

in the lumber business and said he thought it was worth the time and money expended. He told of his many experiences. After all, he said, the greatest value he found in his technical training was in using it constantly and in an indirect manner. He believed that a technical training, a short course, dealing with structure, texture, strength, hardness, durability, etc., of wood, the study of every tree species of commercial importance in the United States and maladies to which trees and wood are subject, would be beneficial to all who control the lumber industry of the country.

TUESDAY MORNING'S SESSION.

When the meeting was called to order by Chairman Kendall, he stated that the preparation of the address on "Stumpage and Logging Costs," which P. C. Rickey, of the Long-Bell Lumber Co., Kansas City, had been asked to prepare, had been delayed, so Frank Schefflin, of the Central Coal & Coke Co., Kansas City, would give an address on the same subject.

STUMPAGE AND LOGGING COSTS.

In part Mr. Schefflin stated that the difference in stumpage between log scale and board measure caused by overrun is probably one of the most mooted questions in the lumber business, as it is affected in so many ways by a diversity of causes. First the different log scale rules in themselves give different results as to overrun and then the same rule applied in different ways produces different results as to overrun. Overrun is further affected by the method of deducting for defects in logs, by the manner of slabbing, by the character of edging done and by the judgment of the trimmer man in trimming the lumber and, of course, by many other causes too numerous to mention. Much could be said in connection with logging costs, but they are subject to greater variations than are the costs in the manufacturing end of the business, being affected by the natural conditions which ingenuity and efficiency cannot overcome.

CO-OPERATION WITH ARCHITECTS AND BUILDERS.

Jason F. Richardson, jr., of Ottawa, Ill., made an address on "Co-operation with Architects and Builders."

Mr. Richardson advocated closer relationship between the architect and the material man. The former has an influence that is being more appreciated and has become a widening influence. The commendation of architects for manufactured products is being sought with more eagerness than ever. An architect assumes a position of trust towards the owner, to see that money placed in his hands is wisely expended. The owner has the right to the architect's best judgment, his best skill, his best advice, his absolute fidelity and good faith and these conditions must be met before the architect's duty is accomplished. Lumber is coming back, not only for a number of every day uses where substitutes have failed, but for really big things, such as warehouse construction, factories, etc. The general practice is to specify long leaf. He believes southern pine to be the best wood for general building purposes and the strongest and best commercial wood on the market today. In conclusion, the lumberman, Mr. Richardson said, must believe in his materials. It is not hard for the architect to believe in them and why should it be for the lumberman. "If lumber is treated right it will treat you right for years to come."

Ben S. Woodhead, president of the Beaumont Lumber Co., Beaumont, Texas, said that he thought that those present who attended the School of Salesmanship would like to express their appreciation of the entertainment given them on the night previous by the Lumber Press Club. Mr. Woodhead made a motion to that effect and it was unanimously carried.

YELLOW PINE TRADE BAROMETER.

The weekly trade barometer No. 54 of the Southern Pine Association for the week ended Friday, June 30, and issued to the trade July 3, gives the report from 153 mills for the week named. It shows as follows:

	Cars	Feet
Orders on hand	18,493	368,805,899
Orders received during the week	3,644	72,672,292
Total	22,137	441,378,191
Shipments during week	4,514	90,022,702
Balance orders on hand	17,623	351,455,489

This compilation shows that the shipments exceeded the production for the week by 5,624,784 feet; that the production exceeded the orders during the week by 11,725,626 feet, and that shipments exceeded the orders by 17,350,410 feet. The total orders received during the week ended June 16 were 3,759 cars, and for the week ended June 30, 3,644 cars, a falling off of 115 cars as compared with two weeks ago. The orders on hand two weeks ago were 17,697 cars, while this week there were 17,623 cars, only a slight difference. As compared with a month ago, however, the difference is more noticeable, as on June 9 there were 18,914 cars unfilled.

SAW MILL COSTS.

C. J. Mansfield, general manager of the Arkansas Lumber Co., Warren, Ark., gave an address on "Saw Mill Costs."

Mr. Mansfield stated he hoped he could analyze that part of the cost of producing lumber allotted to him, which covers from the log pond to the sorting chain. Any one in charge of a lumber producing plant figures cost continually and then never satisfies himself or his stockholders. "It can't be done." All mills do not use the same methods of figuring cost, hence do not get the same results. The Southern Pine Association is making a strong effort to have all its subscribers figure cost on the same basis and by so doing get at final figures in some way which will enable comparison to be made. This uniform cost accounting undertaking by the association should have the support of every subscriber. The more the salesmen know about the cost of production, the better equipped they will be to sell lumber at a profit and that is what is necessary to make the producing and marketing ends successful.

A paper that was to have been read by O. O. Axley, chairman of the lath committee of the Southern Pine Association, Warren, Ark., on "Yellow Pine Lath," was omitted, but it will be printed in the record of the official proceedings.

YELLOW PINE SHINGLES.

"Yellow Pine Shingles" was the subject of the address of J. H. Eddy, chairman of the shingle committee of the Southern Pine Association, Birmingham, Ala., but owing to the limited time given him, he gave only an outline of the address. In part Mr. Eddy said: "The yellow pine shingle, a valuable by-product of the lumber industry, has been very badly neglected and very sadly abused. With a great natural market at the very doors of the mills and with quantities of material at hand which could, by a simple operation and at small outlay, be turned into a product to perfectly meet the existing demand, the opportunity has not been taken advantage of. Mr. Eddy, told of yellow pine shingles producing a tight and durable roof, of their reasonable cost and easiness of application. Through the use of unsuitable material in the manufacture of shingles, either making them too thin or too wide, the product has been open to criticism. The substitute manufacturers have not been slow to discredit the shingle by charging it with the responsibility for a heavy percentage of the annual national fire loss. The use of any other material than the shingle as a roof covering for the modest home is to decrease the desirability of that home while increasing its cost. There is no known material that can take the place of the shingle, except at greatly increased cost, in usefulness, permanency and beauty.

Secretary-Manager Rhodes presented the weekly barometer of the Southern Pine Association on a large banner. It was No. 53 and when the audience saw the very favorable report it gave, there were hearty cheers given.

CHARLES S. KEITH, OF KANSAS CITY, MO.

Digitized by Google

JUDGING ORDERS.

F. R. Watkins, general sales agent of the Missouri Lumber & Land Exchange Company, Kansas City, made an address on "Judging Orders." He said that lumber combines its producing and selling departments into closer relationship with each other, than any other of the three fundamental industries. It is not customary for a farmer to complete and finish his products ready for the market, or to deal with the grocer or the consumer; and not many mine owners transfer their ore through all processes into stoves, steel rails or silver dollars. It is practically the universal practice, however, in the lumber business, that every step between a tree and finished lumber is within the control of the saw mill and this includes the actual selling process. It is difficult to get up a paper of this kind without causing a suspicion that the sales agents are a bunch of kickers and cannot see anything pleasant in any order, but such is not really the case. The first thing to do towards correcting something that is wrong is to find out what is wrong. This paper may give an insight into some of the points considered by sales departments about the mechanical features of orders and salesmanship that will start such discussion in your own mind and with others as in the end will prove helpful.

At the conclusion of Mr. Hines' address a recess was taken.

Address of Edward Hines on "Lumber Salesmanship"

The address of Edward Hines, of Chicago, on "Lumber Salesmanship," was an admirable resumé of the entire subject, covering in brief the history and development of the lumber business along the Great Lakes and the development of salesmanship from that time. He drew a sharp line of comparison between the situation confronting the salesmen in the old days, thirty-five years ago, and that of today. He said: "I maintain that specialization in salesmanship is indispensable today. Not because I am quixotic and enjoy the perfection of an arduous road, but for the cold matter-of-fact reason that in modern business there is no other road. The one road to successful selling that does [illegible] difficult as it may be, is continually [illegible] narrower and more hazardous. The salesman who starts out selling in any line of business with a determination to make a success of his job will find his gray matter a much better factor than his leg work. If he is going to exchange a standard commodity for cash intelligently and at a living profit, he will have to think to do it and must THINK in capitals, for today mere industry and perseverance, admirable qualifications as they are, are quite as likely to lead their possessor to the poor house as to success. He must put his thinking matter in high gear and keep it there all the time to keep pace with his competitor."

Mr. Hines particularly impressed upon his audience the necessity for a salesman to know all the various characteristics of the lumber he is trying to sell, as well as that of the lumber with which he must compete. He should be able to show a manufacturing customer wherein his own stock might be used to better advantage than the stock the consumer is using at the time. The salesman ought particularly to know what the stock is to be used for, to see it in its finished state, get the dimensions, thickness, width and length. With this knowledge the salesman should be able to size up the situation and furnish the concern with stock cut to the finished lengths and widths which might admit of the working off of old items or irregular stocks, which might be of lesser value, but serve the consumer's requirements equally as well.

He called attention to one important feature, in that lumber has been used for certain purposes of an unsuitable character. The user of the lumber must be educated and the traveling salesman is the best one to do this and to show the dealer that he is not in business for the present, merely, but for years to come. The salesman should be able to explain to his customers, to architects, builders and consumers, the importance of using the particular kind of lumber best suited for any specific purpose, and should give intelligent, practical and honest advice to the retailer.

Mr. Hines continued: "Of the many recognized essentials for successful salesmanship today none stand out so clearly as intelligence, initiative and courtesy—and the greatest of these is courtesy. If in every business institution as much real appreciation, as full credit and consideration were given the employee who radiates sunshine and good cheer with unfailing patience and intelligent sympathy, as to the one who masters severe technical difficulties, the business would be decidedly better, the spirit of loyalty implanted in the heart of everybody and the esprit du corps infinitely benefited."

In conclusion Mr. Hines quoted twelve apt sayings of the late Marshall Field, prince of merchants and salesmen, as follows:

"Study most carefully and take advantage of the value of time.

"The success of perseverance.

"The great pleasure of working.

"Cultivate the dignity of simplicity.

"Carefully consider the worth of character.

"Cultivate, at all times, the power of kindness.

"The influence of example.

"Feel an obligation in doing your duty well.

"Practice the wisdom of economy.

"The virtue of patience.

"Do everything possible to improve your talents.

"Find joy in originating."

TUESDAY AFTERNOON'S SESSION.

The session Tuesday afternoon began with the reading of a number of questions asked by those present and dropped in the question box. They were answered from the platform and quite an animated discussion took place in regard to several of them.

HOW TO COVER THE TERRITORY.

An address on "How to Best Cover the Territory," was made by James H. Heyl, of Columbus, Ohio, representing Eastman, Gardiner & Co., Laurel, Miss. Mr. Heyl stated that time is fast coming when each salesman will have a limited territory that he will be expected to cover thoroughly at least once in every four weeks. With a limited territory, he should make himself familiar with every concern using lumber for every purpose. He told how to lay out the route for the month, to see as many customers as possible but not to hurry too fast, if there is an order in sight. He said it helped to cover the territory best by leaving a good impression. "To sum up," said Mr. Heyl, "work the territory honestly and thoroughly, make the customers glad to see you if they want lumber or not and remember that the man who finds a new use for yellow pine and broadens its market is the fellow who is best covering his territory."

J. Lewis Thompson, chairman of the silo committee of the association, gave an address on the "Wooden Silo." Mr. Thompson, who has devoted much time to the consideration of the silo question in all its details, in the short talk he gave forcefully exemplified the knowledge which he has obtained and his ability to tell it to others to good advantage.

There was a brief talk given on "Mill Construction" by Robert S. Lindstrom, of the Illinois chapter of the American Institute of Architects, Chicago. The paper he was to read, he stated, had been previously published in full. He gave a synopsis of his previous treatment of the subject.

Chairman Kendall asked those present to assemble about the territorial banners that had been given out in order to form territorial organizations. Each territory was then to name a delegate and an alternate, who will act as an executive committee. The object of electing these delegates now was so they could meet before the meeting closed.

LUMBER EFFICIENCY.

A paper on "Efficiency," by R. J. Tolson, of Waco, Texas, was read in the absence of the writer by J. C. Dionne, editor of the Gulf Coast Lumberman. Ben H. Woodhead, of Beaumont, Texas, was selected as a "victim" to have his efficiency tested during the reading of the paper.

Mr. Woodhead was required to rate himself, as to the percentage of his efficiency on 23 points. When the test was finished, it was found that the school had given him an average of 83 percent.

The reading of the paper and the discussion on the percentages was one of the hits of the session.

The following are the twenty-three requisites to make a 100 percent salesman:

1. Health.
2. Energy and industry.
3. Knowledge of yellow pine as a wood.
4. Knowledge of other competitive woods.
5. Knowledge of other building materials.
6. Knowledge of the methods and costs of manufacture.
7. Knowledge of grading rules.
8. Market conditions, prices, etc.
9. Traffic rules and transportation.
10. Knowledge of retail merchandising.
11. Courtesy.
12. Truthfulness and honesty.
13. Self-Control.
14. Confidence in self and your goods.
15. Loyalty.
16. Personal neatness.
17. Truth and judgment.
18. Personality, address and approach.
19. Initiative and originality.
20. Economy and profits.
21. Knowledge of human nature and psychology.
22. Co-operation.
23. Wisdom.

WEDNESDAY MORNING'S SESSION.

There were several changes made in the programme on Wednesday morning, the final day of the meeting, in order to finish on schedule time.

SELLING COSTS.

The first paper to be read was one on "Selling Costs, Direct and Indirect," by W. M. Beebe, manager of yellow pine sales of the Long-Bell Co., Kansas City, Mo.

Mr. Beebe said in part that selling cost, as applied to salesmen, means expense. The use of traveling salesmen is as old an institution as the manufacturers themselves and, aside from the directing head located at the central office, they are the most important factors in the distribution of lumber products. The buyers of lumber wait for the representative to call on them and 95 percent of the lumber is bought of the traveling salesmen or because of his efforts. The buyer usually places his order where he can get the best service and the best goods at the lowest prices, but where many competitors have the same price, quality and terms, the personality of the salesman is usually the determining factor in the placing of the order. In summing up, the salesman who keeps a watchful eye on his expense account and uses his maximum energies in the service of his employer, even though he may not be as bright as others, is the one who will be promoted, while the one possessing a brilliant mind, failing to watch his expense account and serve less loyally his employer, will ever remain a travelling salesman or serve in some other position with less reward.

CO-OPERATION FROM THE SAW MILL.

Charles E. Martin, of the Sabine Lumber Co., Cedar Rapids, Iowa, followed with an address on "Co-operation from the Saw Mill."

Mr. Martin declared perfect co-operation can be gained only through the employment of the highest efficiency applied to the three chief factors governing the marketing of lumber and these three factors should be analyzed, one by one. They are the office, the shipping clerk and the salesman. The sale of lumber is effected through the medium of one, two or a combination of three of these principals, service, quality and price. The salesman, by soliciting only such orders as are desirable to the mill, makes quick service possible. The mill has no good reason for shipping other than high quality and quality embraces not only the right kind of lumber, but the manner in which it is loaded. Good service and good quality pave the way for a good price.

MERITS AND LIMITATIONS OF WOOD.

The address, "Merits and Limitations of Wood," which was set for the day previous, was by E. A. Sterling, manager of the trade extension bureau of the National Lumber Manufacturers' Association, Chicago. Mr. Sterling said wood has many merits, which remain unchanged because the material is

Digitized by Google

the same. The only great difference is in the manner in which wood is used. Customs and manners of living have changed, bringing similar changes in the uses of wood, but not influencing its merits. It can be shipped from places where it grows to regions where it is used quickly. Another merit is that it is easily cut and shipped. Lightness and strength are the other merits. Then there comes a merit which especially appeals to every one and that is the beauty of wood. In considering the merits of wood, we should not shut our eyes to its limitations. Like all good things, it is not perfect. In itself, wood has really no serious limitations. A good salesman will master all of the points relating to the merits and limitations of the product he sells. He should not only know all about wood, but why he knows it. If a consumer points out limitations, the salesman should be able to tell him how to turn them into merits. At the same time, he should be reasonable and not advocate wood for all purposes. It is unwise to recommend wood when it is not safe and economical. Wood should be recommended only when it is best and the salesman should know this and why.

DECAY OF YELLOW PINE AND ITS PREVENTION.

The address of Dr. Herman von Schrenk, consulting engineer of the Southern Pine Association, St. Louis, on "The Decay of Yellow Pine Lumber and Methods for Preventing Same," followed. Dr. von Schrenk said that for lack of time he would give only the salient points of his address.

He told of the various types of decay; the blue stain fungus and of the various schemes for preventing its growth; of the chemicals used in the artificial treatment of lumber; how the preservatives are applied and forced into the wood by different methods; of the simplest method applicable to the small user; when to use the treated lumber; how to use the preserved wood depended very materially on the purpose for which it was intended. In conclusion, he said that every one interested in the modern merchandising of yellow pine, would fail of his full responsibility unless he recognized the necessity for a careful use of the preserving problem and is fully alive to the future possibilities which lie in extending the use of properly preserved yellow pine.

MR. WEISS ON MILL REFUSE.

One of the addresses of the meeting of particular interest was that on "Possibilities of Mill Refuse," which followed the address by Dr. von Schrenk. It was by Howard F. Weiss, director of the Forest Products Laboratory, United States Forest Service, Madison, Wis.

Mr. Weiss, after a brief introductory of the subject, said that several of the lumbermen in the Southern Pine Association are now successfully working their waste into commercial products at a profit, but even under the most efficient management, there is much which remains to be done. Present methods of successfully utilizing the waste of southern pine may be roughly divided into two large divisions: First, mechanical utilization and the manufacture of wooden articles; and, second, chemical utilization or the production from wood of products other than wood. He stated that the southern pine mill and factory waste is now being used in the manufacture of 287 separate items. He told of the gratifying progress of the chemical utilization of southern pine waste. In conclusion, he showed many articles that are now being made from waste. They were handed around and created much wonder.

"Reaching the Consumer" was the subject of an address by Hugh McVey, editor of "Successful Farming," Des Moines, Iowa. Mr. McVey gave a short talk on how to reach the consumer best and gave the salesmen several valuable suggestions as to how their product could be sent to the consumer.

General L. C. Boyle, of Kansas City, was introduced. He commenced his talk by telling how he came to get the title of "colonel" and then went headlong to his talk. It was a very strong argument in behalf of the lumber industry. He scored the demagogues and foolish legislators who have misrepresented the industry for years. He held his audience from the start of his talk to the finish,

WEDNESDAY AFTERNOON'S SESSION.

At the convening of the final session, Wednesday afternoon, there were several questions presented which were answered by Dr. von Schrenk and E. A. Sterling.

HOW SALESMEN CAN CO-OPERATE.

"How Salesmen Can Co-operate with the Association" was the subject of an address given by Ben S. Woodhead, president of the Beaumont Lumber Co., Beaumont, Tex. He gave only a very brief synopsis of his address prepared, because time was lacking. He suggested that the best method to promote association work was to disseminate in the quickest way, among the largest number of interested people, the greatest intelligent comprehension of the principles and benefits of co-operation. In conclusion, he said: "And lastly, if you buckle down to this work and are able to hold up your own end of it skillfully, untiringly and pleasantly, under stress of all kinds, I can truthfully say to you, gentlemen, that you will be worthy of that epitaph, which some people claim Bret Harte wrote on a friend of his: 'He did his damndest. Angels could do no more.'"

RICH IN LITERARY EFFORT.

A thing which concerns this newspaper more than any other in connection with the recent "School of Salesmanship" at St. Louis is in regard to the application to selling propaganda of the wonderful wealth of literature produced at that meeting.

We were called upon early in the week to make some disposition of this literature in an endeavor to utilize it to the best interest of our readers in our report of this gathering.

In disposing of this problem, it was determined that only a brief resumé of the various speeches and papers produced at that meeting could be used by us in our story of the occasion.

It is not within the province of a review to print the full text of any paper produced at that or any other meeting of the lumber trade, unless the paper can be produced as a news special or as a special article—this on the avowed and tried-out principle that the reading public—not only our own but everybody's else READING public—positively will NOT, never HAS and never CAN be persuaded to read speeches and papers if printed in full.

There may have been a FEW lumbermen, five or six years ago, and certainly were SEVERAL lumber trade newspaper men—up to and prior to that time—who may have thought a little differently on this subject; but that idea has passed and gone forever. At all events we invite any contradiction of our position that may be made, and will gladly welcome the advent of any proof to show that our position is not well taken.

Now, given that our position IS well taken, we have come to the point with which we may adorn this utterance, by suggesting what may be best done with literature produced by the "School of Salesmanship" at St. Louis.

First let us state the fundamental fact that the propaganda of the Christian religion was never produced by circulating 28-pound brass-clasped illustrated Bibles, but by the circulation of the little, unobtrusive, soft-stepping, self-effacing leaflet or tract that may be always carried away in the pocket!

We have heard that the wonderful literature of the "School of Salesmanship" is to be printed in a book which the salesmen and others interested may carry around in their grips and which they may use as a text book; so we plead with the powers that be in the matter of the publication of the literature PRODUCED in St. Louis, that first it be sent around in modest little PAMPHLETS—possibly each paper that was read or speech that was made in a pamphlet or "tract" by itself.

For years some of the associations in the lumber trade have issued an annual book relating to their annual meetings, and rows of them grace our office library shelves; but barring the fact that they may be used quarterly as reference books, they are of no service to anybody for anything else. If thousands of copies of each item which those books contain had been circulated where they would do the most good, and at short intervals between the annual meetings of the associations which gave them birth, great benefit would have accrued therefrom.

The pages of a series of pamphlets can be gathered into a book, of course, and those pamphlets can be constructed with that idea in view, and in the end the "School of Salesmanship" book may be produced; but in the meantime and in the construction thereof a wonderful good may be done by circulating the pamphlets suggested. We certainly hope to see this accomplished.

Editor,

CAPT. WHITE ON LUMBER SALESMEN.

Capt. J. B. White, president of the Missouri Lumber & Land Exchange Co., Kansas City, kept his audience in roars of laughter for fully half an hour by telling one story after another. He then took up his subject, "The Lumber Salesman and His Possibilities." His talk was full of suggestions to the salesmen as well as the lumbermen. He referred to the efficiency test of the afternoon before. He said he would cut down the twenty-three requisites to seven. He created great laughter by stating that when Gabriel sounded his bugle and the day of judgment came, St. Peter would say to the lumber salesmen: "Please step up; take a position right above your employers." And when the salesmen would ask the reason why, St. Peter would tell them that they deserved the place, "for you have had your hell on earth." He concluded by telling how he would approach a customer and the psychology of salesmanship in all its windings, phases and requirements. At the conclusion of Capt. White's talk he was given a hearty round of applause.

A general discussion ensued on questions of selling cars in transit and the shipment of lumber for reconsignment. Julius Seidel, H. M. Willhite, and several others participated in the discussions.

Adjourned.

EXPLOITING SOUTHERN YELLOW PINE.

By W. H. Sullivan, Chairman Trade Extension Committee, Southern Pine Association.

Mr. Sullivan treated of salesmanship from the standpoint of trade extension, which he said meant confidence in the product, successful operation, conservation of waste, satisfied customers, boosters in the sales organization, new uses for southern pine, objection to destructive competition and happy and contented stockholders, owners and employees.

Mr. Sullivan proceeded to discuss each one of these points in detail. He urged the salesmen to suggest to the secretary the name of some important article manufactured in his territory which might be now made of southern pine. He also suggested that the sales managers should keep in touch with the operating end of the business and know the quality and size of the timber that is being operated and keep his assistants posted on what kind of special timber to sell. He also urged upon the salesmen the conservation of waste stuff; that they make effort to push the sale on particular items, such as lath, shingles and box shooks; also to keep the Southern Pine Association closely posted on the development of trade in the territory traveled. He said that the reason that lumber companies employ salesmen is so that they can be in close contact with their customers and a good many manufacturers often wonder how a salesman can satisfy a customer who has a little claim by talking with him over the telephone, and of course the reason is that he is well acquainted with the customer. However, he thought that sometimes it would be an advantage to see the customer personally instead of using the telephone.

He deprecated destructive competition, by which he meant that where a salesman has a regular customer, a competitor keeps hammering away at the price with this customer until finally he gets a part of the business. He did not regard this as legitimate competition.

Mr. Sullivan spoke of the difference in salesmen, some of them being enthusiastic in the work of selling lumber, while others seem to think that they go around only to have a good time, meet people and so on, merely for their own satisfaction. He regarded it quite essential that the salesmen visit every concern using lumber in the territory assigned to him, which is the only way to get thoroughly acquainted with the territory and to give the home office full information regarding the people and their special wants. Especially it is a good idea to look over the dry stocks in the territory and in a general way find out what items are in surplus and what are short.

In conclusion Mr. Sullivan said: "You frequently write and complain about grades and manufacture. Do you ever write and say that the last car shipped on order No. 1,000 was the best graded and best manufactured car ever sent into your territory and that your customer is very much pleased? All operating men are human and a letter of this kind coming from the field force would be circulated throughout the plant and would give all of the operating organization confidence in themselves and speed them on to greater efficiency in their grading and manufacture."

THE DENSITY RULE.

By J. E. Jones, Chief Inspector, Southern Pine Association.

Mr. Jones said that he was not an engineer, but his remarks would be along the lines of an inspector. He spoke of the long necessity for a rule for the inspection of yellow pine timbers, where strength is the greatest factor to be considered. All of the rules covering yellow pine until recently had disregarded entirely the strength and durability of the wood, considering only the permissible maximum number of defects. For this reason grades of standard, merchantable and prime are known on the Atlantic coast and No. 1 and No. 2 common in the central south. These rules in all cases do not provide for the wants of architects and engineers, as they do not fix any strength value and experts are concerned largely with strength and durability. The term "commercial long leaf" is often used in specifications for structural material, but any differentiation between long leaf and short leaf is ineffective, as there is a wide and overlapping margin of quality in the several species. This leads to considerable confusion and loss of money in case of dispute and it is practically impossible to determine the species from a visual examination of the manufactured timber, the only absolute method of the determination being by microscopical examination, which involves too much labor for lumbermen in general inspection.

Mr. Jones spoke of the work of the Forest Service in promoting the density rule and described the manner in which the rule had been formulated. He said: "It will be noted that this measurement of strength makes no distinction between the botanical species of southern yellow pine. The tests have shown, as a matter of fact, that there is no difference whatever in strength qualities when the material shows the required density of growth. Therefore, it is entirely possible for timber of short leaf or loblolly pine to possess the measure of strength requisite for ordinary structural purposes. He stated that the density rule had been accepted and endorsed by the American Railway Engineering Association, the Illinois Society of Architects, the New Orleans Dock Board, the United States Navy Department and numerous building code commissioners. He said that the density rule was a guarantee to architects and engineers that their specifications will be carried out, and the more definite it is possible to make grading rules, the closer it is possible to classify structural material from the standpoint of strength, the more satisfactory will it be to the engineer and the producer will be more likely to obtain a reasonable price for his product. However, owing to the mixing in different kinds of timber the engineer decides on the basis of the weakest material he is likely to find in the lot, and naturally on that basis he is willing to pay the owner the price asked for the weakest material. Mr. Jones stated that it should be borne in mind that the density rule is a measurement of strength only, having no reference to durability and that where durability is of the greatest importance, consideration should be given to the heart contents of the material used.

SELLING THE FACTORY AND TRADE.

By C. W. Myers, W. R. Pickering Lumber Co., Detroit, Mich.

Mr. Myers asserted that there has been no change in the offensive tactics in the battle for orders for lumber during the present generation and quoted Chairman Harry T. Kendall as having said that lumber is sold today the same way it was sold fifty years ago and that present methods were antediluvian. He spoke of a recent session of the American Medical Association where he had found ten different and distinct branches of specialists represented, which showed the progress made by the medical profession through specialization. This must be applied to special salesmanship and he thought there should be four branches; (1) selling the retail yard trade; (2) selling the railroads and car shops, (3) selling the export trade and (4) selling the factory and industrial trade. Success in the line of selling the industrial trade can be obtained only by close co-operation between the manufacturer and the salesman.

He called attention to a serious deficiency on the part of the manufacturing department who, he said, left off manufacturing where the real profit begins. There is an increasing demand for lumber cut to lengths, especially worked stocks, but few planing mills are equipped with proper machinery to execute these orders. He knew of no reason why rough finish should be shipped to the modern market on the high rates of freight and made into casings and other interior trim, cut to length, when with the addition of very little equipment it could be produced at the shipper's own plant at a better profit. In Mr. Myers' opinion the yellow pine trade has already lost to other woods a big volume of business because of the fact that the salesman failed to study the use to which the stock should be put. Recently Mr. Myers called on a buyer for a large automobile manufacturer in Detroit and was informed that his company used no yellow pine. Mr. Myers knew that other automobile concerns were using large quantities of No. 2 yellow pine for export crating and asked the buyer's reason for using something else. He said that on account of the weight and hard, flinty character of yellow pine, it was more economical to use another wood. Upon investigation it was found that this concern has always used long leaf, whereas short leaf would have been equal in service to any wood now being used and at a lower price. The point Mr. Myers desired to bring out in this discussion was the importance of the salesman having a thorough knowledge of the wood, its proper uses and a fair knowledge of operating methods. He thought there was no reason why lengths under ten feet should bring a less price than staple lengths, as long as there can be a demand created for the stock.

PRESIDENT KEITH ON THE YELLOW PINE SITUATION.

Charles S. Keith, president and general manager of the Central Coal & Coke Co., Kansas City, and president of the Southern Pine Association, in his July 1 bulletin on the lumber situation, sent out to members of his sales force, expresses the belief that the turning point for the better in the lumber business has been reached. He basis this on (1) building permits show a great gain over the corresponding period of last year; (2) retail lumbermen state that their volume of business as compared with the same period last year shows an increase of from 10 to 70 percent; (3) he believes that the trade bought heavily last summer and fall anticipating an increase in business, and this stock has been assimilated since December last. Salesmen report that stocks in the hands of retailers now are less than normal, while their business is larger than previous years; (4) the crop outlook in the United States has never been better, with prospects for good crops on both small grain and forage, the latter being better than usual, and the farmers profit more from the forage crops than from their small grain; (5) while there has been an increase in stocks at the mills of the Southern Pine Association of 265,720,000 feet, five companies have accumulated 139,000,000 feet of this, and it is safe to say that other large companies have accumulated proportionately of the remainder, so that this stock is largely in the hands of the strong companies.

Mr. Keith states, furthermore, that his company's mills are operating four days a week because further accumulation of stock could not be cared for, but the intention is to continue this curtailment until the surplus has entirely disappeared, regardless of market conditions. His conclusions are that there will be an increased consumption and a better demand on the part of the retailers right away; that stock in retailers' hands will have to be replenished; that stocks in the hands of manufacturers are normal, with the exception of a few companies who can hold them; that the surplus stocks are quickly disappearing, and that with increased volume of business prices will become stronger.

WHY THE SALESMAN MUST KNOW GRADES.

By W. J. Haynen, Chairman Grading Committee, Southern Pine Association, Hattiesburg, Miss.

Chairman Haynen said that on account of keen competition, the subject was one of particular importance. Attacks made on wood construction by different building codes in various cities in the country had added greatly to the decreased use of lumber and hence it became necessary to educate the architects, contractors, builders and so on concerning the uses of yellow pine. Also that was one of the reasons for establishing the density rule. Mr. Haynen said it is a lamentable fact that the lumber consumption of this country had declined 50 board feet or 10 percent per capita within the last ten years. This is a condition which in his opinion ought to be corrected at once. He devoted particular attention to the work of the Southern Pine Association during the last eighteen months and said that this was for the benefit of the large as well as the small manufacturers and all should join the association. Mr. Haynen stated that all the salesmen ought to be able to grade yellow pine timbers under the density rule and if they could not do this all the labor has been lost. He laid special stress upon the necessity for the man who was selling a product like lumber to be thoroughly posted on every feature. He cautioned the salesman never to be afraid to condemn yellow pine if its use is not fitted for the purpose intended. The firm might lose one sale, but the salesman would greatly increase his circle of friends and his sales; and if such intelligent co-operation had been carried out in the past the manufacturers today would not be able to provide enough product to take care of the demand. The speaker regarded yellow pine timbers as being the best in the world for building and construction purposes, a fact fully recognized by all reputable engineers. Mr. Haynen read the rules for the five timber grades including heart timbers, No. 1 common timbers, square and sound timbers, merchantable timbers and select structural material, and requested his hearers to carefully read the rules for each grade.

In conclusion he advised his hearers to learn the grades thoroughly; to preach the use of wood, especially yellow pine; to be honest with employer, customer and competitor; to establish and keep in operation a steady supply of information between the sources of production and consumption and utilize this information so as to increase the consumption and bring prosperity to the industry of the whole.

WOOD SUBSTITUTES.

By H. S. Sackett, Forester National Lumber Manufacturers' Association.

Mr. Sackett enumerated the principal substitutes for wood as being brick, steel, concrete, fiber board and patent roofing and, of lesser importance, metal lath and terra cotta. Brick displaces wood mainly in home and factory construction as well as in the construction of department and flat buildings, for both interior and exterior walls. This is on account of its fire resistant properties and its tendency to make more difficult the spread of fires. However, the fact should not be lost sight of that after a fire has attacked a building, the one with brick walls is more difficult to fight than the one made of wood, owing to the fact that the walls are harder for the firemen to get through and furthermore because they form a veritable chimney for the fire itself.

Mr. Sackett paid his respects to the increasing legislation against the use of wood in construction in the cities, but said that it is the contents of the building and not the building itself which causes the fire and in many so-called fireproof construction buildings the tendency is toward greater carelessness, therefore more fires, a situation which is borne out by actual facts.

The speaker called attention to the superiority of wood block pavement over brick, in the essentials of noise, durability, efficiency and wearing qualities. He spoke of the inroads made in the replacement of wooden cars by steel cars, but said that railroads are not looking with as great favor on steel cars now as they did some time ago. An inspection of steel passenger cars in Milwaukee, Wis., recently showed that they had completely rusted through in eighteen months, which was doubtless due to the fact that steel instead of wrought iron was used and the rust was aided by the smoke from the engine. In Mr. Sackett's opinion the United States will go through the same

Digitized by Google

experience that a number of European countries did, who turned from the wooden car to the heavy steel car and then went back to the wooden car. Relative to steel in buildings he quoted the National Board of Fire Underwriters, who said that an unprotected steel beam when attacked by fire is not as reliable as a wooden beam. However, they recommend that the steel beam be protected and that the wooden beams also be protected by sprinklers or with asbestos or plaster board.

Mr. Sackett said that steel has increased the use of wood in some respects, notably in the construction of skyscrapers, which require large quantities of interior trim. The use of concrete is more economical, possibly, in office buildings and factories, where a load of 300 pounds per square foot is required, but the concrete structure is more difficult to alter and the floor must be covered with some soft material for the workmen to stand on. For buildings demanding a load less than 300 pounds a square foot, heavy timber is more economical and when properly sprinkled is decidedly preferable to any other type of construction.

Regarding the use of fiber board, he said that a a few years ago the Forest Service compiled statistics showing that of the boxes then in use 90 percent were of wood and 10 percent of fiber. He also referred to the fragile character of the fiber board box and the increased loss and damage claims, owing to wetting and to rough handling.

In summing up, Mr. Sackett said that the substitute manufacturers are displacing annually about 10,000,000,000 feet of lumber or 25 percent of the normal production. To offset this he advises a country-wide educational campaign.

CLAIMS AND DISPUTES—THEIR CAUSE AND SETTLEMENT.

By M. L. Wuescher, Auditor Great Southern Lumber Co., Bogalusa, La.

Mr. Wuescher said that, in its final analysis, a claim is the result of a mistake or a misunderstanding. He analyzed the circumstances under which a claim might be developed and stated that it might be caused, (1) in taking the order from the customer by the salesman, (2) in the execution of the order by the mill, and (3) in the inspection and tallying of stock on receipt of the car by the customer. He said that mistakes at the time of the taking of the order by the salesman may be due to any one of the following named errors: In description or in the price of lumber; in transmitting the order to the mill and not having all the data pertaining to the order written into the order rather than in an accompanying letter; by inserting a wrong routing or incorrect weight in the order sent to the mill; making a special agreement with the customer regarding the stock and not sending sufficient information to the mill; by not advising the mill on orders for special stock for what purpose it is to be used; and in cases of special work stock not accompanying the order with a blue print or design; by selling lumber on comparison; by the salesman not being entirely familiar with the conditions at the mill; by the liability of a misunderstanding between the customer and the salesman in the description of lumber, or in the price; in soliciting and accepting orders over the telephone.

Mr. Wuescher told of the ability of the salesman to correct these errors and making sure that every condition regarding the sale be properly entered and forwarded.

As to execution at the mill, claims may result from making errors in grading; in tallying; in short cuts; in miscut lumber; poor planing mill work; errors in invoices; differences between the sales office and the shipping department; the shipment of lumber during unfavorable weather conditions; the shipment of green lumber; wrong routings; the use of equipment not adapted to the order, especially during a car shortage; the shipment of lengths different from those provided for.

The third cause of claims, Mr. Wuescher said, was the inspection or tallying of stock on receipt of the car by the customer, the principal cause of these claims being the natural difference of opinion between the employees of the customer and the employees of the mill in tallying; grading, the rough handling; a breakage of lumber in unloading; the natural disposition of the purchaser to compare the lumber of one mill with that of another instead of using the Southern Pine Association grading rules; mistakes in tallying and checking lumber; extremely technical inspection by the buyer of lumber on a declining market; delay of shipment of the car beyond the time promised.

An outline of the way to handle these claims with the mills is suggested by Mr. Wuescher by giving the car and order number, the date of the arrival of the car, the condition of delivering the equipment with seal number appended; the general condition of the car; a full and complete report as stated by the customer; a full report of the stock, including grading; if stock has been unloaded; whether it has been sold or re-manufactured and the method thereof; the best adjustment that is acceptable to the customer, with recommendations and what other disposition can be made of the lumber. By providing all the information contained in the above, final action could be taken with the mill without endless correspondence.

CREOSOTED WOOD BLOCKS FOR INTERIOR SERVICE.

By A. H. Noyes, Ayer & Lord Tie Co., Chicago.

Mr. Noyes deplored the apathy with which lumbermen have viewed the field for creosoted wood block interior installation. Instances have been brought to his attention where direct opposition by retailers and jobbers have done much to kill a chance for sales, on account of their inability to divorce themselves from personal interest in favor of the general good of the lumber trade. Mr. Noyes gave a brief statement of the manufacture, promotion and sale of creosoted wood blocks. He said the stock used is of excellent quality. His concern buys 3x8 and 4x8—10 feet to 20 feet, square edge and sound, long leaf yellow pine, free from bark, loose or rotten knots or any other defects detrimental to its strength or durability, the annual rings in three inches measured radially from the center of the heart to average not less than eight to an inch.

Mr. Noyes followed through an order for 1,000 square yards of interior blocks for a machine shop floor. The order when made out will advise the plant to cut 3-inch blocks from the 4x8 dry stock and to treat by the Rueping process, using English oil. Floor condition dry. The superintendent turns to his records and finds that certain cars of stock from certain mills were received and stacked for seasoning on a certain date. He gives a copy of the order to the block mill foreman with instructions to cut 28,000 feet board measure of dry stock. It is the block mill foreman's place to satisfy himself that the material is in proper condition to receive treatment. The planks are then handled by locomotive crane on to the conveyor and moved up to the block mill where the first step is to surface two sides. Nineteen 14-gauge saws are used for cutting the blocks, there being twenty-one blocks cut each time the piece passes through. Behind the saws stands an inspector, who examines the blocks for variations and he has instructions to stop the mill when they vary more than 1-16 inch from the correct measure. One saw on an arbor making uneven blocks would cause considerable trouble and afterward an uneven floor. There is another inspector who culls out any blocks showing bad checks, wane, shake or other defects.

The treatment consists of an air pressure of approximately 75 pounds a square inch, followed by an oil pressure of 175 to 200 pounds a square inch.

In closing Mr. Noyes said: "I will briefly name over some of the places where creosoted wood blocks can be used to best advantage. Any plant where heavy material is handled is our largest field. Every type of metal manufacturing plant can use and needs a creosoted wood block floor. Among the lighter service conditions are breweries, bakeries, and hotel kitchens. Wood block installations are in all of these, but the areas are small and the installations few. Railroad shops, freight houses and platforms offer a large, fertile field. Barns and farm buildings, while in most cases offering limited yardage in single installations, make up for their deficiency by their number. Concrete is killing to stock when put under them and requires heavy bedding. Creosoted wood block make an easy floor to install and are warm under cattle and hogs, make a sanitary floor and one that is easily cleaned.

"There isn't a retail lumber yard in any small town that can afford to be without a stock of blocks for this purpose, and the volume of business they can secure, once they put in a stock, and advertise the fact, will be gratifying in the extreme. It is here that you gentlemen, through your small town lumber yard, can secure a pleasing volume of business.

"It is largely due to the ease with which cement can be secured that concrete floors in barns have become so general, and it is here that the retailer can develop a field worthy of his best efforts, and at the same time benefit his customers by giving them something better than they have ever used."

ASSOCIATION PUBLICITY AS A LUMBER SALESMAN.

By W. J. Ferry, Advertising Manager Southern Pine Association, Kansas City Mo.

Mr. Ferry said that of all the activities of the Southern Pine Association none is so directly important as the work of the advertising department. He gave an outline of what it is doing and trying to do for enlarging the sale of yellow pine. There are four divisions in the general advertising department: (1) Display advertising, (2) the compilation and publication of booklets, pamphlets and other literature, (3) creating and establishing a co-operative service for retail lumber dealers and (4) the dissemination of special articles exploiting southern yellow pine.

The display advertising has been directed principally to the consumer. The circulation of the mediums used in the advertising is in excess of 17,000,000, of which the magazines and national weeklies represent 5,800,000, the daily papers 565,000, builders' journals 130,000, engineering papers 128,000, lumber journals approximately 80,000 and farm papers approximately 8,000,000.

Mr. Ferry said that more than fifty pieces of advertising literature have been prepared since the department began and the number of all forms of literature distributed exceeds 760,000. Mr. Ferry gave the various features of the several publications, many of which are familiar to our readers and his address was most interesting and instructive.

CREOSOTED WOOD BLOCK PAVING.

By F. P. Hamilton, Paving Engineer Southern Pine Association, New Orleans.

Mr. Hamilton said: "The selling of creosoted blocks is no job for a price cutter. It takes a salesman to sell creosoted blocks; anybody can cut a price if permitted to do so. Creosoted wood block is not a cheap article in but one sense. Its merit consists in its longevity and general acceptability."

Mr. Hamilton said that while a great many of those present did not sell creosoted wood blocks, they should know about them and know about the character of the timber and know what a superior pavement can be made for floors in factories, machine shops, warehouses and various other places and all who are interested in southern pine should know these things and boost the product.

Mr. Hamilton said that there never was a paving material which received as much attention from the general public and from promoters of other materials as creosoted wood block. This originated with promoters of other materials because the creosoted wood block is a menace to their business. He said that if wood block were as bad as pictured by the opposition it would have died in infancy instead of living through several centuries and improving with the progress of the human race.

Mr. Hamilton went back to the origin of the wood block pavement, which he said was first laid in New York in 1835, and then in Philadelphia and London in 1839, and Paris in 1859. Creosoted pine blocks laid on a concrete foundation were first laid in Baltimore in 1899, in Boston in 1900, and in New York, Minneapolis and St. Louis in 1902. All of these streets today are in good condition and very little has been spent for repairs. "There is in use today in the United States more than 18,000,000 square yards of creosoted wood block pavement, the equivalent of 1,000 miles of roadway thirty feet wide." This pavement is found in sections of heavy traffic, such as Broadway, New York; the loop district, Chicago, and leading boulevards in Cincinnati, St. Louis and Minneapolis. Paris spent $14,000 to improve the Rue de Rivoli and London spent $35,000,000 to improve the Strand and both used creosoted wood blocks for that purpose. Mr. Hamilton took up the various complaints that had been heard on wood blocks and demolished them one by one.

YARD STOCK GRADING RULES.

By J. W. Martin, Long-Bell Lumber Co., Shreveport, La.

Mr. Martin spoke of the various ideas regarding grading that were advanced by different people and outlined general methods of yard grading. He said that the manufacturer who is doing the best work along this line is the one who has given

Digitized by Google

intelligent consideration to every physical characteristic of the tree. The least possible time should be allowed to elapse between the cutting of the tree and putting the logs in the water. Logs should never be cut and allowed to lie in the woods or on a skidway in hot weather, as blue sap is a sure consequence. Machinery at the mill must be kept at the highest condition of efficiency. Lengths should be checked every day and widths at least twice a day. Lumber should be piled to shed rains and have ample air spaces in the pile. Cross strips should never be more than four inches wide and a pile should never lean forward. Two by fours should be piled on edge and have a cross piece every 4½ feet. There should be enough moisture in the kiln to prevent the surface of the piece from shrinking and checking. Logs must be sawn into material that will carry the defects, that is red heart into boards and pitchy material into timbers, fencing and dimensions where pitch is a virtue, and keep it out of siding, ceiling and finish. In other words he urged that nothing be added to the natural defects of material in the process of manufacture, but its desirable qualities should be added to by excellence of finish.

As to grading, Mr. Martin advised that the rules should be stuck to closely. No manufacturer has enough margin of profit so that he can afford to over-grade. Profitable manufacture and satisfied and well served customers are the great things desired and can not be secured except by suitable selection of material. Wide-ringed loblolly does not produce acceptable joist or timbers, but if fairly free of knots produces beautiful grain effects as finish. If knotty it serves as well as any for sheathing, floor lining, etc. Firm red heart will outlast any other heart lumber that is not water-proofed by pitch; it takes paint perfectly, but it does not stand wear as well. A coarse knotted board will serve as well as a clear board in certain places. A wormy studding will hold nails and stand as firm as if the worm holes were not there. In conclusion, he said: "Grading for yard stock is not merely the separation of the lumber after manufacture, but it begins with the cutting of the tree, extends throughout the sawing, drying and planing of the lumber, even to the manner in which it is loaded onto the cars."

CO-OPERATION A SALESMAN SHOULD HAVE FROM THE GENERAL OFFICE.

By W. L. Henry, Chicago Lumber & Coal Co., Springfield, Ill.

Mr. Henry spoke of Section 37 of the grading rules which said: "No arbitrary rules for the inspection of lumber can be maintained with satisfaction. The variations from any kind of rule are numerous and suggested by practical common sense, so nothing more definite than the general feature of different grades should be attempted by rules of inspection."

In Mr. Henry's opinion this might be aptly applied to the selling of lumber, especially that portion which refers to common sense. He thought it was all right to have general rules for the guidance of the men on the road, but they should not be burdened with a lot of red tape and receive so many bulletins and instructions that the salesman hesitates when a problem confronts him and proceeds only after he has referred to the home office. He urged that the salesmen be given all the necessary information in the way of stock lists, price lists and so on, but thought that the latter should not be made to feel that there is no confidence placed in his judgment and ability to cope with problems for which there is no precedent. The salesmen should have the full backing of the general office. Another method of co-operating with the salesmen was for the main office to show confidence in him. To the average customer the man who calls at his office and solicits his business, is "the firm" and the firm is largely judged by the impression the representative creates. The salesmen should have copies of all correspondence passing between the main office and the customers in his territory.

One good point made by Mr. Henry was as follows: "I once worked for a line yard firm and one of the strictest requirements was that the yard managers report just as carefully all over-shipments as they did shortages, and heard the head of the firm say the reason for this was that if he led his men to think he was dishonest in his dealings with the firms which were shipping him material, how could he expect them to feel otherwise than that he was stealing from other people. Why not steal from him?" So if you are unwittingly undermining the confidence your man has established with his trade and causing the buyer to become imbued with the idea you are suspicious of your man and are not sure of his ability, naturally the customer thinks you should know your own employee better than he does and forms the idea it would be well to keep an eye on him and incidentally on the firm, as the salesman is the exponent of the firm.

Mr. Henry urged that the main office should give the salesman credit for all the sales made in his territory whether sent in directly by the salesman or not. He advised against the placing of business with commission men in the same territory where the salesman is operating, which would have the effect of creating unnecessary competition. He urged salesmen to be careful regarding promises as to date of shipments, but when the statement is made that a shipment will go at such a time, the office should make every effort to see that it is scrupulously complied with. The intelligent salesman will not intentionally promise anything unreasonable.

Entertainment at St. Louis by the Lumber Press

Nothing quite like the "School of Preparedness" entertainment, created and staged by the Lumber Press Club, was ever witnessed in connection with a lumber association or any OTHER kind of banquet ANYWHERE and it goes without saying that nothing similiar will ever occur again. This is neither commendation or criticism of the affair, but a statement of fact.

It took two weeks to create it and gave the creators a lot of fun and it took an hour and thirty minutes for it to be squibbed off into the night of June 26, but it will take a considerable length of time to forget it; and the gifted young actors who participated and yearn for commendation of their histrionic art must not take the ABOVE statement as either COMMENDATION or CRITICISM.

There are a lot of people who stayed at home from the "School of Salesmanship" sessions who are curious, of course, about all portions of the event, and as those people have rights the LUMBER WORLD REVIEW proposes to tell its readers a LITTLE bit about this "School of Preparedness," concerning which there seems to be such a diversity of opinion among those who attended the banquet and such a diversity of opinion among those who created the entertainment and then went home and sat down in cool places and wrote about it.

One lumber trade newspaper, which took a more or less active part in the affair and whose editor produced one of the most laughable features of the entertainment, did not seem to think enough of this episode to even mention it in his sheet; another lumber trade newspaper printed three sticks about it and let it go at that; two others went into very florid details and sang of the episode both high and low to the extent of some columns.

Of course this difference of opinion is very amusing to those who participated in the show, but it is altogether in keeping with the impressions of the audience.

An old time friend, a lumber salesmen of distinction, and a person who in most things is very analytical, came into the office of the LUMBER WORLD REVIEW yesterday to pay his compliments to the editor, and wanted another copy of the Lumber Press Club News and spoke of the entertainment in this wise: "I sat right down in front and watched this thing from the beginning to the end and I want to know who in—ever conceived that thing; and how in the name of—did anybody ever expect to put over a banquet and an entertainment of this sort on seasoned rainwater and how in the name of—on high and in the name of the —below did they expect to do this thing WITHOUT ACTORS? Is it POSSIBLE that there were no barefoot women dancers in St. Louis, no people that could be hired to pull bantam chickens out of hats or produce baby elephants from the pockets of the spectators? If you will tell me how that thing ever happened, and how I ever stood for it, I will be indeed obliged to YOU."

It will take people who were in the knowledge of this whole proposition to accurately describe or anticipate or imagine the scene which followed. However, our friend, the salesman, went away into the hot streets, knowing no more about the banquet and entertainment than he SEEMED able to get from actually attending HIMSELF.

A man from Texas and a man from Wisconsin came up to the footlights after the show was over and the actors were gathering up the fragments and said in effect: "We want to congratulate you. We have never seen as clean a show as this outside of a CHURCH. You really CAN produce entertainments and banquets without liquor after all. We are deeply indebted for this. You must have put in a lot of hard work on this affair?"

So there you are, kind and gentle reader; take your choice.

On this page we print a facsimile of a letter Secretary J. E. Rhodes was good enough to write upon the subject, which letter is very deeply appreciated by the members of the Lumber Press Club.

Southern Pine Association

Office of Secretary and Manager

CHAS S KEITH President
P S GARDINER First Vice Pres
JOHN H KIRBY Second Vice Pres
HENRY M YOUNG Treasurer
J E RHODES Sec & Man

New Orleans, La., June 30, 1916.

Mr. B. A. Johnson,
Master of Ceremonies,
"School of Preparedness,"
Lumber Press Club,
c/o LUMBER WORLD REVIEW,
Chicago.

Dear Mr. Johnson:

In behalf of the Southern Pine Association, Mr. Harry T. Kendall, Chairman, and the members of the Committee on Sales and Distribution, we desire to express to you and to the members of the Lumber Press Club our sincere thanks for having successfully devised and executed the arrangements for the entertainment at the banquet given in connection with the School of Salesmanship in St. Louis, June 26.

The Committee, and all interested in the success of the meeting, are very grateful to you and your associates for the time, thought and sincere interest which you devoted to this work. The School of Salesmanship is generally conceded to have been a great success and the entertainment feature at the banquet contributed in no small degree to this result.

Yours truly,
SOUTHERN PINE ASSOCIATION,

Dictated by
J. E. Rhodes,
Secretary-Manager.
A:

J. E. Rhodes

A FEW WORDS ABOUT THE PERFORMANCE.

It was built along David Belasco and George M.

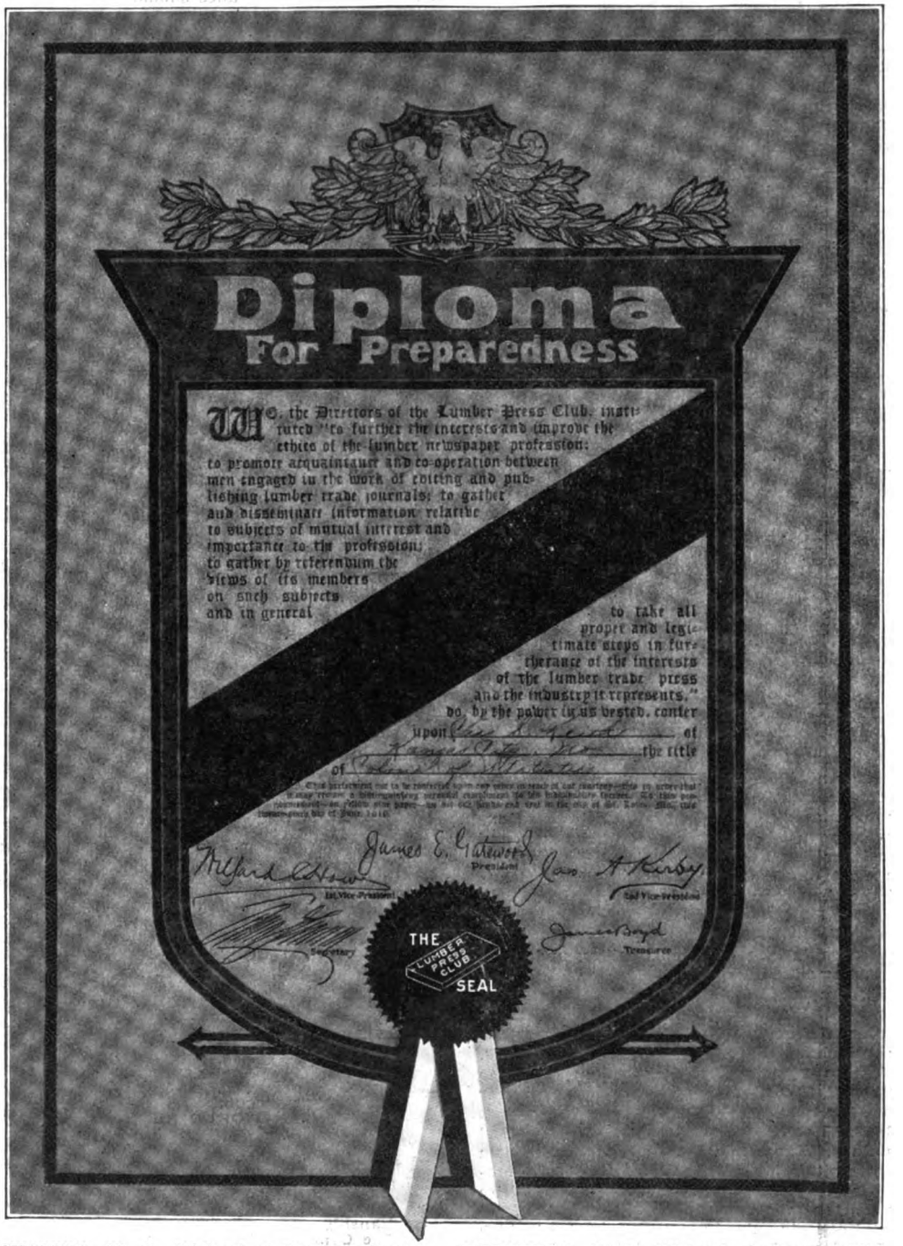
The "Colonels" and the "Diplomas" Given to Them by the Lumber Press Club "School of Preparedness," St. Louis, Mo., June 26

REGULAR "COLONELS."

AXLEY, O. O., "Colonel of Short Leaf," Southern Lumber Co., Warren, Ark.
ASHBY, H. H., "Colonel of Firsts and Seconds," Long-Bell Lumber Co., Kansas City, Mo.
AUSTIN, J. H., "Colonel of Sports," W. R. Pickering Lumber Co., Kansas City, Mo.
BEEBE, W. M., "Colonel of 'The Kaw,'" Long-Bell Lumber Co., Kansas City, Mo.
BONNER, B. F., "Colonel of Tactics," Kirby Lumber Co., Houston, Tex.
BOYD, GEO. H., "Colonel of Atlanta," Germain & Boyd Lumber Co., Atlanta, Ga.
BOYKIN, L. J., "Colonel of Specifications," Gulf Lumber Co., Houston, Tex.
BARHAM, P. M., "Colonel of Secretaries," W. R. Pickering Lumber Co., Kansas City, Mo.
BISSELL, S. B., "Colonel of Wausau," Wausau-Southern Lumber Co., Laurel, Miss.
BURGOYNE, C. R., "Colonel of Pensacola," Stearns Lumber & Export Co., Pensacola, Fla.
CARROLL, A. J., "Colonel of Railway Materials," J. J. Newman Lumber Co., Hattiesburg, Miss.
CLARK, G. S., "Colonel of Kilns," Tremont Lumber Co., Winnfield, La.
CRAWFORD, J. E., "Colonel of Pine Belt," Pine Belt Lumber Co., Lake Charles, La.
CHIPMAN, J. B., "Colonel of Inspection," Frost-Johnson Lumber Co., St. Louis, Mo.
CUSHING, D. T., "Colonel of Terms," Great Southern Lumber Co., Bogalusa, La.
DANTZLER, L. L., "Colonel of Moss Point," Dantzler Lumber Co., Moss Point, Miss.
DAVIS, R. S., "Colonel of Differentials," Long-Bell Lumber Co., Kansas City, Mo.
DIERKS, D. V., "Colonel of Kansas City," Dierks Lumber Co., Kansas City, Mo.
EMMERT, C. E., "Colonel of Conroe," Delta Land & Timber Co., Conroe, Texas.
EDDY, J. H., "Colonel of Birmingham," Kaul Lumber Co., Birmingham, Ala.
FARNAN, W. E., "Colonel of Urbanity," Kirby Lumber Co., Houston, Tex.
FOLEY, J. S., "Colonel of Kentwood," Brooks-Scanlon Co., Kentwood, La.
FROST, A. E., "Colonel of Shreveport," Frost-Johnson Lumber Co., Shreveport, La.
FULLERTON, S. H., "Colonel of Transportation," Gulf Lumber Co., East St. Louis, Ill.
GARDINER, P. S., "Colonel of Placidity," Eastman, Gardiner & Co., Laurel, Miss.
GILCHRIST, F. R., "Colonel of Laurel," Gilchrist-Fordney Co., Laurel, Miss.
GILBERT, L. D., "Colonel of Texarkana," Southern Pine Lumber Co., Texarkana, Tex.
GILLETT, COL. M., "Colonel of Colonels," Great Southern Lumber Co., Bogalusa, La.
GREEN, C. W., "Colonel of Branding," Eastman-Gardiner & Co., Laurel, Miss.
GRIFFIN, R., "Colonel of General Sales," Central Coal & Coke Co., Kansas City, Mo.
HALE, M. J., "Colonel of Brookhaven," Central Lumber Co., Brookhaven, Miss.
HAGERTY, H. S., "Colonel of Blarney," Moore-Hagerty Lumber Co., Hattiesburg, Miss.
HANCOCK, W. T., "Colonel of Rates," Kirby Lumber Co., Houston, Tex.
HARLAN, W. S., "Colonel of Chickens," Jackson Lumber Co., Lockhart, Ala.
HALPIN, B. E., "Colonel of Stout," Stout Lumber Co., Thornton, Ark.
HALLOWELL, R. M., "Colonel of Industry," Industrial Lumber Co., Elizabeth, La.
HARDTNER, HY. T., "Colonel of Forestry," Urania Lumber Co., Alexandria, La.
HASLAM, LEE, "Colonel of Pickering," W. R. Pickering Lumber Co., Pickering, La.
HAYNEN, W. J., "Colonel of Grades," J. J. Newman Lumber Co., Hattiesburg, Miss.
HICKS, GEO. R., "Colonel of B & Better," Bowman-Hicks Lumber Co., Kansas City, Mo.
JONES, C. W., "Colonel of Plainview," Fort Smith Lumber Co., Plainview, Ark.
JUDD, A. W., "Colonel of Base Ball," Gates Lumber Co., Wilmar, Ark.
KIRBY, JOHN H., "Colonel of Cavaliers," Kirby Lumber Co., Houston, Tex.
KAUL, J. L., "Colonel of Alabama," Kaul Lumber Co., Birmingham, Ala.
KEITH, CHAS. S., "Colonel of Statistics," Central Coal & Coke Co., Kansas City, Mo.
KENDALL, H. T., "Colonel of Salesmanship," Kirby Lumber Co., Houston, Tex.
KETCHAND, R. L., "Colonel of Bradley," Southern Lumber Co., Warren, Ark.
KLUMB, C. E., "Colonel of Wiggins," Finkbine Lumber Co., Wiggins, Miss.
LATHROP, F. H., "Colonel of Suavity," Lathrop Lumber Co., Birmingham, Ala.
LONG, R. A., "Colonel of Agriculture," Long-Bell Lumber Co., Kansas City, Mo.
LUCAS, JNO. H., "Colonel of Jurisprudence," Chief Counsel, Kansas City, Mo.
MANSFIELD, C. J., "Colonel of Warren," Arkansas Lumber Co., Warren, Ark.
MARTIN, J. W., "Colonel of Clears," Long-Bell Lumber Co., Shreveport, La.
MATTISON, G. E., "Colonel of Malvern," Arkansas Land & Lumber Co., Malvern, Ark.
MORETON, S. E., "Colonel of Homochitto," Homochitto Lumber Co., Bude, Miss.
MITCHELL, A. S., "Colonel of Fishers," Ingram-Day Lumber Co., Lyman, Miss.
MURRAY, W. T., "Colonel of Fordyce," Fordyce Lumber Co., Fordyce, Ark.
MOSS, HERBERT, "Colonel of Manning," Carter-Kelly Lumber Co., Manning, Tex.
McLANE, J. R., "Colonel of Noma," Alabama & Florida Lumber Co., Noma, Fla.
McINTOSH, J. A., "Colonel of Brinson," Stuart Lumber Co., Brinson, Ga.
NELSON, M. B., "Colonel of Foreign Orders," Long-Bell Lumber Co., Kansas City, Mo.
PICKERING, W. A., "Colonel of Springfield," W. R. Pickering Lumber Co., Kansas City, Mo.
PETTIBONE, F. W., "Colonel of Jordan River," Jordan River Lumber Co., Kiln, Miss.
RICKEY, P. C., "Colonel of Accounting," Long-Bell Lumber Co., Kansas City, Mo.
REIMERS, F. C., "Colonel of Hammond," Natalbany Lumber Co., Hammond, La.
ROGERS, P. A., "Colonel of Export Sales," Eastman, Gardiner & Co., Laurel, Miss.
RIBENACK, W. C., "Colonel of Thornton," Stout Lumber Co., Thornton, Ark.
ROGERS, H. N., "Colonel of Distribution," Eastman, Gardiner & Co., Laurel, Miss.
RANNEY, A. W., "Colonel of Common Points," J. J. Newman Lumber Co., Century, Fla.
RHODES, J. E., "Colonel of Diplomacy," Southern Pine Association, New Orleans, La.
SARGENT, JNO. A., "Colonel of Reclassification," Central Coal & Coke Co., Kansas City, Mo.
SANFORD, F. L., "Colonel of Zona," Zona, La.
SALMEN, FRED W., "Colonel of Exhibits," Salmen Brick & Lumber Co., New Orleans, La.
TRIESCHMANN, A., "Colonel of Mouldings," Crossett Lumber Co., Crossett, Ark.
TEMPLE, T. L. L., "Colonel of Reserves," Southern Pine Lumber Co., Texarkana, Tex.
TOWNSEND, G. A., "Colonel of Exports," Great Southern Lumber Co., Bogalusa, La.
THOMPSON, J. L., "Colonel of Silos," Thompson Bros. Lumber Co., Houston, Tex.
VENABLE, T. L., "Colonel of Hattiesburg," J. J. Newman Lumber Co., Hattiesburg, Miss.
WIESS, RAY, "Colonel of Materials," Kirby Lumber Co., Chicago, Ill.
WISNER, F. G., "Colonel of Conversation," Eastman, Gardiner & Co., Laurel, Miss.
WALKER, L. T., "Colonel of Fourche River," Fourche River Lumber Co., Chicago, Ill.
WILHITE, H. M., "Colonel of East St. Louis," Gulf Lumber Co., East St. Louis, Ill.



SHAFFER, W. D., "Colonel of Shooks," Great Southern Lumber Co., Bogalusa, La.
SHERWOOD, J. C., "Colonel of Accounts," Central Coal & Coke Co., Kansas City, Mo.
SMITH, B. H., "Colonel of Longville," Longville Lumber Co., Longville, La.
SCHULZ, R. C., "Colonel of Marathon," Marathon Lumber Co., Laurel, Miss.
STEVENS, F. C., "Colonel of Building Plans," Gilchrist-Fordney Co., Laurel, Miss.
SNELL, H. H., "Colonel of Classification," Lathrop Lumber Co., Birmingham, Ala.
SULLIVAN, W. H., "Colonel of Bogalusa," Great Southern Lumber Co., Bogalusa, La.
STEVENS, F. W., "Colonel of Bagdad," Bagdad Land & Lumber Co., Bagdad, Fla.
SOWERS, W. J., "Colonel of Epley," Major-Sowers Saw Mill Co., Epley, Miss.
SLAGLE, C. E., "Colonel of Clarks," Louisiana Central Lumber Co., Clarks, La.
THOMPSON, C. F., "Colonel of Weights," Mississippi Lumber Co., Chicago, Ill.
TROUNCE, J. W., "Colonel of Buffalo," Great Southern Lumber Co., Buffalo, N. Y.
WOODHEAD, B. S., "Colonel of Beaumont," Beaumont Lumber Co., Beaumont, Tex.
WUESCHER, M. L., "Colonel of Facts," Great Southern Lumber Co., Bogalusa, La.
WHITE, J. B., "Colonel of Genealogy," Missouri Lumber & Land Exchange Co., Kansas City, Mo.
WIENER, ELI, "Colonel of Spellbinders," Angelina County Lumber Co., Keltys, Tex.
YOUNG, H. M., "Colonel of Cash," New Orleans, La.

"COLONELS" BY BREVET.

BROOKS, R. H., "Colonel of Satin Lined Interior Finish," Advertising Agent, Little Rock, Ark.
KENLY, WM. L., "Colonel of Colonels," Commandant, Jefferson Barracks, St. Louis, Mo.
GLADDING, NELSON A., "Colonel of Song," E. C. Atkins & Co., Indianapolis, Ind.
WILMOT, WM. G., "Colonel of the Flat Earth," Lidgerwood Mfg. Co., Chicago, Ill.
SHUMATE, THOMAS, "Colonel of Producers," 4630 Kenmore Ave., Chicago, Ill.
SONDHEIMER, MAX, "Colonel of Mystics," E. Sondheimer Co., Memphis, Tenn.

Digitized by Google

Cohan lines, written by the entire Lumber Press Club and most competently staged by Thomas Shumate, a producer of theatrical affairs.

The entertainment—so called—occurred in a series of "light and "dark" houses and was meant to be—except in the climax, a burlesque on schooling and scientific research.

Just to elucidate what was meant to happen and what possibly did happen, we print herewith the dramatis personae:

Mysterious Stranger.....Max Sondheimer
Master of Ceremonies.....B. A. Johnson
Mind Reader.....J. C. Dionne.
Manager for Mind Reader.....James A. Kirby.
First Assistant Manager for Mind Reader.....James Boyd.
Second Assistant Manager for Mind Reader.....Six Members of Lumber Press Club.
Chorister.....Nelson A. Gladding
Geographer-Phrenologist.....William G. Wilmot
A Moving Picture Machine.....The Machine Itself.
A Spotlight.....The Spotlight Itself.
Herald.....Thomas Shumate.
Nine Members of the Lumber Press Club.....The Nine Members in Evening Dress
Skull of a Bright Young Man.....The Skull Itself
Eleven Soldiers....The Eleven Soldiers Themselves.
Two Policemen....Not present and never meant to be.

Every act—except that of the moving picture man—was ushered in by the "Spirit of '76", a local St. Louis band costumed to represent the wonderful patriotic painting of that name, which band, with waving flag and scream of fife and beat of drum, marched about the dining room under the glare of the spotlight, creating much enthusiasm.

The "Mysterious Stranger"—even with all the art and craft of the make up man,—could not be disguised in any way except to compel him to be dumb. He lived through an hour and twenty minutes of that condition and coming out of the chrysalis of his disguise made a talk on "Salesmanship."

William G. Wilmot looked like Micawber on the right side, Col. Sellers on the left side and the Immortal J. N. from front. What he may have looked like from back no one found out, for he wisely stood with his back to the wall, while proving that the world is flat and that Phrenology beats sales knowledge.

A mind-reading act by J. C. Dionne, James A. Kirby, and James Boyd was a great feature—but cannot be done again before that particular audience because they gave away their professional secret.

Incident to the action of the spectacle, Nelson A. Gladding, of E. C. Atkins & Co., Indianapolis, came all the way from New York to attend this gathering, led the spectators and entertainers in singing, "Tramp, Tramp, Tramp, the Boys are Marching," "Columbia, the Gem of the Ocean," "Just Before the Battle Mother," and, at the end, "America."

The Lumber Press Club News, written and printed in St. Louis by members of the club, was delivered during the banquet by five newsboys and was read by 75 percent of those who received it; and while no one has commented on the character of this sheet, the lumber trade newspaper editors can testify to the fact that the people who received the paper DID read it, which records the fact that at least ONE lumber trade newspaper has been read (as we SUSPECT they all have), even though it is not customary for readers to send night letters to the editors commenting on the incident each time.

There are sixteen copies of this paper left and in the hands of the secretary of the Lumber Press Club, and if any man is curious to see the sheet and will contribute $5 to his local sanitarium that takes care of sick babies in the heat of this summer weather and will send his receipt to either James E. Gatewood, president, care St. Louis Lumberman; Willard C. Howe, first vice president, care the American Lumberman; James A. Kirby, second vice president, care the Southern Lumberman, Bolling Arthur Johnson, secretary, care the LUMBER WORLD REVIEW; or James Boyd, the treasurer, care the Lumber Trade Journal, New Orleans, he will—by that act—when the receipt is in the hands of the secretary at Chicago—receive by return registered mail a copy of the above paper. This offer holds good during the month of July.

In the last moving picture episode an announcement was made by the Master of Ceremonies that the "School of Preparedness" had conferred a diploma upon the members of the standing committees and upon the officers of the Southern Pine Association. A few of the diplomas were presented to the people for whom they were intended. It was announced the remainder would be sent by mail direct.

In the Lumber Press Club News, at the bottom of nearly every page, in type an inch deep, is the slogan "The Hope of the World." During the time of the spectacle the Herald several times referred to "The Hope of the World." In the end the real nub of the whole thing was discovered to the audience.

A pistol shot rang out, the room went dark, the spotlight blazed upon the perspiring editors who sweltered under their wilted collars as they stood and pointed to a great replica of the "Service" sign of the Southern Pine Association over the rostrum, upon which they had spent the evening, and exclaimed in various qualities of voice "The Hope of the World," whereupon a great 20-foot flag fluttered down behind them, Chorister Nelson A. Gladding arose to his feet and sang, and the orchestra played "America," the assembled company joining patriotically in large, red voices.

Lumber Imports and Exports for April, 1916

The monthly trade summary of the Department of Commerce of the United States, with totals to May 1 or for ten months of the fiscal year ending June 30, 1916, and comparisons with previous years, will be found of peculiar interest to lumbermen, showing, as it does, the effects of the European war on the lumber and general trade, the lack of sufficient vessels to carry our products, the ups and downs of export and domestic values and giving a wonderful fund of information, which must enter into the sum total of lumber calculations sooner or later. It has been condensed in readable and understandable form herewith.

One of the most interesting features of the report is the statement shown of the volume of export trade carried by American-owned vessels and by vessels sailing under foreign flags—a showing that is most discreditable to the vaunted patriotism of the American people.

THE NEED FOR A MERCHANT MARINE.

The deplorable lack of vessels sailing under the American flag is more conclusively shown in every succeeding report issued by the Department of Commerce at Washington. In April, 1916, there were exported from the United States in American vessels merchandise to the value of $53,131,322, while foreign vessels carried American goods to the value of $289,119,378 in that month, or over five times as much. Of this the far greater part, or $173,113,413 worth, was carried in British-owned vessels alone. The same relative figures are shown in the recapitulation of the Department of Commerce for the exports of domestic merchandise during the ten months ended April 30, when there were total exports valued at $3,304,427,094, of which $2,583,376,537 worth were carried in foreign vessels.

The foreign trade of the United States showed an increase of $106,000,000 in April this year as compared with April, 1915, and for the ten months it showed an increase of nearly $1,200,000,000, or 53 percent, a proportion, which will be undoubtedly maintained through the remaining two months of the fiscal year.

OUR TRADE WITH ALASKA.

The monthly summary of the Department of Commerce shows that Alaska cuts no inconsequential figure in the lumber trade of the Pacific northwest. During April, 1916, the shipment of lumber to Alaska was 6,491,000 feet, as compared with 4,557,000 feet in April, 1915. For the ten months ended April 30, 1916, the total shipment of lumber to Alaska was 191,000 feet, as compared with 23,563,000 feet in the corresponding ten months of 1915 and 16,395,000 feet in the corresponding ten months of 1914. This shows that the Alaska trade in lumber is developing rapidly. The same ratio of increase in business with Alaska is noted in various manufactures of lumber, including box shooks, doors, sash, and furniture.

The total value of lumber and its products shipped to Alaska in April, 1916, was $416,885, as compared with $395,427 in April, 1915. The shipments of lumber during the ten months ended April 30, 1916, were valued at $1,077,991, as compared with $881,015 in 1915 and $783,001 in 1914.

SOUTH AMERICAN LUMBER TRADE.

Much has been hoped for by lumbermen in the development of our trade with South American countries in lumber and other forest products. Up to this writing the results as shown by the report, are disappointing, due perhaps to one reason more than any other—the lack of adequate vessel facilities.

The exports for April, 1916, and for the ten months of the fiscal year ending April 30, are as follows:

	April 1916, feet.	April 1915, feet.
To Argentina	4,619,000	15,615,000
To Brazil	35,000	300,000
To Peru	3,411,000	No record
To Uruguay	153,000	No record
Other S. A. countries	694,000	5,583,000

The exports to various South American countries for the ten months ended April 30, were:

	1916—Feet.	1915—Feet.	1914—Feet.
Argentina	74,912,000	43,775,000	186,143,000
Brazil	7,105,000	7,674,000	36,016,000
Peru	24,584,000	No record	No record
Uruguay	10,090,000	No record	No record
Other S. A. countries	12,152,000	48,263,000	137,512,000

The lumber exports to Brazil, Peru and Uruguay were not kept separate until the present fiscal year and hence no comparison can be made with shipments of lumber to those countries in previous years.

EXPORTS OF FURNITURE.

Exportation of furniture to South American countries has not been of flattering proportions during 1916, as compared with the preceding years, but shows a slight increase this year as compared with last, although far below the figures for 1914. The exportation of furniture to South America is reported as follows:

	April, 1916 Value	April, 1915 Value
Argentina	$18,680	$24,600
Brazil	2,368	1,633
Other S. A. countries	12,183	13,349
Total	$33,231	$39,582

For the ten months ended April 30 the value of furniture exports for the years given was as follows:

	1916	1915	1914
Argentina	$166,958	$147,600	$720,734
Brazil	37,147	23,526	129,720
Other S. A. countries	205,643	282,905	448,609
Total	$409,748	$454,031	$1,299,063

The total exports of furniture to all countries for the months of April 1916 and 1915 and for the ten corresponding months of the fiscal year follow:

April, 1916, value.....$263,943
April, 1915, value.....256,351

Exports of furniture to all countries for ten months ended April 30:

1916.....$2,567,569
1915.....2,441,090
1914.....5,647,247

YELLOW PINE AND FIR EXPORTS COMPARED.

In order that our readers may have a fair idea of the relative exportation of southern pine and Pacific coast fir, a few figures are presented herewith:

The yellow pine exports in April were:

	Feet
April, 1916	39,809,000
April, 1915	46,345,000
Decrease	6,536,000

or 14 percent.

Exports for ten months ended April 30, 1916.....460,477,000
Exports for ten months ended April 30, 1915.....367,349,000
Exports for ten months ended April 30, 1914.....894,597,000
Increase ten months 1916 over 1915..... 93,128,000 or 25 percent.
Decrease ten months 1916 from 1914.....434,120,000 or 48 percent.

The exports of Pacific coast fir for April were:

Digitized by Google

	Feet
Exports of fir in April, 1916	25,997,000
Exports of fir in April, 1915	23,256,000
Increase	2,741,000
or 12 percent.	
Exports for ten months ended April 30, 1916	227,501,000
Exports for ten months ended April 30, 1915	308,666,000
Decrease	81,165,000
or 26 percent.	
Exports for ten months ended April 30, 1914	564,928,000
1916	227,501,000
Decrease	337,427,000
or 60 percent.	

Exports of yellow pine decreased in April, 1916, 14 percent from April 1915.

Exports of Pacific coast fir increased in April, 1916, 12 percent over April, 1915.

Exports of yellow pine increased in the ten months ended April 30, 1916, 25 percent over the ten months ended April 30, 1915.

Exports of Pacific coast fir decreased in the ten months ended April 30, 1916, 26 percent from the ten months ended April 30, 1915.

Exports of yellow pine decreased in the ten months ended April 30, 1916, 48 percent from the ten months ended April 30, 1914.

Exports of Pacific coast fir *decreased 60 percent* in the ten months ended April 30, 1916, from the ten months ended April 30, 1914.

EXPORTS OF LOGS.

	Feet.
Exports of logs April, 1916	2,436,000
Exports of logs April, 1915	5,035,000
Ten months 1916	27,401,000
Ten months 1915	35,029,000
Ten months 1914	117,964,000
1916 less than 1915	25 percent
1916 less than 1914	80 percent

EXPORTS OF LUMBER—ALL WOODS.

	Feet.
Exports for 10 months ended April 30, 1916	988,523,000
Exports for 10 months ended April 30, 1915	926,966,000
Exports for 10 months ended April 30, 1914	2,010,416,000
Increase of 1916 over 1915	6½ percent
Decrease in 1916 from 1914	51 percent

EXPORTS OF STAVES.

	Pieces.
April, 1916	4,215,527
April, 1915	3,672,996

Exports of staves for ten months ended April 30:

	Pieces.
1916	46,938,118
1915	31,855,668
1914	64,409,028

EXPORTS OF DOORS, SASH AND BLINDS.

April, 1916, value	$21,259
April, 1915, value	18,545

Exports for ten months ended April 30:

1916, value	$246,803
1915, value	498,987
1914, value	954,099

EXPORTS OF BOX SHOOKS.

In April, 1916, value	$198,940
In April, 1915, value	209,551

Exports of box shooks for ten months ended April 30:

1916, value	$2,449,758
1915, value	1,674,625
1914, value	2,530,727

EXPORTS OF RAILROAD TIES.

April, 1916	241,329
April, 1915	315,809

Exports of railroad ties for the ten months ended April 30:

1916	3,348,373
1915	3,233,374
1914	4,245,581

EXPORTS OF LUMBER TO CUBA.

	Feet.
April, 1916	13,501,000
April, 1915	7,902,000
For ten months ended April 30:	
1916	138,790,000
1915	69,099,000
1914	108,760,000

LUMBER EXPORTS TO THE UNITED KINGDOM.

	Feet.
April, 1916	13,726,000
April, 1915	23,924,000
Exports for ten months ended April 30:	
1916	227,690,000
1915	183,757,000
1914	278,703,000

LUMBER EXPORTS TO AUSTRALIA.

	Feet.
April, 1916	15,286,000
April, 1915	11,036,000

Exports to Australia for ten months ended April 30:

1916	127,770,000
1915	164,063,000
1914	258,954,000

Revival of Hoo-Hoo Interest in all Sections

Advices from various sections of the country indicate that the revival of interest in the Hoo-Hoo order is unabated.

At Evansville, Ind., preparations are being made for a Hoo-Hoo revival meeting to be held July 10, at which Julius Seidel, of St. Louis, Snark of the Universe, and E. D. Tennant, secretary and treasurer of the order, are expected to be present. They will be given a big reception at Evansville, and Paul Luhring, Vicegerent Snark for southern Indiana, states that plans are being made for a large concatenation at Evansville in the early fall.

A successful concatenation was held at Orange, Tex., Saturday evening, June 17, under the auspices of J. W. Sherwood, Vicegerent Snark for that district. A procession was formed at the Holland hotel preceded by a band and a large number of the members of the order participated, together with the candidates. Those who were initiated at the concatenation, held in the Elks Lodge room, were Fred H. Swails, of Orange; C. W. Roddam, Orange; Lucian P. Perry, Vinton, La.; Raymond Perry, Vinton, La. The concatenation was largely attended and Marcus E. Sperry, of Orange, conducted the ceremonies.

The Hoo-Hoo brethren of Bend, Ore., had a merry time on the evening of June 16 when twenty-seven kittens were initiated into the Hoo-Hoo order. The concatenation, which was presided over by Vicegerent Snark F. D. Becker, was held at the Emblem Club. A dinner and dance followed the ceremonies. Those who were initiated were the following:

J. P. Hennessy, G. E. Clark and T. A. McCann, all of the Shevlin-Hixon Lumber Co.; H. G. Norton, J. P. Keyes and H. E. Allen, of the Brooks-Scanlon Lumber Co.; E. A. Sullivan, of the Sullivan Contracting Co.; H. C. Ellis; J. C. Rhoades; J. A. Estee; J. H. Haner; R. W. Sawyer, editor of the Bend Bulletin; V. V. Harphan and A. C. Read, of the Forest Service; C. M. McKay, of the Mueller Timber Co.; E. H. Stoehr, of the Bend White Pine Sash Co.; J. E. Larson; Dr. U. S. Coe, manager Lumbermen's Hospital; O. O. Carlson, of Carlson & Lyons, mill supplies; W. H. Downing, of the Downing Lumber Co.; A. Eagan, traveling freight agent of the Oregon & Washington Railroad; G. W. Cheney, of the Knapp-Cheney Box Co.; H. A. Miller, of the Miller Lumber Co. Two kittens from Portland were A. Kelling, assistant general freight agent of the Oregon & Washington Railroad, and N. A. Drew, of the Timberman.

J. F. Wilder, of the J. F. Wilder Lumber Co., Hattiesburg, Miss., who has long been interested in the Hoo-Hoo order, was in the Panama Canal Zone recently and while there got up a concatenation at Colon, at which were present a good representation of the lumbermen of the Zone. A class of eight lumbermen was initiated, comprising William T. MacCormack, George M. Guerin, Arthur C. Macy, Lewis E. Clark, William Kidston, Thomas A. Lombard and William F. Foster.

The lumbermen were enthusiastic over the affair and William T. McCormack has been made Vicegerent Snark for the Zone. Mr. Wilder is entitled to much credit for his enterprise.

The Western Carolina Hoo-Hoo held an informal session at the Langren Hotel, Asheville, N. C., on the evening of July 3. Frank E. Johnson, of the National Casket Co., is Vicegerent Snark and gave the members a good time. It is likely that a concatenation will be held at Asheville later in the month.

CINCINNATI LUMBER CLUB OUTING.

Cincinnati, O., July 6.—Sixty members of the Cincinnati Lumbermen's Club attended the most successful and thoroughly enjoyable outing of the organization probably ever held last Saturday at the famous old Bevis Tavern, out the Colerain Pike. The usual contests, sumptuous dinner and trimmings whiled away the day. The inevitable baseball game sprung up in the afternoon. The hardwood dealers contested with the yellow pine men and after nine innings of wonderful exhibitions of how the grand national game should not be played, the hardwood men came out victorious to the tune of 16 to 14.

The Latest News of the Lumber World

THE GREAT FREIGHT RATE HEARING.

Coincident with the issuance of this number of the LUMBER WORLD REVIEW there is beginning the greatest railroad rate investigation in the history of the country. The hearing will be held at the Auditorium Hotel and will be presided over by B. H. Meyer, chairman of the Interstate Commerce Commission. This of itself shows the importance with which the investigation is regarded by the government, as usually such hearings are placed in the hands of an examiner for the commission. The investigation will cover railroad freight traffic on every item made of wood from top to bottom; it will cover all phases of the lumber industry and months of preparation have been made for the hearing by the railroads, the lumbermen and by the members of the commission.

The commission has made a classification of 18,000 rates applying to lumber and articles made of wood. The lumbermen have made a compilation of the nature, destination and other freight conditions regarding the shipment of 50,000 car loads of lumber in all parts of the country. No doubt the railroad authorities have made similar, if not, as usual, more ample preparation than any other of the parties in interest.

This is not a fight between the railroads and the lumbermen, but a thorough investigation at the instance of the Interstate Commerce Commission itself and on its own initiative. The lumbermen are glad that this is so, because they will have an opportunity to place before the proper department of the government the large number of problems which have confronted and dismayed them during the last several years. The commission will simplify present methods of handling lumber, if possible to do so, and will have due care for the interests of all parties.

Lumbermen fear the effect of a reclassification of freight rates, as proposed by the railroads, as many of the established usages are regarded as fundamental necessities of the manufacturing and distributing business. To disturb them might mean ruin to many. It is believed that, in view of the extensive character of the hearing, a full month will be occupied, if not more.

LUMBER EXHIBIT AT ATLANTIC CITY.

The Master Car Builders' and the American Railway Mechanics' Associations have just completed a ten days' meeting at Young's "million dollar pier" at Atlantic City, New Jersey. In connection with the meetings, the Railway Supply Manufacturers' Association, consisting of manufacturers of materials which go into the manufacture of cars and locomotives and railway shops generally, held an annual exhibit illustrating the nature of their products and particularly improvements made during the past year.

For the first time in the history of these great expositions, a group of lumbermen made an exhibit this year. The Southern Pine Association had a large space on the pier, in which they exhibited a full-sized section of a standard box car. This section was fully equipped with hand rails, bolsters, couplers, etc. The car was so constructed as to indicate different methods for constructing the sides, ends and roofs of box cars. In addition to this car section, the exhibit consisted of a large number of sections of southern yellow pine sills, some of which had been in service in cars for twenty years. There was also a complete exhibit illustrating the new density rule, a rack illustration of different grades of car lining, siding and roofing. Through the courtesy of the Ayer & Lord Tie Co., of Chicago, the entire floor of the exhibit was covered with creosoted interior yellow pine blocks.

The chief purpose of the exhibit was to call the attention of railway officials to the fact that there was still available yellow pine material suitable for car construction, and that this could be obtained easily from a large number of manufacturers. The exhibit was also intended to illustrate the desirability of using carefully prepared specifications and of properly inspecting the lumber when purchased.

The attendance at the exposition was very good and, judging from the comments made by the engineers who visited the exhibit, the Southern Pine Association has every reason to be proud of its maiden effort. In one of its daily issues, the Railway Age-Gazette commented on the exhibit in a most favorable manner, calling particular attention to the advent into the field of such an extraordinary organization as the Southern Pine Association.

MAY OPEN BRANCH IN LITTLE ROCK.

Memphis, Tenn., July 5.—At a recent meeting of the board of governors of the Southern Hardwood Traffic Association held here, President McClure appointed a committee of three, composed of R L. Jurden, William Pritchard and O. M. Krebs, to confer with D. S. Watrous, of Little Rock, and other Arkansas lumbermen regarding the opening of a branch of this organization at Little Rock. This step was first dicussed on the recent visit of the Memphis lumbermen to Helena, Ark., made for the purpose of bringing about closer relations between the lumber interests of Memphis and Helena and it is probable that plans will be completed shortly for the establishment of this branch which, will be run similarly to that opened at Louisville, Ky., some months ago. There will be a delegation of Helena and other Arkansas lumbermen here as guests of the association Friday, July 7, and it is likely that the movement will be definitely decided upon at that time, particularly as indications point to the affiliation of these interests with the association.

EXECUTIVE COMMITTEE NAMED.

Col. John M. Woods, the new president of the National Hardwood Lumber Association, has announced the appointment of the following executive committee of that organization:

John M. Woods, Boston, Mass., chairman.
E. V. Babcock, Pittsburgh, Pa.
T. M. Brown, Louisville, Ky.
Theodore Fathauer, Chicago.
Charles H. Barnaby, Greencastle, Ind.

REPORT OF STOCKS.

Reports made by 158 mills belonging to the Southern Pine Association, as recently compiled, show that on May 1 there were 1,315,187,760 feet, which was 24,000,000 feet larger than in April, 56,000,000 larger than in March, 110,000,000 feet larger than in February, and 204,000,000 feet larger than in January. The cut in May shows a decrease of 10,000,000 feet from the March report, March showing the greatest total of production of any month in several years, being 475,332,385 feet.

ALEXANDRIA DISTRICT EXCHANGE.

The regular monthly meeting of the Alexandria District Lumbermen's Exchange was held at the Hotel Bentley, Alexandria, La., on June 20.

Reports were received from a large number of mills in the district, among them the Forest Lumber Co., which stated that it was operating its sawmills four days a week and its other mills were running on the same time. The Frost-Johnson Lumber Co. stated that it was running all of its mills four days a week. The Powell Lumber Co. will close down its sawmills for sixty days. The Long-Bell Lumber Co. mills are running four days a week and there is a general movement to curtail throughout the south.

The Germain & Boyd Lumber Co., of Atlanta, La., stated that it was unable to meet the present market, but that it has thirty days' timber cutting ahead, mostly No. 1 and square edge and sound.

The Louisiana Saw Mill Co., of Glenmora, report orders for timber more plentiful than for yard stock and heavy inquiries on heart timbers. This company stated that it expected demand to revive by July 15.

The Newell Lumber Co., of Eunice, reported that its shipments last month were 2,000,000 feet and the cut 1,000,000 feet and that the June cut would probably be about the same. F. L. Adams, of this company, reported that he expected to see a decided change for the better within the next two weeks.

The Urania Lumber Co., of Urania, reported a curtailment during May of 25 percent and indicated a curtailment of 40 percent in June, stocks being about 2,000,000 feet below normal.

The Meridian Lumber Co., of Meridian, La., reported that its stocks were all below normal except on No. 1 dimension.

SOUTHERN FORESTRY CONGRESS.

A number of prominent men have accepted invitations to speak at the annual meeting of the Southern Forestry Congress, to be held at Asheville, N. C., July 11-15. Hon. Edmund Seymour, of New York, president of the American Bison Society, will speak on Tuesday on the subject, "Re-establishment and Protection of Big Game in the Southern Appalachians." Henry S. Graves, forester of the United States Forest Service, will speak on "Southern Forests and Their Place in the Nation's Timber Supply." Governor Craig, of North Carolina, will make an address of welcome and open the deliberations of the congress. Clarence J. Owens, secretary of the Southern Commercial Congress, will speak on the subject, "The Forests in Relation to the Upbuilding of the Town" on Tuesday. Professor J. W. Toumey, director of the Yale Forest School, will deal with the subject "The Regeneration of the Southern Pine Forests." Professor Toumey is perhaps the foremost authority in the country on seedlings and planting of cut-over and abandoned lands. J. F. Eldredge, supervisor of the Florida National Forest, will speak on the subject "The Naval Stores Industry—How It Can Be Perpetuated in the South."

The Thursday morning's session of the congress will be devoted to the subject of "Forest Fire Prevention in the South." Among those who will speak at this session will be J. A. Viquesney, forest, fish and game warden of West Virginia; Professor H. H. Chapman, of the Yale Forest School; F. W. Besley, state forester of Maryland; W. Hoyt Weber, manager of the Central West Virginia Fire Protective Association; J. G. Peters, of the Forest Service, and others.

All men and women who are interested in any phase of the great subject of forestry are cordially invited to attend the gatherings.

HAS THE AMERICAN SOCIETY FOR TESTING MATERIALS LAID DOWN A NEW LINE OF POLICY?

The American Society for Testing Materials has either changed its policy or some one of its august, erudite and scientific members has "peached."

You know this is horrible to relate, but it is nevertheless true. One of the reputable lumber trade newspapers has printed in a recent issue the "Proposed Tentative Specifications for Wooden Paving Blocks" and what purports to be or might be construed to be the final findings of that body on the rules, definitions, etc., for "Selected Structural Douglas Fir Specifications for Bridge and Trestle Timber."

We see no reason in the world why these things should NOT be printed, nor why there should have been so much secrecy and holding back of information concerning the recent density rules for yellow pine, upon which the American Society for Testing Materials FINALLY placed its approval!

It has been OUR experience that the more you talk and write about a thing, the quicker you either "kill" it or "cure" it.

A year ago—however—for a newspaper to print advance findings of this society was EASILY the equivalent of throwing rocks at your king or passing your commanding office without saluting.

We have NOT printed the rules and regulations and SHALL not until we are officially informed that to do so is not a misdemeanor, thereby—as our news sense tells us—missing a rare opportunity of printing something that would be REALLY VALUABLE to the trade.

EDITOR.

The Alexandria Lumber Co. reported a curtailment of one day a week and a reduction of its stocks of 500,000 feet in the last thirty days. It reported also that No. 1 and square edge and sound are very scarce. It reported dimension selling at about $8.50 off.

The Enterprise Lumber Co., Alexandria, reported that it had booked orders lately for fifty-six cars of dimension at $8 to $8.50 off the list. It had refused an order for twenty-five cars of dimension at $9 off the list.

S. H. Bolinger & Co., of Shreveport, reported that their May shipments were 600,000 feet more than their production and in the last few days orders for fifty cars of dimension had been booked at $8.50 off.

The Anacoco Lumber Co., of Lake Charles, reported good orders for heart-cutting timber. The firm is curtailing one day a week. Its dimension is selling for $8 to $8.50 off.

The Iatt Lumber Co., of Colfax, reported that it had more orders for dressed stocks than it could handle. Timber prices are holding up and dressed timbers are selling at about $1 less than six months ago.

The Peavy-Byrnes Lumber Co. reported that it had 13,000,000 feet on its yard and is curtailing two days a week.

The Trinity County Lumber Co. reported that its stock is considerably below normal and that shipments and production are about even. It is curtailing one day a week.

Secretary Guy H. Mallam reported that during the previous week he had received letters which indicated that the curtailment of operations at the southern mills was having a good effect on orders and prices.

GEORGIA-FLORIDA MILLMEN.

The Georgia-Florida Sawmill Association held its regular monthly meeting at Live Oak, Fla., June 20 and adopted new grading rules for long leaf yellow pine, which embodied changes that were made and approved by the board of governors at the May meeting of the association. Copies of the new rules, which will become effective on August 1, will be printed at once and a committee will notify other associations of the changes made from the 1905 rules.

It was stipulated that non-members desiring association service will be charged $7.50 a day instead of $5, and also expenses.

The standard shingle was changed from eighteen inches to sixteen inches. The weight of air dried boards was fixed at 4,000 pounds to the thousand feet.

Four new members were elected as follows: Horse Shoe Lumber Co., River Falls, Ala.; J. N. Bray & Co., Valdosta, Ga.; King Lumber & Oil Co., Umatilla, Fla.; J. H. Alison & Bro., Gainesville, Fla.; Neisler Fruit & Land Co., Reynolds, Ga.

The following standing committees were appointed by President W. Frazier Jones:

Finance—R. H. Paul, G. W. Brandon, William McKay, S. B. Denton, W. C. Davis, G. O. Waits, J. H. Loughridge.

Traffic—H. S. Dunlevie, L. L. Daugherty, D. W. McArthur, H. P. Hughes, J. J. Upchurch.

Grievance—A. G. Cummer, E. P. Rodwell, T. L. Price, J. E. Graves, J. L. Greer.

Inspection Dimension—H. W. Taylor, R. B. Young, A. G. Cummer, C. W. Kirby, H. S. Cummings, J. H. Alison, H. L. Gray, W. Ray, E. A. Osborne.

Inspection Planing Mill—E. L. Marbury, R. H. Paul, T. J. Aycock, A. G. Garbutt, H. P. Hughes, R. S. Boyd.

T. A. Cartwright, traffic manager, tendered his resignation much to the regret of the members of the association. Mr. Cartwright is to be affiliated with the Cherry River Boom & Lumber Co. and its allied interests.

The next meeting of the association will be held Tuesday, July 25, at Jacksonville.

EASTERN EMBARGO MODIFIED.

Several modifications of the embargo on eastern rail shipments have been announced by the National Wholesale Lumber Dealers' Association, some of the principal features of which follow:

The Pennsylvania lines still have an embargo on lumber for the Brooklyn eastern district terminal. Specific modifications of the embargo on lumber for Jersey City, Thirty-seventh Street Station, New York; North Fourth Street Station, Brooklyn and New York lighterage may be made upon authority of C. H. Krick, general superintendent, Thirty-third Street Station, New York. The embargo on shipments for export via New York continues in effect.

A modification of the Pennsylvania railroad embargo on lumber for Kensington, Shackamaxon and Pierce Street Stations has been made by the Pennsylvania, at Philadelphia, to permit movement of shipments for all consignees, excepting Stroud & Wilgus, H. H. Sheip Manufacturing Co., Ed F. Henson & Co., J. T. Pearson and Seaman & Menaugh. The embargo against Fairhill Station is removed.

The New York Central has modified its embargo to permit acceptance of shipments from all points for all track deliveries in New York and Brooklyn, excepting the Brooklyn eastern district terminal. The New York Central embargo on shipments for delivery by lighter in New York is modified to permit acceptance of all shipments when consigned direct to specific lighterage deliveries.

The Lehigh Valley can modify its embargo on shipments consigned for lighterage delivery in New York harbor if authorized by F. E. Signer, general eastern freight agent, New York. Embargo also applies on export freight unless authorized by F. E. Signer. This means that domestic shipments from all ports will be accepted for New Jersey and track deliveries.

The Erie embargo on lumber for the Anderson Lumber Co., Passaic, N. J., has been removed. Export freight by way of New York still has an embargo.

The Central Railroad of New Jersey continues its embargo as heretofore, excepting that shipments for Jersey City, Brooklyn terminal, Bush docks and Bush terminal will be accepted.

The New York, New Haven & Hartford and Central New England roads have removed embargo on all items except bituminous coal. Specific embargoes are placed against industries failing to promptly unload and release equipment.

The Latest News from Washington

Lumber World Review, Washington Bureau, 208 District National Bank Building

L. M. LAMM, Staff Correspondent

SCOPE OF THE HEARINGS IN THE GENERAL CLASSIFICATION CASE OUTLINED.

Washington, D. C., July 5.—The Interstate Commerce Commission just on the eve of the going to press of the last issue of the LUMBER WORLD REVIEW, gave out a statement telling of the scope of the hearings to be held at Chicago, beginning on July 10, before Chairman Meyer, of the commission. A brief telegram as published in our issue of June 25, told of the announcement. In order that the lumbermen interested may know something more of what is to be taken up at the hearings we are printing herewith, some of the most salient features of the announcement, just on the eve of the beginning of the hearings.

The commission states that it "intends to submit in evidence the digest and rate study which was compiled in connection with this proceeding." This was briefed in a former issue of this paper. Continuing the announcement says:

"Immediately after the introduction in evidence of the digest and rate study all parties to the proceedings will be invited to correct any errors found therein and to make such supplementary statements as they desire, not only with regard to the answers to interrogatories but also as to the data compiled under the study of present tariff conditions.

"The answers to questions 4 and 5 of the commission's original interrogatories show the attitude of carriers and shippers toward the present situation as disclosed in lumber lists now in effect and toward the establishment of a uniform lumber list. The answers to those questions also contained to a great extent their recommendations as to changes to be made. It is particularly desired that each party to this proceeding, including carriers and shippers, should make a complete statement of the position he intends to take." Further in the announcement the commissioners say:

"Carriers and shippers are asked to consider with respect to each commodity listed the practicability of using the carload minimum which predominates for the entire country for movements from one territory to another, leaving for application to movements within each territory such minima as may be called for by other conditions peculiar to that particular section.

"With respect to each article listed in the table information should be furnished as to the average loading per car, the value per 1,000 feet per ton, and liability to damage and also as to the quantity of movement and the average length of haul in so far as it may be feasible." The outline continues:

"Carriers and shippers are requested to consider the adoption of a uniform-transit charge for the service of stopping in transit, as well as uniform provisions for determining the rate ultimately to be applied on the in-and-out movement as outlined.

"In how far do proportional rates take the place of transit?

"Carriers and shippers are requested to consider the policing and reconsignment rules referred to by number and by letter in the last column of the transit table and set forth in brief form at pages 339 and 340. The carriers which provide these rules should come prepared to state the object and purpose of each rule, and each carrier will be expected to state at the hearing why it does not consider it necessary to include in its tariffs such rules as are not included. Wherever the different rules applied present merely variances in terminology, the adoption of uniform terminology should be considered. It should be determined what rules it is important to retain and whether or not it is practicable to adopt a uniform list of rules to be applied by all carriers. As to each transit provision, uniformity in the time limit for stop-over should be determined upon.

"Another question which carriers and shippers are invited to consider is whether or not it would be practicable to so word transit provisions as to permit of their application upon reasonable request at all points along the route of movement with reasonable provisions for extra charge for back haul.

"Uniformity should be secured in the names given for the various transit provisions in the different sections of the country, so that in each section and for all carriers each name will mean the same.

"With regard to reconsignment and diversion, carriers and shippers are requested to state to what extent they believe such provisions to be necessary and beneficial.

"Where transit provisions are accorded in one section of the country and not in other sections of the country, the facts which make it necessary to accord them in the one case and which render it unnecessary in the other should be set forth."

In order, as the commission sets forth, "to secure an orderly presentation of testimony shippers will be heard in the order (as published in the last issue of the LUMBER WORLD REVIEW) in so far as they have testimony present with regard to the groups of related articles indicated."

Shippers are to be heard first. The commission has stated that the carriers may present their testimony by territories if they prefer.

IMPORT FIGURES FOR SHINGLES FOR ELEVEN MONTHS.

Washington, D. C., July 5.—The value of the shingles imported into the United States from Canada for the eleven months ending May of this year was more than $500,000 more than for the same period last year. This is according to the monthly figures of the Department of Commerce.

For the eleven months, ending May, 1916, there were 1,616,806,000 shingles imported with a value of $3,256,124. For the eleven months ending May, 1915, there were 1,321,422,000 shingles imported with a value of $2,766,523.

The same figures show that for the month of May in this year there were 168,002,000 shingles imported, valued at $374,649. In May, 1915, there were 156,533,000 shingles imported, with a value of $339,742.

UNITED STATES GOVERNMENT CALLS FOR BIDS ON TEAKWOOD.

Washington, D. C., July 5.—Bids are to be opened here on September 19, by the Bureau of Supplies & Accounts, Navy Department, for 9,200,000 feet b.m. of teakwood logs. This is rather an unusual order and was placed by the Navy department for finishing the battleships California and Tennessee and for stock.

According to the specifications, which are just being sent out, 2,000,000 feet are for delivery f.o.b. the Brooklyn, N. Y., and Mare Island, Cal., navy yards; 2,000,000 feet for delivery f.o.b. government vessel in Manila Bay, P. I.; 2,000,000 feet delivery f.o.b. government vessel, at Rangoon, Burmah; and 2,000,000 feet delivered f.o.b. government vessel at Saigon, French Indo-China; also 600,000 feet, one-half to be delivered at the Brooklyn, N. Y., and the other half at the Mare Island, Cal., navy yards; and 600,000 feet delivered f.o.b. government vessel in Manila Bay, P. I.

REPORTS OF GENERAL LUMBER INVESTIGATION CONSIDERED IN CONFERENCE.

Washington, D. C., July 5.—Arrangements have been made for a co-operative meetings of the Federal Trade Commission, the Forest Service, and the Bureau of Foreign & Domestic Commerce, Department of Commerce, in the general lumber investigation.

No details could be obtained as to the purpose of the meetings but it is thought that the report of the Forest Service, just recently completed, will be gone over at least in part at the meetings.

E. T. Allen, of Portland, Ore., representing the Western Forestry and Conservation Association arrived here last week.

Mr. Allen's visit is in connection with the lumber investigation of the Federal Trade Commission and the lumber study of the Forest Service. He has had conferences with Commissioner Parry, as well as the Chief Forester and other members of the Forest Service.

USE OF WOOD WASTE IN THE MANUFACTURE OF PULP INCREASING.

Washington, D. C., June 30.—Officials at the Forest Service have just made a statement to the effect that the use of wood waste in the manufacture of pulp is steadily increasing.

It is said that approximately 330,000 cords of waste, valued at $1,400,000 were utilized by 35 of the 200 pulp and paper mills of this country. It is thought that as the price of cord wood goes up the amount of wood waste used will become greater.

INTERSTATE COMMERCE COMMISSION NEWS

Just as this edition of the LUMBER WORLD REVIEW goes to press the hearings are to start in Chicago in No. 8131, being the general lumber reclassification case, which will doubtless develop into one of the biggest factors in the lumber trade for the future. Officials of the commission here refuse to speculate as to how long the hearings will last, but from the ground that has to be covered and the witnesses to be heard it seems as though six weeks would be a short time. Chairman Meyer of the commission will open the hearings, but it seems doubtful if he will be able to stay in Chicago and take testimony for a long period of time, owing to the many pressing duties that are now before the commission.

INTERSTATE COMMERCE COMMISSION HEARINGS

Following are the hearings and arguments now on the commission's docket in lumber cases between now and the next press date of this paper:

On July 13, at Kansas City, Mo., before Examiner Pugh, in I & S Docket No. 813, concerning lumber rates from Oklahoma.

On July 14, at New Orleans, La., before Examiner Gibson, in I & S Docket No. 832, concerning lumber rates from Louisiana stations.

On July 15, at Chicago, Ill., before Examiner Gartner in Case No. 8817, of the Peshtigo Lumber Co. vs. the Wisconsin Northwestern et al.

On July 17, at Kansas City, Mo., before Examiner Worthington, in case No. 8809, of the Globe Lumber Co. vs. Sibley, Lake Bisteneau & Southern et al.

On July 18, at Chicago, Ill., before Examiner Gartner, in case No. 8808, of the Louisiana Lumber Co. vs. the C. C. C. & St. Louis.

On July 18, at Grand Rapids, Mich., before Examiner Thurtell, in case No. 8329, of the Cadillac Lumber Exchange vs. the Ann Arbor et al.

On July 19, at Omaha, Nebr., before Examiner Flynn, in case No. 8670, of the McShane Lumber Co. vs. the M & O et al.

On July 24, at Little Rock, Ark., before Examiner Pugh, in I & S Docket No. 877, taking up lumber rates from Arkansas City, Ark.

Suspensions.

The commissioners have suspened the operation of certain items appearing in supplements Nos. 2 and 3 to New York, New Haven & Hartford I. C. C. tariff No. X-15 until October 26.

The suspended items contain a proposed new rule providing for the assessment of additional demurrage charges on cars held in transit or on storage tracks at destination. The proposed rule reads as follows:

"When cars are held in transit at points short of destination, or on storage tracks at destination, because of failure of consignees to unload within the free time cars that have been placed on public delivery tracks, private sidings or industrial interchange tracks, and notice thereof is sent or given to consignee, the charges shown in this tariff and local freight tariff covering additional demurrage charges for detention of equipment will apply to all cars so held, and no additional free time will be allowed after final displacement."

Personal News Notes

The E. A. Engler Lumber Co., of this city, has moved its offices from the Lumber Exchange building to 1450 McCormick building. The company operates a saw mill at Beaudette, Minn.

E. T. Allen, of Portland, Ore., of the Western Forestry & Conservation Association, was in Chicago week before last on his way to Washington, D. C., and expects to spend a week or two in the east.

Frank F. Fish, secretary of the National Hardwood Lumber Association, this city, is planning to make a trip to Boston next week to confer with Col. John M. Woods, the new president of the association. During his absence Mr. Fish will also do a little missionary work among the members of the trade in New York and New England.

R. G. Keizer, now of Pittsburgh, Pa., and formerly a resident of Chicago, has been spending a few days at Platteville, Wis., where his family has been visiting since Mr. Keizer went east three or four months ago. Mr. Keizer is the eastern representative of the Idaho White Pine Manufacturers Agency, with general offices at 1824 Continental & Commercial Bank building, this city, and branches at Pittsburgh, Pa., and Spokane, Wash.

Members of the Lumbermen's Association of Chicago enjoyed a great treat at their last luncheon, held June 27 at the association rooms, in listening to Col. Henry Stephens, of the National Box Manufacturers Association. Col. Stephens, who is seventy-five years of age, is a splendid athlete, and told the members how he had gained his good health and gave them his system of exercising and diet. The members greatly appreciated his instructive remarks.

George L. Forester, secretary-treasurer of the Western Carolina Lumber & Timber Association, Asheville, N. C., arrived in town last Friday to attend the reclassification hearing by the Interstate Commerce Commission, beginning on this date. Mr. Forester said that he expected this would be a rather long-drawn-out session, but his friends and associates in North Carolina were all deeply interested in the case and he expected to stay through the hearing if it took all summer.

Phil A. Ryan, formerly a well known Chicago lumberman, but now located at Lufkin, Tex., where he is operating a saw mill under the style of the Philip A. Ryan Lumber Co., was in Chicago during the National Hardwood Lumber Association's convention and spent some time afterward calling upon his old friends in the trade in this territory. Later he went to Madison, Wis., where his daughter is to remain as a student at the summer school. Mr. Ryan looks as if the Texas climate has agreed with him, as he is evidently in the very best of health.

Adair Lockman, manager of western sales for the Germain Co., of Pittsburgh, Pa., of which company he is also vice-president, and of whom mention was made in a recent issue of the LUMBER WORLD REVIEW, has opened offices at 452 Peoples Gas building, which will be the western headquarters of his company from this date. Mr. Lockman will apply his usual vigorous methods to the extension of the yellow pine trade of the Germain Co., which has built up a large business in eastern territory in the last decade.

NEW WAUSAU CONCERN.

The Gill-Andrews Lumber Co., of Wausau, Wis., has recently been incorporated with a capital of $30,000 to embark in the wholesale lumber business with offices in the Wisconsin Valley Trust Co. building, that city. The components of this new firm are Charles Gill, for fourteen years northern buying representative for Upham & Agler, of Chicago, and J. B. Andrews, of the former firm of Andrews & Ruepke, of Birnamwood, Wis. In his capacity of buyer Mr. Gill had bought the Andrews cut of lumber for the last ten years and was therefore well acquainted with his new partner Mr. Andrews sold out his interests at Birnamwood last December to the Charles W. Fish Lumber Co., of Elcho, Wis.

The officers of the new company are Charles Gill, president; B. B. Andrews, vice-president, and J. B. Andrews, secretary and treasurer. The company will handle principally northern hardwoods and is already doing a successful business.

OBITUARY

MRS. C. F. HETTLER.

The death is announced June 28, of Mrs. Catherine Hettler, widow of the late Captain C. F. Hettler, and mother of Herman H. Hettler, the prominent Chicago lumberman. Mrs. Hettler has made her home in Fort Wayne, where she and Captain Hettler resided for over fifty years. She was 76 years of age and was born in Stark county, Ohio. Besides her son, Herman, she is survived by two sisters, Mrs. Joseph Miller, of Monroeville, Ind., and Mrs. Henry Helmich, of New Haven, Ind. Mrs. Hettler was prominent in church and charitable circles and was a large contributor to worthy enterprises. The recently erected building of the Young Women's Christian Association at Fort Wayne is one of the institutions which she aided liberally, as well as Hope hospital, of which she was a trustee. The funeral services were held at Fort Wayne on Friday, June 30.

HYMENEAL

DENNY-PRITCHARD.

Announcement is made of the marriage at Fort Riley, Kan., on Wednesday, June 21, of Mary Josephine Pritchard, daughter of George Barnard Pritchard, of that city, and George Vernon Denny, of Savannah, Ga. Mr. Denny is the representative in the southeastern territory of the well known saw firm of E. C. Atkins & Co., of Indianapolis, Ind., and has a wide acquaintance in the trade.

CYLDE OPENS ASHEVILLE OFFICE.

The Clyde Iron Works of Duluth, Minnesota, has opened a branch office at 35 American National Bank Building, Asheville, N. C.

W. C. Champion, who is well known to the industry throughout the Appalachians, is manager in charge.

W. C. CHAMPION, OF ASHEVILLE, N. C.

The new branch was rendered necessary to accommodate the company's rapidly-growing business in this section.

Lumbermen are invited to use it as their headquarters while in Asheville.

Business Changes, Incorporations and Fires

New Concerns

Hyattsville, Md.—The People's Lumber Co.; $10,000 capital. William P. Magruder, George N. Bower, Hyattsville, Md., Elmore Power, College Park, Md.

Maysville, Ky.—E. A. Robinson & Co., furniture; $50,000 capital. E. A. Robinson, W. N. Stockton and C. B. Holstein.

Fort Payne, Ala.—Pine States Lumber Co. H. B. Brock, president; C. B. Oventel, vice-president; J. P. Wardlaw, secretary-treasurer-manager.

Atlanta, Ga.—Hardwood Timber Co.; $1,000 capital. John Keily, John Wiley and P. B. Barringer.

Indianapolis, Ind.—Acme Building Material Co.; $75,000 capital. George W. Farrington, Almyr Bradway, William R. Harryman.

Wheeling, W. Va.—The J. W. Beltz & Sons Construction Co.; $50,000 capital. Regina Beltz, John W. Beltz, Henry E. Beltz, Henry Keil and others.

North Tonawanda, N. Y.—Hope Operating Corporation, to deal in lumber; 1,250,000 capital. L. S. DeGraff, J. L. Crane, G. A. Mitchell.

Fennimore, Wis.—The Center Lumber Co. L. D. Eastman, president; W. A. Graham, vice-president and treasurer, and Grant Lewis, general manager and secretary.

Akron, O.—The T. H. Clark Lumber Co.; $50,000 capital. T. H. Clark and others.

Baltimore, Md.—Tropical Lumber & Pulp Co.; $500,000 capital; Joseph J. Hock, John J. Duffy, jr., Albert S. Laun, George W. Lindsay and others.

Charlottesville, Va.—The Yancey Bark Co., to manufacture lumber; $75,000 capital.

New York, N. Y.—Buttle Parquet Floor Co.; $50,000 capital. B. Stender, F. A. Williamson, N. B. Buttle.

Wausau, Wis.—The Gill-Andrews Lumber Co. has been incorporated to engage in wholesale trade. Charles Gill, president, B. B. Andrews, vice-president, J. B. Andrews, secretary and treasurer.

New Haven, Conn.—The Star Trim & Millwork Co.; $25,000 capital. Louis Berman.

Wilmington, Del.—The Plateau Coal & Lumber Co.; $100,000 capital. Herbert E. Latter, Norman P. Coffin and Clement M. Egner.

Tampa, Fla.—The Weidman-Fisher Co.; $100,000 capital. George F. Weidman, president; Thomas D. Fisher, vice-president, and John A. B. Anderson, secretary.

Springfield, Ill.—The Porter Lumber Co.; $5,000 capital.

Robert, La.—Graves & Patenotte; $40,000 capital. (To do a general sawmill and lumber business.) L. J. Patenotte, president, and William A. Graves, secretary and treasurer.

Detroit, Mich.—The Newman Lumber & Supply Co.; $40,000 capital.

Kingston, N. Y.—The Hub Lumber Co.; $50,000 capital. S. H. Merritt, G. E. Taylor and E. L. Taylor.

Cleveland, O.—The Heights Sash & Door Co.; $10,000 capital. W. H. Dettelbach, David Klein, Louis B. Spanner and others.

Tulsa, Okla.—The Cosby Lumber Co.; $15,000 capital. A. B. Patterson, L. L. Hutchinson and Mrs. Bessie Cosby.

Flint Hill, Va.—The Flint Hill Cooperage & Lumber Co.; $25,000 capital. E. Marshall Newton, president, and C. P. Armory, secretary and treasurer.

Spring Brook, Wis.—The Spring Brook Lumber Co.; $2,500 capital. J. E. Gillett, J. A. Morrison and E. M. Gillett.

Vancouver, B. C.—The Sylvania Logging Co.; $30,000 capital.

Jonesboro, Ark.—The Jonesboro Handle Co.; $3,000 captal. A. W. Scott, J. D. Scott and Walter Rogers.

Robinson, Ill.—The Hinman Lumber Co.; $20,000 capital. Ralph Hinman, William S. Brannum, jr., and G. Lathrop.

Shreveport, La.—The Union Lumber & Planing Co.; $10,000 capital. A. C. Bodenheimer, president and treasurer; H. Bodenheimer, vice-president, and C. L. Oxford, secretary and general manager.

Lebanon, Me.—The Rochester Handle Co., to buy, sell and operate in timberlands, manufacture lumber, etc.; $10,000 capital. Everett W. Reed, president; Leon C. Henderson, treasurer; John G. McLaughlin and Robert C. Fownes.

Amesbury, Mass.—The Clark Body Co., to manufacture automobile bodies; $25,000 capital. George E. Hodge, Thomas Clark and James R. Graves.

Newark, N. J.—The Port Newark Moulding & Lumber Co.; $50,000 capital.

Buffalo, N. Y.—The Tarbox Lumber Co.; $50,000 capital. Luther W. Tarbox, Blanche A. Tarbox and Odell R. Blair.

New York, N. Y.—The W. E. Hooper Lumber Co.; $2,500 capital. W. E. Hooper, Albert F. Paul and C. J. Decker.

Liberty, Tex.—The Trinity Hardwood Co.; $10,000 capital.

Hillhurst, Wash.—The Hillhurst Lumber Co.; $5,000 capital.

Kendall, Wash.—The Kendall Lumber & Shingle Co.; $25,000 capital.

New Mills

Myrtis, La.—The Southern Lumber Co. is erecting a new sawmill, replacing the mill burned some time ago.

Gulfport, Miss.—The Edward Hines Lumber Co., of Chicago, Ill., will erect a mill to cost $800,000.

Aliceville, Ala.—H. F. Sly will install a sawmill with a daily capacity of 10,000 feet.

Montgomery, Ala.—J. C. Turville & Sons, of Martin, Tenn., will erect a factory for staves, etc.

Omaha, Neb.—Jensen & Jensen are establishing a planing mill here.

Elizabeth, N. J.—The Meidritter Lumber Co. is building a mill to cost $15,000.

Memphis, Tenn.—The Kelley Lumber Co., of Searcy, Ark., is establishing a saw mill plant.

Augusta, Ark.—J. H. Bonner & Sons, of Heth, have bought a mill near here which will have a daily capacity of 25,000 to 30,000 feet.

Pittsboro, Miss.—George C. Brown & Co., of Memphis, Tenn., will build a sawmill and develop timberland.

Scooba, Miss.—The Harmon Lumber Co. is erecting a $2,000 building and will install planing and sawmill machinery to cost $5,000.

Rocky Mount, N. C.—The Tar River Lumber Co. will rebuild sawmill recently burned.

Fires

Eastport, Fla.—The dry kilns and 4,500,000 feet of lumber of the Carpenter & O'Brien Lumber Co. burned; estimated loss $150,000.

Wilbur, Wash.—Office, store building and $25,000 stock of lumber belonging to the F. R. Woodbury Lumber Co. burned.

Milton, Ia.—The office of the Milton Lumber Co. burned; loss not stated.

Reed City, Mich.—Dry kilns at plant of William Horner burned; loss estimated at $5,000.

Shirley, Me.—The plant of the Shirley Lumber Co. burned; loss $50,000, partly covered by insurance.

Indianapolis, Ind.—Three storage structures filled with shingles and lumber belonging to the Capitol Lumber Co. burned; loss $5,000.

Huntsville, Ala.—Lumber yard of Nathan J. Williams damaged by fire; loss partly covered by insurance.

White, Ark.—The mill of the Gulledge Bros. Lumber Co. burned; loss $22,000.

Business Changes

Milwaukee, Wis.—The South Side Lumber Co. has changed its name to the Froedtert Lumber Co.

Montgomery, Ala.—The Erod Lumber Co. is now known as the Betly & Sons Lumber Co.

Charles City, Ia.—The Charles City Lumber Co. has sold out to the Wyatt-Lampert Lumber Co.

Columbus Junction, Ia.—The Bollenbach Lumber Co. has sold out to T. E. Dunn.

Baltimore, Md.—The Eisenhauer MacLea Co. is now known as the MacLea Lumber Co.

Chester, Mont.—The Hutchinson Lumber Co. has sold out to the Rogers-Templeton Lumber Co.

Ashby, Neb.—The Ashby Lumber Co. has sold out to the John Halloren Lumber Co., of Ottawa, Kan.

Downing, Wis.—Barnard & La Pointe have sold out to the O. & N. Lumber Co., of Eau Claire.

Marked Tree, Ark.—R. T. Pierce has been succeeded by the Pierce-Edmiston Co.

Jacksonville, Fla.—J. Taya's Sons Co., of New Orleans, La., has opened an office here.

Iron River, Mich.—The Phoenix Lumber & Supply Co. has increased its capital to $25,000.

Superior, Wis.—W. E. Hurst has sold out to the Hibbing Lumber Co., of Hibbing, Minn.

West Chester, Pa.—S. C. Black has sold his planing mill business to D. N. Showalter.

Fennimore, Wis.—The Center Lumber Co., a new corporation, has purchased the business of the Wisowa Lumber Co. Officers of the new company are L. D. Eastman, president; W. A. Graham, vice-president and treasurer, and Grant Lewis, secretary and manager.

North Tonawanda, N. Y.—The Kelsey Hardwood Lumber Co. has reduced its capital from $150,000 to $130,000.

Denver, Col.—The Empire Lumber & Manufacturing Co. has been succeeded by the Heffner Lumber & Manufacturing Co.

Magazine, Ala.—The Holt Lumber Co. has changed its name to the Gulf Mill Co.

King, Ark.—The King Lumber Co. has been succeeded by the King Saw Mill Co.

New Orleans, La.—The Western Lumber Co., of Columbus, O., has opened an office here.

Philadelphia, Pa.—The Thos. E. Coale Lumber Co. has increased its capital to $100,000.

Tripoli, Wis.—The Stolle Lumber Co. is now known as the Stolle Lumber & Veneer Co.

Lufkin, Tex.—The Philip A. Ryan Lumber Co. has leased what is known as the Foster hardwood mill, situated in the eastern portion of this county, a few miles from Manning, and will operate same.

Fayetteville, N. C.—The Whitlock-Spencer Lumber Co. has sold out to the Carolina Timber & Lumber Co.

Cambridge, Ida.—The Cambridge Lumber Co. has sold its retail yard to the Spurrier Lumber Co.

Chicago, Ill.—W. K. Cowan & Co. have been succeeded by the W. K. Cowan Furniture Co.

South Bend, Ind.—The Licking River Lumber Co. is liquidating.

Louisville, Ky.—H. A. McCowen & Co. have removed to Memphis, Tenn.

New Orleans, La.—The Crescent City Manufacturing Co. has been succeeded by the Crescent City Sash, Dood & Blind Manufacturing Co.

Minneapolis, Minn.—F. A. Duncan has withdrawn from the Merrick-Duncan Lumber Co.

Henniker, N. H.—Fred R. Atwood is removing his plant to Manchester.

Sherwood, Ore.—The Copeland Lumber Co. has been succeeded by the Tappendorf Lumber Co.

Fort Pierre, S. D.—Keyser & Bunker have been succeeded by George W. Keyser.

Hayward, Wis.—The Willow River Lumber Co. has increased its capital from $100,000 to $500,000.

Brinkley, Ark.—The Monroe Lumber & Timber Co. has moved its headquarters to Monroe.

Monrovia, Cal.—The Boyd Lumber Co. is succeeded by Frank L. Bortells, who will operate it as the Bortells Lumber Co.

News Miscellany of the Lumber World

Pacific Coast News

SEATTLE, WASH.

Seattle, Wash., July 3.—Douglas fir manufacturers will be given an opportunity to bid on about 15,000,000 feet of lumber wanted by the Panama canal commission. Fir mills at first were eliminated from competing for this business because the specifications called for yellow pine. The industrial bureau of the Seattle chamber of commerce made a protest to the commission and to the Washington delegation in congress with the result that the specifications were changed so that fir manufacturers could bid on the business.

The old brig "Harriet G.," built thirty-eight years ago at Norfolk, Va., and which has been lying idle in Puget Sound for two years, has been pressed into the lumber service and will take 300,000 feet from Bellingham to South America. The charter rate is $30 a thousand feet.

On July 1 the Seattle office of the Lidgerwood Manufacturing Co. removed from 807-809 Western avenue to their new quarters at 63-65 Columbia street.

"More than $100,000,000 worth of commodities, other than lumber, are manufactured in the United States annually from wood," said Prof. H. K. Benson of the University of Washington in a speech before the Arctic Club on the utilization of waste products in lumber manufacturing. "The failure of the northwest to participate in this phase of wood utilization is therefore not particularly complimentary to its technical skill. In the northwest the manufacture of rosin might prove profitable provided certain methods, thus far experimental, may be applied on a commercial scale."

An order for 560,000 feet of creosoted Douglas fir wood stave pipe has been placed by the Wenatchee Reclamation district with the Pacific Coast Creosoting Co., of this city. The pipe will be sixty-three inches in diameter.

Log-towing rates on Puget Sound will be advanced 10 cents a thousand feet July 1. This increase is the first in the sound's log-towing industry in years. According to the tugboat men this increase will exactly offset the increase in the cost of operation.

* * *

SAN FRANCISCO, CAL.

San Francisco, Cal., June 19.—J. E. Frederickson, C. A. Rockstrom, T. N. Nock, S. A. McConbrey and George Shields, prominent lumbermen from the northwest, arrived in San Francisco recently to confer with California pine manufacturers about standardization methods.

The recently organized Goodyear Redwood Co. is planning to erect an office building at Greenwood, Cal., and will remodel the mill and increase the capacity to 100,000 feet a day.

The Mitchell-Dorr Lumber Co. of Eureka, Cal., which owns a shipping site at Field's Landing, contemplates logging 10,000 acres of redwood timber lying on Salmon creek and extending as far back as Lawrence creek.

Henry Coupe and Arthur Chase are erecting a sawmill at Oregon Hill, Cal., above Marysville, which will have a daily capacity of 15,000.

The McGlaufiin Co. is removing its mill from Sunnyvale to San Rafael, Cal. The concern manufactures specialties out of eucalyptus and is making the change on account of the quantity of timber available in the vicinity of San Rafael.

Three rafts of piling will be brought down the coast from Astoria to San Francisco this season by the Hammond Lumber Co., and the Benson Lumber Co. is preparing to tow four rafts to San Diego, each of these to contain about 6,000,000 feet of lumber.

The California White and Sugar Pine Manufacturers' Association has been incorporated at San Francisco, Cal., with a capital stock of $5,000 by E. H. Cox, C. R. Wisdom, E. A. Blocklinger, A. E. Roth and F. D. Madison. E. I. Dixon, grade inspector of the Red River Lumber Co., of Westwood, Cal., has accepted the offer to act as one of the first official inspectors for the newly formed association.

The paving of the first block on Battery street, San Francisco, with wood blocks, has proved to be so satisfactory that work has been commenced on the paving of the next block between Pine and California streets. The wood block paving necessitated a contribution on the part of the property owners, who were quite willing to pay the difference in price between this and an asphalt or basalt block pavement.

Inland Empire News

SPOKANE, WASH.

Spokane, Wash., July 3.—The melting of last winter's snows coupled with heavy rains of the last two weeks has put the Kootenai river, just east of Spokane, over its banks, severely crippling the many big mills located on the river.

The Bonners Ferry Lumber Co., at Bonners Ferry, Idaho, the Libby Lumber Co., at Libby, Mont., and the Eureka Lumber Co., at Eureka, Mont., have all been forced to close down on account of the flood. The damage, however, is not extensive and all the mills will be in operation again within a few days.

A. W. Laird, of the Potlatch Lumber Co., located at Potlatch, Idaho, just south of Spokane, and J. P. McGoldrick, of the McGoldrick Lumber Co., of Spokane, have returned from two weeks in California, where they were in conference with California lumbermen regarding grade standardization.

The Milwaukee Railway Co. is bringing in from six to twenty cars of logs daily and dumping them into the Spokane river from the International tract, about 20 miles east of Spokane. These logs are from the extreme north end of Kootenai county, Idaho, and from Bonner county, and presage the development of a new logging industry of some magnitude.

To increase the manufacturing capacity of its sawmill near Olympia, Wash., the Buchanan Lumber Co. is making a number of changes in its plant, installing new machinery and boilers and constructing a 100-foot brick stack. Sylvester LaBarra is in charge of the building of the new stack which has reached the 75-foot mark and is rapidly nearing completion. Four big boilers are being bricked in and a sawdust house of solid construction has been erected. New sawdust conveyors have been put in and changes made about the mill.

* * *

KALISPELL, MONT.

Kalispell, Mont., July 1.—A. O. Westburg, of the A. O. Westburg Lumber Co., Columbia Falls, Mont., transacted business in Kalispell recently. He reports the mill running its full capacity of one shift, and that they contemplate a long season's run. The company recently installed a donkey engine, and several miles of railroad.

The Libby Lumber Co., Libby, Mont., is operating its sawmill and shipping department to its full capacity, and is getting out about 8,000,000 feet of lumber per month, a considerable portion of which is delivered to its string of 26 yards through Montana and the Dakotas. The company is working a large force of men in its logging operations, which is handled by rail and donkies, and overhead skidders. The plant is one of the most modern in northwestern Montana, and has sufficient timber in sight to warrant several years' operations at the present site.

In the near future the Northern Pacific will build a 35-mile branch line from Dixon up the Flathead river for a few miles, swing northwest in a big curve to Ronan, and by swinging into Polson from the east will afford the road a tap into the heart of the Flathead country and a line to the outlet of Flathead lake, which is becoming widely known as a summer resort. Information that the road will be built at a cost of

He Was "Stuck" On His Tract

Once there was a man who had what was reputed to be an exceptionally valuable tract of timberland—no matter where—which he bought on an old-fashioned "timber cruise" plus his personal inspection.

Wishing to take his profit on the investment he confidently offered the tract to James D. Lacey & Company.

Besides the reputation of the tract there were superficial indications of unusual excellence: but Lacey & Company deal only with THE FACTS.

A LACEY REPORT on the tract showed the astonishing fact to be that the value of merchantable timber on the tract was barely more than half what the intending seller sincerely believed he had, although he was an experienced lumberman.

He was "stuck"—badly; in fact a "LACEY REPORT" on the property when he bought it would not have cost a twenty-fifth of what he was "stuck." This is a true story—with a moral. May we send you "Pointers," an interesting booklet?

TTLE - White Building - WASH.

about $1,000,000 was received here yesterday from reliable sources, following the visit over the proposed line by J. M. Hannaford, president of the road and his assistant, Thomas Cooper, during the latter part of last week. Surveyors have been going over the route of the new line.

The sale of the Warland Lumber Co.'s business, at Warland, Mont., to Thomas Baird and William Harper, which was closed last week, comprises a transaction of considerable magnitude. The purchase includes all of the mill property, store building, and cut over lands, including the lands of the townsite of Warland, and standing timber to the extent of 680 acres.

* * *

COEUR d'ALENE. IDAHO.

Coeur d' Alene, Idaho, July 3.—The concrete foundations of the planing mill machines are being poured into position in the big new plant of the Edward Rutledge Timber Co., at Coeur d'Alene, and soon these high speed machines, electrically driven, will be surfacing and milling Marble Creek white pine for shipment to eastern points. The plant was built in a remarkably short time. Grading for the foundation began October 19, but not until November 12 was the railroad spur completed so that material could be brought to the site. Equipped with two double-cutting band saws, a 96-inch edger, and a selection of all that is best in modern manufacturing, the mill is turning out about 300,000 feet in two shifts. The lumber yard is situated thirty feet above high water mark on a gravel base that absorbs all surface moisture and is exposed to every breeze that blows across Lake Coeur d'Alene. This affords unusual air-drying facilities, which is a considerable advantage from the viewpoint of the retail lumber dealer.

Owing to the location of the timber, which lies largely in the Marble Creek basin, the company has adopted the trade name of "Marble Creek, Idaho, White Pine."

F. J. Davies, secretary of the company, an authority on timber and a man who has devoted a lifetime to looking after timber lands, has charge of the logging and transportation of the logs to the plant. Huntington Taylor, the vice-president and general manager of the company, was for 18 years with the Northern Lumber Co., at Cloquet, Minn., with the exception of a few years that he was connected with the Northwest Paper Co. there, and for a number of years was assistant to Manager Rudolph M. Weyerhaeuser. Lawrence R. McCoy has charge of the sales.

Central Southern News

MEMPHIS, TENN.

Memphis, Tenn., July 4.—Application for a charter has been filed with the Tennessee authorities by James E. Stark & Co., Inc., as successors to James E. Stark & Co., of this city. The capital stock of the new corporation is $300,000 and organization has been perfected by the election of the following: James E. Stark, president; M. C. Raymond, vice-president; E. A. Okerbloom, secretary; and J. E. Walsh, treasurer. The last named three, together with B. W. Hirsh, an incorporator, and H. C. Roeske, a director, are employes of James E. Stark & Co. who have been taken in as stockholders by James E. Stark & Co., Inc. The new firm will operate the mill at Memphis belonging to the Memphis Veneer & Lumber Co., in which James E. Stark is the principal owner, and it will also run the mill at Dyersburg, Tenn., recently acquired by James E. Stark & Co. from the Price-Ruhl Lumber Co. The separate identity of the Memphis Veneer & Lumber Co. and James E. Stark & Co., Inc., will be maintained but the two will work closely together with a view to expanding the business of each.

Roland H. Darnell has been elected president of R. J. Darnell, Inc., and the Darnell-Love Lumber Co. as successor to his father, R. J. Darnell. Fred M. Darnell has been made vice-president of both firms. These, however, are the only changes resulting from the death of R. J. Darnell as R. J. Wiggs continues in the capacity of secretary-treasurer. The will of Mr. Darnell named Roland H. Darnell and Elliott Lang as administrators of the estate, valued at about $1,000,000, and directed that the affairs of the companies in which he was interested should be conducted along the same lines as before his death until the youngest beneficiary reached his majority. Therefore the business of R. J. Darnell, Inc., and the Darnell-Love Lumber Co. will be conducted as before. R. J. Darnell, Inc., owns the big double band mill at Batesville, Miss., together with a vast amount of timber in that territory, and preparations are now being made to start up both sides of this big plant. Only one side is being operated at present. The Darnell-Love Lumber Co. owns two mills at Leland. One of these is being operated now but the company will start the other mill in a few days. Information regarding plans for increased manufacturing operations comes from R. J. Wiggs.

Memphis has become headquarters for H. A. McCowen & Co., formerly of Louisville, Ky., and the business of that firm will in future be conducted from this city under the general management of R. L. Jurden who has been elected head of the company. These changes have grown out of the recent death of H. A. McCowen, of Louisville, president of that firm and one of the principal stockholders in Penrod, Jurden & McCowen. Other officers elected are: K. S. Daugherty, vice-president; W. L. Fletcher, treasurer, and E. B. Snyder, secretary. H. A. McCowen & Co. own a mill at Bristol, Tenn., and one at Logansport, Ind., and both of these will be kept in operation under the new management.

* * *

JACKSON, MISS.

Jackson, Miss., July 5.—The big hardwood mill of the Henry Maley Lumber Co. has been completed and placed in operation. This concern for a number of years had a plant at Yazoo City, Miss., but it was decided some time ago that it should be removed to Jackson because the timber supply at the former point had been cut out. The Jackson mill will have a daily capacity of 50,000 feet. C. E. Maley is president of the Henry Maley Lumber Co. while J. W. Bertrand is secretary.

R. G. Kennedy and C. L. Ray, of Amory, Miss., have made plans for incorporating the Amory Lumber Co. and building a planing mill there with daily capacity of 40,000 feet per day.

The contract has been awarded L. Moore Dry Kiln Co., Jacksonville, Fla., by E. E. Jackson Lumber Co. for seven rooms 20x104 feet of the Moore moist air type. These kilns will have a holding capacity of 315,000 feet per day and will dry about 125,000 feet every twenty-four hours. The kilns will be modern in every respect and of fireproof construction. The work on this modern plant is progressing rapidly and it is expected the entire plant will be ready for operation by the first of September.

Northern States News

MINNEAPOLIS, MINN.

Minneapolis, Minn., July 7.—Building operations for the first six months broke all Minneapolis records with a total of $10,573,325. For the corresponding period of 1915 the cost of construction was $7,726,755. The unprecedented gain is due to a steady and persistent building campaign, and is not because the total was swelled by a few exceptional buildings.

Rising stage of water due to recent heavy storms let loose 500,000 feet of logs belonging to the Northland Pine Co., held in boom below the government high dam between Minneapolis and St. Paul. The logs had gone over the dam early in April when the going out of the ice caused a rampage that started at Elk River, Minn., and took a great many logs down stream. The sudden rise of the Mississippi river again July 1, caused the second runaway of the logs. The Mississippi & Rum River Boom Co. has been put to it to gather the strays. The Northland Pine Co. has had difficulty in keeping logs in boom from running by its mills in Minneapolis.

The Shevlin Co., with headquarters in the Soo-First National building, Minneapolis, has purchased a tract of 26,000 acres of pine lands near its big mill at Bend, Ore. The tract was bought from the Mueller Lumber Co., Davenport, Iowa.

Raymond Yates has been appointed as Minneapolis representative of the Bonners Ferry Lumber Co. of Bonners Ferry, Idaho, and of the Edward Rutledge Timber Co. of Couer d'Alene, Idaho. He is in charge of the joint office maintained by the two concerns in the Lumber Exchange in Minneapolis.

A teamsters' strike, which was in progress during June in Minneapolis, caused considerable inconvenience to retail lumbermen in handling city trade. Teamsters organized a union, but made no demand for additional wages or shorter hours, merely asking that their union be recognized. It was not recognized and non-union teamsters were hindered in making deliveries. More than 200 special police were sworn in. Aside from delays and a few altercations between non-union teamsters and strikers, the strike is now a memory. De-

Digitized by Google

liveries are again being made on schedule time. The strike has been practically abandoned.

Henry G. Hayes is now making his headquarters at the Hotel Radisson in Minneapolis while he is representing the Old Oregon Lumber & Shingle Co. in this territory. His field covers Minnesota, North and South Dakota, Iowa, Illinois and Wisconsin. The firm has general headquarters in Seattle, with mills at Everett and Anacortes.

Southwestern News

HOUSTON, TEX.

Houston, Tex., July 5.—D. E. Mead has opened a yard of his own at Lauresa, Texas, under the name of the Lauresa Lumber Co., with a capital stock of $25,000.

Ross and Jones have just put in a mill at Cleveland, Texas, with Capt. J. P. Ross as manager.

The lumbermen of the city are considerably worked up over the recent fight by the old line insurance people of this state before the Texas Insurance Commission to increase the rate of insurance on wooden roofs. The hearing was held early in June, and lasted about a week, developing into a fight against wooden shingles and wooden construction in general. The lumbermen made a vigorous protest and arguments in the case will be duly presented by their counsel.

* * *

BEAUMONT, TEX.

Beaumont, Tex., July 3.—The British steamship Pikepool, by far the largest lumber boat yet to dock in the local harbor, arrived here shortly after 11 o'clock Thursday morning. The huge steamer rounded the turning basin and tied up at the Pearl street wharf, where she will take on a cargo of approximately 3,000,000 feet of yellow pine timber. She will be in port during the Fourth of July celebration and will sail for England about next Thursday.

This is the third of the fleet of five vessels chartered by the Standard Export Lumber Co. to load at Port Beaumont. She is much larger than either of the first two to load here, and her capacity is as large as that of both the other two vessels, the Weardale and August Leffler.

The Pikepool is 346 feet long and has a 51-foot beam. When loaded she draws 23.3 feet of water. Her draft tonnage is 3,683 tons.

Crops are good throughout Texas and prospects for retail trade are good. Several new mills and yards have been opened for business lately.

South Atlantic News

JACKSONVILLE, FLA.

Jacksonville, Fla., July 3.—George A. Cartwright has resigned as traffic manager of the Georgia-Florida Saw Mill Association to take a position in Philadelphia. His assistant, W. E. Gardner, succeeds him.

The mills in this section are not suffering for want of orders, but the need of transportation facilities has been badly felt in this section both by rail and water. The export trade especially is hampered. There are not enough ships to go around.

Transportation conditions are improving all the while, and though there is no immediate prospect of better shipping facilities by water we believe that this will develop before a great while.

Middle States News

BUFFALO, N. Y.

Buffalo, N. Y., July 7.—Building business has held up well in this city during the past month, although the figures may not equal the same month of last year. June last year was the largest building month of 1915, the total cost of permits being $1,673,392. The year is a little behind last year to date, but this is due in some degree to the bad weather, which lasted pretty much through both May and June.

Not as much lumber is being brought in by lake this season as a year ago and this is due in part to the high lumber freight rates and the shortage of vessels. Every week has seen mention of sales of lumber boats to go to the ocean trade and the number has been so large as to reduce materially the available vessels. Some of the yards say they have had great difficulty in getting charters for this season, although they have quite an amount of lumber to be brought in. The movement by rail has been larger than usual, as the dealers who wanted stock promptly have not always waited for boats. Not much shortage of lumber stocks here is reported and with what has been received so far this season most of the yards have a pretty fair assortment.

J. B. Wall, president of the Buffalo Hardwood Lumber Co., will make a trip to the Canadian Pacific timber country this month, accompanied by John Welch, a lumberman of Memphis. The Walls own some large timber tracts in British Columbia and are planning to develop them. The two lumbermen will probably be away for five or six weeks.

The Buffalo preparedness parade was one of the greatest demonstrations ever held here, and the lumbermen were in line as a body to the number of several hundred. All the yards had a good representation, showing that when anything big is going on in Buffalo lumbermen are usually in it. Buffalo is to be represented by at least two lumbermen at the Mexican border, these being C. Ashton McNeil and S. S. Mitchell, who are members of Troop I.

Ohio Valley News

CINCINNATI, OHIO.

A steady improvement in the local situation was noted for the better part of June, especially toward the end of the month. The impetus to the market no doubt was gained to a great degree through the improvement in the building situation, as is shown by the figures recently given out by the building commissioner. While the gain in June this year over a year ago is not large, the proportion is ample enough to be very encouraging to tse lumbermen. Permits in June, 1916, amounted to 1,560, receipts $2,936.95 and total cost $1,082,580, against permits in 1915, (June) 1,479, receipts $2,832.85 and total cost $940,635.

Cincinnati lumbermen have been advised, through a report by Special Agent Roger E. Simmons, of the Bureau of Foreign and Domestic Commerce, that more cordial business relations with South American lumber consumers is to be had for the asking practically. He says that now considerable Douglas fir from the Pacific Coast is being marketed in Chili and Peru, with little of the friction which for so long has characterized American trade with Argentine, Brazil and Uruguay. Ecuador, it is said, would be a promising field for the American lumbermen were it not for the high tariff.

Big motor truck orders are being received by car building concerns and automobile manufacturers in this section recently from the U. S. government. At Springfield, a few miles north of Cincinnati, a concern there has just finished two train loads of trucks on an order for 132 trucks. The entire order will amount to about four trainloads. The machines are of the three ton and half ton size, chain driven model.

* * *

EVANSVILLE, IND.

Evansville, Ind., July 7.—J. C. Greer, of the J. C. Greer Lumber Co., a few days ago returned from Louise, Tenn., Cumberland Furnace, Tenn., and Lone Oak, Tenn., where he inspected the company's stave factories. He reported all the plants being operated on steady time with a good demand for tobacco hogshead staves.

Maley & Wertz, of this city have established a sales office at Grand Rapids, Mich., with Thomas J. Christian in charge.

John A. Reitz & Sons, hardwood lumber manufacturers of this city, a few days ago acquired a tract of timber land containing 125 acres in western Kentucky and the logs will be cut and brought here by rail. It is something unusual for this company to bring in logs by rail, as for the past several years it has been getting its log supply by boat from the Green river country in western Kentucky.

Fred Bergman, of Bergman & Mann, lumber dealers and planing mill owners at Chrisney, Ind., was here on business a few days ago.

The veneer factories in Evansville and neighboring cities are being operated on full time and this year up to this time has shown a nice increase in business over last year.

Is Now Ready

The first edition of Baughman's Buyer and Seller was copyrighted in 1886. Since then the book has been improved with each edition until now we have the twelfth edition, which is far superior to any of the books previously out.

This book, bound in flexible water-grained leather, can be mailed to your address for $2.50.

LUMBER WORLD REVIEW
608 S. Dearborn St., Chicago, Ill.

Digitized by Google

The Current Trend of the Lumber Market

General Market Review

The statement that lumber has not made any progress in the last two weeks would be plainly superfluous. At the same time the movement of stock from mill to assembly point and thence to consumer has not been altogether restricted. In fact, as compared with some periods of the last two years, the lumber market might be termed almost active, but when contrasted with last fall and winter it is undeniably slow. There is no buoyancy anywhere, as far as that is concerned, but there is nevertheless a steady, quiet, unobtrusive drift of lumber into consumptive channels every day. This does not seem to count for much at the moment, but in the aggregate it mounts up to comfortable proportions. This is not sufficient, however, to reduce stocks perceptibly nor influence prices favorably, but without doubt it is holding the market and prices are not being slaughtered with the same recklessness that has prevailed at times during the past three months.

There are several favorable features observed, not the least of which is the very great improvement recently reported in the crop situation. Advices as to the condition of the winter wheat crop are more reassuring than had been anticipated, while the northwestern wheat crop is even better than early reports indicated. Corn is in good condition, although in the central western territory some radical losses are reported. Altogether the crop conditions are encouraging, rather than pessimistic, so that the territory which furnishes the market for most of the lumber will be fairly prosperous. A very encouraging feature also is found in the fact that money continues plentiful, interest rates are nominal, building prospects are unusually favorable and the small towns and cities are evidently destined to be large users of lumber this year as a result of these co-ordinate features.

NORTHERN AND WESTERN PINE.

In recent weeks there has been a gradual lowering of demand as well as supply of western pine. Trade has not been particularly active, nor has it suffered serious impairment. In fact, there has been a fairly normal inquiry and movement of soft pine lumber into consuming channels right along. Whether this has been at satisfactory prices is, perhaps, a mooted question, but the fact remains that manufacturers in the Inland Empire, in California and in the middle north have not felt called upon to sacrifice their stock. As a consequence prices are held fairly steady and the demand in the main is satisfactory. The drift of opinion among manufacturers of soft pine is that the present lull is only temporary. Many of the manufacturers have contracts ahead and this will tide them over until normal demands appear.

SOUTHERN PINE.

A resume of the reports received from southern pine manufacturers indicates a continued dullness in the general movement, not only in yard stock but in special lines such as car material and timbers. There is no doubt that business has slowed down very materially within the last three or four weeks, as is shown by the weekly trade barometer of orders, cut and shipments. At the same time the volume is not discouraging in any degree, showing only such decline as might be anticipated at this stage of the building season. Many wholesalers and retailers had provided themselves liberally with stock in the early spring and this has not all been disposed of. Reports from traveling men, however, indicate that considerable of the lumber bought early in the year has gone into consumption and that it is only a question of a month or so when replenishment will be necessary. The fact that unfilled orders for over 350,000,000 feet of pine were reported from 153 mills assures continued good business for several weeks ahead, at the end of which period the usual fall requirement is likely to appear.

Yellow pine distributers in the northern territory are satisfied that there is something in the way of business ahead of them during the remainder of the year. The building permits in Chicago, for instance, are of a character to promise a large consumption of yellow pine during the last half of 1916. With the war situation quieting down and a more hopeful feeling as to general business prevalent, there should be at least a partial resumption of activity in the near future. The railroads are in a somewhat precarious condition because of the threatened strike of their employees. It is feared that a general strike in the rail industry would precipitate more grief for lumbermen than any other single factor that might enter into the problem, although they have survived some pretty hard knocks in the last few years. The probability is, however, that some satisfactory settlement will be reached before the fall months, in which event railroad and car construction will proceed and much lumber will be required.

CYPRESS.

The movement of cypress in this territory is fairly large and there is much encouragement for activity during the last half of the year. Some of the dealers in this territory say that they are having a little inquiry from greenhouse and tank manufacturers and that this outlet is likely to become more active soon. Prices have been maintained on a fairly good level. As far as yard stock is concerned the demand has not been heavy, but has been fairly large, coming from the western and southwestern territory and mostly mixed cars.

NORTHERN AND SOUTHERN HARDWOODS.

According to the most reliable advices the hardwood market is in a negative position. The interior finish trade is exceedingly quiet and there is not much promise of any particular revival this month. At the same time stocks at the factories have been constantly drawn upon and some replenishment is going on right along. Prices are more favorable to buying than in the early spring and many consuming concerns are insuring themselves against a possible shortage of lumber and consequent higher prices later on by contracting now for desirable stocks. Considerable interest is attached to the furniture expositions at various centers and the reports from these are encouraging. There are many visitors and considerable buying is reported.

Shortage is reported in inch plain red oak in some quarters, especially in first and seconds, but No. 1 and No. 2 common are in increased supply. Quartered white oak is also plentiful in the firsts and seconds grades of inch, but other thicknesses are low. There is a shortage of No. 1 common and there are said to be many unfilled orders for this grade. A satisfactory inquiry is reported for poplar and many stocks have been drawn upon heavily. In chestnut the demand is fair with ample supplies, although the sound wormy grade is reported to be well absorbed.

Concerning the northern woods there is little of moment to record. Sales have been reasonably heavy and stocks are not large. In fact there is a considerable shortage in some of the principal items. Thick maple is in particularly good demand and all thicknesses are easily salable. There is a continued strong inquiry for birch and the market is well cleaned up on that item, much of the buying having been done early.

HEMLOCK.

Business is only moderately active in the hemlock line and prices are easy. Mill stocks are not large. The low price of yellow pine has not affected the demand for hemlock seriously, but has exercised some influence on the price which has been held after all on a fairly steady level. The excellent crop prospect throughout the hemlock territory is especially encouraging to producers, as they believe that it means liberal orders in the late summer.

SHINGLES AND LATH.

The red cedar shingle market is practically unchanged. There is very little stock in transit and no difficulty is experienced in marketing whatever is offered. Some of the mills that were closed down on account of the strike and other reasons have started up and hence there is no prospect of scarcity. Prices are based on $1.45 to $1.50 for stars and around $1.90 to $1.95 for clears f. o. b. mill. This makes the market in Chicago territory $3.11 to $3.16 for clears and $2.52 to $2.57 for stars.

South Atlantic Markets

NORFOLK, VA.

A lumberman of Norfolk writes us as follows: "The fear of losing a few orders has had a marked influence on the market. The lowering of prices on low-grade lumber by some of the manufacturers has brought about some disastrous price cutting. However, many mills are now curtailing production, some of the larger mills cutting down to 50 percent.

"Sales are not very heavy just at this time, but prospects for improvement in demand are good. There is no doubt that prices will advance within a few weeks."

* * *

JACKSONVILLE, FLA.

This report comes to us from Jacksonville: "Although in many sections of the county the lumbermen are feeling the want of orders, according to the information that can be gained, the mills in this section are not suffering along this line, as many of them have orders ahead that will insure their operation for from 60 to 90 days, at which time the heavy orders for winter building will then begin to arrive.

"While there has not been the expected demand in the very large eastern cities, it is a fact that the yards in the east are asking and obtaining more for lumber than for a long time. This information we have from wholesalers who have recently visited that territory."

* * *

BALTIMORE, MD.

We have received this report of the Baltimore market: "The market in yellow pine is not as strong as it was sixty days ago: the demand is less active, and there have been some recessions in prices. The demand for pine from the box makers continues good.

"In hardwoods, too, the demand has fallen off to some extent and stocks are increasing; prices, however, are firm.

"The principal feature in the market continues to be the export business, which is suffering from the restrictive regulations adopted by the British government; the lowering in ocean freight rates has caused some reduction in prices.

"Lumbermen in general are busy, and maintain that business will be better later in the season."

Inland Empire Markets

SPOKANE, WASH.

We have received this report of the local market from Spokane: "The yards are not overstocked and the volume of business was declared sufficient to warrant steady operations.

"The local trade in eastern Washington has been stimulated recently by the improvement of farms and the erection of granaries for the coming wheat crop. The wheat growers are seeking storage facilities in order to avoid the excessive sack costs.

"City trade is fair, new construction work exceeding that under way a year ago. Building permits issued during the first five months of 1916 involved an expenditure of $700,035, comparing with $475,071 for the same period in 1915.

"Prices are much better and business far bet-

Digitized by Google

ter than a year ago. We will keep our mills running throughout the summer. During the last month prices have made no noticeable change."

New England Market

A lumberman writing from Boston speaks of the New England market as follows: "There is a fair request for all lines of hardwood lumber and prices are being well maintained. Factory stock is in especially good demand.

BOSTON, MASS.

"Some weakness is manifest in the market for southern pine. Heavy construction timbers and dimension are bringing good prices, but boards, partition and flooring are obtaining concessions.

"The market for cypress, poplar and Pacific coast woods is practically unchanged in volume and prices; the volume is fair and the prices satisfactory. The hemlock market is not so satisfactory as it was a fortnight ago, the concessions in southern pine naturally depressing this market."

Ohio Valley Markets

A correspondent well informed on market conditions in Cincinnati writes us as follows: "A general improvement in the building situation, due in the main to the continued fair weather, has had a very beneficial effect upon the local lumber market. While orders are not coming in with any great rush recently, inquiry has developed very heavily, both in numbers and volume. Much of this is confidently expected to materialize into good business in the near future. This, in connection with the promising outlook has caused the local market to strengthen considerably and while off color a couple weeks back, shows unmistakable signs of coming back to life.

CINCINNATI, OHIO.

"There is a general feeling of optimism evident. The consuming factories are ordering in increased volume and their inquiry spells some big business in the near future. The furniture factories are going along especially well. Gum and oak are finding a good market with the furniture manufacturers, while the fancy woods such as mahogany, Circassian walnut and domestic walnut are moving well and commanding especially good prices. Dry stocks, fairly well assorted a couple of weeks back are becoming pretty well thinned out and many items are getting quite scarce. As is usual in a case like this, the demand seems to be center particularly on those items which are the scarcest to obtain. Prices are strengthening materially, there being few instances of any selling being done below the standard quotations."

* * *

A man well informed on the hardwood situation in Evansville and southwestern Indiana writes as follows: "There has been a slackening in trade with the hardwood lumber manufacturers in this section during the past ten days or two weeks, but this was looked for, as this time of the year generally witnesses the slowing up in business in almost all manufacturing lines. It is not expected that trade will take on much activity before the last of August or the first of September, although the manufacturers of course expect to do some business. Some of the large mills in Evansville and vicinity are being operated on full time, while on the other hand, a few of the mills are closed down for the time being.

EVANSVILLE, IND.

"Collections are good and the general tone of the business world is not discouraging. Crop conditions are quite promising. The wheat crop will not average over 60 percent normal. The corn crop is more promising, however, and an unusually large acreage was planted in southern Indiana this year. The timothy hay crop is expected to be one of the largest in many years.

"Lumber prices are holding steady and there is no disposition on the part of either the manufacturers or retail dealers to cut or slash prices. There is still a strong demand for quartered white oak, while plain oak is only in fair demand. Gum is holding up well and the furniture manufacturers have been buying in liberal quantities. Ash and hickory are in good demand, while walnut is dragging. The river mills here report that they are getting a good many inquiries for quartered sycamore and some of this lumber is moving. Poplar has been dragging for some time past, while elm is only fair.

Pacific Coast Markets

A leading operator in the northwest has this to say of market conditions: "We beg to state that with the general curtailment, more unanimous than at any time in the previous history of the business, we anticipate that conditions will not necessitate further reductions in price. Reduction of capacity to the demand now in effect and anticipated after the Fourth, will be the logical solution of our difficulties.

TACOMA, WASH.

"The strike situation on the water-front on the Pacific coast has been so serious that nothing is moving by water except under a heavy strain, and operators generally feel that the time has arrived when 'open shop' conditions must prevail if industries are to exist."

* * *

A correspondent well informed on market conditions in the northwest writes us as follows: "A peculiar condition has developed in the lumber industry of the Pacific northwest. For several weeks the volume of new business arriving has steadily been declining and there has been considerable talk among manufacturers of a decided curtailment of the output. But within the last few days the market has shown some strength. A buying movement of considerable proportions has set in. This new business is for retail yard stock and special cutting orders. Railroads also are taking some of the business.

SEATTLE, WASH.

"It is thought by some manufacturers that the return to wood construction by the railroads in place of the high-priced steel is responsible for the increased demand for lumber by the transportation companies.

"One of the chief topics of discussion among mill men at this time is curtailment of the output. Many believe the only salvation of the industry is to close at least one day a week, preferably Saturday. So far there has not been any great accumulation of stocks at the mills in spite of the fact that some of the larger operators have from 10,000,000 to 20,000,000 feet on hand, but this is not considered a heavy stock for these particular mills.

"The log market continues firm. So far there has not appeared any surplus of logs in the water, nor have quotations declined. Cedar logs continue scarce notwithstanding the strike of the shingle weavers and the consequent closing of some of the mills.

"Red cedar shingles are soft. There is a very light demand, although this condition is not unusual at this season. Stars are weak at $1.50 and clears show little evidence of being able to hold at $1.95.

"Charter rates still are high and this fact coupled with the strike of the longshoremen is holding the off-shore trade down. Some shipping men are of the opinion that charter rates have reached the high mark and that in six or eight months the rates will weaken and lumbermen will be able to enter the foreign market to a greater extent."

* * *

A correspondent well informed on local conditions sends this letter from San Francisco: "The lumber situation at San Francisco has changed but little during the past fortnight. The strike of stevedores is still on at this port and but little lumber is being handled. The Shipowners' Association of the Pacific coast, whose members own most of the lumber schooners, has issued a statement to the effect that at San Diego business is being carried on by lumber yards on about the usual scale and that schooners could be unloaded at Redondo, Santa Barbara, Port San Luis, Hueneme and Ventura. At San Pedro the yards will be reopened as soon as police protection is furnished. The lumber yard men of San Francisco are keeping their agreement to sell no stock until a settlement of the labor question is reached and lumber is to be had only in a few yards whose owners are not a party to this agreement. Some lumber is being received from day to day but these receipts have not been heavy enough to cause any marked congestion. Conditions similar to these are prevailing in other cities around San Francisco bay and building operations are being affected to a noticeable degree.

SAN FRANCISCO, CAL.

"Owing to the longshoremen's strike a large part of the freight formerly carried by the water route has been diverted to rail and the immediate result has been a shortage of cars.

Gulf Coast Markets

The market in New Orleans is reported as follows: "The yellow pine market is showing considerable activity. There have been some large orders recently and many inquiries lead to the belief that heavy business will develop later. The local market has been unusually active lately, much building being under way.

NEW ORLEANS, LA.

"Cypress mills report about all the business they can handle and prices from car manufacturing concerns and railways are placing some good orders, and there is active buying on the part of the yard trade. The demand for factory stock is improving.

"Building throughout the New Orleans territory is more than usually active, so that the market for sash and doors is very good."

* * *

A manufacturer of cypress expresses this opinion of the market: "As to the lumber situation at present:

PATTERSON, LA.

"The cypress market has been rather quiet for the past month, due chiefly, I think, to the fact that during the last of the past year, and the beginning of this year, the wholesalers and retailers bought heavily and are now pretty well stocked up. What orders we do get specify in nearly every instance, rush shipment, which would indicate that the dealers are still unwilling to buy heavily.

"We do not anticipate a healthy increase in business for a month or so yet, although we have recently had inquiry from one man for two and one-half to three million feet of lumber."

* * *

A lumberman writing from Beaumont says: "There has been some improvement in the yellow pine market here within the last few days. Millmen report increase in inquiries and demand and a firming up of prices.

BEAUMONT, TEX.

"The prospects for export trade are better than for some time and the outlook for the interior trade for the remainder of the year is excellent.

"Prospects for building in Texas and throughout the southwest are reported to be excellent, and crops throughout the southwest are good."

Northern States Markets

A leading Nebraska lumberman writes us as follows: "We are experiencing at this time a very soft market on yellow pine which in our opinion will affect the western market. The decline on west coast products in this immediate territory has not been as marked as it has been in yellow pine, which we think is accounted for by the extraordinary efforts which the west coast mills are putting forth to hold the market firm.

OMAHA, NEBR.

"Just why the decline occurred, we are not in a position to state definitely. Here's our opinion of it, however. The advances which went into effect both south and west starting about the first of last September were, as you know, abnormal. The mills experienced a little demand, a percentage of which was domestic, part of it railroad purchasing and some export. They had been running along from hand to mouth for so long that as soon as they had a good excuse for putting up the market, they of course did so, and in our opinion overdid it. You will remember that lumber advanced practically 60 percent in about so many days. There is no question but what the mill men were entitled to this advance but a mistake was made in that it wasn't spread over a greater length of time.

"The foreign war condition and preparedness talk in our own country led them to believe that a market would be made for their manufactured stock and the advance which they had put into effect could be maintained. We believe they are now realizing that the major portion of this so-called demand was fictitious and now that they are getting down to earth, they find their stocks accumulating and necessarily have to be moved, therefore the general softening in market conditions.

"Together with this, of course it is possible to ship lumber at this season of the year, particularly from the west coast, for less money than during the winter. In other words, the under-weights are such that fir can be laid down on a 50 cent rate from 50 cents to $1 a thousand less now than it could be along in the winter, and at the same time the mill men get practically as much for their stock as they would then.

"Whether the market will continue to decline, we of course are not in position to say. It is not our opinion that lumber will become as cheap again as it was this time last year but we are guessing that at least it will be possible to purchase stocks the latter part of July cheaper than it can be done at this time. The greatest trouble with the lumber business at large is the fact that there is no stability to the market of the commodity."

* * *

This report of existing market conditions and prospects of future business comes to us from Minneapolis: "Predicted increase in business from rural yards is still largely in the predicted class, although there is daily greater assurance that the business is to come. Farmers of the northwest are now paying close attention to growing crops. Wheat and other small grains never looked better. The hay crop is excellent. Extensive building operations among the farmers is confidently expected when the crop is out of the way. As things stand now the retail lumber dealers are ordering only to keep stocks somewhat filled.

MINNEAPOLIS, MINN.

"Northern pine and hemlock are moving fairly well and at list prices, there being no concessions made.

"City building goes on apace. Factory demand for thin stuff and low grade lumber for shipping crates keeps the tag ends cleared up at fair prices. Sash and door factories are kept busy with city orders and get an occasional mixed car order from the country trade. The factories say that country yards are low in all interior finish and expect big orders will be placed later in the season. Hardwoods of the northern kinds are still bringing stiff prices, but are moving only to fill current demands, buyers hoping a decline in prices may come and give them an opportunity to fill broken stocks. Manufacturers do not expect to make any concessions as southern production is being curtailed and the demand for hardwoods is large and growing larger.

"White cedar posts and poles have begun to move a little more rapidly, although buyers are holding back some of their biggest orders on account of the excessive price of copper wire used in telegraph construction. Even wire fencing material has gone skyward, retarding farmers' work."

* * *

A Wisconsin manufacturer writes us as follows: "We have practically withdrawn from the market, due to the fact that our stock is depleted. Yellow pine has weakened to some extent, but the transient shipments, which at one time threatened to undermine hemlock values, are less in evidence than for some time past.

RIB LAKE, WIS.

"Trade is getting better every day as the weather conditions improve, and stocks get in fair shipping condition. I do not notice any weak spots, although occasionally some firm stretches the concession to $2.25 and even $2.50 to move some item of his surplus. I feel greatly encouraged over the outlook for fall business, both as to values and volume."

Middle States Markets

A correspondent well posted on the lumber situation in western New York writes us as follows: "The lumber trade shows a little less activity than a few weeks ago and some easing off in prices has occurred. The mills have curtailed their output to some extent, but the supply of most lumber is fully adequate to the needs of the trade. The weather during June, as well as May, was for the most part not favorable to doing any active lumber business. An unusual amount of rain fell and this greatly hindered the farmers from carrying on their sowing. The apple crop will be much smaller than was at first counted on, while many farmers were unable to sow oats at all, because of wet lands.

BUFFALO, N. Y.

"The demand from retail dealers through western New York has therefore not been up to expectations during the past few weeks. Lumber at these yards has been moving out so slowly that it has been necessary to buy only a small amount of new stock. In the factory towns business is going on at a good rate and the demand for

Digitized by Google

lumber has been on a satisfactory scale. Business would be still better if labor costs were not as high as at present.

"Prices of different building woods remain fairly steady, though they are not as high as some weeks ago. Lumbermen say that a readjustment process is going on and that prices in some woods, at least, went up to an unjustifiable level. A decline has been of benefit to the situation, and it is not thought that it will have to go much further than it already has in order to stimulate buying. For the present a hand-to-mouth policy is the general rule among lumber buyers. Stocks are being gradually reduced and are not above the ordinary in most instances.

"The hardwood trade has been only fair lately, having shown a decline from six weeks to two months ago, as is natural at this time of year. Prices in some woods are showing an easing up, and wholesalers say that plain oak can be bought cheaper now than in the spring. Thick maple is being sold in good quantity and prices are being maintained at a firm level. Thick ash is also holding up well in price. The hardwood demand is well distributed over the list and low grades are being called for in good shape. Local yards are finding it necessary in most cases to add to their assortments, though stocks are of fair size."

* * *

NEW YORK, N. Y.

A correspondent sends us this report of the metropolitan market: "The local market has fallen off during the last two weeks, both as to volume and price.

"The effects of the freight congestion are being felt throughout the city and district. The wholesale trade is less than normal for the season, and until the consumption of stock equals the supply on hand little betterment can be expected.

"General trade conditions are satisfactory and with the probable early settlement of the labor troubles, the lumber market should resume its activity, and develop good fall demand.

"Prices should advance materially with readjustment of transportation and labor, and will undoubtedly be obtained within the next month or six weeks."

Central Southern Markets

MEMPHIS, TENN.

From a lumberman of Memphis we have received this report of trade prospects: "Building operations in Memphis are quite large for this time of year. Those for June were substantially ahead of the corresponding month last year and the total since January 1 shows a large increase compared with the same period in 1915. The building commissioner says that there is more activity now in construction circles than for a long while and contractors and other interests bear testimony to the fact that the outlook is quite bright for the remainder of the summer. Crop prospects in the Memphis territory were never better and prices for both cotton and cotton seed are unusually high.

"This combination is regarded as an exceptionally favorable augury for prosperity throughout this section this fall and winter and it is regarded as quite certain that, unless some disaster overtakes the crop or prices suffer a severe slump, all lines will develop unprecedented activity during the remainder of the year, including saw mills, planing mills and woodworking enterprises of every kind."

* * *

LAMISON, ALA.

A manufacturer of yellow pine writes us as follows: "In reply beg to say that we find that there is still a fair volume of inquiries. The prices are not very satisfactory and most of the business now being offered is for almost immediate shipment. The present condition of our order file is good.

"We anticipate a gradual betterment in prices, from now until late fall."

* * *

NASHVILLE, TENN.

The condition of the local market is thus described in a letter received from Nashville: "There has been no material change in prices of lumber in this market this month, prices being about the same as were made several weeks ago, when some declines were noted. Business is of moderate volume, with some of the dealers reporting fairly active trade, while others report orders inactive.

"Building operations in Nashville continue on a large scale, and this has contributed greatly to a satisfactory trade in the retail department. Factories have been ordering for current needs, with the largest orders coming from the furniture, automobile and box factories.

"Transportation conditions in the north and east have shown improvement, enabling shippers to get some business through."

* * *

LEXINGTON, KY.

This expression concerning the hardwood market comes to us from one of the leading hardwood men of the country: "The volume of business this month is about 80 percent of the average of the preceding three months.

"Demand for hardwoods at the present is fair; buyers appear convinced that there will be no further advance in hardwoods with a likelihood of some decrease, consequently they are purchasing for their immediate requirements only. We do not anticipate much if any lower values in hardwoods, as the increased cost of supplies, together with increased cost of labor would mean unprofitable operation at anything less than present values.

"We anticipate a fair demand for hardwoods throughout the year."

Southwestern Markets

ST. LOUIS, MO.

A lumberman of St. Louis writes us as follows: "The hardwood market is in better condition than a few weeks ago, with better prospects ahead. Demand for factory stock has improved perceptibly. Oak and gum are in fair demand and prices continue firm. Retail yard stocks are low and buying must soon begin for the fall trade.

"Yellow pine is in fair demand. Retail yard buying is light, but inquiries are increasing in volume and prospects for heavier demand in the immediate future are good. There has been a slight improvement in prices."

* * *

HOUSTON, TEX.

A well known lumberman of Texas writes us as follows: "While prices accepted by yellow pine mills are not satisfactory, inquiries indicate that there will be a stiffening of demand accompanied by satisfactory prices probably within the next thirty days.

"Lumbermen believe that Mexico will afford a good market very soon. If peace is established immense quantities of lumber will be required for rebuilding railroads and for other reconstruction, and if war is declared our government must buy in great quantities for roads, railroads and temporary uses of the army.

"The volume of local trade is a little lighter than normal for this season of the year.

* * *

BIGELOW, ARK.

A lumberman of Arkansas writes us as follows: "We wish to say that there is a perceptibly better feeling in the yellow pine trade as we have seen it the past week. Orders have increased in number and prices are somewhat firmer. We attribute this change in tendency to cessation of rains in the southwest country, growing appreciation of the curtailment of production which has been in effect among the largest mills for some four to six weeks, and lastly, to the fact that there is still a vast amount of building in prospect. In fact, Babson's Statistical Organization in its letter of June 27, warns its subscribers that business in general has reached its climax, although there is every indication that it will be good for the balance of this year. It adds, however, 'as prices decline and labor becomes more plentiful we may see considerable new building, even after most other lines of business have begun to decline.'

"We believe the steady decline of the past three months in yellow pine has brought prices to a level which cannot be unsatisfactory to buyers."

* * *

SALT LAKE CITY, UTAH.

A prominent lumberman of Utah writes us as follows: "Trade for the first six months of 1916 has been much better than the first half of 1915, and while trade is slowing up some just now, we are in the habit of expecting July and August to be a little quiet, but everything points to a good fall trade, and unless something unforeseen appears to stop building, we believe we will have a normal year.

"Yards are not buying at present except for their immediate needs, not only on account of the approaching dull season, but on account of the prices slumping. The retail man seldom buys on a falling market."

"S. O. S."

In this connection, the above does not mean trouble. On the contrary it means avoidance of trouble. It means: SEND ORDERS SOUTH, for Yellow Pine to

BUYER YELLOW PINE, CYPRESS AND HARDWOODS.

Located in the center of Mississippi's manufacturing district wishes to make connections with two or three wholesalers to buy on commission, or will accept straight salary position with large concern. Seven years' experience. Will furnish gilt edge references. Address "H. F." care LUMBER WORLD REVIEW.

ARKANSAS SOFT PINE EXHIBIT.

The Arkansas Soft Pine Bureau, of which R. H. Brooks, Little Rock, Ark., is manager, has just installed in the Building Material Exhibit on the second floor of the Insurance Exchange, this city, its handsome exhibit in the shape of a miniature cottage finished entirely with Arkansas soft pine. The cottage is the same as was shown in the exhibit at Cleveland, O., Dayton, O., and other points throughout the country during the recent association meetings. It has six rooms and a bath and if it were built on the same specifications for use it would cost, it is stated, something like $2,500. The exhibit is surrounded by a grass lawn, with flowers in the yard and on the porch and climbing vines on the lattice work. The home is electrically lighted throughout. There is a fire place in the living room and everything is complete, the rooms being papered and curtains installed. The design of this handsome exhibit was made by Aymer Embury, the architect who designed the large number of modern homes and cottages for the Home Builders' Book of the Arkansas Soft Pine Bureau. It is well worth visiting by those among lumbermen who have not seen it at one of the other exhibitions. The lumbermen of Chicago esp[illegible]ould visit the Building Material Exhibit on the second floor of the Insurance Exchange and see this wonderful little home.

NEW PAPER MILL AT BOGALUSA.

The new paper mill which will be the property of the Great Southern Lumber Co. is a go, and within 60 days dirt will be flying on another million dollar enterprise for Bogalusa. The money for erecting and equipping the plant was voted in Bogalusa last week.
Within the next ten days the selection of a manager, who will attend to the building of the big plant, will be announced and then just as soon as the material begins to arrive, work will begin. It will be one of the most modern plants in the country and will have a capacity of 100 tons per day. The product to be made by the mill will be the same as that of the Louisiana Fibre Board Co. It is estimated that the mill will give employment to 400 in Bogalusa and as the material will be hauled from the Great Southern woods, instead of using the waste at the mill, will give employment to about 100 men in the woods.
Unless there is an unexpected delay in purchasing the machinery the mill will be in operation by the end of this year, and the market is in such condition that there is no question about the mill running full blast.
Bogalusa will profit greatly from the very start as scores of skilled and unskilled workmen will be at work erecting the building and installing the machinery, and the pay roll will be almost as large after the start on the building is made as when the mill is in operation.

ARE WOOD FENCES COMING BACK?

A recent bulletin of the United States Department of Agriculture contains information derived from a recent investigation in twelve northern and central states regarding the various kinds of fences in use. It was found, to the surprise of the investigators, that the old fashioned board fence renders less land untillable than any other kind of fence, the amount being as follows: Board fence, 3.23 feet; barb wire fence, 3.42 feet; woven wire and picket fence, 3.29 feet; straight rail fence, 3.57 feet.
During recent years, especially in the middle west, board fences have been largely replaced by other kinds; but with the application of modern creosoting methods there appears to be a splendid opportunity for the wooden fences to again come into general use. The posts should be thoroughly treated in all cases and there is no reason why low-grade boards properly treated could not be extensively used for fencing.

THE TEACHERS' COTTAGE MOVEMENT.

The biggest, most universal scheme for social service in the history of America, one affecting every hamlet in the land, has been instituted by the National Lumber Manufacturers' Association, in its proposal to build a home for every rural school teacher in America.

Louisiana will be one of the first states where the plan will be carried into effect, and a thorough investigation of the conditions in that state has been made, it being found that the state has already made progress in that sort of movement. Work on this philanthropic enterprise is already under way and the association will announce its plans in a few weeks.

President R. H. Downman, of New Orleans, and Directors W. H. Sullivan, of Bogalusa, and E. G. Swartz, of Burton, La., are among the most ardent advocates of the project, the success of the building of such structures in a few isolated portions of their home state having convinced them that it is a good social movement for the entire nation, as well as for Louisiana.

The plan was first broached a few weeks ago at a conference of the directors of the association and proved instantly popular. The idea was taken up by the United States Bureau of Education, and the first result of this co-operation between the lumbermen of the nation and the government is in the issuance of a brochure entitled "Teachers' Cottages," by R. S. Kellogg, secretary of the National Lumber Manufacturers Association, in collaboration with the United States Bureau of Education, and which is being sent to every county superintendent of schools in America. The Rockefeller Foundation has already approved of the plan and is giving $25,000 to foster the with more money to come.

The National association has taken up this social service work in the belief that the education of the nation will be immensely advanced if the teachers of the nation's young are properly housed. The theory is that if teachers are provided with proper homes, the country districts will be able to secure better teachers, and avoid the constant changes by which the schools are always in an unsettled condition. Secretary Kellogg says in his brochure on the subject:

"Under present circumstances, the teaching of a country school often becomes simply a temporary expedient for the teacher the first term after getting a certificate, and ambitious teachers who are anxious to grow in their profession, and make something of themselves, go, just as soon as possible, to the city schools, where living conditions are better. The country schools are always left with the largest proportion of young, inexperienced, poorly trained teachers."

Mr. Kellogg urges also that the teachers' cottages, or, as he calls them, "teacherages," should be models of sanitation, artistic, though inexpensive and so constructed that they may be not only homes, but real social centers for the rural neighborhoods. In order to further this plan of properly caring for the teachers, the lumbermen's organization is ready to prepare plans to assist rural communities in providing their teachers with the kinds of homes which have proved satisfactory in the state of Washington, and in the other more scattered localities where they have been built.

Special departments of domestic science are operated in about two hundred of the public schools of Louisiana. These departments are supported partly by special state aid. A number of domestic science cottages have been built in the various parishes. The parish school boards have ample authority in law to build cottages for the purpose of providing quarters for the domestic science work.

SAFEGUARDS FOR WORKERS ORDERED BY CALIFORNIA COMMISSION.

San Francisco, Cal., July 1.—The tentative safety orders, passed recently by the California State Industrial Accident Commission regarding safety devices in woodworking establishments have been adopted. The orders provide that all circular rip saws must have hooded guards and be provided with spreaders or splitters; that all cross cut saws of the swinging type must be guarded, and that knuckle guards must be attached to the swing frame; that guards must be installed to protect both upper and lower wheels of all band saws; that all wood joiners must be equipped with cylindrical cutter heads of the safety type; that all disc sanding machines must have the circumference and back of the revolving head thoroughly guarded, and all belt sanders must have pulleys enclosed; that all mortising machines must be provided with thumb guards to prevent an operator's hand from coming in contact with the chisel; that all wood shapers not automatically fed must be provided with guards; that all cutting heads and saws of tenoning machines must be guarded, and that all gears, belts, pulleys, sprockets and shafting connecting with woodworking machinery must be guarded. It was also recommended that floors where operators stand to operate machines, such as wood shapers, joiners, saws, etc., be provided with non-slip surfaces.

During 1915 there were 3 fatal accidents in the woodworking industry in California, 55 injuries that will prove permanent and 1,069 temporary injuries. The total compensation and medical payments for these accidents amounted to $23,484.

50 H-P G.-E. Motor Driving Trimmer and Transmission Booth-Kelly Lumber Co., Springfield, Ore.

Electric Power Reduces Mill Costs

If you would build a lighter mill building, but one story in height, consider electric power from G-E apparatus.

For a low upkeep and more continuous operation due to lessened vibration and definite limit to the power which can be applied to each machine use G-E apparatus.

Reduced fire hazard follows the separation of lath mill, picking table and hog house from saw mill which is possible with electric power.

To use much less power due to greatly lessened friction losses drive each machine with a G-E motor.

Let us refer you to satisfied users. Send for bulletin No. 4962, today.

General Electric Company

General Offices: Schenectady, N. Y.

District Offices in:

Boston, Mass. — New York, N. Y.
Philadelphia, Pa. — Atlanta, Ga.
Cincinnati, Ohio — Chicago, Ill.
Denver, Colo. — San Francisco, Cal.
St. Louis, Mo.

Sales Offices in All Large Cities 6293

The great economies of G-E motor drive are not confined to logging operations, but are evident throughout the mill. The following list shows a few of the many lumber mills with G-E installations:

SOUTH

A New Book

LOGGING

The Principles and General Methods of Operation in the United States

By Ralph Clement Bryant, F.E., M.A., Manufacturers' Association Professor of Lumbering, Yale University.

8vo, xviii 590 pages, 133 figures.

Cloth, $3.50 Net

The information which is contained in this book can be applied by the lumberman in his daily work.

The chief facilities and methods for the movement of timber from the stump to the manufacturing plant, especially logging railroads, are discussed at length.

Greatest emphasis has been laid on features about which there is not much written material available.

SCRIBNER'S LOG BOOK

Over 1,500,000 of these books have been sold. It has had a larger sale than any book of its kind. It has a log scale, lumber tables and an abundance of other useful information. Price prepaid 25 cents.

Reduce Expense in Your Mailing Department

Cut down the five o'clock rush. Send out more letters in less time, at less expense. Hundreds of concerns—big and little—are saving hours of time as well as salaries by cutting cost in the Mailing Department.

All this and more is possible by using the

SAUNDERS SEALOGRAPH

—a machine which seals envelopes faster and better than by any other method—made in four sizes—hand-power and electric—one of which will just fit your needs.

And you can try this machine FREE in your own office right on your own mail; and you don't have to buy unless it just suits you. Write for catalog and trial offer. It will save you hours of time and money too

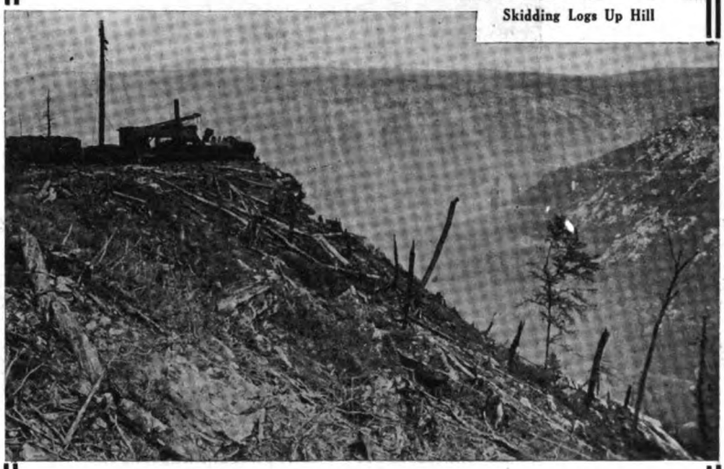
LIDGERWOOD
Overhead Skidders

Skidding Logs Up Hill



The Babcock Lumber & Boom Co.'s tract in the Blackwater Canyon, West Virginia, is so rough that it could not be logged until Lidgerwood Overhead Skidders with high head spars, mechanical slack-puller and interlocking drums were installed.

Skidding is done both uphill and downhill.

Spans up to 2600 ft. are used.

The Champion Lumber Co. are operating five machines of this type at Sunburst and Crestmont, N. C., two of which are operating over 3800 and 4000 feet spans respectively—the longest in the world.

Send for our new bulletin, "High Spar Skidders."

The paramount issue of the day is

EFFICIENCY

This was clearly demonstrated at the recent great meeting of the NATIONAL LUMBER MANUFACTURERS ASSOCIATION, at Chicago.

Atkins Saws Spell Efficiency

Look into their quality. Examine the Saw question as it deserves and save your money by using "The Finest Saws on Earth."

We make a Perfect Saw for Every Purpose, such as Band, Circular, Gang, Cross-cut, Heading, Shingle, Stave and other Saws. We make Machine Knives too and they are just as fine as ATKINS SAWS.

Have you received your copy of our 248 page book, "L. R."?

It tells all about ATKINS SAWS, Knives and Specialties. It illustrates and describes every possible type of Saw and lists them all. Write for it.

Specify ATKINS when you place your next order. Write to the nearest address below. We'll tell you how to get them to the best advantage.

Mr. Retail Lumber Dealer:

Every victory won for quality is a blow struck for better business and every sale of Frost-Johnson yellow pine lumber is a victory won for quality.

The issue is not obscure; the lines are clearly drawn. Will you accept something less than the best in yellow pine lumber, or will you stand for quality—for the finest quality and service that skill and industry can achieve?

The lumber users who purchase from you must be given their money's worth. Quality cannot be denied. It must be upheld in this day of keen competition. Frost-Johnson Quality and Service are our bid for recognition. Into them we have put the best materials, the finest workmanship and the soundest, most up-to-date methods that money, skill and ingenuity can command.

Why not enjoy the same advantages that other retail lumber dealers enjoy by sending us your future orders for yellow pine lumber? We have on hand at all times millions of feet of yellow pine lumber of every description, perfectly graded and assorted.

It costs you no more in the beginning and it's cheaper in the end.

He Who Looks Before He Leaps

Stock conditions at the CYPRESS saw mills are excellent but are not in the least burdensome. The fact of the matter is that sales, thus far this year, have been fully as heavy as the production and even the midsummer business has been beyond expectations.

The CYPRESS market has continued to widen and the new consuming fields which have been opened are calling for a gradually increasing amount of stock. Experiments with CYPRESS in rather strange directions have been successful and the wood is quite rapidly getting out of the class of ordinary lumber and becoming a specialty. This, in itself, creates a condition of demand which will eventually make CYPRESS independent of a majority of the causes which affect the rise or fall with other woods.

In the very near future will begin a systematic campaign to make the public know the differences between tide water CYPRESS and inland cypress These differences are very marked, so far as results obtained with the wood are concerned, and a large number of consumers already know about them. The tide water CYPRESS is being trade-marked and the inland cypress can never be trade-marked with the same brand, and when the differences are told to the public, the public will stand upon the trade-marked variety.

All of those whose names are signed to this advertisement make tide water CYPRESS and all are prepared to furnish trade-marked CYPRESS as a guarantee of quality from you to your customer. An increasing number of retail yards see the point in this and are insisting upon trade-marked CYPRESS You also will see it before many months have passed, and if your stock on hand is not then trade-marked you will have many regrets.

Be wise and accept the tip that all orders should specify that every board should be branded with the official brand of The Southern Cypress Manufacturers' Association.

BIG CHIEF
BRAND

Red Cedar Shingles — Red Cedar Siding

ALSO

Fir Flooring — Fir Ceiling
Fir Finishing Lumber
Fir Construction Material

BIG CHIEF brand Shingles are made of timber from the great cedar forests of British Columbia, acknowledged the finest cedar timber grown in the world. These shingles are manufactured on upright machines specially designed to produce a vertical grain shingle, which is the only shingle made that will lay flat and smooth on the roof and not "cup" or "curl up" on the edges.

ARKANSAS SOFT PINE
TRADE MARK

SOFT WORKABLE COMMON LUMBER

Do You Know

That

White Enamel *Stays* White

On

Arkansas Soft Pine

because there is no pitch or resinous oil in the wood to discolor the white lead?

Do you realize that because of this fact Arkansas Soft Pine supplies an inteiror finish suitable for Apartments and fine homes, which you can retail at

Moderate Cost

compared to the scarcer hardwoods heretofore recommended for white enamel treatment?

(Ask for a finished sample)

We want you to know these facts, together with the important information that in connection with the National Advertising of Trade Marked Arkansas Soft Pine, a special book addressed to architects has already prompted requests from two thousand members of that profession, for complete information regarding the wood and

Where It Can Be Secured:

Our answer to the last question is *"At Your Dealer's."*

Are you the Arkansas Soft Pine dealer in your town?

If not—why not?

All stock bearing the Arkansas Soft Pine Trade Mark is manufactured and sold exclusively by the following companies:

Cotton Belt Lumber Co	*Bearden, Ark.*
Crossett Lumber Co	*Crossett, Ark.*
Eagle Lumber Co	*Eagle Mills, Ark.*
Edgar Lumber Co	*Wesson, Ark.*
Freeman-Smith Lumber Co	*Millville, Ark.*

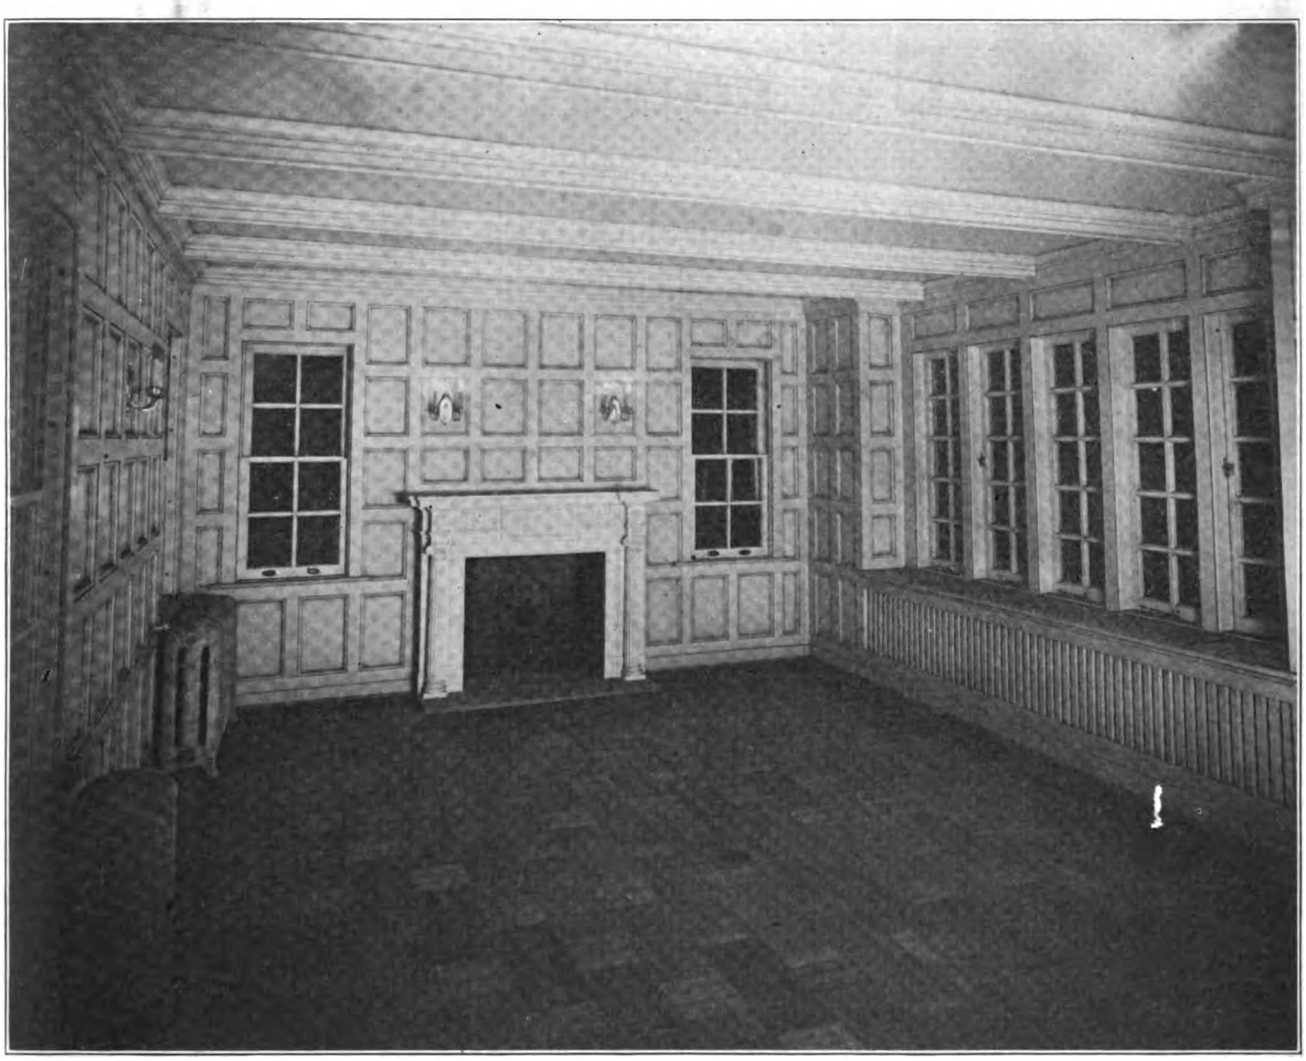
White Enamel

for Interior Woodwork is in demand

The illustration below shows the dining room of the NORTH CAROLINA PINE BUNGALOW in New York City, which is finished in White Enamel, and has attracted much attention by its beautiful effect. Note the novel panelling and beamed ceiling. The floor is Rift North Carolina Pine.



North Carolina Pine

"The Wood Universal"

forms an ideal base for Enamel Paint. Being practically free from pitch or resin it contains no element that will repel or discolor the most delicate finish. White enamel will remain white on this wood if the paint itself is right. Sell your trade North Carolina Pine for painted work as well as for stain finish and they will rise up to call you "blessed".

Write to us for prices or other information. We will serve you gladly.

"You furnished the Pole and We got the Fish"

That's the way the first dealer who used the local newspaper advertising which we furnish free, summed up the results of his spring campaign. Read these two extracts from his letters to us. They tell the story.

"My competitors on either side are tearing themselves to pieces in a vain endeavor to head off the tide of patronage which has turned to this yard for the old reliable WHITE PINE."

"It is with a great deal of pleasure that we can advise you WE HAVE RECEIVED POSITIVE AND ACTUAL RESULTS from this campaign. We have enjoyed a very nice trade on our WHITE PINE and just yesterday we were still more gratified by selling a party in ****, a point where there is no yard and which is eleven miles west of here, a bill totaling $1,200. This man knew what he wanted and sent a carpenter who, when he looked over the stock and saw how we were hooked up, did not take long after his return to conclude the deal. Certainly in this campaign the expenditure has been justified and we wish to share our pleasure and good feelings over the outcome with you. *You furnished the pole and we got the fish.*"

We have plenty more "poles" and there are plenty of "fish" in your territory. Write today and ask us about our advertising helps for dealers. They get the business.

If your WHITE PINE stock is low any of the following members of the White Pine Bureau will give your order careful and immediate attention.

Yellow Pine, Oak and Gum Lumber

Retailers can get from us Rough Oak Wagon Material for reaches, tongues and general repair work and gum box boards in the same car with Yellow Pine yard stock.

We have three Yellow Pine Mills; one at Pineland, Tex., and two at Diboll, Tex., which manufacture 150,000,000 feet of lumber a year. At Diboll we manufacture hardwood entirely separate from yellow pine; both operations being conducted by competent men. This enables us to furnish mixed cars of pine and hardwood manufactured in the proper way.

SOUTHERN PINE LUMBER COMPANY
TEXARKANA, TEXAS

CALIFORNIA WHITE PINE

We wish to announce to the many friends and customers of Shevlin service and Shevlin quality that we have started operations in Oregon.

Our first unit is completed and we are ready to ship kiln dried shop and selects of the highest quality CALIFORNIA WHITE PINE. The timber grows at a high altitude along the east slope of the Cascades. It is, accordingly, of remarkable texture. Box factory in connection with mill.

AGAIN WE DO A FAVOR for a friend who desires to let the great lumber public know that he has a real bargain in hardwood timberland. We are glad to loan ourselves to any such activity as this, because the business of these advertising pages is to sell what these lines of type advertise—all we get paid for is the space. However, we wish our readers to know that we have read all the "documents in the case" and that we vouch for the moral and financial worth of the owners and their representations.

THE OWNERS HAVE FOR SALE 48,000 acres of virgin hardwood timber lands located in southwestern Virginia, which, according to two cruises by very competent men, have an average of 4,700 feet of hardwood timber to the acre, or all told **TWO HUNDRED TWENTY-FOUR MILLION FEET** of merchantable, high-class, accessible hardwood timber.

THIS TIMBER CONSISTS OF 90,000,000 feet White Oak; 30,000,000 feet Chestnut Oak; 10,000,000 feet Red Oak; 26,000,000 feet Chestnut; 10,000,000 feet Hemlock; 24,000,000 feet White Pine; 20,000,000 feet Yellow Pine, 5,000,000 feet Yellow Poplar; 3,000,000 feet Hickory and 6,000,000 feet Miscellaneous.

THE NORFOLK & WESTERN RAILROAD, through a subsidiary company, has built a branch road for the **SOLE PURPOSE** of reaching this timber, this line being now in operation.

ONLY BONA FIDE PURCHASERS will be considered, and anyone interested may know positively that his negotiations will be direct with the owner, or an accredited representative. No commission men or brokers will be considered.

THE OWNERS ARE NOT LUMBERMEN and are offering the property for sale in order to close out an estate. They would wish to make an arrangement with the buyers in order to obtain the bark from the property. Write to us and we will forward your letter to the owners.

Yours sincerely,

GIRDLING THE EARTH WITH HOUSES

THE STORY OF VOLUME:

The volume of lumber produced in the mills of this company each year is sufficient to build a good-sized house every mile round the earth.

Stop and think what it means to buy **quality lumber** from a company that can so standardize its quality as to keep up a demand for a quantity it must manufacture, sufficient to build one good-sized house every mile round the earth.

Think what it means to have an annual demand for **quality lumber** in such an aggregate as to form a train shipment of twenty-four thousand three hundred and sixty-six cars, each car billed to a lumber buyer or on an export order.

Imagine a train of cars one hundred and eighty-four miles long. That represents the annual output of the Long-Bell Lumber Company's mills.

The largest yellow pine milling capacity under the control of a single organization is the Long-Bell Lumber Company, with capacity for manufacturing over one and a half million feet of lumber per day.

With three hundred working days the capacity shows an output of over four hundred and fifty million feet per annum.

This enormous production of **quality lumber** is possible to be manufactured by one organization only because of the company's efficient management.

It is only possible to manufacture **quality lumber** representing over one and a half million feet per day because of the demand by dealers and consumers in this and foreign countries which is increasing in volume every year.

There is a reason why the Long-Bell Lumber Company manufactures an increased quantity every year and is able to sell its daily output of one and a half million feet.

THAT REASON IS QUALITY

The standardization of lumber began with the Long-Bell Lumber Company a great many years ago.

A **quality standard** was established which made a reputation while it built up the volume and this standard of quality has been guarded with care by the mill managers who are jealous of the splendid reputation thus attained.

But more than all this the record made by the Long-Bell mills for PROMPT SHIPMENT has caused dealers, all over the world, to repeat and continue to repeat their hurry-up orders once they have had a taste of this **quality lumber** and these quick delivery shipments.

Think of a record established by one lumber organization which shows an average time of eight and a half days from the arrival of orders at the mills until the cars were loaded, on the entire 1915 year's production.

It is YOU, Mr. Dealer, who gets the benefits of this **quality lumber** and these record shipments.

It is you, Mr. Lumber Dealer, who makes it possible for these mills to produce **quality lumber** and get it out for you on record time. The Long-Bell Lumber Company is mindful at all times of your needs, your requirements, and your customers' demands.

A large lumber mill organization can increase its business only by the most refined attention to the minutest detail of the finished product.

A leader of quality and volume can only maintain its supremacy by its attention to these details, and so careful and so watchful are the mill managers and their foremen in their constant scrutiny of every step of the progress of lumber manufacturing from the log to the car door that you may be assured your cars of lumber at all times will bear YOUR most careful scrutiny.

There is a salesman in your territory, authorized to quote you the lowest prices we are making on Long and Short Leaf Yellow Pine, Forked Leaf Brand Oak Flooring, Oak lumber, Straight or Mixed car lots, etc.

An inquiry by postal, wire or letter brings a quotation or salesman to you when you want one.

The MANAGER of a South Carolina Lumber Plant whose Company is a policy carrier in the

Lumbermen's Underwriting Alliance

recently remarked that he was more interested in receiving the ALLIANCE MONTHLY FIRE BULLETINS than anything aside from his salary check. He realizes that the manager who **reads** and **heeds** the warnings and suggestions along FIRE PREVENTION lines contained in these BULLETINS is more likely to continue to have a **going mill** to manage than the man who does not receive them and who is kept in ignorance of the lessons they teach each month.

The March issue should be in the hands of every Saw Mill Manager, Superintendent and Foreman. **Send for this number**—it will cost you nothing, and will familiarize you with one of the important advantages of carrying a part of your insurance with the

U. S. Epperson Underwriting Company

Suite 1116, R. A. Long Bldg., Kansas City, Mo.

IN THE EARLY DAYS

lumber was a word used to describe things that were useless or of little value. The Lombards were the money lenders of the middle ages. A Lombard-room was a room used by pawn brokers to store their pledges consisting of household goods and things of cumbersome or bulky nature. Later such space was termed "lumber room." Lumber, therefore, represented in those days nothing of consequence.

NOW

we know lumber as timber sawn into the form of beams, joists, boards, planks, and especially that which is smaller than heavy timber. The word brings to mind boards of even running thickness and width, clear, straight, strong, durable, with grain or figure, according to species, that will harmonize with any setting. Lumber now occupies a place in civilization that makes it indispensable to mankind, keeping step with every progressive move in manufacture. Ours is the lumber of the modern kind.

We know that we know lumber as it is now known.

We want you to know that we not only know lumber but know how to make it.

One little order will prove we can make good.

ONE OF THE MOST IMPORTANT HAPPENINGS AND one of the most important MOVEMENTS have been running along together—for the last two weeks—hand in hand, in that narrow path through which streams the lumber world and which is SUPPOSED, sometime or ANOTHER, to lead down INTO the promised Land of Canaan.

Whether or not that is to BE the geographical finish of the highway on which we march, it is not yet our place to prophesy.

All that WE can do, which will be of interest, will simply be to continue to saunter along the way, that we may gather up the items of fact and the items of gossip which will interest those who trudge BEHIND—for most of our procession IS behind, you know—our tendency to rear-guard marching having become SUCH a habit with us, as a BUSINESS, that there is OFTEN much doubt whether we are "coming or going"—whether we are really following our Moses down INTO the Land of Canaan or are on our way back to Pharaoh to make bricks without straw—that is lumber without profit—and to humbly beg our Egyptian taskmaster to invent still ANOTHER plague, that we may show our FORTITUDE!

The movement to which we refer is the frantic "locking of the stable door after the horse is gone," which many lumber manufacturers are indulging in throughout the entire country and which we call "curtailment"—a thing which, if it had been done at the right time, would have kept many a good man out of the bankrupt court and which may even now help a little bit in keeping away the sheriff and protecting a trade which is so situated that it cannot protect itself and up to date has had no government assistance in that direction.

The other event to which reference is made above is the great reclassification hearing of the Interstate Commerce Commission, which has just spent twelve working days and nights in Chicago on the proposed reclassification of lumber, busily engaged in umpiring over 3,000,000 words of conversation on the subject.

We have paid our compliments to both of these events—the curtailment question and the reclassification question and what we have done we have done with an open mind; and now when the curtailment effort has been made and the reclassification conference is ended, we are wondering "what is the use."

Each of these subjects deserves a little special editorial mention of its own, and shall have just that, but first we wish to be grateful for sirocco heat and the gentle falling of the rain.

Those two things have happened in the last two weeks to such an extent and so universally that if the cracking of the growing of the

corn from all parts of the corn-land, could be mobilized in one place, and these separate sounds could be crystallized into one sound, the roar of the battles of Europe would be by comparison the tweet of a sparrow to the thunders of Niagara.

If Divine Providence had not stepped in and brought the heat and the summer rain, no matter of "curtailment" or "reclassification" would have been of any service. So in this end of our "howdy-do" for July 25, let us say that every indication, North, East, West and South, is that there will be almost universally a good crop of corn. The importance of the general crop is not measurable at this time, but the sign is set in the Heavens, the winds are blowing warm and the rains are falling—and these phenomena of nature are happening in such strength and quantity as to encourage all lines of business everywhere.

The Interstate Commerce Commission Conference.

OVER on Plymouth Place, in this city, on the wide imposing stones of a linotype concern, it is reported there are resting, in their white simplicity, nearly eight tons of metal that had been fashioned into type, which, when properly locked up and impressed upon paper, will recount the entire "exhibit" and "oral" testimony that has been offered by the attorneys and testified to by the witnesses and transcribed by the court stenographers at the Interstate Commerce Commission hearing on lumber classification which has just closed.

There ARE people, of course, who look so sardonically upon all phases of life that they WOULD and ARE inclined to look upon this event in the nature of a National joke, but we refuse to take it AS such. We wish to be recorded as being among those who very highly approve of this occurrence, WHETHER or NOT lumber be reclassified.

We are not prepared to discuss the merits or demerits of this situation from the viewpoint of railway freight rate making, or the equities of judicial balancing of lumber freight rates, so that they may work an EQUITY when if not rightly done they would work a HARDSHIP, one way or another!

However—in discussing the good which has been accomplished by this hearing we want to register the deliberate opinion that the whole affair has done the lumber trade of the United States millions of dollars' worth of good, and has benefited the railroads and likewise the government in like measure—even if the result of the hearing or investigation does NOT now result in the RAISING or LOWERING or changing of a single lumber freight rate, or the change in ANY particular of lumber tariffs as they exist to-day or existed before the disturbance began two years ago.

There is a definite reason for this statement and if the reader will sit into a cool place by the window we will give that reason and quit.

The railroad men and the lumbermen and the Interstate Commerce Commission needed above all OTHER things a conference to determine basic principles as opposed to hundreds of hearings to dispose of specific rates of freight. One or two of the witnesses, we believe, reminded the conference that they were not there on trial, and the chairman, we understand more than once, made a definite statement that the affair was only a friendly conference looking in the direction of establishing the fundamental principles of freight rate making for lumber.

Now that the investigation is over, we take it that the commission and the railroads and the lumbermen themselves have become in a great measure convinced—as we understand the Federal Trade Commission is convinced—that while lumber is a commodity upon which freight rates must be levied, that it DIFFERS from all OTHER commodities, stands in a class by itself, and cannot be subjected to the ordinary rules of freight rate making—and that—really lumber has been done a most grievous injustice in the past by being considered along the lines of other commodities; and now, if these three parties to this friendly conference desire to find out just what IS the matter with lumber freight rates and to devise some scheme which would reduce to a minimum the controversy over the subject, then surely this conference which produced its eight tons of type matter to tell its 5,000 page story will have become and is NOW, at this MOMENT, a basis for great good to all parties concerned!

How About a National Lumber Inspection Board?

WE MAY, AS AN INDUSTRY SOMETIME OR ANOTHER, learn how to curtail production at the right time; and there may come a time when the Interstate Commerce Commission will not have to put 85 percent of its time into straightening out kinks in the lumber tariffs; but there never WILL come a time when we will not have, as a live issue, always ready for discussion, the INSPECTION OF LUMBER.

Already the American Society of Architects has given much thought to the subject and has suggested that the inspection of lumber is a problem for the Bureau of Standards at Washington.

We have not the time on this hot morning to look up just the details of what the American Society of Architects has done about this proposition, but the action was taken some time late in 1915 or early in 1916, around about the period when the lumbermen who are in the building woods end of the business were making love to the architects.

This inspection proposition of lumber is not unlike the tariff question in politics. The average lumberman is not a politician, and if the lumber trade were polled on the question of just what should be done with the political question of the tariff, we are THOROUGHLY satisfied that an overwhelming majority of its votes would be piled up for a tariff commission to handle the matter.

The LUMBER WORLD REVIEW has already laid down in a previous editorial the foundation of a discussion on this question which it expects to make, and does propose here and now that the lumber industry should father a National Inspection Commission of its own, to consist of a board five or seven men, whose business it should be to devote their lives to this matter of the inspection of lumber, at salaries that would take care of any reasonable man's wants and make it worth the while of many a man in the lumber trade to devote his time and attention to the proposition, for his life's work.

It would be folly to argue that you could not find the men. Money will find the men, and even in a little half dozen interviews on the subject with a half dozen of the most influential lumbermen of the country, at least two of either the five or seven people it has been suggested might sit on this proposed inspection board, have ALREADY been cited, and could be secured, if such an undertaking were properly financed and found sufficiently popular.

We make this suggestion realizing that what USUALLY happens to the pioneer is BOUND to occur to US. There are undoubtedly many very clever lumbermen who will object to such a proceeding, and there will also be those who believe so thoroughly in an emasculated and spineless lumber press that they will not hesitate to tell us this is none of our business; that we are only newspaper people and are not SUPPOSED to have any inspection sense. But no matter; we have made this suggestion—nevertheless—and are prepared to stand by it or it would not have been made.

If this matter of a National Inspection of lumber of all sorts be not an opportunity for the activities of the National Lumber Manufacturers' Association, and if it be not one of the REAL things that a National Lumber Manufacturers' Association should not take up and work out, then we will be glad to KNOW and to have DEFINED to us just what IS the province of such an organization!

We hold no brief permitting us to speak for THAT or any OTHER organization in lumber, but still we have reason to believe that such an activity would be agreeable to the National Lumber Manufacturers' Association and would furnish it with an activity as necessary as its Blue Book; as necessary as its Inter-insurance department; as necessary as its Trade Extension department; and VERY likely it would be more lauded for the adoption of such an activity than it could EVER be for carrying out—as it will and must—the OTHER three lines of endeavor!

At all events it is worth thinking about and worth thinking about deeply until some way is discovered of accomplishing the purpose.

To All Manufacturers of Lumber!

IF YOU HAVE THE LEAST FIGMENT of curiosity, you will finish what you have just begun. We have written over 2,000 letters for the information upon which we have based our "Curtailment" article, which begins on the next page and takes up over eight pages of this issue, and we want to to tell you frankly that it is up to you to read that article, every word of it—and then to profit by it.

We have told the manufacturers of lumber just about what we think of them as business men and it should be part of your task to read that article and find out the facts.

We know it is a long story.

It had to be.

If we can afford to write such a story and print it, you cannot afford to miss reading it. If you have not the time to read it, personally, let your secretary do it, with instructions to mark the places where we say things about you, personally!

We realize that we are hard to satisfy. We realize that it looks a great deal like being "fussy" to complain about the lack of interest of lumber manufacturers in this question of curtailment when at least 200 of them or at least 25 percent of those addressed upon the subject have been good enough to reply to our queries.

For that twenty-five percent who did reply we are grateful—very, but for the remainder, 75 percent who sit back with their hands in their laps and do not seem to care in which direction they are moving or pay any attention whatever to movements which are started entirely for their own good, we have no very great consideration for their feelings or hope for their future.

An Immediate Necessity for Curtailing Lumber Production

Opinions Concerning "Running Conditions" and "Lumber Stocks" from Twenty States

Part II.

By BOLLING ARTHUR JOHNSON

If the lumber manufacturing mind could be made into a composite mentality, as we make a composite photograph, undoubtedly it would,(as the moving picture producers say), "register" A NATIONAL SUSPICION.

If you who are reading the above paragraph are a manufacturer and are not quite mad enough at the assertion made, please read it again and get GOOD and angry. Your anger and curiosity might lead you to read the many pages which follow. If you do NOT read these pages NOW you will likely never get another chance, for as soon as they are off the press they are going into the melting pot, not to be soon dragged forth again to serve the purpose of a trade that does not seem especially to care whether it is on the road to Heaven or to Hell!

JUST A FEW WORDS OF EXPLANATION.

Early in July we received, by mail, a list of what purported to be the activities of sawmills in the yellow pine producing territory. To check the matter up we wrote the article which appeared under a caption similar to the one which appears above, and published it in our issue of July 10, including a list of yellow pine sawmill activities; but in order to check the matter up before that article was printed, we sent out a circular letter to all of the lay members of all of the lumber manufacturing associations which belong to the National Lumber Manufacturers' Association, with a "proof" of the article, and after about forty-eight hours from the day that letter was put into the mail, the answers began to trickle back through our "Wide East Windows."

It has been altogether the bravest attempt ever made by lumber manufacturers in this country to assert themselves and talk truthfully about their condition, and those who have REALIZED the NECESSITY of REPLYING and who have had the nerve of FEATHER BOLSTERS STOOD on END, have REPLIED!

But, do you realize, Mr. Lumber Manufacturer, that there are—at least—800 lay members of the National Lumber Manufacturers' Association, and that barely 185 of these have cared enough about the "other fellow" or cared enough about their OWN condition to have the courtesy to reply to this communication?

This campaign of ours—which seems to us to have just ABOUT been drawn to an end, but even YET might be carried on and into ANOTHER ISSUE of the LUMBER WORLD REVIEW—has proved OVERWHELMINGLY one great central TRUTH, namely, that the ENTIRE TROUBLE with the LUMBER MANUFACTURERS of the United States is from WITHIN and NOT FROM WITHOUT; that they have been bully-ragged and set upon and billy-be-damned and harassed so much by so-called legal restrictions that they even lack the courage to say that their souls are their own!!

We are not making these statements fault-findingly, but just for the sake of the TRUTH, because the truth OUGHT to HELP.

We cannot much longer lay all of our troubles upon a Bureaucratic Government; the railroads; the enforced waste in manufacture; the inroads of substitutes, etc., when our real BASIC trouble is that by force of circumstances and environment our PRODUCTION of the product and MERCHANDISING of the same DIFFERS from that of any OTHER production of product and merchandising of product and MUST have and SHALL have and SHALL be governed by DIFFERENT rules and laws of trade than those which govern and rule OTHER lines of trade!

It OUGHT to be patent to any inside observer of the lumber trade, as it IS patent to almost all OUTSIDE observers, that no person or set of persons has ever yet known anything definite or COULD know anything definite about the "supply of lumber on hand"; or, if they did know what was the "supply" of lumber on hand, could by that means or any other means control the "supply" to either RAISE it or to LOWER it!

If the three pages of information which we printed on this subject in our issue of July 10, coupled with this monument of type in the present issue of the LUMBER WORLD REVIEW, does not indicate—as a manufacturer of yellow pine of Alabama recently remarked—that "INDIVIDUALISM is dead in connection with the management of the manufacturing end of the lumber trade in the United States"—AND that it SHOULD have and MUST have either the privilege of lawful cohesion from the government or direct control of the government, then may this lumber newspaper never again indulge in a speculation of any sort!!

Lumber manufacturers may hesitate to "speak out in meeting," but we do not, even though this statement might lead someone to bring up that old-time wall motto concerning the fearsome tread of angels as opposed to the heavy and clanking steps of fools.

Anyone who does not like our attitude in these matters either does not take a broad view of these affairs, or else has not read fully our issue of July 10, or this issue of July 25—ON THIS SUBJECT.

We will pay no attention to the protests of ANY person as to OUR attitude in this matter until that person has read all there IS to read on this subject in the two issues of our paper mentioned. The person who has done THAT will have a RIGHT to AN OPINION.

We have reprinted our letter of July 6, and have corrected the list of mill statements, and brought it up to date, in so far as we could gain information.

We call the especial attention of all our readers to "Three Merciless Answers from a Brainy Texan," printed on the third page of this article.

ALABAMA.

The information from Alabama is more meager than that from most of the states that have pretended at all to follow our movement to stop an over-production of lumber.

The trouble with the information is that it is not specific enough. What we would all like to know is just what does "running on short time" mean. It might mean, as compared with some other period, the cutting off of a night each week from the regular day and night run; and while that would mean curtailment, as compared with some other previous time, it would carry with it no definite showing to indicate just how much the reduction might have been from "some other previous time of running."

JUST STARTED UP—WILL CONTINUE TO RUN!

A very well known firm, whose rating is high, and whose integrity is good, makes no specific report, but does write a letter saying: "We have run only about two-thirds' time during the past month, because of storms prevailing here, but we are not figuring on curtailment, as we are just getting started, and have no stock of lumber on hand, and wish to build up some."

BELIEVES "SUPPLY AND DEMAND" ALWAYS GOVERN MARKETS.

What is the use arguing against the fetish of "supply and demand" when the Federal Trade Commission is just about ready to believe that "supply and demand" do not govern the lumber trade, and that we stand in a commercial line altogether helpless in that regard?

We NEVER KNOW what is our "supply," because no human being has ever been able to see it all at once; but that will make no difference to some people, even those who are endeavoring to prove things to the commission!!

The people who have the power of life and death over the selling of "building wood" lumber make up their opinions on what is the "visible supply of lumber," depending entirely upon their own individual vision—looking outside their own yards—and there we have the difficulty, because we cannot possibly, all of us, see far enough or alike.

We are led to make the above statment in order to try to counteract in small measure that which follows in an extended quotation from a close friend of ours in Alabama, who says:

"The law of supply and demand governs the lumber market, as it does other markets. Flying in the face of this law year after year has cost the lumbermen untold millions, without doing anyone any good. Continuing to manufacture lumber at a normal rate, when consumption is far below normal, and without adequate facilities for storing the products, which means forcing it on the market, regardless, is about as asinine a proposition as we can well imagine.

"Apparently many operators in this section believe they should run full time, whatever they may think about what other operators should do. We have no inquiry as to their views on this point, except as opportunity offered for casual discussion. It would appear that many of them do not realize the situation, or what it demands in good business judgment, while many others say that they never reduce production unless everybody else does so. A very large proportion do not seem to feel that in running full time and insisting upon selling their output at some price has anything to do with unsatisfactory conditions in the lumber business. The matter is, of course, one for individual judgment

Digitized by Google

and action, and we have not attempted to argue the question with anyone or to give any advice, but our own curiosity as to how some operators arrive at their point is nothing short of painful.

"We feel that every manufacturer of lumber who studies the business, in an effort to arrive at the facts concerning it, will find himself in agreement with the views expressed in your issue of July 10.

"When the present crop of timber is gone, it will be gone forever, and that is all there will be to it. The marketing of large quantities of yellow pine at figures below the cost of production is perhaps not the most serious phase of the existing situation; there remains the fact that having, through overproduction, hammered the price down to a point where it barely covers the operating cost, the operator is compelled to leave in the woods a much larger percentage of each tree felled than he would normally do, because he cannot afford to bring in common logs, and the consumer naturally takes the better grades when the price is low. This is a dead loss, and one that will fall heavily upon the coming generation. We do not think it possible to state too forcibly the folly of overproduction.

"With reference to the list of mills voluntarily and individually reducing output to meet market conditions, we are at once glad to know that so many possess the sound judgment and courage necessary to taking such a step and are regretful that more of the yellow pine operators cannot qualify as good business men, to say nothing of their letting a faithful few bear the burden."

Here follows all the detailed information we have concerning the present running of Alabama sawmills, as compared with their running six weeks or six months ago:

Choctaw Lumber Co.	Silas	New plant. Shut down ten days in July. No stock on hand. Will run.
Davis, M. L.	Oak Grove	Curtailing 22½ percent.
Jackson Lumber Co.	Lockhart	Run 2 bands, 1 gang all year until June 20. Shut down everything.
Kaul Lumber Co.	Birmingham	Running five days, per week of 10 hours as opposed to six days previously.

COPY OF A LETTER SENT TO 800 SAW MILL MEN JULY 6. HEREWITH ARE THE ANSWERS.

Lumber World Review

ARE THOSE SAW MILL MEN WHO HAVE NOT ANSWERED THIS LETTER RUNNING NIGHTS?

IF YOU WILL PLEASE HAVE THESE SHEETS PUT IN YOUR TYPEWRITER AND THEN DICTATE AN ANSWER TO EACH QUESTION A SUMMARY OF ALL THE ANSWERS WILL BE RETURNED TO YOU—PERSONALLY—AND WILL ALSO BE USED IN FUTURE EDITIONS OF THE LUMBER WORLD REVIEW.

Gentlemen:

QUESTION NO. 1—We are endeavoring to find out—IN YOUR INTEREST—if "supply" and "demand" control the lumber market—as it is conceded they DO control all OTHER markets. We would not insult YOUR intelligence by suggesting that you do not already know that the "supply" of an article of commerce affects the "demand;" BUT, just at this critical moment when a falling off in the "supply" of lumber in stock is the ONLY thing that will help to patch up a badly broken market, will you talk to us frankly for the national LUMBER GOOD and permit us to utilize the information in an IMPERSONAL way.

QUESTION NO. 2—We are going to give back to you by letter and through the columns of the LUMBER WORLD REVIEW a summary of the EXACT FACTS as to stock conditions; so will you tell us on the "A" line below how much lumber of all kinds you had on hand, in feet, January 1, 1916, and on the "B" line how much lumber you had on hand July 1, 1916?

"A" Lumber on hand January 1, 1916.....

"B" Lumber on hand July 1, 1916.....

QUESTION NO. 3—How many "saws" of all kinds in ALL your MILLS had you in operation January 1, 1916?

QUESTION NO. 4—How many "saws" of all kinds in ALL your MILLS have you in OPERATION right NOW?

QUESTION NO. 5—How many days per week and how many hours per day did you run your sawmills in the month of January, 1916?

QUESTION NO. 6—How many "days" and how many "hours" per day did you run your sawmills during the month of June, 1916?

QUESTION NO. 7—It is ALLEGED that there are actually a FEW sawmill operators who believe THEIR mills should run full time and that all the rest of the sawmills should run SHORT time, in order that all the lumber business MAY be helped to a competency. EXACTLY how MANY such OPERATORS are there in your NEIGHBORHOOD and what reasons do they give for piling up lumber which they know they have got to sell at a LOSS?

QUESTION NO. 8—Attached is a proof sheet of what will either be used as a leader for an article upon the "General Shutting Down of Sawmills in the United States," or as an editorial for our issue of July 10. It will be printed just as proof has been furnished to you, but just for our own INFORMATION will you please be good enough to criticise our position in the matter?

QUESTION NO. 9—Will you note the rather formidable list of mills who are running "short time" that we shall publish in our issue of July 10 and tell us what you think about it?

QUESTION NO. 10—Will you write us at your earliest convenience and give us any other MARKET facts and ideas on the general conditions of the lumber trade in your locality?

Yours very truly,

BOLLING ARTHUR JOHNSON,
EDITOR AND PUBLISHER,
LUMBER WORLD REVIEW.

Let any saw mill man who has not answered this letter do so at once and thus do himself a courtesy.

King Lumber Co.	Prentice	55 hours a week.
Lathrop Lumber Co.	Birmingham	Running five days a week.
Manchester Lumber Co.	Manchester	Running on short time.
McGowin-Foshee Lumber Co.	Folco	Running on short time.
Scotch Lumber Co.	Fulton	Running five days a week.
Smith, W. T., Lumber Co.	Chapman	Both mills running 66 hours.

ARKANSAS.

Our reports from Arkansas are of a varied nature, for our friends from that section have expressed themselves very freely. We are not able to make much change in our list of specific information, but we have to

Digitized by Google

record the fact that one of our friends from Arkansas does not seem to think much of it, as INFORMATION, and offers some rather peculiar answers to our queries, and among others makes the statement: "All of our neighbors are running full time," and to our ninth query writes this answer: "There are some on the list showing running on reduced time who are in fact running full time."

Another operator refers to the fact that still another manufacturer has suffered quite heavily from windfall, to the extent of several millions of feet; that this neighbor is running his mill, and ought to continue to run it, although he—our INFORMANT—announces that HIS mill has been shut down. Following is all of the definite information as it now stands, in so far as we can secure it:

Arkansas Short Leaf Lumber Co.	Pine Bluff	Running 4 days a week.
Arkansas Land & Lumber Co.	Malvern	Shut down June 30.
Arkansas Lumber Co.	Warren	Running 3 to 5 days a week.
Bradley Lumber Co.	Warren	Running 3 to 5 days a week.
Campbell, H. A.	Mt. Idah	10,000 feet daily capacity. Ran only 3 or 4 days in June.
A. L. Clark Lumber Co.	Glenwood	Running three-quarters time.
Crossett Lumber Co.	Crossett	Running 4 days a week.
Eagle Lumber Co.	Eagle Mills	Running 5 days a week.
Edgar Lumber Co.	Wesson	60 hours a week.
Florala Sawmill Co.	Paxton	Running three-quarters time.
Graves Bros. Co.	Hosford	Shut down for over a a year in last two, so now running full time, 10 hours daily.
E. L. Marbury Lumber Co.	Malone	Temporarily shut down account of storms.
Martel Lumber Co.	Martel	Running 44 hours.
Weaver-Loughridge Lumber Co.	Boyd	No curtailment.

We have a letter from Florida which indicates that somebody has damaged the confiding nature of one operator down there, because he insists upon replying to our Question 7, in which we ask him concerning his belief in regard to letting the OTHER fellow do the "shutting down," by saying: "These are USUALLY the mills who REPORT running on SHORT TIME."

GEORGIA.

The stock conditions at yellow pine mills in Georgia should not damage the trade very particularly or affect the general business of the country, if we may judge of Georgia conditions by the lack of attention paid to our letters of inquiry addressed to all large sawmill operators in that state. Here is a meager little list as a result:

Fordyce Lumber Co.	Fordyce	Running 4 days a week.
Freeman-Smith Lumber Co.	Millville	50 hours a week.
Gates Lumber Co.	Wilmar	Running 5 days a week.
Ozan-Graysonia Lumber Co.	Prescott	5 days a week.
Reed Bros. Lbr. Co.	Buckner	Running 40 hours.
Union Saw Mill Co.	Huttig	Running 4 days a week.
Wisconsin & Arkansas Lumber Co.	Malvern	60 hours a week.

Three Merciless Answers from a Brainy Texan

QUESTION NO. 7: It is ALLEGED that there are actually a FEW sawmill operators who believe THEIR mills should run full time, and that all the rest of the mills should run SHORT time, in order that all the lumber business MAY be helped to a competency. EXACTLY how MANY such OPERATORS are there in your NEIGHBORHOOD, and what reasons do they give for piling up lumber which they know they have got to sell at a LOSS?

ANSWER: "We control the output of all mills in this vicinity, except one mill just building; three of these are running about half time; one we have closed down entirely; the other operates only planer to fill orders as received and shipped. We are booking orders faster than we are either making or shipping lumber, so do not feel that we are doing anything toward the repeal of the law of supply and demand. We have turned down as many orders as we have accepted, because we do not Accept, Except, at a living price."

QUESTION NO. 8: Attached is a proof sheet of what will either be used as a leader for an article upon the "General Shutting Down of Sawmills of the United States," or as an editorial for our issue of July 10. It will be printed just as "proof" has been furnished to you, but just for our own INFORMATION will you please be good enough to criticise our position in the matter?

ANSWER: "Would just as soon criticise the statement that you cannot put five gallons of whiskey into a two gallon jug, as to criticise the assertion that you cannot put six days and some nights' output into a three day demand. If each manufacturer would govern his own production in proportion to prices and orders received, we might feast a little on finance instead of on philosophy."

QUESTION NO. 9: Will you note the rather formidable list of mills who are running "short time" that we shall publish in our issue of July 10, and tell us what you think about it?

ANSWER: "Think that none of them has gone further in curtailment than we, and that none of them has now more orders in proportion to actual production than we, and think when we can't get orders at living prices, we'll shut down entirely and let the other fellows have the 'cur' and the 'tail' also and add our part to the 'ment'; in doing which we swap the first two syllables outright for the little letter 'a' to use between 'e' and 'n' in the last syllable."

FLORIDA.

Our circular letter of July 6 went to about sixty people in the state of Florida—maybe a few more; maybe a few less. Either the letters were DELIVERED in one or the other of the oceans, which have been much agitated by storms upon either side of this "land of oil and wine," or else the ANSWERS to our letters have ridden away on the wings of these storms, and have not been DELIVERED to US. Here is our report on Florida:

Alabama & Florida Lumber Co.	Noma	Running 85 percent.
Alger-Sullivan Lumber Co.	Century	Shut down 30 days.
Bay Point Mill Co.	Pinewood	60 hours. Expect to close down.
Florida Land Co.	Montbrook	Closed down.
Augusta Lumber Co.	Augusta	Have closed down all mills and become "remillers."
Dunlevie Lumber Co.	Allenhurst	Double band mill with resaw, running continuously 11 hours per day.
King Lumber & Oil Co.	Unadilla	Had been running 5½ days, 9 hours each; now shut down, from 4 saws in January to 2 saws in July.
Thompson, John R.	Quitman	Running 10 hours a day, 5 days per week.

INDIANA.

Our inquiry, the reader knows, was not concerned alone with yellow pine, fir, etc., but takes in the whole lumber manufacturing industry of the United States, wherever the lay members of the National Lumber Manufacturers' Association may be located. This dragnet of ours has picked up a crackerjack set of opinions from a hardwood manufacturer

Digitized by Google

at North Vernon, Ind., whose letter we reproduce practically entire below:

THE TROUBLE WITH THE "LUMBER" BUSINESS IS THE "LUMBER" BUSINESS.

"We agree with you—in the main—that supply and demand have quite a little to do with lumber sales, but we do not believe that it will necessarily have to govern prices. If every mill owner, or all the larger manufacturers of lumber, would set a decent, profitable price on their lumber, the buyer would have to pay it or go without, regardless of supply or demand. Of course there woudn't be as much sold—we mean by this during times of depression—but every foot sold would yield a profit.

"We have been operating very spasmodically during the past year. Along in December we began getting more business than we could handle, and we cut our stock to less than a million feet at the two mills. We are running now to accumulate a normal stock.

"We have come to the conclusion that lumbermen—as a whole—are the poorest salesmen, the worst advertisers, and the poorest informed men on general trade conditions that we have in this country. Our marketing conditions are bad, we depend on a wholesaler to sell our product, and know nothing about the ultimate uses of the lumber. We do not believe in advertising, because we never had to do it, and why should we now? Every one uses lumber. We are unaccommodating, and do not try to SERVE our trade. We think that these things have a big bearing on the slacking up of the lumber business and trade in general.

"We have come to the conclusion that we will not pay any attention to market prices. We have been getting and will continue to get prices that are better than the market.

"We will do this by giving the CONSUMER what he wants. If he wants a grade of one face stock, we will make it for him. If he wants 8 to 12-inch we will give it to him. We will make our grade good enough to satisfy him and hold his trade and try to really SERVE him. We want our customer to BUY from us instead of our having to SELL to him.

"We think this is the only policy for the mill man to follow. Wholesalers, in the main, are honorable, fair-minded men, and have attained the place with the trade that they have because they gave SERVICE to the consumer. They weren't afraid to go to a little trouble to fill an order, and so they commanded the trade and kept the customers' good will. Wholesalers make profits, whatever the state of the market, AND THEY MAKE THE BIGGEST PROFITS WHEN THE MILL MAN IS SELLING LOWEST. Do they cut their prices when the mill man does?

"We believe that we have solved the lumber problem, so far as we are concerned. We have only recently started on this plan, but we can see that it's the right one, and that it's bearing fruit.

"The trouble with the lumber business is the lumber business."

North Vernon Lumber Co., North Vernon.....Two bands cutting hardwoods, each mill 18 days, 10 hours in June. Stock low, as compared with January.

KENTUCKY.

We can make no formal report for the state of Kentucky, as to specific mills. One operator cutting poplar, says: "We have your favor of July 6, and note with approval your effort to curtail lumber production. We have not been running our mill for the last few months, and will not run more than two months for the balance of the year."

Another high-class hardwood concern in Kentucky makes no formal report, but says: "We shipped last month about 1,000,000 feet more than we manufactured, and our stock on hand July 1 was about 6,000,000 less than January last. We anticipate that our production for the next few months will be in excess of our shipments; still, in view of our decreased stock, we will make no curtailment of production."

LOUISIANA.

The conditions in Louisiana, where everyone is alive to the subject and 99 percent of the mills are cutting yellow pine, and where each mill takes the trouble to inform itself about conditions at OTHER mill plants, they will never seem to evidence a great deal of appreciation of what we have been endeavoring to do.

WANTS ALL NIGHT AND DAY RUNS TO GO TO "DAY RUNS" ONLY.

One friend in Louisiana comes to the front with some very pertinent suggestions, from which we quote as follows:

"Our stock on hand July 1, as compared with January 1, shows an increase of about 12 percent. We consider our stock at this time, however, about normal, it being lower on January 1 than we ordinarily carry.

"I am glad you have determined to enter upon a campaign of education along this line, and will do all I can to assist you. I believe that if the general information of this character can be disseminated among the mill men the situation can be better controlled, that is, there is even now a feeling among some of the mill men in this section that they are probably doing more than they should in curtailing and are not absolutely satisfied and sure as to the sincerity of others.

"Then, too, there is continually suggested the idea that certain mills are still running nights, although that would, of course, curtail a proportion equal to that of those mills running days only. Still the fact that they are running night and day when they do run certainly does not encourage the mills that are running day only.

"I believe that what the night run does to the productions that are actually made and the influence on the mills that are running days only is the worst handicap we have. In other words, if all the mills that are running night and day would go to a day run only, it would restore a great deal of confidence that I do not believe will exist so long as they continue. I simply suggest this as my idea, if it is worth anything to you and the mills make use of it."

WANTS TO STOP ALL MILLS AND ADVERTISE NATIONALLY.

Our correspondence has dug up a man in Louisiana whose letter would make a great hit with those who believe that all our troubles would be wiped away by an immense campaign of national advertising. The ideas of this gentleman please the LUMBER WORLD REVIEW very much, and if he will only let us disclose his identity and come out in the open, he can have all the space he wants in the LUMBER WORLD REVIEW to discuss his theories.

This gentleman certainly has vision, but he will have a hard time getting many people to agree with him. He says:

"I believe the best thing for lumber would be not to cut a tree or make a board for six months, and during that time to put out the biggest advertising propaganda the world ever saw. At the end of six months there should be a demand for lumber. The thing in the way of this is our partners, the multitude of our poor employees at the mill; how to care for them for six months, and then have them available. If there are any lumber barons left who will arrange to take care of the common labor employees for six months, let us shut down our sawmills for six months and advertise lumber."

BELIEVES IN OUR ENTIRE PROPAGANDA.

We have a very lovely letter from a man in Louisiana with whom the editor of the LUMBER WORLD REVIEW has never had an opportunity to become acquainted, and which makes us long to see him. There is no reason why we should not quote his name, but we have started out to make this affair as impersonal as possible, even though all the records are kept in our office for any one's inspection or observation.

To the question of supply and demand he says: "We are fully convinced that supply and demand control the market. Too much lumber is being made. We believe in curtailing, and are doing so. We believe that all should curtail, and not throw the burden on a few. We believe in only night runs in rare cases, where the mill was especially constructed with that end in view."

Concerning our Question 7, our new found friend says: "We had a few such operators among our neighbors until a short while ago, but now we believe that practically every mill man in this community has been converted, and is practicing curtailment. Where you find a 'hog' of the kind you mention, he will tell you that his 'overhead' is too great, that he has timber down or is under some contract to take so much timber, or his turpentine operations are pushing him, or his interest is eating him up, or that his neighbors are not sincere, and that although they are SUPPOSED to be curtailing REALLY they are running quarters, longer hours, and that the whole THING is a FARCE!"

When we asked this gentleman to criticise our position in this matter, he said: "We like the publicity given these mills that are curtailing. We believe that continual pounding on this subject will induce others to follow. Too much cannot be said on this subject. Your editorial is good, and your efforts are to be commended. We would like to see a big campaign of this sort carried on by ALL the lumber trade papers just at this time. Keep up the good work, we say, as you can do nothing that will more effectively help the industry at this time."

To our avowal of intention of printing these lists of sawmill operators in the LUMBER WORLD REVIEW from time to time, this gentleman from Louisiana remarks: "Keep this list in your paper each issue It is bound to do a lot of good."

Referring to trade conditions our correspondent said: "We have confidence in the situation. The bottom has been reached. Fall buying is near!!"

SOME HOPEFUL "STRAWS" LEANING TO THE LOUISIANA BREEZE.

A mill man situated where he can get both domestic and ship-side trade—if there be any—says: "We have all the timber orders we need,

Digitized by Google

and have this month entered enough business to run us for thirty days We do not know of anyone running full time."

Another Louisiana manufacturer says: "We know of no mills in this territory running full time. We think your plan of giving publicity to this subject is a good one, and should be appreciated by the lumber people."

Another Louisiana man says: "I started a five-day run back in April. I do not know of a mill cutting over 10,000 feet a day which is not down to three days a week."

Another Louisiana operator says in regard to whether or not some of his neighbors are holding back, in order to "let George do it," "there are none in this neighborhood."

Here is the detailed statement:

Anacoco Lumber Co.	Guy	Will cut off 8 days' run in July—as opposed to four days in June.
Alexandria Lumber Co.	Alexandria	Running 5 days a week.
Anacoco Lumber Co.	Grabow	Running 5 days a week.
Big Pine Lumber Co.	Colfax	Closed down.
Bowie Lumber Co.	Bowie	Running 6 days; 11 hours each. Being cypress, no curtailment necessary.
Bolinger, H. A., Lumber Co.	Shreveport	Running 4 days a week.
Bolinger, S. H., & Co.	Reeves	Running 5 days a week.
Brown Lumber Co.	Shamrock	Running 5 days a week.
Bentley, J. A., Lumber Co.	Zimmerman	Running 5 days a week.
Bryceland Lumber Co., Ltd.	Bryceland	Were running 6 days a week, 11 hours; now 18 days a month, 11 hours.
Brooks-Scanlon Lumber Co.	Kentwood	Running 5 days a week.
Bowman-Hicks Lumber Co.	Oakdale	Running 5 days a week.
Caddo-Rapides Lumber Co.	Alexandria	Running 5 days a week.
Crowell & Spencer	Long Leaf	Running 5 days a week.
Calcasieu Long Leaf Lumber Co.	Lake Charles	Running 4 days a week.
Central Coal & Coke Co.	Neame	Running 4 days a week.
Central Coal & Coke Co.	Caroon	Running 4 days a week.
Cady, W. M., Lumber Co.	McNarry	Running 5 days a week.
Elton Lumber Co.	Hutchinson	Running 4 days a week.
Elton Lumber Co.	Elton	Will shut down 30 days.
Elton Lumber Co.	Hutchinson	Closed down.
Enterprise Lumber Co.	Alexandria	Running 5 days a week.
Forest Lumber Co.	Oakdale	Running 4 days a week.
Frost-Johnson Lumber Co.	Campti	Running 4 days a week.
Frost-Johnson Lumber Co.	Mansfield	Running 4 days a week.
Frost-Johnson Lumber Co.	Montrose	Running 4 days a week.
Germain & Boyd Co.	Atlanta	Running 5 days a week. May reduce to 4 days if conditions do not improve.
Great Southern Lumber Co.	Bogalusa	Running 5 days a week.
Gulf Lumber Co.	Fullerton	Running 5 days a week.
Houlton Lumber Co.	Houltonville	Idle.
Hudson River Lumber Co.	DeRidder	Running 4 days a week.
Huie-Hodge Lumber Co.	Hodge	1 mill closed down.
Hurricane Creek Lumber Co.	Lake Charles	Running 5 days.
Iatt Lumber Co.	Colfax	Closed July 1.
Industrial Lumber Co.	Oakdale	Running 4 days a week.
Industrial Lumber Co.	Elizabeth	Running 5 days a week.
Industrial Lumber Co.	Calcasieu	Running 5 days a week.
Johnson, W. F., Lumber Co.	Campti	Running 5 days a week.
Krause & Managan	Westlake	Running 5 days a week.
King-Ryder Lumber Co.	Bon Ami	Running 4 days a week.
Lee Lumber Co.	Tioga	Running 5 days per week, 10 hours a day. Were running 6 days a week.
Louisiana Longleaf Lumber Co.	Victoria	Running 40 hours.
Louisiana Longleaf Lumber Co.	Fisher	Running 40 hours.
Louisiana Saw Mill Co.	Glenmora	Running 5 days a week.
Louisiana Central Lumber Co.	Standard	Running 4 days a week.
Louisiana Central Lumber Co.	Clarks	Running 4 days a week.
Lock-Moore Lumber Co.	Westlake	Running 5 days a week.
Longville Lumber Co.	Longville	Running 4 days a week.
Louisiana Long Leaf Lumber Co.	Alexandria	Mill not running.
Long Pine Lumber Co.	Fisher	Running 4 days a week.
Ludington Lumber Co.	Ludington	Running 4 days a week.
Lyon Lumber Co.	Garyville	Running approximately 20 days a month, 11 hours a day.
Lyons Lumber Co.	Kernan	Running 6 days.
Meridian Lumber Co.	Meridian	Running 5 days a week.
McNarry Lumber Co.	McNarry	Running 5 days a week.
Newell Lumber Co.	Eunice	Running 5 days a week.
Natalbany Lumber Co.	Hammond	Running 5 days a week.
Pawnee Land & Lumber Co.	Pawnee	Running 5 days a week.
Poitevant & Favre Lumber Co.	Mandeville	Running 4 days a week.
Powell Lumber Co.	Edna	Running 4 days a week.
Peavy-Byrnes Lumber Co.	Kinder	Running 4 days a week.
Pickering Lumber Co.	Pickering	Running 4 days a week.
Pickering Lumber Co.	Barham	Running 4 days a week.
Rapides Lumber Co.	Woodworth	Running 4 days a week.
Ragley, W. G., Lumber Co.	Ragley	Running 5 days a week.
Sabine Lumber Co.	Zwolle	Running 5 days a week.
Sabine Lumber Co.	Colfax	Running 5 days a week.
Sanford, F. L.	Zona	Running 4 days a week; 11 hours.
Schwing Lumber & Shingle Co.	Plaquemine	Cutting cypress; no curtailment necessary.
Southern Lumber Co.	Myrtis	Idle; mill burned.
Springfield Lumber Co.	Springfield	Idle.
W. G. Strange Lumber Co.	Newlin	Running 40 hours.
Tremont Lumber Co.	Winfield	Running 5 days a week.
Weaver Bros.	Weaver Spur	Running 5 days a week.
Weaver Bros.	Boyce	Running 5 days a week.
Weaver Bros.	Couchwood	Running 5 days a week.
Weaver-Hearne Lumber Co.	Couchwood	Running 50 hours.
F. B. Williams Cypress Co.	Patterson	Cutting cypress; no curtailment necessary. Properly advertised.
Williams Bros.	Oberlin	Running 5 days a week; 10 hours.
Wyatt Lumber Co.	Gandy	Running 60 hours.
Urania Lumber Co.	Urania	Running 5 days a week.
Victoria Lumber Co.	Victoria	Running 4 days a week.

MICHIGAN.

A hardwood manufacturer in Michigan says: "We think that your action is highly commendable, and comes nearer to the needs of the situation than anything yet attempted. There is no question but that if a general curtailment is not made the lumber business will go to smash."

The lumber manufacturers of the state of Michigan are not generally very anxious about the shutting down of mills or curtailing. Probably they do not have to be. They are cutting hardwoods. We have reports from four concerns:

Kneeland-Bigelow Co.	Bay City	Running six days per week; no curtailment compared with January.
Louis Sands Salt & Lbr. Co.	Manistee	Were running six days a week, 20 hours in January; now running six days, 10 hours.
Williams Bros. Co.	Cadillac	Were running six days per week; 10 hours a day; now 22¾ days, 10 hours.
Wisconsin Land & Lumber Co.	Hermansville	Running 25 days; 10 hours; short crew.

MINNESOTA.

Minnesota is a "short horse, soon curried":

J. Neils Lumber Co.	Cass Lake	Running 26 days; 520 hours. One-half stock on hand now had in January.

Digitized by Google

MISSISSIPPI.

More interesting developments are showing up from the state of Mississippi than from any other in the list of twenty-two states from which we have had some sort of word.

It would be difficult to write a separate subhead line for each slant of opinion that comes up from Mississippi at this time. We will have to group all our friends' various opinions, statements etc., under a GENERAL head, which we trust may stand out in such manner as to attract our readers.

We understand, by grapevine telegram, that some of the manufacturers in Mississippi have felt especially put out on account of our lack of DEFINITE information at the beginning of this campaign.

We said at the outset that the information which we were giving out was "rather ragged" as to the harmony of it in the securing of LIKE information from each concern. It was all, however, legitimate enough, in so far as any investigation upon our part could determine.

One company has made objection to the fact that they were misrepresented in regard to our statement in our publication of July 10, when as a matter of fact no mention was made of that firm in our issue of July 10, but only in the "PROOF" of our article, which was sent out for the purpose of correction, but which was NOT corrected by the complaining company, but was FINALLY corrected by omission, by no better information than a FEELING on the part of the editor that there was something wrong about the basic facts. So—after all—when we come to think it over, no one has been hurt, and many much benefited by the campaign which has ensued.

One Mississippi concern says: "We are closed down, and expect to be for thirty days. We certainly hope your campaign will cause the big fellows to shut off, because our little 50,000-foot curtailment will not help much. Personally, we have not run nights in fifteen years."

Another Mississippi concern says: "Overproduction is the sole cause of the present depression in lumber. Until thirty days ago there had been no curtailment. The lack of export orders for two years and the late spring in the interior, which caused postponement of building, simply made the trouble."

Another Mississippi concern says, in regard to our Question No. 7: "Two or three mills claim others are running 'night and day,' while they are only running days; also claim to have too many logs in the woods."

Another Mississippi concern pays its respects to the fellow who wants the OTHER fellow to do the curtailment, when it says:

"There are operators who think the other fellow should do all the curtailing. We also believe that overproduction of yellow pine lumber is due primarily to night running. We believe that the greedy operators, who put their plants on day and night shift when the market is firm, are responsible for the present decline in prices. We also believe that the said operators are the ones now crying the loudest for someone to pull their chestnuts out of the fire. When we see the necessity for curtailing in order to benefit our particular operation we will do so, but not to help other operators who increase their capacity every time the market gets stronger."

Another Mississippi concern emits an epigram, when it says: "Production should be based upon facts WE KNOW, rather than on HOPES we ENTERTAIN." The LUMBER WORLD REVIEW believes that it would not take long for THAT advanced thinker to get away from all this "supply and demand" theory, which most of us fall down and worship, and which none of us has ever known anything about, in building lumber.

There comes up from Mississippi the cry of one man who really believes that he has seen the light. We thought it would be strange if we did not dragnet some one person out of the whole sweep of our seining who ABSOLUTELY agreed with us! This gentleman says:

"We don't think that 'supply and demand' has anything to do with the question of yellow pine lumber, as the yellow pine manufacturers themselves voluntarily keep the price $5 lower than it should be. It takes hard work to do this, but they have always been very successful. The only fault we find with your article is that it is not strong enough. We have studied over the list of mills very carefully, and notice that we are not in it. As soon as we finish cutting timber blown down by storm of September, 1915, we will shut down indefinitely."

Another Mississippi friend says: "We know concerns down here personally that believe the OTHER fellow should do the curtailing. They are all owing money, and are compelled to sacrifice their stumpage to pay their obligations. They got into this condition by becoming too damned greedy, and becoming timber poor. We cannot possibly criticise your attitude. The trouble is lack of confidence among mill men, who have lied to each other so long and so consistently, as to the prices they were getting, and how they purposed to curtail, etc. We need more confidence, more guts, and more shed room."

An important Mississippi concern read our "proof sheets" sent out on July 6, along with our letter, and said: "It is a good article, and hope you will print it in full."

Another Mississippi concern says: "We cannot commend too highly the position you have taken in this matter. The list you print looks good, but there are many more whose names should appear in this column to show they are trying to do their share to assist the other manufacturers."

Another Mississippi concern says: "We know of one mill operating full time, but which gives no reason therefor. Beginning this week, we reduce our running time to four days, but are now completely shut down, on account of a hurricane which passed over the Gulf states on July 5 and 6, blowing down a large percentage of our timber. The list you print is all right, but it is not large enough."

Another concern gives out some surprising information for a Mississippi mill, until one comes to realize that it is in the hardwood business. It says: "Many mills in this territory are operating thirteen hours a day, and say they have enough business to warrant operating extra hours. Your position, however, is right, and we should like to see the hardwood mills curtail 50 percent. No real profit can be realized from sawmilling at the present time."

Another Mississippi concern—which is the last we quote—says: "Mills which normally run 'days only' should not be expected to curtail, as long as any mill is operating nights."

Here is the revised Mississippi list:

Bienville Lumber Co.	Forest	No curtailment. Normal product 100,000 per day; now cutting 150,000; will take off night run in 10 days.
Batson-McGehee Co.	Millard	Never did run night and day. Were making 50,000 daily. Now shut down for 30 days or longer.
Bay Springs Lumber Co.	Bay Springs	Normal Product 635,000 per month; running 4 days per week; curtailing 135,000 feet per week.
Bentley & Emery	Richton	Normal product 3,000,000 per month; not curtailing.
Bentley & Emery	Richton	Running 60 hours.
Brookhaven Lumber & Manufacturing Co.	Hattiesburg	3 days 1 mill; other mill idle.
J. Bounds	Moss Point	Idle.
Buckwalter Lumber Co.	Union	Shut down from 10 hours, 6 days per week, to 20 days, 10 hours.
Central Lumber Co.	Brookhaven	40 to 50 hours a week.
Central Lumber Co.	Bogue Chitto	40 to 50 hours a week.
Champion Lumber Co.	Kiln	Idle.
Cybur Lumber Co.	Picayune	Running days only, 5 per week; curtailing 300,000 per week.
Crosby Bros. Co. Stillwell-Crosby Co.	Canton	Mills closed down. Was producing 3,600,000; normal product 4,800,000.
Cotton State Lumber Co.	Meehan Junction	Running full time day only; 125,000 feet per day. Was down 11 months in 1915.
Cotton States Lumber Co.	Meehan Junct.	Running 5 days.
DuBois, John E.	Lake	Double band mill running one side; curtailing 1,000,000 feet a month.
Eastman, Gardiner Co.	Laurel	Running 9 hours per day curtailing 150,000 feet per week.
Enochs Lumber Co.	Fernwood	Shut down through June.
Finkbine Lumber Co.	Wiggins	Shut down June 24 for 3 weeks, 105,000 feet per day, normal.
Finkbine Lumber Co.	Wiggins	Closed.
Futvoye-Paterson Co.	Shuqualak	Running 60 hours.
Gilchrist-Fordney Lumber Co.	Laurel	Running 60 hours.

Digitized by Google

Griffin, J. M.	Blodgett	Normal product 1,500,000 feet per month; shut down for 30 days June 15.
Gray, C. L., Lumber Co.	Meridian	Will curtail.
Hall & Legan Lumber	Morton	Running two-thirds.
Hemphill Lumber Co.	Rhodes	Running 10 hours, 26 days per month. Will likely not curtail until all night running is stopped.
Hinton Bros. Lumber Co.	Lumberton	Running 50 hours.
Homochitto Lumber Co.	Bude	Have been curtailing 165,000, per week for several weeks.
Jordan River Lumber Co.	Kiln	Running 10 hours a day; no night run.
Lumber Mineral Co.	Arbo	Burned.
Lumber Mineral Co.	Arbo	Idle; mill burned.
Marathon Lumber Co.	Laurel	Running 5 days a week, no nights, curtailing 150,000 weekly.
Moore-Haggerty Lumber Co.	Hattiesburg	Were running 110,000 daily; now 60,000—5 days per week—no night running.
Major-Sowers Lumber Co.	Epley	Curtailing 1 day a week.
Mississippi Lumber Co.	Quitman	Curtailing 1 day a week.
Native Lumber Co.	Howison	Running 60 hours.
Newman, J. J., Lumber Co.	Sumrall Hattiesburg	Curtailing 1 day and 1 night, each plant, amounting to 525,000 feet weekly.
Richton Lumber Co.	Richton	Curtailing 1 day and 1 night each week; cutting 140,000 to 170,000 each 10 hours. Contemplating 4 days a week.
Rosa Lumber Co.	Picayune	Curtailing 1 day and 1 night, 100,000 feet a week.
Schryver Lumber Co.	Louisville	Running 2 saws, 5 days, and 1 saw, 4 days a week.
Ship Island Lumber Co.	Sanford	Curtailing 1 day a week.
Sumter Lumber Co.	Electric Mills	No curtailment; normal product 4,000,000 a month.
Tallahatchie Lumber Co.	Philipp	Hardwoods; running 10 hours; 26 days per month.
Vinegar Bend Lumber Co.	Vinegar Bend	Curtailing 1 day a week, 100,000 feet a week.
Wausau-Southern Lumber Co.	Laurel	Shut off night run—running days only.
White, J. J., Lumber Co.	Columbia	Losing 15% of time account of bad luck.

OHIO.

We have one formal and one informal report to record from Ohio. Both are important, but it is not possible to transmit the important information the report contains in a tabular way, because they are both hardwood institutions.

One Ohio concern—a large producer of oak, poplar and general hardwoods—shows a reduction in stock from January 1 to July 1 of 2,320,988 feet, and says: "While the demand is not snappy, still we have hard work getting lumber on sticks and dry fast enough to take care of our orders."

It is interesting to see how practically this company takes the question of curtailment, saying, as it does: "A concern would have to be guided entirely by the conditions of its business. If we were unable to sell our lumber as fast as we made it by full time, we would certainly cut down our production to where demand would take care of itself."

Another Ohio company—also manufacturing hardwoods—says: "Your suggestions and efforts are timely, and we hope that the industry and LUMBER WORLD REVIEW will be benefited. Excessive rains have interfered with logging operations in the south to such an extent that in September and October of this year the demand will be much greater than the supply, particularly in gum lumber."

This company had 600,000 feet more stock on hand July 1 than it had January 1, and was running an additional hour each day.

OREGON.

Only three meager reports have trickled through from the great state of Oregon, and those reports are not very full.

One company believes these things: "All operators run longer than they should, or run too strong. It is an epidemic or a frantic effort to get timber cut up, regardless of price. Your protests are all right, but not strong enough. You are doing the right thing."

Here are the reports:

Brown Lumber Co.	Cottage Grove	Ran 73 hours in January; 280 hours in June.
Carlton Consolidated Lumber Co.	Carlton	Not making any lumber; made none in January.

NORTH CAROLINA.

One of our friends in North Carolina had reported, up to July 20. If there are any others, they will follow this paragraph. This concern says: "Think all mills should curtail or shut down completely. Have always thought it best in our operations to run full, while running in order to keep production down, and to shut down completely when the situation compelled it. When we resume operations we may decide to run only four days a week. Embargo, car shortage, and declining prices make entire situation very unsatisfactory. Mill shut down July 1; will not resume until conditions improve."

SOUTH CAROLINA.

Our one informant in South Carolina says: "Have been operating all year until the present week. Regular capacity. No difference between January and June. Have a little more stock on hand than in January, but it is green. Stock of dry lumber lower than any time in three years. Have closed our sawmill for this week, excepting one day. Have shut down from one to two days a week for a month."

TENNESSEE.

We have reports from three hardwood friends in Tennessee, which cannot be fashioned in tabular shape. These reports add additional confirmation to the rapidly growing opinion that the hardwood manufacturers do really know how to handle the situation.

In regard to our various queries one company suggests that the "supply and demand" proposition has ceased to be a matter of consideration, as the demand far exceeds the supply "at very satisfactory prices." This particular hardwood concern had 8,250,000 feet of hardwood lumber in January and 6,100,000 feet in July, and replying especially to Query No. 7 about some people running overtime, hoping the other fellow would do the curtailing, our Tennessee friend makes some pointed remarks in this statement: "The condition above described does not exist in this neighborhood. No one I know of is piling up lumber or selling any logs. The condition applies only to yellow pine people, and what is known as the North Carolina pine people. It would appear that as soon as they get a little business they start running day and night, cutting and slashing everything in sight. This results in quickly demoralizing the entire market. THERE'S A REASON. Ordinarily their logging conditions in yellow pine are so easy and simple that they can quickly and greatly increase their output, while in the mountain regions this is impossible, and perhaps is the real reason why our business is stable and steady and satisfactory."

Another Tennessee operator in hardwoods says: "While it is a fact that supply and demand, in a certain sense, control prices, we, as a rule, take into consideration when we make quotations ONLY the amount of stock we have on hand."

A delightfully whimsical friend of ours in Tennessee, in referring to our first question, wherein we invite our friends to "talk frankly," reminds us that "free talkers are often slack doers." When asked to criticise our position in the matter, this humorous friend does not hes-

Digitized by Google

itate to say: "You know a lumberman is generally damned if he does, and damned if he don't; so what's the difference. One way is about as good as another, and the reason's equally as strong; so go to it!"

TEXAS.

The very keenest-witted and altogether cleverest thing that has come to the editorial desk of the LUMBER WORLD REVIEW comes from Texas, in answer to our Questions 7, 8 and 9.

To Question No. 7, in which we referred to the desire of some sawmill operators to let the other fellow do the curtailing, this writer-lumberman says: "We control the output of all mills in this vicinity, excepting one mill just building. Three of our mills are running half time; one we have closed down entirely; the other operates only planer, to fill orders as received and shipped. We are booking orders faster than we are either making or shipping lumber, so do not feel that we are doing anything toward a repeal of the law of 'supply and demand.' We have turned down as many orders as we have accepted, because we do not Accept Except at a living price."

To our invitation for a criticism of our attitude in this matter, our Texas acquisition says: "Would just as soon criticise the statement that you cannot put five gallons of whiskey into a two-gallon jug as to criticise the assertion that you cannot put a six—and some—nights' output into a three days' demand. If each manufacturer would govern his own production in proportion to prices and orders received, we might feast a little on finance, instead of on philosophy."

To our Question No. 9, in regard to the list of mills running on short time, our correspondent-acquaintance did his finest work in the following answer: "Think that none of them have gone further in curtailment than we, and that none of them now have more orders in proportion to actual production than we; and think when we can't get orders at living prices we'll shut down entirely and let the other fellow have the 'cur' and the 'tail' also, and add our part to the 'ment,' swapping the first two syllables outright for the little letter 'a,' used between 'e' and 'n' in the last syllable."

These three answers from "somewhere in Texas," from someone entirely unknown to the LUMBER WORLD REVIEW, are really the silver lining to this cloud of effort.

Read those three paragraphs again if you don't understand them.

Here is the situation as it now seems to stand in Texas in regard to running conditions:

Alexander Gilmer Lumber Co.	Remlig	Running 5 days.
Angelina County Lumber Co.	Keltys	Running 5 days a week.
Beaumont Saw Mill Co.	Beaumont	Running 5 days a week.
Central Coal & Coke Co.	Conroe	Running 4 days a week.
Carter, W. T., & Bro.	Camden	Running 5 days a week.
Carter-Kelley Lumber Co.	Manning	Running 4 days a week.
Frost-Johnson Lumber Co.	Nacogdoches	Running 4 days a week.
Fidelity Lumber Co.	Boucett	Running 4 days a week.
Keith Lumber Co.	Beaumont	Running 5 days a week.
Kirby Lumber Co.	Houston	No night runs; 3 of the 13 mills idle; balance running but 5 days a week.
Livingston Lumber Co.	Buck	Running 55 hours.
Lutcher & Moore Lumber Co.	Orange	All mills running 5 days.
Lufkin Land & Lumber Co.	Lufkin	Running 4 days a week.
Myer, R. A., Lumber Co.	Honey Island	Running 5 days a week.
Miller-Link Lumber Co.	Orange	Running 5 days a week.
Pickering Lumber Co.	Haslam	Running 4 days a week.
Palmetto Lumber Co.	Beaumont	Running 2 weeks a month.
Rice, J. S. & W. M.	Houston	Running 2 weeks a month.
Southern Pine Co.	Diboll	Running 5 days a week.
Sabine Lumber Co.	Houston	2 mills; running 5 days a week.
Temple Lumber Co.	Pineland	Running 95 hours.
Texas Long Leaf Lumber Co.	New Willard	Running 50 hours.
Trinity Co. Lumber Co.	Groveton	Running 5 days a week.
Thompson Bros.	New Willard	Running 5 days a week.
Thompson Bros.	Trinity	Running 5 days a week.
West Lumber Co.	Houston	3 mills; running 5 days a week.

VIRGINIA.

Just one person in Virginia offers a suggestion and therein are some things worth printing: "Several mills in our state are trying to get the other fellow to shut down; some from pure cussedness—some on account of short time timber coupons to meet. Under normal trade conditions, there is mill capacity sufficient to meet the demand from day to day. Our export market is cut off, but it will come again. The best way to meet its demands is with new cut lumber. Until then, let the trees grow. I think your movement is in the right direction. Too much lumber is being made for the general good. Our mill capacity is 1,750,000 feet per month, but we have not turned a wheel since the war began."

WASHINGTON.

We have not received a great bulk of information from the state of Washington, but what we have received is interesting in several directions, and to prove this we will make two excerpts from the six or eight letters that are in front of us.

THE WAY THE "STRAWS" INCLINE AS THE WIND BLOWS OVER WASHINGTON.

One Washington concern, replying to our Question No. 7, says: "Very few people are making a bluff of this matter. Ninety percent are curtailing by running five days a week."

Another Washington mill says: "Several people in this locality are running because of the claim of 'overhead expense.' Your article is o. k. We have not sawed a foot of stock lumber for three years, and we are not going to prepare to saw until we can show a reasonable profit, if we have to lie idle for ANOTHER three years."

Another Washington concern says: "Supply and demand have just as important a relation to the lumber business as any other. It is an infallible law of merchandising. We know a mill man who advances the fact that he was closed down ten months last year, and now has trouble with his logging railroad, as a reason for running at the present time. Those are 'pin head' reasons. Your position is correct. Lack of cohesion in most things has been the main deficiency of the lumbermen in the northwest. This situation is better just now, as a very general curtailment is on. However, there are a good many 'fair weather sailors' in this business, and it is a question how long they will stick."

Another Washington mill man says: "All kinds of excuses are offered by mill men operating nights, chief of which is that it reduces the unit cost of overhead expenses, which in our judgment is a short-sighted policy, because in order to relieve themselves of the extra quantity of lumber made by night running, they are compelled to sell it at a much less rate per thousand feet than the saving would be on overhead expenses. There is a tendency on the part of many mills on this coast to operate nights, just as soon as the lumber market appears to be getting on a profitable basis; always resulting in a lowering of prices, until they are forced down so low they are compelled to cease operations."

Another important Washington firm says: "We are out of the market. We have not operated our mill since October, 1913. It is not our intention to resume until the market gets in a more stable condition."

Here is the tabulated satement for Washington:

Northwest Lumber Co.	Seattle	Shut down since October, 1913.
Port Blakely Mill Co.	Port Blakely	Apparently have not been running this year.
Seattle Lumber Co.	Seattle	Shut down since June, 1913.
Walsh Lumber Co.	Rock Cut	Apparently have not been running this year.
Weyerhaeuser Lumber Co.	Everett	Running 5 days per week.

WEST VIRGINIA.

After twelve days of waiting, we have just one letter from West Virgina, which is very enlightening, and yet not in such shape as to be entered in a tabular way. The company is a large one, and these are the things its manager has to say: "As for supply and demand regulating the market, we think this is an important element in the situation, as it creates a sentiment either for or against strong prices and the placing of orders. We have 16,000,000 feet on hand now, and only about 500,000 feet less than we had on hand in January. Had four saws in operation in January. One mill has since cut out; during January we ran the mill 10 hours a day, 24 days. We ran the mill 10 hours a day, 24 days in June, making our reduction by shutting down one side of the mill. Our business is good and satisfactory as to prices. Shipments have been made on short notice, but we have not had any orders extending any distance in the future. We look for quite an improvement

Digitized by Google

in demand for lumber between now and September 1, as business is really better than we expected during July."

Of course, the West Virginia plant is a hardwood institution.

WISCONSIN.

We have but three letters from Wisconsin. Wisconsin is EITHER overwhelmingly SATISFIED or deeply ASHAMED to CONFESS. Wisconsin has had as long a time as any other section to come into this symposium, and it might transpire before we go to press that we will get a few replies, even yet, to our circular letter of July 6.

A few remarks were dropped by the three gentlemen who wrote us, from which we will quote.

To remember that the average hardwood manufacturer is mightily satisfied with conditions just now, will help even any HALF way informed man to understand the Wisconsin attitude. One Wisconsin man says: "You are on the right track, put on a full head of steam. Manufacturers should lend every effort to correct the situation. If the yellow pine mills are actually curtailing, they are doing the right thing by conserving their market somewhat and incidentally their pocketbooks."

Another Wisconsin operator said that his concern had nearly 6,000,000 feet of hardwood on hand July 1, and now only about 1,750,000 feet; that they had lost their mill by fire in July, 1914, and would not have another mill ready for operation until October 1, 1916.

One Wisconsin manufacturer did not pointedly answer any question, but used the white spaces in our letter of July 6 to give us the following information: "Yes, supply and demand control the lumber market, and 'substitutes' are controlling the consumption. We are not manufacturers, consequently cannot help you on this, but your work ought to do the manufacturers some good, or at least set them to thinking as to what is BEST to do. We don't know how they can meet their bills. There should be a law passed prohibiting the use of loblolly, as that stock seems to make the prices; but it is a crime to put the stuff into a house. Sorry we cannot be of more service."

There is Now Brewing the Most Important "Diplomatic" Event Since the Great War Began!

On the morning of July 8 one Chicago newspaper printed the news of the British "Black-List," then until the morning of July 11 (as our records show), there was not a line printed about this thing in any American newspaper. No trade newspaper, in so far as our information runs, has printed a word about it, and we have had clipping bureaus working on this proposition since the afternoon of July 8.

On July 10 the first "peep" of United States government administration protest concerning this matter came out of Washington by the Arthur Sears Henning route.

STILL there was no visible protest made until the morning of July 19, when both the "Chicago Herald" and the "Tribune" printed a list of "Men and Firms in the United States put on British Black-List."

In all conscience, though, we do not see why they should call it so distinctively a "British Black-List" when it has been confessedly, from the beginning, a movement of the Allies, all the nations forming the Allies being confessedly implicated in the movement.

A very strange thing about this affair was that so far as our records go (and they are pretty thoroughly kept), no American newspaper of any class indulged in editorial opinion on the subject until the morning of July 20, which leads us to the conclusion that the editors must have been in bed when the dispatches of July 19 were received.

THE "CHICAGO HERALD" SPEAKS OUT.

On the morning of July 20 the "Chicago Herald" printed an editorial entitled "The British Black-List" which was as follows:

"There are certainly grounds for protest by this government against the British government's action in placing a number of American firms and individuals on an official "black list" and forbidding British subjects to trade with them. Considerably more is involved than the mere exercise of the right of the British government to regulate the trade relations of its own subjects.

"In fact, the plan appears admirably calculated to regulate the trade relations of the subjects of neutral nations quite as effectively as those of British subjects; their trade relations not only with Great Britain but also with other neutral nations. There are already plenty of indications that it is having just this effect. British steamship lines fear to accept shipments from blacklisted firms to any point because so doing might come within 'the trading with the enemy' act, and neutral lines fear they may be denied the facilities of British ports.

"Just as Great Britain in promulgating the black list goes beneath the fact of American citizenship and incorporation and determines whether the individuals running a certain business are or are not practically enemies, so it may be assumed that Washington in making its protest will go behind the mere verbal declaration that the black list is simply a regulation of the trade relations of British subjects and show that in essence and operation it is a gross and unnecessary restriction of neutral trade.

"In addition, the act of placing American firms and American individuals on such a black list, thus discriminating between different classes of American citizens, seems a breach of international comity and probably of the spirit of existing treaties. It is a denial of the validity of American charters of incorporation and of American citizenship. It is in line with the British policy of economic pressure at all points with as little regard for neutral rights as the neutrals will put up with."

This editorial of the "Chicago Herald" was followed by an on the fence editorial in the "Chicago Tribune" at a later date.

These news events and editorial mention have been followed by a pattering imitation of the originals throughout the country and now, on this morning of July 24, BOTH the "Herald" and "Tribune" print astonishing articles on the "Black-List," covering many columns in each paper the leading editorial in the "Tribune" being devoted to that subject.

The "Tribune" said: "If the United States submits to the British Black List without ordering reprisals, it will convince every German that our neutrality is cowardly. It shames us if it permits us on one hand to insist that we shall furnish war supplies and on the other hand submit to a boycott of American firms because they have tried to aid Germany."

From New York, on July 24 comes the following statement on the "Black-List," supposed to have been made by the senior member of one of the largest bank houses on the "list," who says: "The black-listing of 80 American firms and individuals is only one step in the plan of Great Britain to wipe out the foundations of German trade over the world. It is a foolish policy applied here, but it means that the British government is now waging a part of its commercial warfare in the United States. The list contains not only the handful of names published in American newspapers but the names of 8,000 firms and individuals in all parts of the world."

OUR INTEREST IN THE "BLACK-LIST."

There is no indication that the lumber interests can have an interest in this movement of the Allies unless by implication and this is not a time for implications but it is time for intelligent attention, towards any ruling of any government towards any measure, war or otherwise, which might possibly interfere with our foreign lumber trade. In this connection note what Brookmire's report has to say under date of July 17, referring to their new "Lumber and Building Chart" which was issued July 3. We quote:

"Our new 'Lumber and Building Chart' issued July 3 shows that the decline was not due to any lack of domestic demand, for the barometers of domestic demand are sufficiently favorable to maintain high prices. THE CHART CLEARLY SHOWS THAT THE TROUBLE IS WITH THE EXPORT TRADE, which has recently averaged only about 90,000,000 feet per month as compared with monthly exports of lumber and wood products amounting to 220,000,000 feet during 1912-1913. The decrease of 130,000,000 feet per month as compared with before the war, of course, is small in comparison with the total production of the United States, for the lumber cut duing the month of May, 1916, amounted to 1,335,000,000 feet of soft woods and 117,000,000 feet of hardwoods, but the decrease in exports of all lumber products amounts to more than the total cut of both classes. And a decrease of 8 percent in the gross shipments of any basic business is enough to cause market weakness."

So these things being true are we not interested in any movement which promises to further inhibit an already much damaged function of our National Lumber Trade?

General News of Associations and Clubs

ASSOCIATION HOLDS IMPORTANT MEETING.

Asheville, N. C., July 15.—The Western Carolina Lumber and Timber Association held an important and enthusiastic meeting here July 3. It was the annual meeting of this association which, while only three years old, has done much to forward the interests of the lumbermen of the state.

President W. O. Riddick presided and made a brief address, congratulating the organization on the work accomplished, thanking the members for their hearty support and outlining the work to be undertaken.

Secretary-Treasurer George L. Forester read his report in which the members expressed much interest. After its acceptance he made an informing and vigorous talk to the members, urging greater interest in various rate hearings conducted by the Interstate Commerce Commission, and advising that representatives be sent to the Chicago hearing and next month to the Atlanta hearing.

The most important action taken by the meeting was the decision by a unanimous vote to levy a tax of three cents on each thousand feet of lumber cut by the members, the money to be used for advertising and to otherwise advance the work.

Directors elected were as follows: W. O. Riddick, W. Granville Taylor, J. M. English, W. B. McEwen, Louis Carr, N. J. Warner, C. A. Dicky, W. S. Whiting, Frank E. Johnson, A. G. Betts and J. E. Fulgham.

W. S. Whiting was unanimously selected as president, J. E. Fulgham was elected vice-president and George L. Forester was re-elected secretary and treasurer.

GREAT MASS MEETING OF THE PACIFIC COAST LUMBERMEN—DATES FOR LOGGING CONGRESS AND WESTERN CONSERVATION ANNUAL MEETING SETTLED.

On July 20 the LUMBER WORLD REVIEW was advised that the Pacific Logging Congress and the Western Forestry & Conservation Association annual meetings would be held in Portland, Ore., October 24 to 28 inclusive.

The meeting of the Western Forestry & Conservation Association will be held on October 24 and 25 and the Pacific Logging Congress will occupy the dates October 26, 27 and 28, a good part of the time to be taken up in an excursion to Gray's Harbor, which leaves Portland October 27.

GREAT MASS MEETING IN SEATTLE.

A great mass meeting of lumbermen will be held in Seattle on July 27 and 28, which will be the most important gathering of the sort held on the Pacific coast in many months.

Sawmill men, loggers, timber owners, sales managers, shingle mill operators, sash and door manufacturers, foresters and traveling salesmen will meet in series of joint conferences in Seattle on July 27 and 28. It promises to be one of the largest and most representative meetings ever held under the auspices of the West Coast Lumbermen's Association.

One of the features of this meeting will be an open session of the grading rules committee, at which time the revised grading rule will come up for final debate and adoption.

Program for the meeting will deal with manufacturing and marketing problems, sessions to be interspersed with recreation and trips of inspection to nearby manufacturing properties equipped with the most modern machinery for making and handling forest products.

California, British Columbia and Inland Empire lumbermen have been invited to participate in this convention.

Staff Correspondent.

CONVENTION DATES.

July 26—Michigan Hardwood Manufacturers' Association, Detroit, Mich. Annual meeting.

July 27-28—West Coast Lumbermen's Association, Seattle, Wash. Midsummer meeting.

July 28—Northern Hemlock & Hardwood Manufacturers' Association, Hotel Pfister, Milwaukee, Wis. Quarterly meeting.

August 8-9—Western Pine Manufacturers' Association, Bend, Ore. Semi-annual meeting.

August 8-10—National Commissary Managers' Association, Hotel La Salle, Chicago. Seventh annual meeting.

August 10-11—Southern Sash, Door & Millwork Manufacturers' Association, Isle of Palms Hotel, Isle of Palms (Charleston, S. C.). Quarterly meeting.

August 23-25—National Association of Box Manufacturers, Belmont Hotel, New York, N. Y. Midsummer meeting.

WEST COAST LUMBERMEN HOLD INTERESTING MEETING.

Tacoma, Wash., July 14.—An interesting meeting of the West Coast Lumbermen's Association, of which J. H. Bloedel is president and Thorpe Babcock secretary, was held last Friday. Fifty manufacturers of fir lumber were present and listened with interest to the report of Secretary Babcock on his recent eastern trip to the annual meeting of the National Lumber Manufacturers' Association at Chicago.

C. A. Doty of the Chester A. Snow Log & Shingle Co., Littell, Wash., who is the inventor of an air-cooled refuse burner which is attracting considerable attention on the Pacific coast, explained the burner in detail to the members of the association. At each meeting some subject of interest to manufacturers is presented by an authority.

Following Mr. Doty's paper the proposed revision of the grading rules was presented for discussion, and an animated hour spent in debating the proposed changes, which, other than a few minor ones, consisted in making three grades for common and a rule for five-eighths-inch drop siding. Both these features were rejected and the grading committee authorized to hold an open meeting at which further objections will be stated and the rules adopted.

A subject of importance will be up for discussion at the next meeting of the association, that of establishing a rule for structural timbers. This question is having the best thought of western manufacturers centered upon it at present.

LOUISVILLE LUMBERMEN COMBINE BUSINESS AND PLEASURE.

Louisville, Ky., July 22.—The Louisville Hardwood Club has recently enjoyed two outings which have been put down among the red-letter events in the records of the club. The lumbermen journeyed to Devil's Kitchen, on the Taylorsville road, and to the Eight-Mile House, on the Shelbyville road, where chicken dinners were served as a preliminary to the business sessions. The lumbermen met at the Seelbach Hotel, where automobiles were provided, and the journey to the resorts was made by way of the parks and other attractive routes. The attendance was unusually large, as the members of the local organization are fond of the country for the summer meetings, and the plan of having outings enables the meetings to be kept up without a break.

Recent discussions in the club have dealt with business conditions in various consuming industries. The furniture trade, it has been reported by those conservant with the situation, is in excellent condition, the midsummer shows having been successful in attracting a large number of buyers. The business booked by the manufacturers has been above normal, both with reference to orders for immediate delivery and for shipment early in the fall.

NASHVILLE LUMBERMEN'S CLUB.

Nashville, Tenn., July 22.—The Nashville Lumbermen's Club has lost the complaint made before the Interstate Commerce Commission against the Louisville & Nashville Railroad and others, seeking to obtain the transit privilege on lumber. The local club put up a hard fight in this case, and the members were very hopeful of success, desiring to be placed on an equal basis with other large markets that have been granted the transit privilege on lumber, the same as on logs. The adverse decision of the commerce commission came as a distinct disappointment.

According to announcement just made by President W. M. Farris, jr., the Nashville Lumbermen's Club will discontinue weekly meetings for the remainder of the summer. Many members are out of the city, and attendance falls off during the warm weather.

CALL FOR ANNUAL MEETING.

To Members:—

The TENTH ANNUAL MEETING of the Michigan Hardwood Manufacturers' Association will be held at the HOTEL STATLER, Detroit, Mich., Wednesday, July 26, 1916, at 10:00 a. m. (Detroit time).

There are certain conditions of the lumber industry that warrant a full attendance at this meeting of every member of the Association.

Among the subjects for consideration are:

1. Present Market Conditions—Hardwoods and Hemlock.
2. Grading Rules for Hardwood and Hemlock Lumber.
3. Reports of Regular and Special Committees.
4. Election of Officers and Directors for one year.

Keep in mind the time and place—Wednesday, July 26, 10:00 a. m., (Detroit time) Hotel Statler. Make your hotel reservations early.

You are invited to association luncheon at close of session.

Very respectfully,
J. C. Knox,
Secretary.

Chas. T. Mitchell, President.

PREPARATIONS FOR HOO-HOO ANNUAL MEETING.

Memphis, Tenn., July 20.—Preparations are going forward steadily for the Hoo-Hoo Annual here September 9. The Hotel Chisca has been chosen as official headquarters for this event and J. D. Allen, Vicegerent Snark for the western district of Tennessee, has appointed three committees to look after vital features for the occasion, with chairmen as follows: Finance, P. A. Gates, York Lumber & Manufacturing Co.; entertainment, S. C. Major, and printing and programs, J. M. Pritchard, secretary Gum Lumber Manufacturers' Association.

These committees are holding meetings every now and then with a view of getting everything in satisfactory shape. All of them report substantial progress. Mr. Allen is very anxious that as many Hoo-Hoo as possible who have become delinquent in this part of the country shall be reinstated before the Annual in order that there may be a large contingent of local members of the order to take part in entertaining the visiting delegates from all parts of the country.

LUMBERMEN HAVE BIG DAY AT DETROIT

Talks of Salesmanship Made by Prominent Members of the Trade—Edward Hines, of Chicago, Presides at Session—Frank Snell, of New Orleans, and Harry Kendall, of Houston, Contribute Papers—Informal Talk by Experts

For the last three months there has been much speculation among lumber people as to the status of the World's Salesmanship Congress scheduled for Detroit and to occur on July 9, 10, 11, 12 and 13. C. J. Ashton, of Detroit, representing this congress, made two or three trips to Chicago in regard to it and very definitely interested the LUMBER WORLD REVIEW in his efforts and secured without any difficulty its assistance in helping to make up a program for the purposes of the congress in regard to the participation of the lumber trade of the country, which program, made in our office, was substantially adopted.

On the afternoon of July 12, and not in the morning as had been at first arranged, the lumber salesmen's session of the congress occurred and was a complete success.

Many have since remarked that it would have been a great achievement had the ENTIRE lumber trade taken an interest in the congress, in the preparation of the program and in securing a large attendance.

We shall not, under any circumstances, endeavor to print even a full story of the lumber salesmen's end of this congress, much less an extended story of the conference itself.

One of the results of the congress was the crystallization of the idea that it should be made annual, for it is already tentatively arranged that the next annual meeting of the congress will be held in Philadelphia and it is planned to raise $100,000 to make the congress a permanent institution.

R. H. Downman, of New Orleans, president of the National Lumber Manufacturers' Association, is a member of the executive committee of the congress and was to have presided at the meeting on July 12, but was detained in Chicago on account of the hearing before the Interstate Commerce Commission and his place was taken by Edward Hines, of Chicago, who made a most notable success of the event.

There were probably 175 people present at this meeting—all lumbermen, of course.

There occurred on the same afternoon a meeting almost equal in interest to the lumber trade as the particular sessions set apart for lumber, namely, the meeting of general sales managers, some 1,200 or 1,400 in number, who listened to a paper on "Price Maintenance," written and read by George E. Watson, secretary of the Southern Cypress Manufacturers' Association of New Orleans. Mr. Watson has done some very notable things in the preparation of papers. His papers in the interest of lumber have been few and far between, but very forceful and worth while. We hope in some future issue of this publication to print in full Mr. Watson's paper read on that occasion, entitled, "Price Maintenance."

DETAILS OF THE LUMBER SALESMEN SESSION.

The lumber salesmen were welcomed to Detroit by William E. Brownlee, president of the Detroit Lumber Board of Trade. In his talk of introduction, Mr. Brownlee spoke briefly of the association he represents and the building exposition it fathers and supports.

Edward Hines presided at the meeting and read a very important paper entitled, "Loyalty in the Evolution of Selling."

Robert H. Brooks, of Little Rock, Ark., manager of the Arkansas Soft Pine Bureau, talked on "Stock List Offers vs. Real Salesmanship." It was a very practical paper and contained examples of how to do the work of selling, which were not—as are unfortunately some of the suggestions along this line—simply a dreaming of dreams, but suggestions that may be worked out.

Harry T. Kendall, sales manager of the Kirby Lumber Co., Houston, Texas, and himself an adept at conducting so-called "Schools of Salesmanship," as evidenced by the wonderful yellow pine convocation recently held in St. Louis, was to have read a paper, but was called away from the Congress by a telegram announcing the illness of his father. The title of Mr. Kendall's paper was "Sales School Courses and Books."

M. B. Nelson, who was to have delivered a paper entitled, "Direction of Salesmen," was not present.

Alexander Hamilton, president of the National Association of Traveling Lumber & Sash & Door Salesmen, of Indianapolis, Ind., spoke impromptu to the subject, "Vision in Salesmanship," but certainly not without great preparation—that preparation that comes with years of experience and in living along right lines.

Mr. Hamilton's subject permitted of much leeway as to what he might say, and he cheerfully accepted the condition and delivered an address that did not contain a single wall motto or "spellbinding" platitude.

It was such a man as Alexander Hamilton that the LUMBER WORLD REVIEW had in mind when it advised the lumber associations to do away with hired spell-binders. If we will only take the trouble to look for them, the lumber trade has among its own members many men of vision who can advise them as Alexander Hamilton did at Detroit, without bringing up visions of copy-book epigrams and wall-motto witticisms.

Mr. Hamilton advised salesmen against getting into a rut; advised them to be honest; to consider themselves a part of the company they represented, instead of an excresence; advised them to hunt for beauty in the various enforced acts of their calling, and altogether created a profound impression and transmitted much knowledge of value.

Arthur Koehler, of the Forest Products Laboratory, Madison, Wis., delivered an illustrated talk entitled, "The Value of Technical Knowledge in Selling."

Robert B. Goodman, of Goodman, Wis., although a seasoned campaigner in the preparation of and delivery of technical papers on the cost production and like things, delivered his first address in regard to the selling end of the business at this congress in Detroit.

We expect to use Mr. Goodman's paper in full in an early issue.

Following the set program, Chairman Hines called for short talks from many of the lumbermen present and responses were made by Charles W. Restrick, W. E. Ford, Morris A. Hayward and others.

In the evening the Michigan Lumber & Sash & Door Salesmen's Association entertained the lumber delegates to the congress at a banquet at the Hotal Statler.

The banquet in its working out was very much of a compliment all around to C. J. Ashton, secretary of the organization, who had been very active in the work of the World's Salesmanship Congress, and without whose activity and pertinacity of purpose the executives of the National Lumber Manufacturers Association's trade extension department would probably never have gone into the enterprise at all.

After the banquet the guests were taken for a steamer ride on Lake St. Clair.

Discussion of the Papers Presented at the Congress

We have to thank several of the gentlemen who prepared and delivered papers at this congress for copies of their various addresses. It was very thoughtful of the gentlemen to distribute their papers in this way and to reckon with the fact that a mention of those papers would be of some value to the lumber press.

A few of the highest type organizations in lumber, like the Southern Pine Association, the Hardwood Manufacturers' Association of the United States, and the National Hardwood Association, make a point of furnishing the lumber press with these routine matters and it is not at all surprising that they, by that method, secure more publicity than some other of the lumber organizations of the United States.

It is obvious to the reader, of course, that in a review of this character we cannot use the full text of any of these estimable papers, although we would very much like to.

EDWARD HINES'S PAPER ON LOYALTY.

Edward Hines declared an unwavering belief in loyalty as a factor in the evolution of selling, and in the establishment of departments of salesmanship in the colleges and universities of the country as the great future in business education. He said that the business world was just beginning to realize the importance of proper salesmanship in its various bearings and discussed salesmanship in the broad sense, pointing out how Germany and Japan, for instance, have made it a national study for the advancement of national prosperity. He spoke of Japanese loyalty to racial interests and ideals, and said that German loyalty is even a better example of this spirit.

Discussing the German method of making salesmanship a profession, and of learning to sell scientifically, he said that it was trained study that had made the German salesman the wonder of the world, and he continued:

"It is after thirty-five years in business that I have been led to believe that experience is the most costly and often the most extravagant of teachers. I do not mean by this to discount the value of experience; quite the contrary; but I do contend that the most intelligent and useful loyalty, the kind most needed nowadays, and the kind that will be an absolute necessity to every modern business henceforth, is that loyalty, coupled with aptitude, that is deliberately and purposely developed through early training and education.

"I would suggest the creation of chairs of salesmanship in our leading universities. I would have students study salesmanship in post-graduate courses, which would include a thorough grounding in economics and practical business law, and which would be made of the highest value by frequent lectures on selling methods by the most successful of the world's salesmen. Salesmanship, the fundamental factor in the new civilization, has lagged behind as far as the leading universities are concerned. When salesmanship is specifically recognized in our highest seats of learning, there will be established a community of the highest mutual interests, with well defined principles and codes of loyalty which will be generally recognized and adhered to as a specific aid for business betterment.

"The university man, trained to aptitude, taught how to study, is better fitted to acquire in a few years more profitable and useful business experience than the average salesman of the same age potentially as well equipped mentally but untrained, would be likely to acquire in a lifetime of hard knocks, mistakes, failures and successes."

This attitude toward scientific, college trained salesmanship, Mr. Hines declared, from his experience in the lumber business, was certainly needed in that field, and to no greater extent there than in any other field of human endeavor with which he has come in contact.

This development of college trained salesmen, he declared, was the greatest step to be seen in the future toward the evolution of proper salesmanship in America. Proper training would be essential in the future, he declared. He continued:

"The biography of the self-made business man of the future will not read that he started as an office boy at the age of ten, and then with only the most elementary schooling became a captain of industry. Instead, it will be more likely read that he worked his way through high school by working after school and Saturday afternoons and then worked his way through college. I know that I am not alone among those who have succeeded in business without college education. Some of the much criticised features of college life are the stuff out of which enduring loyalty is made.

"In future works of importance it is improbable that large customers will permit the buying of materials without scientific tests. The salesman who is not informed on the qualities and uses of his goods from a scientific standpoint will find it next to impossible to get a hearing.

"Modern scientific buyers will be looking for salesmen who are clear-eyed university men, who can give clean cut, accurate answers to their questions and perhaps help them by suggestions born of knowledge even more scientific and thorough than their own."

MR. SNELL ON "HOTEL EXPENSES AND WAGES".

F. N. Snell, secretary aand general manager of the Louisiana Red Cypress Co., of New Orleans, in his usual analytical and yet entertaining manner, made one of his most notable efforts in the all too short paper which he delivered at the Detroit meeting under the caption "Salesmen's Hotel Expenses and Wages."

Mr. Snell considered the hotel expenses and wages all in one breath or succession of breaths, beginning back on the edge of time when the world was young, and tracing traveling conditions up to the present. He drew a very vivid picture of travel in the old days when he referred to the small town stop of those times as follows:

"You would sometimes reach a small town late at night in the winter season in the north, as I have, to be ushered into a cold sleeping room with no means of heating it, (unless perchance the chimney or stove pipe happened to pass up through it) with only an old-fashioned wash-bowl and pitcher standing on a small stand or commode, a little mirror hanging over it, probably badly cracked or broken in several places, a bed and usually one very uncomfortable chair, and you disrobed by the faint and flickering rays of an old, ill-smelling oil lamp. On getting into bed you felt you had enough blankets and comfortables over you to prevent your ever getting up without help; but you eventually get warm enough to fall asleep. In the morning you found your mustache frozen to the bedclothes, and on arising, after a hard struggle with the frost and the load of bedding, you also found the water in the pitcher frozen so you needed some kind of a weapon to break the ice before you could perform your morning ablutions.

"All of this you obtained for fifty cents and you felt like charging it up in your expense account at about four dollars. Your breakfast would sometimes cost you two bits and sometimes a half dollar—frequently it was dear at either price. In those days lumber salesmen had to be rugged and strong physically and their digestive organs always in good working order. Gradually, however, conditions changed, better accommodations could be had, and today it is only in the isolated and very small places where comfortable hotel accommodations cannot be obtained."

Mr. Snell compared the conditions in the old days with the present luxuries, advising salesmen to always get the best. He especially advised that the salesman should always be in good physical condition. He said:

"A salesman should always be at his best, mentally and physically, if he is striving for and expects good results. Furthermore, he will really find that the most successful salesmen, the ones who get the best pay, will try to get away from all the demoralizing influences mentioned and will spend an hour or so about every night writing to the general office giving a report on those they called on that day, as well as any other matter of general interest that may have occurred; writing to customers they expect to visit during the next few days, calling attention to some items of stock they know each particular customer uses, especially if something their firm has a good supply of; send in what orders they secured, accompanying them with full and complete information regarding any that may be a little out of the ordinary and therefore might require some special attention at the general office."

Mr. Snell paid his respects definitely also to the question of salesmen's wages, which interests the LUMBER WORLD REVIEW more than any discussion of expense accounts, having a plan of our own about expense accounts that shuts out the light of any sun on that subject.

We are, however, especially interested in what Mr. Snell had to say on the wage question and those things which go to make up a salesman's right to a wage. Here is the text of Mr. Snell's deductions upon that point:

"The question of salesmen's wages is a big and a broad one, because there are so many elements entering into a determination as to the real worth of a salesman to his firm.

"Some salesmen have the ability to get a big volume of orders, but sometimes only at the lowest market prices, or the lowest they are authorized to make, while others, not so strong on volume, always get the top notch prices. Then there are others, commonly classified as 'order takers' or 'peddlers,' who just drift along seemingly without much ambition to become a real live one.

"Undoubtedly the best salesman is the one who is thoroughly conversant with the good and bad qualities of the particular kind of lumber he is selling, so he can convincingly recommend it for such purposes as it is best adapted, thereby obtaining and holding the full confidence of those he sells to and avoiding the pitfalls too many encounter by recommending their material as good for *all* purposes; the one who not only has a complete knowledge of the product he is selling, but who by constant, intelligent study, research and observation also acquires at least a fairly good knowledge of the competing woods, and likewise secures every bit of information and data he can about the numerous substitutes for wood, so that he can point out their weak points; the one who thoroughly believes in what he is selling and the firm he represents and therefore is completely and constantly filled with the spirit of loyalty to his employers and always doing his very best to guard and promote their interests in every legitimate way; the one who is always optimistic and can meet the world with a smile instead of a frown, even when business is dull and orders are scarce.

"The chronic pessimist never yet accomplished any of the big things in the world, either in commercial or public life. He is the best salesman who never deems it necessary to 'knock' a competitor, but attains one of his chief pleasures in praising the good qualities of the material he is selling; the one who is strictly honest, aggressive, of strong and pleasing personality, full of intelligent, hard work—in short, a hustler, and who has the necessary nerve to decline an order if price is unsatisfactory or there is anything called for which cannot be furnished by his firm; the one who is conservative in his expense account without being stingy, and who is always alert to grasp every opportunity presented whereby he can bring about better conditions for the trade, for his firm and for himself; the one who also has the stamina, when investigating or adjusting a complaint, to tell the customer he is wrong, when such is the fact—in other words to stand for a square deal for both the customer and the mill and to see that both get it."

EDWARD HINES, CHAIRMAN OF LUMBERMAN'S DAY. MR. HINES HAS SINCE BEEN MADE A MEMBER OF THE EXECUTIVE COMMITTEE OF THE PERMANENT ORGANIZATION OF THE WORLD'S SALESMENSHIP CONGRESS.

Mr. Snell closed his address with that wonderful poem of Walt Mason's which really ought to be pasted on the fly leaf of every Gideon Bible. We are glad to give it space. Here it is in full:

THE WELCOME MAN.

"There's a man in the world who is never turned down, wherever he chances to stray; he gets the glad hand in the populous town, or out where the farmers make hay; he's greeted with pleasure on deserts of sand, and deep in the aisles of the woods; wherever he goes the welcoming hand—he's

The One Who Delivers the Goods.

"The failures of life sit around and complain, the gods haven't treated them right; they've lost their umbrellas whenever there's rain, and they haven't their lanterns at night. Men tire of failures, who fill with their sighs the air of their own neighborhoods; there's a man who is welcome wherever he goes—he's

The One Who Delivers the Goods."

MR. KENDALL'S INTERESTING PAPER.

It is to be deplored that Harry T. Kendall could not have been present to impress his own personality upon this notable convention in Detroit. His paper contains many interesting facts. Possibly one of the best things in Mr. Kendall's paper is the paragraph which Mr. Kendall wired from Chicago to D. M. Barrett, general chairman of the congress, on his way to Kansas City, in which he said these things:

"The great thing that the World's Salesmanship Congress will do for sales executives and salesmen will be to give them a broader vision, an insight into the great economic structure of this country and its necessities. Most of us travel in circles so small that our own problems become monumental and frequently insurmountable. If we stand back and look around the vast horizon of business and see the big things to be done we, in going forward to tackle the larger problems, find that we have almost unconsciously stepped over our own smaller difficulties and they lie behind us solved."

Mr. Kendall hit the nail on the head when he suggested a lack of solidarity in the lumber trade which prevented that oneness of purpose in doing things nationally; that our very bigness and many-sidedness made us unwieldly.

He did this when he cited the example of the National Cash Register Co. as an example; but Mr. Kendall tells it best:

"Smaller industries, or industries in which one large concern predominates, have made great strides in the marketing of their product. Perhaps one of the most prominent examples of this is the National Cash Register Co. Its success has not been alone due to the control of patents covering the manufacture of cash registers, but to an energetic, progressive selling policy that has not only sold National cash registers, but made the cash register an institution in nearly every business house in the civilized world. Sales agents of this concern meet regularly, either in their district headquarters, or at the general offices of the company, and are taught not only the intricacies of the cash register, but the art of salesmanship as well. Every possible objection to their product is carefully considered and the salesman taught how to meet it. Every possible avenue through which the sale of its product may be pushed is carefully investigated by experts and selling campaigns planned in new directions. There could be but one result from this character of selling policy, and the cash register business is one of the successful lines of mercantile endeavor in this country.

"The fact that the lumber trade lacks a large enough unit to command the attention and consideration of the industry forces it to seek some other method to encourage the training of its salesmen along modern lines. The first effort to inaugurate something of this kind consisted of a salesmen's conference held in Chicago a little over a year ago by the representatives of the northern white pine interests; and within the last few weeks the Southern Pine Association held a meeting in St. Louis, which was largely attended by the sales representatives of members not only of the association, but of non-member manufacturers, wholesalers and retailers."

Mr. Kendall handled the matter of the deficiencies of knowledge regarding the lumber trade without gloves and we are glad to quote him again, and in full, upon this point:

"The average sales representative has no training in the science of salesmanship, and little information regarding the manufacture of or the product which he sells, except for a more or less hazy idea of grades of lumber when he comes in contact with them. The present day selling literature of the manufacturer consists wholly of a stock sheet showing the quantity on hand available for shipment, and a price list, which is the sales manager's idea of the market, rather than a hard and fast price list based on cost plus reasonable profit. In turn, the retail distributer sells his consumer entirely on price, without any educated effort to sell the article that is most suitable for the purpose intended.

"Viewing this situation from a manufacturing standpoint alone, these deficiencies may be considered as follows:

"First: No knowledge on the part of the sales-

Digitized by Google

man of the science of salesmanship.

"Second: No knowledge of manufacturing conditions or costs.

"Third: No study of markets, either from the standpoint of seasonable sales or proper geographical distribution of the various articles manufactured.

"Fourth: No study of trade extension possibilities, and

"Fifth: No knowledge of the use or misuse of wood.

"On the whole, the retailer may be charged with:

"First: No knowledge of the use or misuse of wood. That is to say, where wood should be used, what kind of wood to use, and an understanding of the proper care of wood.

"And, secondly, a failure to feature a better article at a higher price."

We hope some time to print in full this paper which Mr. Kendall delivered at the congress, but if not this paper, others that will be coming from his pen in the future, for Mr. Kendall is only in the first flush of his career and will accomplish much along these lines.

Proposed Tentative Specifications for Douglas Fir and Selected Structural Douglas Fir Bridge and Trestle Timbers

We present herewith the first authentic lumber newspaper printing of the tentative specifications for selected structural Douglas fir bridge and trestle timbers, recently considered by Committee D-7, Dr. Hermann von Schrenk, Chairman, American Society for Testing Materials, done at their Atlantic City, N. J., meeting last month.

ABBREVIATED accounts of these tentative rules have been printed before, but this is the first FULL report.

Dr. von Schrenk says, in connection with the submission of this report: "These tentative standards will now lie over for a year, and if, in the opinion of the committee, they should be made permanent standards they will come up for a vote of the whole organization next year. They are what one might call a working basis."

Concerning the work of Sub-Committee No. 4 of Committee D-7 on the subject of wooden paving blocks, Dr. Hermann von Schrenk states that "The report of Sub-Committee No. 4 on wooden paving blocks was withdrawn and not presented," which is of considerable interest in view of the fact that at least ONE lumber newspaper recorded their presentation and published the report.

Herewith is the report on timbers, prefaced by some questions and followed by the actual technical report, including a cut, designated as Fig. 1, not previously printed in connection with this report.

REPORT OF COMMITTEE ON TIMBER.

"In co-operation with the officials of the United States Forest Service and the West Coast Lumbermen's Association, Sub-Committee III has, during the past year, been considering the possibility of formulating a specification for grading structural Douglas fir timbers upon a somewhat similar basis to the specifications adopted last year for southern yellow pine timbers.

"After considerable correspondence a meeting was held in Seattle, Washington, at which specifications for structural Douglas fir were discussed. It has been known for some time that the variation in weight per cubic foot and density found in Douglas fir results in considerable variation in strength. After a careful consideration of a number of specifications, the sub-committee has prepared Tentative Specifications for Selected Structural Douglas Fir Bridge and Trestle Timbers for consideration by the Society.

"Committee D-7 recommends that these proposed tentative specifications, appended to this report, be published among the Tentative Standards of the Society for one year."

DEFINITIONS OF THE TENTATIVE SPECIFICATIONS.

1. The following definitions are used in connection with these specifications:

(a) ANNUAL RING—Each annual ring is composed of two distinct types of wood structure, namely, the porous, light colored and light weight spring wood, formed during the first part of the growing season, and the hard, dense and darker colored summer wood, formed during the latter part of the growing season.

(b) SUMMER WOOD—Summer wood is the hard, dense portion of the annual ring. It is darker in color than the more porous spring wood.

(c) SOUND AND TIGHT KNOTS—A sound and tight knot is one which is solid across its face, and which is as hard as the wood surrounding it, and is so fixed by growth or position that it will retain its place in the piece.

(d) ENCASED KNOT—An encased knot is one whose growth rings are not intergrown and homogeneous with the growth of the rings of the piece it is in. The encasement may be partial or complete; if intergrown partially, or so fixed by growth or position that it will retain its place, it shall be considered a sound and tight knot.

(e) LOOSE KNOT—A loose knot is one not firmly held in place by growth or position.

(f) ROTTEN KNOT—A rotten knot is one not as hard as the wood it is in.

(g) MEASUREMENT OF KNOTS.

IN BEAMS, the diameter of a knot on the narrow or horizontal face shall be taken as its projection on a line perpendicular to the edge of the timber. On the wide or vertical face, the smallest dimension of a knot is to be taken as its diameter.

IN COLUMNS, the diameter of a knot on any face shall be taken as its projection on a line perpendicular to the edge of the timber.

(h) DIAGONAL GRAIN—(Including cross and spiral grain)—Diagonal grain is grain not parallel with all the edges of the piece.

(i) DENSE AND SOUND DOUGLAS FIR—Under this heading two classes of timber are designated: (1) Dense Douglas fir and (2) sound Douglas fir. It is understood that these two terms are descriptive of the quality of the clear wood.

(j) DENSE DOUGLAS FIR—Dense Douglas fir shall show on either one end or the other an average of at least 6 annual rings per inch or 18 rings in three inches, and at least 33 1-3 per cent summer wood as measured over the third, fourth and fifth inches on a radial line from the pith, for girders not exceeding 20 in. in height, and for columns 16 in. square or less. For larger timbers the inspection shall be made over the central three inches on the longest radial line from the pith to the corner of the piece. Wide-ring material excluded by the above will be accepted provided the amount of summer wood as above measured shall be at least 50 percent.

In cases where timbers do not contain the pith, and it is impossible to locate it with any degree of accuracy, the same inspection shall be made over three inches on an approximate radial line beginning at the edge nearest the pith.

The radial line chosen shall be representative. In case of disagreement between purchaser and seller as to what is a representative radial line, the average summer wood and number of rings shall be the average of the two radial lines chosen.

(k) SOUND DOUGLAS FIR—Sound Douglas fir shall include pieces of Douglas fir without any ring or summer wood requirement.

GENERAL REQUIREMENTS.

2. (a) The timber shall be only "Dense Douglas Fir" as defined in Section I (j).

(b) The timber shall be well manufactured, square edge and sawed standard size; solid and free from defects such as ring shakes and injurious diagonal grain, loose or rotten knots, knots in groups, decay, pitch pockets over 6 in. long or 3/8 in. wide, or other defects that will materially impair its strength.

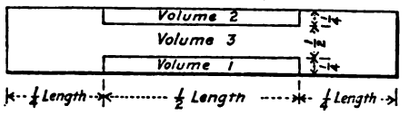

FIG. 1.

(c) Occasional variation in sawing, not to exceed 1/4 in. scant at the time of manufacture, will be allowed.

(d) When timbers 4 by 4 in. and larger are ordered sized, they shall be 1/2 in. less than rough size, either S1S1E or S4S, unless otherwise specified.

DEEP JOISTS.

3. The timber shall show not less than 85 percent of heart on each of the four sides, measured across the sides anywhere in the length of the piece. It shall not have in volumes 1 and 2 (Fig. 1) knots greater in diameter than one-fourth the width of the face in which they occur, with a maximum of 1 1/2 in. in diameter. It shall not have in volume 3 (Fig. 1) knots larger than one-third the width of the face in which they occur, with a maixmum of 3 in. in diameter. Knots within the center half of the span shall not exceed in the aggregate the width of the face in which they occur. Diagonal grain in volumes 1 or 2 with a slope greater than 1 to 20 will not be permitted. When stringers are of two-span length they shall be considered as two separate pieces and the above restrictions applied to each half. The inspector shall place his stamp on the edge of the stringer to be placed "up" in service.

CAPS AND SILLS.

4. The timber shall show 85 percent of heart on each side of the four sides measured across the sides anywhere in the length of the piece, and shall be free from knots larger than one-fourth the width of the face in which they occur, with a maximum of 3 in. in diameter. Knots shall not be in groups.

POSTS.

5. The timber shall show not less than 85 percent of heart on each of the four sides, measured across the face anywhere in the length of the piece, and shall be free from knots larger than one-fourth the width of the face in which they occur, with a maximum of 3 in. in diameter. Knots shall not be in groups.

LONGITUDINAL STRUTS OR GIRTS.

6. The timber shall show all heart on one face; the other face and two sides shall show not less than 85 percent of heart, measured across the face or side anywhere in the length of the piece, and shall be free from knots over 2 in. in diameter.

LONGITUDINAL X-BRACES, SASH BRACES AND SWAY BRACES.

7. The timber shall show not less than 85 percent of heart on two faces and shall be free from knots larger than one-third the width of the face in which they occur, with a maximum of 2 in. in diameter.

BRANDING.

8. The inspector shall brand each timber which conforms to the above requirements "Selected Structural Douglas Fir."

THE LOUISVILLE PLAN FOR SECURING NEW INDUSTRIES.

Louisville, Ky., July 22.—The plan which has been adopted by the Louisville Board of Trade in connection with securing new industries, is one which seems likely to serve as a model for other cities. The board is now raising $1,000,000 which will serve as working capital for the Louisville Industrial Foundation. This organization will conduct an industrial survey of the city, determine the industries which it is best fitted to serve, and then make an aggressive effort to land enterprises of this kind.

The hardwood lumbermen, who are co-operating in the work of raising the required fund, more than $250,000 of which was pledged before the campaign formally opened, believe that woodworking factories can be secured in number, on account of the excellent hardwood supply, the favorable location with reference to distribution, and the ample labor supply.

SOUTHERN FORESTERS AT ASHEVILLE

Large Gathering of Forestry Experts from Near and Far—Permanent Organization Effected—Many Interesting Addresses

A very wonderful gathering of foresters, with a sprinkling of lumbermen, convened at Asheville, N. C., on the morning of July 11 and remained in session as the Southern Forestry Congress from that day until the evening of July 15—altogether the most serious attempt to legislate in the interest of southern forestry that has been attempted to date.

It is INDEED a gathering considered to be of great and grave importance when United States Forester Henry Solon Graves is SCHEDULED to attend and DOES attend. Most of Mr. Graves' papers that have been read before conventions of lumbermen and foresters in this country have been read by others than Mr. Graves himself.

This congress at Asheville has been brewing and steaming in the pot for several months and was one of the "dates ahead" of the editor of the LUMBER WORLD REVIEW, but the Interstate Commerce Commission gave a party in Chicago of twelve days' and twelve nights' duration, which eclipsed the Southern Forestry Congress without the least difficulty in point of the necessity for attention thereto, both by newspaper representatives and by a great number of the leading lumbermen of the United States.

THE PROGRAM.

The following program at Asheville was carried out almost in its entirety.

Opening Session—Tuesday, July 11.

Invocation—Bishop Junius C. Horner, of Asheville.

Address of Welcome—Governor Locke Craig, of North Carolina.

Welcome to Asheville—Hon. J. E. Rankin, Mayor of Asheville.

Response from the North—Dr. Hugh Baker, Dean New York State College of Forestry.

Address:

The Southern Forests and Their Place in the Nation's Timber Supply—Hon. H. S. Graves, United States Forester.

The Forests in Relation to the Upbuilding of the South—Dr. Clarence J. Owens, secretary Southern Commercial Congress, Washington, D. C.

Re-establishment and Protection of Big Game in the Southern Appalachians—Edmund Seymour, president American Bison Society, New York.

Afternoon Session, 2:30 P. M.

Addresses:

Forestry in the United States—Hon. Charles Lathrop Pack, president American Forestry Association, Lakewood, N. J.

The Part of the Women's Clubs in Forest Conservation—Mrs. W. T. Lingle, president North Carolina Federation of Women's Clubs.

A Practical Example of Forest Management in Southern Yellow Pine—Henry E. Hardtner, president Urania Lumber Co., Urania, La.

The Erosion Problem of the South and Its Relation to Forestry—R. S. Maddox, Forester Tennessee Geological Survey, Nashville, Tenn.

Tuesday Evening, 9 P. M.

Informal reception to visiting delegates by the Women's Clubs of Asheville at the Battery Park Hotel.

Wednesday Evening, July 12.

Inspection of Biltmore Forest Plantations.

Wednesday Evening, 7:30 P. M.

Informal Get-together Dinner for Delegates at Battery Park Hotel.

Thursday, July 13—Morning Session, 10 A. M.

Forest Fire Protection.

Organization of State Protective Systems—Prof. H. H. Chapman, Yale Forest School.

What the States Can Do in Forest Fire Protection—F. W. Besley, State Forester of Maryland.

Publicity and Education in Forest Protection in the South—J. E. Barton, State Forester of Kentucky.

Protection of Federal Forest Lands in the South—Wm. L. Hall, District Forester in charge of the Eastern National Forests.

What West Virginia is Doing in Forest Fire Protection—Hon. J. A. Viquesney, Forest, Game and Fish Warden of West Virginia.

Afternoon Session, 2:30 P. M.

Southern Forestry Practice.

Southern Pineries, Their Possibilities and Future—Prof. Ralph H. Bryant, Yale University.

The Regeneration of the Southern Pine Forests—Prof. J. W. Toumey, Director Yale Forest School.

The Naval Stores Industry; How It Can Be Perpetuated in the South—W. W. Ashe, U. S. Forest Service.

Evening Session, 7:30 p. m.—Separate conferences or executive meetings.

Friday, July 14.—All day automobile trip through Pisgah National Forest.

Saturday, July 15.—Trip over logging railroad to Mt. Mitchell State Park.

The above are the things that were regularly scheduled, but as a matter of fact many meetings in the way of conferences of various associations and organizations and the like were held in an INFORMAL and FORMAL manner in the recesses between the various features of the program.

No adequate conception of the importance of this gathering will ever—very largely—come to the National lumber mind of this country on account of the enforced attendance of lumbermen and newspaper men at the Interstate Commerce Commission hearing in Chicago, and thus—ANOTHER occasion when the practical affairs of life take precedence over the IDEALISTIC and ALTRUISTIC!

The LUMBER WORLD REVIEW has been in touch—from the beginning—with the big men who MADE the Southern Forestry Congress possible, and realizing the importance of the movement will very likely have reference from time to time to the various papers produced at this gathering, but at the present moment is able only to treat the affair as a matter of news.

FEATURES OF THE CONGRESS, "GOOD" AND "BAD."

The participating associations were the Association of Eastern Foresters, Society of American Foresters, North Carolina Forestry Association, the North Carolina Pine Association, Appalachian Park Association, and the American Forestry Association.

Charles Lathrop Pack, of Lakewood, N. J., represented the American Forestry Association, of which he is president, and during the time of the meeting told of the wonderful progress of that association, wherein it had recently in a few short months increased its membership 2,500.

The association developed the sentiment that the forests belong to the people—we are told—and given that it develops actually that the forests DO belong to the people, we are wondering when the people take over the forests from the lumbermen just how their owner will catalog them—whether they will be considered an "asset" or a "liability."

During the progress of this convention Henry E. Hardtner, president of the Urania Lumber Co., of Urania, La., discussed the question of "A Practical Example of Forestry Management in Southern Yellow Pine" and aired his favorite theory that all of the timber in Louisiana will be gone in eighteen years, deducing from that impression that therefore the people of Louisiana and of the south should at once go to work to replant the forests. Mr. Hardtner's theory would be lovely if it could be proved to be logically true, and really no one should be finicky about the matter of arguments if they bring results, which of course Mr. Hardtner's theory about long-leaf pine never will do—first because no person knows how much lumber is cut annually in Louisiana or any other state of the Union; and second, NOBODY knows how many trees there were in the first place or how many there are now left—not a very good basis upon which to predict just how long the trees in Louisiana will last.

The LUMBER WORLD REVIEW had hoped that such a brainy man as Mr. Hardtner, loving the practice of forestry as much as he DOES love it, would some time or another work out of the idea that the product of the tree is like any other commodity and conclude that the forest lands should be reforested for plain, every-day ECONOMIC reasons—but no matter, those things will all straighten out by and by.

The really good things discussed at this congress were along lines of conservation of existing forests, reforestation, the restoration of big game and the extension of the Weeks law, all of which were heartily and unanimously favored.

FEATURES OF THE OPENING SESSION.

Dr. Joseph Hyde Pratt, president of the Southern Forestry Congress and state geologist of North Carolina, Chapel Hill, N. C., presided, and after Bishop Horner had offered an invocation introduced Governor Craig, of North Carolina, a gentleman who has been promoting forestry work for many years.

Gov. Craig is a man who considers that the lumber interests have something in common with forestry, a thing which too few of the Society of American Foresters consider ethical.

Gov. Craig said considerable about the forests having been given for public use, for the conservation of water power and the furnishing of timber and warned the people against the famine to come.

Mayor Rankin, of Asheville, made a graceful presentation of the character of Asheville's hospitality; John L. Kaul, of the Kaul Lumber Co., Birmingham, Ala., was to have responded to this address but was flood-bound and did not arrive and Dr. Pratt made a felicitous reply.

United States Forester Henry Solon Graves made a splendid impression and gave out many historical facts of note and related the attitude of government in its USE of the forest. His talk concerning the co-operation of the government in the prevention of forest fires was of MOST interest, when we consider the various features of his excellent paper.

Edmund Seymour, of the American Bison Society, and Geo. S. Powell talked interestingly upon their special themes; Verne S. Rhodes related the story of the rise and progress of the Vanderbilt estate; Mr. Pack, to whom reference is made above, talked of the scientific handling of blight that has killed the chestnut trees in New Jersey and the white pine blister rust that is over-running New England and urged the south to look after their interests. Other speakers appeared according to program.

COMMITTEES APPOINTED.

These committees were appointed:

Resolutions: R. C. Jones, Virginia, chairman; J. W. Toumey, Yale; Thos. A. Cox, North Carolina; H. S. Graves, Washington; Dr. L. S. Palmer, Washington; Miss Julia A. Norne, North Carolina; J. E. Barton, Kentucky; Henry E. Hardtner, Louisiana; John L. Kaul, Alabama; Bolling Arthur Johnson, Illinois; L. J. Young, Michigan; R. S. Maddox, Tennessee; Gallatin Roberts, North Carolina; Mrs. R. S. Hosmer, New York.

Publicity—Neptune Buckner, North Carolina, chairman; Dr. Hugh P. Baker, New York; Verne Rhodes, North Carolina; N. B. Clark, Massachusetts.

Registration—E. H. Frothingham, Washington; Mrs. J. S. Holmes, North Carolina; L. L. Bishop, North Carolina.

Permanent Organization—J. G. Lee, Louisiana, chairman; F. W. Besley, Maryland; J. G. Peters, Washington; Edwin P. Cox, Virginia; Edmund Seymour, New York; Clarence Owens, Washington; J. E. Ingraham, Florida; J. A. Viquesney, West Virginia; W. L. Tyler, Virginia; G. R. Loyall, Tennessee; Mrs. W. P. Wharton, Massachusetts; Mrs. W. L. Lindsey, North Carolina.

THE TRIP OVER THE BILTMORE ESTATE.

Besides being a very practical exemplification of what can be done in reforestation and the care of it, the trip over the Biltmore estate was a success in every way.

Verne S. Rhodes, forest supervisor of the Pisgah National Forests, showed the visitors both sides of the picture. The guests were entertained at luncheon by Dr. and Mrs. S. A. Wheeler at the Biltmore Dairy, and had a banquet on the terrace of the Battery Park hotel in the evening, and afterwards attended a ball at the hotel.

THURSDAY THE IMPORTANT DAY.

Thursday, July 13, was the important day from the standpoint of practical help as was proved by the papers read. The principal papers were as per the program, the general theme being forest fire prevention and southern forestry practice.

Two of the feature events of Thursday were the decision to make the congress a permanent affair and the decision to erect a memorial tablet in Pisgah National Park to the late George W. Vanderbilt. For this latter work President Pratt named the following committee: Gov. Craig, Chas. Lathrop Pack, president American Forestry Association; Dr. W. H. Holmes, of the Smithsonian Institute; United States Forester Henry S. Graves,

Digitized by Google

Dr. Geo. F. Kunz, Geo. S. Powell, of the Appalachian Park Association, and Dr. Joseph Hyde Pratt.

J. D. Peters, of the Forest Service, was introduced by Dr. Pratt as presiding officer and Mr. Peters presented H. H. Chapman, of the Yale Forest School, who went into his subject, "Organization of State Protective Associations," as only a practical man like Mr. Chapman could do, applying his remarks to the lowland, and not to the mountain section.

F. W. Beasley, state forester of Maryland, illustrated "What the State Can Do in Forest Fire Protection," as applied to the Piedmont section especially. He thought the chief fire problem was in Maryland.

Edmund Seymour thought that the people could be educated to help.

John Foley, of the Pennsylvania railroad, illustrated what that railroad system was doing to prevent fire by devices on its railway locomotives and its discontinuance of locomotives not up to the standard.

M. V. Richards, for many years known to the whole southern territory as the land and industrial agent of the Southern railway, expressed his interest and that of his railroad in fire protection. W. T. Lindsey, of the Tryon Forest Club, talked on the subject. Jas. G. Stikeleather, of Asheville, was called to speak for Mt. Mitchell fire protection.

J. E. Barton, on the regular program, spoke on the subject of "Publicity and Education in Forest Protection in the South."

Prof. J. W. Toumey spoke to the question, "Regeneration of the Southern Pine Forests."

W. W. Ashe, of the United States Forest Service, prophesied in a paper called "Forests of the Future, Second Growth."

J. S. Holmes, state forester of North Carolina, who resides at Chapel Hill, that state, was reelected secretary. Besides Mr. Holmes, these people whose names follow were chosen executive officers of this congress: C. I. Millard, chairman, president John L. Roper Lumber Co., Norfolk, Va.; Alfred Gaskill, state forester, Trenton, N. J.; Henry E. Hardtner, Urania, La.; Wm. L. Hall, district forester, Washington, D. C.; W. B. Townsend, president Appalachian Logging Congress, Townsend, Tenn.; Sydney L. Moore, forester Sizer Lumber Co., Jacksonville, Fla.; J. H. Foster, state forester, College Station, Texas, and Joseph Hyde Pratt, state geologist, president, Chapel Hill, N. C. This official list alone guaranteed the success which was made of the congress.

The congress must have created a very remarkable atmosphere all its own, for before it ended Charles Lathrop Pack, in all earnestness, suggested that he really believed that the future would bring forth a man with scientific knowledge and vision enough to invent and nurse into being a new kind of tree, not now in existence, that would be ideal for lumber.

VIEWS AND INTERVIEWS.

Our connection with forestry affairs enables us to print some interesting information gotten from letters, just prior to and since the congress, from people prominent in the work.

ALFRED GASKILL SAYS A GOOD WORD.

Alfred Gaskill, state forester of New Jersey, said that he had spent a great deal of time in the south, most of the time in the forests of North Carolina and has been convinced for many years that TIMBER will be found to be one of the great crops of that vicinity. He believes that the resources of that territory are scarcely touched. He says that the southeastern portion of the United States is indicated by nature as a timber growing region, and having advantages over the northern forestation over a longer growing season and in a greater diversity of species, THAT puts the problem up to the south. For everything of the kind looking toward reforestation of the south is a step toward establishing forestry in a section of the country where it will be most worth while.

A WORD ON STATE CO-OPERATION.

J. G. Peters, chief of state co-operation of the United States Forest Service, considers the congress one of the most important ever held, especially as the southern states are really beginning to turn their attention toward the needs of forest conservation and all which that means, especially as regards protection of the forest from fires. Mr. Peters thought that the congress would be a tremendous factor in bringing to the attention of the legislators of the southern states the advisability of passing adequate forest legislation, especially to provide for non-partisan departments of forestry in these states, with a technically trained man as forester, a forest fire protective system, co-operation with private owners in preparing plans for the management of timber lands and wood lots, state owned forests by gift or purchase and an adequate appropriation of funds to promote the same.

The meeting, which occurred at this congress, of the forestry officials of the southern states, who are co-operating with the federal government under the Weeks law, forest fire protection, which states include Maryland, Virginia, West Virginia, Kentucky and Texas, were provocative of much good.

Each of these states receives from $2,000 to $4,500 a year which is expended for federal patrolmen, who travel the woods to detect and extinguish fires and to warn the public against the careless use of fire, and each state is required to expend an amount at least equal to the federal expenditure.

SOME OPINIONS OF A GEOLOGIST.

A. H. Perdue, state geologist of Tennessee, believes that a great deal of land has been cleared of trees that should never have been cleared, because of the fact that the land has become "perfectly worthless" after the small amount of humus has disappeared from it. Mr. Perdue believes that "there yet remains a great deal of such land which should be left for permanent forests." Mr. Perdue would leave the trees also on the hillside, for protection of the agricultural land below. He believes, too, that there are large areas of cleared land useless for agricultural purposes which should be again reforested.

MR. MOORE SHOWS A PRACTICAL INTEREST.

Sidney L. Moore is forester for the Sizer Timber Co., of Jacksonville, Fla., and went to the congress with the following ideas in view:

"I am much interested in the organization of an association of southern foresters which it is proposed to effect at the same time as the meeting of the congress. Such an association would be along lines similar to the present association of eastern foresters and should bring together in effective, permanent organization all those engaged in federal, state and private forest work in the south. The value and benefits of membership in such an organization to all foresters in the south are self-evident; co-operation in working out the special problems encountered by southern foresters in their field; united action on matters of concern to forestry in this section of the country; and a closer association, both social and professional, among the men engaged in forest work in the south; these are only a few of the advantages which, it seems to me, would accrue from the formation of an association of the southern foresters."

THE SOUTH MUCH BEHIND FROM LEGISLATIVE STANDPOINT.

J. E. Barton, state forester of Kentucky, said that one of the chief things this congress did was to differentiate the problems of forestry in the south from those encountered in the northern United States and he thought that this had been too little appreciated in the past, but that there is a distinct difference in the points of view in the two sections, a considerable difference in the character of the timber and a notable difference in the problems presented by the two regions. From a legislative standpoint the south was much behind other regions of the United States; but while this was being rapidly remedied, nevertheless the stage of progress obtained so far is undoubtedly materially different from that recorded in other sections of the country. There has been a little co-operation between timber land owners, and constituted agents of forest policy in various states of the south; and again the general education in regard to the aims of a forest policy is decidedly less generally understood in the south than in any other forest region. Mr. Barton expects much from the new feeling that will spring up after the congress among land owners and the constituted authorities in forestry in the south.

"COMMUNITY OF INTEREST" A STRONG INCENTIVE.

I. F. Eldredge, forest supervisor, Pensacola, Fla., believes that the Southern Forestry Congress will serve to bring together men of the same community interests throughout the southern states, even if it serves no greater purpose. He believes, however, that it will accomplish a great deal more. He says: "So far as I know, no such opportunity has before been presented and I hope that there will be a general attendance of lumbermen, timber owners and foresters from all over the south; in a great many ways our problems are identical and differ widely from those of the northern and Pacific states. We are in a better position to accomplish something toward a rational forest policy than any other part of the country."

"The forest problems that exist in the south are too many, too broad and too varied to be settled or solved by one set of men as a result of one meeting. Nevertheless, if this meeting can get a number of thinking men of the south, particularly stumpage owners, to working toward a definite policy, it will have served a purpose of immense value to our section of the country."

AN OPPORTUNITY TO CONSIDER A MOST IMPORTANT SUBJECT.

Wm. L. Hall, assistant forester in charge of acquisition, Washington, D. C., felt that the Southern Forestry Congress was one of great importance. He says: "This congress will give an opportunity to consider how the nation may realize to the largest extent on this (the forest) resource and how it may be perpetuated. In the southern Appalachian region alone we have an area of upwards of twenty million acres of land not suitable for agricultural development, but suited by all natural conditions to be a timber producing region of great value. It is of equal interest to the lumber industry and to foresters to maintain this region at its highest productiveness."

EASTERN OREGON COMPANY MAKES LARGE PURCHASE OF LUMBER LANDS.

Baker, Ore., July 15.—The Baker White Pine Lumber Co. has lately made one of the largest deals in timber lands ever consummated in eastern Oregon, consisting of about 20,000 acres, which, with the company's recent holdings, puts it in possession of about 800,000,000 feet of Oregon white pine, grown at an altitude of around 6,500 feet. This pine is noted for its remarkably fine quality and excellent texture, and is especially adapted for high grade factory stock.

The Baker White Pine Lumber Co.'s mill is one of the most convenient and best equipped mills in the northwest. The company also operates a modern sash and door plant and box shock factory. It has lately enlarged its operating capacity and added new machinery and dry kilns.

WOOD BLOCK PAVING GAINING FAVOR IN ARKANSAS.

Little Rock, Ark., July 22.—Wooden paving blocks are to be used on the surface of the reconstructed bridge across the Arkansas river between Little Rock and Argenta, according to the plans which have been announced. Several conferences have been held during the past few days, and it is now practically assured that the proposed enlargement and strengthening of the county bridge will be made. According to the plans thus far developed, the cost will be about $300,000, and will be borne equally by the parties to the agreement, namely, the property owners on Main street and adjoining territory to the south end of the bridge; the Inter-City Terminal Railway Co. and Pulaski county.

The plans call for the rebuilding of the bridge, except for the piers, which are to be strengthened. The roadway will be increased in width from 32 feet to 42 feet and double tracks for street car service across the bridge, which has heretofore not been possible, will be laid. This is part of the scheme to connect the two cities with street car service, and eventually to run interurban cars from Little Rock to Pine Bluff. For the past several years the heavy traffic across this bridge has made it almost impossible to keep the bridge in repair.

Under the new plans it is likely that wooden paving blocks, which have given such satisfactory service in the many miles now paved with them in Little Rock and Argenta, will be used.

WASHINGTON CEDAR IN WOOD PAVING.

Manufacturers of Washington red cedar have just discovered that their product, from which is made more than 65 percent of all the shingles produced in the United States, was the first to be used in modern creosoted wood block street paving. It is a singular commentary on this fact, however, that red cedar is now very little used for the purpose, having been supplanted by Douglas fir, western hemlock and southern pine.

Major Downing, president of the Board of Public Works, of Indianapolis, Ind., returned from a trip to Europe about twenty years ago and was so impressed with the wood block paving he saw in the principal streets of European cities, particularly on twenty-two Paris boulevards, that he contracted for Washington red cedar blocks sufficient to lay 100,000 square yards of paving in Indianapolis. These blocks were dipped in a bath of creosote oil, but notwithstanding this crude process, an inspection of the paving recently made by Walter Buehler, an engineer of Little Rock, Ark., showed that it was in thoroughly good condition.

INTERSTATE COMMERCE HEARING

Three Daily Sessions for Two Weeks Devoted to Most Important Lumber Questions Ever Considered—Scores of Witnesses Heard on Reclassification—Briefs to Be Filed November 1

(This is the Only Complete Digest of this Great Hearing Yet Printed in Any Lumber Newspaper.)

That there was universal interest shown in the reclassification hearing before Chairman B. H. Meyer, of the Interstate Commerce Commission, by lumbermen and those engaged in allied industries all over the United States, was fully evidenced during the past two weeks. Scores of lumber manufacturers and wholesalers and traffic men have been in Chicago during this interval to participate in the hearing either as witnesses or as interested spectators. Scores have recorded their testimony and many more who were in Chicago for the purpose of testifying, found that their evidence was not needed, much time and repetition of statement being saved thereby. A few lumbermen remained throughout the entire procedure, but the vast majority of those who came here remained but one or two days, and having fulfilled their duties in the matter returned to their homes.

There have never before been so many active, intelligent and really influential lumbermen, representing such great and diversified interests, gathered together in one place at one and the same time.

One of the most interesting side features of the hearing was a moving picture show given in the Florentine room of the Congress Hotel on Monday evening, July 17, under the auspices of the National Lumber Manufacturers' Association and representing logging operations in various parts of the country from the tree to the mill and manufacturing and distributing operations from the mill to the trade. This was an excellent means of imparting knowledge to many of the interested attorneys and traffic men, which they probably had not in all their lives had an opportunity to study at first hand.

It seemed to be the aim of the representatives of rival woods to not go to an extreme in their statements as it might affect their competitor, but to present as much of a solidity of argument as they could for the benefit of the industry as a whole. Naturally enough, all of these trade rivalries could not be tucked out of sight or ignored, but it is believed that the Interstate Commerce Commission, in its wisdom will bring out of the mass of evidence submitted, comprising thousands of typewritten pages, a solution of some of the great trade problems that have worried the lumbermen throughout the years.

The hearing was completed, with a few minor features excepted, on Saturday, July 22, occupying twenty-four morning and afternoon sessions and nine evening sessions. Some of the attorneys representing the groups from which the greater part of the evidence emananted must have been worn to a frazzle by the long continued strain, but the commissioner, Mr. Meyer and his two assistants, E. W. Hines and Fred H. Esch, were evidently as serene and unruffled at its close as they were at the beginning of the inquiry.

PREPARATIONS FOR THE CASE.

On the part of the lumbermen preparations for this hearing have been going forward in some instances for fully six months. The various organizations had gotten together and taken counsel with their best men and traffic managers and had diligently worked in preparing statements, exhibits and various items of evidence to support their views of the case. Many witnesses were held in readiness to be summoned from thier homes who were not requested to come, for the reason that the evidence already in sight was growing to tremendous proportions. Many who came at the request of their counsel were not called upon to testify for the same reason and many who were put on the stand simply endorsed the views as expressed by a preceding witness. Toward the last Commissioner Meyer, in his desire to expedite matters, requested the various interested groups still to be heard to endeavor to consolidate upon some single representative who would present the testimony and views of the general group. Accordingly the various interests had a full hearing and much of what had seemed to be a useless waste of effort was thereafter averted.

On the other hand the commission itself had done a tremendous amount of work in preparation, as had likewise the railroad representatives. Many of the exhibits p[illegible] by the various manufacturers' associ[illegible] the most elaborate and painsta[illegible] the one or two which will be found in these columns give only a faint idea of the character and value of the great mass that were filed in the record.

THE FIRST STATEMENT OFFERED.

The first statement offered was that of the southern and northern interests represented by Judge W. A. Wimbish, of Atlanta, Ga. Judge Wimbish's statement was the concrete opinion of the following associations: Southern Pine Association; Southern Cypress Manufacturers' Association; Georgia-Florida Saw Mill Association; Western Carolina Lumber & Timber Association; Northern Pine Manufacturers' Association; North Carolina Pine Association; Hardwood Manufacturers' Association of the United States; Michigan Hardwood Manufacturers' Association; Northern Hemlock & Hardwood Manufacturers' Association.

The statement follows:

"The several lumber lists in which we are concerned, as at present existing, are substantially satisfactory, excepting that uniformity throughout

ROBERT H. DOWNMAN, OF NEW ORLEANS, LA.

President National Lumber Manufacturers Association.

the country is desired. While it may be that some articles might be excluded and others might properly be included, we shall be content if the present list of articles, moving at the lumber rate, should continue without substantial change. Should any change be found desirable our position is that the list should well be amplified and enlarged rather than curtailed.

"Our position is that all of the ordinary and customary products of the saw and planing mill of the lumber manufacturing plant should be included in the lumber list and move under the lumber rate. Speaking generally, the articles now included in the lumber list are not the products of lumber but are products of the log, which, although subjected to an initial manufacturing process, are still lumber and fall within that category.

"We advocate a uniform classification throughout the country of lumber and the usual products of the saw and planing mill to the extent that such classification can be found feasible. Such uniformity is highly desirable in the interest, not alone of the producer, but also of the user. It may be that local conditions will compel exceptions in specific cases within particular territories. Subject to such exceptions the list should be uniform. If this uniformity is to be had, it should be brought about by additions to rather than subtractions from the various lumber lists as now existing. In other words, our position is that the lumber list should be as liberal as may be consistent with correct classification principles and as nearly universal as conditions will permit."

STATEMENT OF THE WEST COAST INTERESTS.

Attorney Joseph N. Teal, of Portland, Ore., presented his statement coincided in by the following associations: West Coast Lumbermen's Association, Eastern Oregon Lumber Producers' Association, Western Pine Manufacturers' Association, California White and Sugar Pine Association, California Redwood Association. Mr. Teal's statement was as follows:

"The territory represented by these associations produced, in 1913, 8,844,490,000 feet of lumber, which was substantially 23.2 percent of the lumber production of the United States.

"1.—The lumber list as applying from the Pacific coast on transcontinental shipments as at present existing, with some few exceptions, is substantially satisfactory. Should any changes be found desirable, our position is that the list should be amplified and enlarged rather than curtailed.

"2.—Our position is that the lumber list should include such products of the log (and essential appurtenances of the product) produced by the sawmills, planing mills and accessory manufacturing plants as will permit the freest movement of lumber and lumber products in straight or mixed carloads at a fair minimum weight, based on commercial necessities.

"3.—There should be included in any lumber list such manufactured by-products as can be secured from waste which is otherwise unsalable, since where the rate permits and encourages the further manufacture and the most advantageous distribution of these by-products, the results are a closer utilization of the tree, an increased footage from the log, more employment for labor, greater tonnage for the carrier and lower cost to the consumer.

"4.—Mixed carloads are essential to wide distribution at the lowest price. This enables the small dealer as well as the large dealer to do business. If the carrier receives a fair revenue for the service performed and the consumer secures the benefit of the most economical manufacture and distribution, it would seem further classification is not desirable and would cause undue and unnecessary burden on the industry and on the consuming public. Broadly speaking, the articles now included in the lumber list are not the products of lumber, but are the products of the log, which, although subjected to further manufacturing processes other than sawing and surfacing, are still lumber and fall within that category.

"5.—While a uniform classification of universal application throughout the country of lumber and its products theoretically might be possible, we do not believe, under the varying conditions under which the traffic moves and the product is handled, it is either desirable or practicable from the viewpoint of the producer, carrier, dealer or consumer. We do believe, however, that the classification can and should be uniform from all lumber producing sections to all common consuming markets.

"Our position is that the lumber list should be as liberal as may be consistent with sound economic principles, and as nearly universal as conditions will permit."

RAILROADS SPRING A SURPRISE.

Lumbermen were surprised and not a little pleased by the statement of Attorney Charles Donnelley, of St. Paul, Minn., speaking on behalf of four of the big transcontinental lines, that these systems cordially approved the statement presented by Attorney Teal on behalf of the lumbermen and that while he represented actively the Great Northern and Northern Pacific roads, he assured the commission that in his statement of endorsement he also represented the views of the Union Pacific and the Chicago, Milwaukee & St. Paul roads. Later Mr. Donnelley stated that his clients also approved the statement presented by Judge Wimbish on behalf of the Southern Pine Association and the other associations he represented.

STATEMENT OF THE MILLWORK INTERESTS.

The Wholesale Millwork Association, which covers all the sash and door manufacturing and jobbing interests east of the Rocky mountains, presented its statement through its attorneys, John

S. Burchmore and Luther M. Walter, of Chicago. The answer of the association was in accordance with Question 3 of the commission's letter of June 20, 1916, covering an outline of the testimony to be developed in this proceeding. Its position is summarized as follows:

(1) Situation unsatisfactory because of no uniformity in rates as between different producing sections and points of consumption and market; (2) a uniform basis on lumber and lumber products is desirable throughout the entire country, as such uniform basis will eliminate preferential and discriminatory rates now in effect; (3) various grades of the same kind of lumber cannot be differentiated in making rates; it is not practicable to make a distinction between rough lumber and dressed lumber; no difference in rates should be made on account of lumber cut to dimension; (4) all wooden house trim should be classed under one group taking rates higher than lumber rates, but still retaining a direct relationship to the lumber rates; this should be a uniform percentage and not a fixed difference in cents per 100 lbs. We believe that a basis approximately 20 percent above the lumber rate is fair and proper for building material including sash, doors, columns, stair work, frames and related trimmings; (5) carriers should provide for a liberal mixture of lumber and wooden building material, the entire shipment to take the highest rate and highest minimum of any of the articles included therein; (6) if transit privileges are granted, they should be made universal and on the same terms throughout the country; (7) from points of origin where no lumber is now produced or shipped, but where there is a substantial production of building material and other products, a revision of the present unused lumber rates will be necessary before such rates can be used for basing rates on other products.

BOX MANUFACTURERS EXPRESS THEIR IDEAS.

This statement covered the National Association of Box Manufacturers, the Eastern Shook and Wooden Box Manufacturers' Association, the North Carolina Pine Box & Shook Manufacturers' Association and the Northwestern Shook Association and was presented by Attorney James C. Jeffery. It answered the interrogatories of the commission to the effect that the present rate adjustments and classifications are unsatisfactory to the wooden box industry. The associations said that they believed it would be highly desirable to their members to have a uniform lumber list and a definite relationship between lumber and lumber products, as stated to the commission in replying to its interrogatories some time ago. However, there is now a uniformity of description on raw material and a uniformity of description on the manufactured product and a definite relationship is already fixed between lumber and wooden box material; that is by having wooden box material (meaning shooks low grade veneers, one-eighth of an inch and over thick as used in box factories) take the lumber rate. Hence the interests represented by these associations are satisfied with the present situation surrounding the transportation of the raw ma

The "Reclassification Hearing" as it Appeared to an Unprejudiced Observer

The editor of the LUMBER WORLD REVIEW asked R. S. Kellogg, secretary of the National Lumber Manufacturers' Association, for a statement in connection with the Interstate Commerce Commission hearing on Docket No. 8131, on the principle that Mr. Kellogg had heard nearly as much of the testimony as Commissioner Meyer himself; that he had been a student of the matter since the beginning and that any resumé of the hearing he might write would be unbiased and informative, and here is what Mr. Kellogg has to say:

STATEMENT OF R. S. KELLOGG.

"The investigation by the Interstate Commerce Commission, which has been going on for the last twelve months, in the matter of the rates on and classification of lumber and lumber products, culminated in the hearing before Chairman Meyer in Chicago July 10 to 22.

"There was a large and representative attendance throughout the hearing of all branches of the lumber industry and of all the leading carriers, appearances on both sides comprising practical operators under the direction of prominent attorneys and traffic men. A tremendous amount of information was given the commission both in the way of oral testimony and voluminous exhibits, the transcript of the testimony alone exceeding 4,000 typewritten pages.

"The eastern associations affiliated with the National Lumber Manufacturers' Association had for their counsel and attorney William A. Wimbish, of Atlanta, Ga., and the western organizations, Joseph N. Teal, of Portland, Ore. There was complete harmony throughout the hearing between the lumber manufacturing and lumber retailing interests in support of the resolution adopted at the conference held in Chicago, September 15, 1915, to the effect that all the ordinary and customary products of lumber manufacturing plants should be permitted to move in straight or mixed carload lots at one rate; and the evidence introduced strongly supported the contention that it would be altogether impractical to make a classification which would result in a wide differentation of the products of sawmills and planing mills connected therewith.

"In strong contrast with the harmonious and concerted action of the lumber manufacturers were the contentions set up by the railroads. The representatives of the Western Transcontinental Lines fully endorsed the position of the lumbermen with respect to a broad classification, while the Southern and Central Freight Association lines favored a basis consisting of present lumber rates to apply on rough lumber, logs, posts, poles and other rough material; that lumber rates plus 5 percent should apply on dressed lumber of a certain class; that a further manufactured class should take 10 percent higher rate than rough lumber, while a 20 percent differential should be placed upon still another group, with many articles removed entirely from the lumber lists, and rates thereon made without any reference to the lumber rates. In supporting this classification, however, the representatives of the southern carriers met with many difficulties.

"The contention of the Wholesale Millwork Association that the rates on sash and doors should be on a percentage basis above the lumber rates, was effectively answered by the west coast lumbermen with respect to the movement of stock doors and sash of pine and fir from that territory to eastern markets.

"No interests aside from the Wholesale Millwork Association, the Southern and Central Freight Association carriers contended that a percentage differential is the only correct means of making differentials over the lumber rate. Representatives of many carriers and other interests sustained the position of the lumber manufacturers that in case differentials are made, the only practical basis is a flat differential.

"Commissioner Meyer handled the hearing with great fairness and expedition, and at the close asked that briefs by counsel be submitted on or before November 1, 1916, and reply briefs by November 20. It is expected that oral arguments will be called for during the first week in December and that the commission will announce its findings at as early a date as practicable thereafter.

"This is the most important traffic case that has ever come before the entire lumber industry of the United States, and the manufacturers have every reason to be proud of the excellent presentation of their interests made by their counsel and the many prominent lumbermen from all sections of the country who testified before the commission, and gave freely of their time in the service of the best interests of the industry."

R. S. Kellogg

Digitized by Google

terial to the mill and the output therefrom. Wherever wooden box material does not take the lumber rate it takes lower than the lumber rate and we respectfully urge that should the commission decide that the present situation should be changed, box material be given this lower rate for the reason stated in answer to Question 5 propounded by the commission.

Relative to Question 3 B, the box interests say that the classification of lumber and box shooks is practically uniform throughout the country at present and "we believe that this present adjustment should be permitted to stand, as it is the result of many years of development and evolution in the lumber and wooden box industry of the United States and a natural adjustment resulting from competition between carriers, producing territories, manufacturers and markets. We believe that any endeavor to change the present adjustment would work a much greater hardship than allowing this adjustment to remain as it is. We feel that such minor inequalities as exist in the present rate adjustment can be readily remedied by proper procedure before the Interstate Commerce Commission instituted by any of the few individuals who are dissatisfied."

NATIONAL HARDWOOD ASSOCIATION'S STATEMENT.

The position of the National Hardwood Lumber Association was set forth in a statement offered by John W. McClure, of Memphis, Tenn., and was as follows:

"The National Hardwood Lumber Association is an organization of manufacturers of and dealers in lumber. It is the position of the association that rough lumber, dressed lumber of all grades, and all unfabricated wood articles should take the same rate. It is frequently necessary to make different rates on the different species of lumber. To advance all rates to the highest level would result in undue discrimination. As an illustration: The hardwood rates in Arkansas average 1 cent higher for each additional fifty miles, whereas the yellow pine rates are blanketed over a large territory. To apply this blanket adjustment on hardwood rates would result in undue discrimination.

"The present situation is unsatisfactory in the following respects: Owing to the lack of transit arrangement, much low grade lumber is destroyed which could otherwise be shipped to concentrating and manufacturing points and there utilized and manufactured into many wood articles.

"Classification of lumber and lumber products should be uniform throughout the country."

STATEMENT OF SOUTHERN HARDWOOD TRAFFIC ASSOCIATION.

J. H. Townshend, manager of the Southern Hardwood Traffic Association, Memphis, Tenn., presented the statement of his association which was, in many respects, similar to that of the National Hardwood Lumber Association offered by Mr. McClure. A brief summary of Mr. Townshend's statement follows:

"The Southern Hardwood Traffic Association embraces about 105 producers and wholesale distributers of hardwood lumber in the lower Mississippi valley.

"Hardwood timber generally is found in comparatively small stands. Lumber is, as a rule, more accurately manufactured by band mills which require large investments, hence such mills usually are established at logical points and bring in their logs by rail from a radius of 100 miles. There also is a substantial production of hardwood lumber by small circular mills, but this lumber almost invariably moves to relatively near assembling points where it is graded, assorted, dried or manufactured into wood articles and shipped to consuming points. It will, therefore, be seen that a large part of all the hardwood lumber that moves to the markets previously has paid a transportation charge either in the log or as lumber in a rough, green or partly dried state, or both in the log and as rough lumber.

"Eighty percent and more of all hardwood lumber reaches the consuming markets in a rough sawed state. The reason for this is that hardwood lumber is used in various wood-working industries, such as furniture, vehicle, interior finish, box factories, etc., which to a large extent are established near the centers of population."

Relatively low log rates obtain to nearby milling points located on the rails of the line originating the logs and rates on lumber to consuming markets have been established with a view to enabling producers in one section to ship into logical markets upon a competitive basis with producers in other sections.

The statement referred to the recent advance in hardwood lumber rates south of the Arkansas river on the west side of the Mississippi to the yellow pine basis. It also recited the situation east of the Mississippi where rates on cottonwood and gum have been less than the rates on oak and other woods. The statement regarded this adjustment as being sound, in view of the lesser value of gum and also the fact that gum timber or stumpage cannot be utilized to the same advantage as oak or other hardwoods.

"It is not our contention that the rate on each species of wood in all instances should be different from the rates on the other species, but only that the principle should be recognized that the rates on all species should not necessarily be the same, and that the controlling considerations in determining what they should be ought to be the competitive factors."

Attention is called to the fact that the average loading of an important hardwood sawmill at Memphis during 1900 and 1901 was 37,027 pounds a car, whereas the same company from June 1, 1915, to March 10, 1916, loaded an average of 54,529 pounds a car, an increase in fifteen years of 17,502 pounds per car.

The approval of the association was given to the milling-in-transit privilege, whereby logs could be moved to nearby milling points and the mill product could go on to consuming markets on the regular lumber rate. In the yellow pine region east of the Mississippi river, the milling-in-transit privilege permits the shipment of rough lumber into manufacturing points and the reshipment of the

JOSEPH N. TEAL, OF PORTLAND, ORE., Attorney for Western Lumber Interests.

dressed stock on substantially through rates from point of origin to destination. Low rates on logs are approved, for the reason that they are essential to the utilization of scattered hardwood tracts.

The association approves reconsignment and believes that the service should be maintained.

Mr. Townshend presented individual statements from Moore & McFerren, of Memphis, Tenn., on behalf of built up box material, who stated that such material might properly pay a higher rate than lumber. He also presented statements from the Anchor Sawmill Co., of Memphis; J. Elwood Cox, High Point, N. C.; D. H. Williams, Belzoni, Miss.; E. J. Willingham, Memphis, Tenn.; J. Murchison, Dickson, Tenn.; C. D. Roberts, Greensboro, N. C., and Norris Bros., Greenville, S. C., all of whom are engaged in the manufacture and sale of shuttle blocks and rough sawn wooden billets, who stated that in their opinion shuttle blocks should take no higher rates than that applied to lumber. There was also a statement from the Kansas City Shook & Manufacturing Co., of Kansas City, Mo., manufacturing trunk slats, which, the company said, should take no higher rate than that applied to lumber. All of these concerns favored uniform classification on lumber and lumber products throughout the country.

VENEERS AND CROSS TIES.

J. V. Norman, representing the National Veneer & Panel Manufacturers' Association and various producers of cross ties, presented statements from these two interests. The former stated that built up wood might properly pay a slightly higher price than lumber, but not to exceed 10 percent and that no difference in classification or rating should be made by reason of the thickness of lumber.

The cross tie interests stated that the practice of a majority of southern roads in classifying ties as lumber make the rate so high that it is impossible to ship ties from a great many parts of the producing sections, particularly those not near the Ohio or Mississippi rivers or their navigable tributaries. Hence the shipment of ties from a great part of the south, where most of them will have to be produced in the near future, is cut off. The tie interests also stated that ties should be classified lower than rough lumber and in some instances should have the same rate as logs.

MR. DOWNMAN THE FIRST WITNESS.

Most of the group statements having been presented, the first witness was called in the person of Robert H. Downman, of New Orleans, La., president of the National Lumber Manufacturers' Association. The statement filed by President Downman was as follows:

"The National Lumber Manufacturers' Association was organized fourteen years ago, and now has as its membership: California Redwood Association, San Francisco, Cal.; Georgia-Florida Sawmill Association, Jacksonville, Fla.; Hardwood Manufacturers' Association of the U. S., Cincinnati, O.; Michigan Hardwood Manufacturers' Association, Cadillac, Mich.; North Carolina Pine Association, Norfolk, Va.; Northern Hemlock & Hardwood Manufacturers' Association, Oshkosh, Wis.; Northern Pine Manufacturers' Association, Minneapolis, Minn.; Southern Cypress Manufacturers' Association, New Orleans, La.; Southern Pine Association, New Orleans, La.; West Coast Lumbermen's Association, Seattle, Wash.; Western Pine Manufacturers' Association, Spokane, Wash.

"The purpose of organizing the National association among the manufacturers of lumber was not to cover any combinations for the suppression of competition or the control of prices, but was for the purpose of bringing together the lumber manufacturers of the country generally to discuss questions of economy, service to the public and the general betterment of manufacturing conditions and the distribution of lumber to the ultimate user, as we believe by the maintaining of an association of this kind that we can subserve the general interests of the public and bring about a better utilization of our forests from a conservation standpoint.

"At the meeting held in Chicago on September 15-16, 1915, to consider the seventeen questions propounded by the Interstate Commerce Commission under Docket No. 8131, the following resolutions were unanimously adopted:

" 'Whereas, It has been brought to the attention of this body that the Interstate Commerce Commission has entered into an investigation of rates, classification, rules and practices relative to the transportation of lumber and lumber products; and,

" 'Whereas, The subject of such investigation is of vital importance to every lumberman, it is not only advisable but necessary, in order to protect the interests of the lumber manufacturers and consumers of lumber of this country in said investigation, that a common position and a united and concerted action be taken by said manufacturers and consumers of lumber.

" 'Resolved, That this body is strongly of the opinion that there should be no change in the classification of lumber and lumber products which would or might result in different rates on the ordinary and customary products of the lumber manufacturing plants, whether shipped in straight or mixed carload lots.

" 'Resolved, That this body is convinced that lumber has borne more than its proper proportion of the expense of transportation, and any reclassification will only result in a higher basis of rates.'

"These resolutions emphasize the attitude of the manufacturing lumbermen and allied interests.

"The answers to the seventeen questions, which were filed by the various affiliated associations through the National Lumber Manufacturers' Association, set forth clearly the general attitude of the lumber manufacturers of this country in regard to this so-called reclassification of lumber. These answers also show that it is the general belief of the manufacturing lumbermen that there is great advantage to the general public and the users of lumber that there should be a liberal lumber list adopted and maintained by the carriers, by which all products of lumbering plants should move in straight or mixed cars under what is known as the lumber rate. By making these so-called lumber lists liberal, it tends toward a closer utilization of the timber taken from our forests, and particularly if this utilization is made at points near the timber supply. It saves waste in

Digitized by Google

allowing the manufacturer to use what is ordinarily called refuse of their logs, which would otherwise be wasted and burned at the point of production. I think that it will be shown conclusively by the evidence of the witnesses produced before your body by the manufacturing lumbermen that all ordinary articles moving from the ordinary lumbering plants are simply lumber in whatever form they may be, and are simply the product of the log, all of which require further processing before they can be put into final use.

"It is our belief that all lumber, whether rough or dressed, should move freely from one end of the country to the other through the various classification territories in straight or mixed carloads at the lumber rate. This, we believe, will not only be of benefit to the shippers but to the carriers alike. If it were otherwise, it would necessitate a rigid policing of all shipments of lumber by the carriers, and thereby very much increase their expenses in the handling of this character of traffic.

"As we take it, we are here for the purpose of rendering every possible assistance that we can to your honorable body in trying to arrive at a harmonious and satisfactory solution of the problems involved in this hearing, and wish to tender to you the services of our association and its members in any way that you may find that they can be of assistance to you."

Mr. Downman was cross-examined briefly on his statement and said that the present rate adjustment is satisfactory to the allied organizations of the National Lumber Manufacturers' Association. He stated that the National association was not of itself a party to the present investigation, the allied bodies only being represented. He believed the present rate situation to be satisfactory to at least 75 or 80 percent of the lumber producers of which he had knowledge.

SECRETARY KELLOGG PRESENTS STATEMENT.

In his statement regarding general features of the lumber industry, Secretary R. S. Kellogg, of the National Lumber Manufacturers' Association, presented an interesting statistical compilation of the allied associations, whose production in 1915 aggregated 12,163,537,000 feet. He also gave figures on the timber supply, showing the quantity of standing timber in the United States on 550,000,000 acres to be 2,800,000,000,000 feet of stumpage. He presented also as a part of the record the interesting book which he had written on "Lumber and Its Uses," in which many of the most important features of the lumber industry are brought up to date, all of which was of decided interest to the commission as well as to the general public.

As a part of his compilation, Mr. Kellogg gave the average mill values of the principal kinds of lumber in 1915 and back to 1899. This will prove valuable to lumbermen as showing the measure of the widely advertised advances that have taken place in various lumber items. It will be seen that while higher than in 1899, values on most items are much lower now than in several recent years.

Monday Afternoon's Session

July 10, 1916

MR. SNELL ON BEHALF OF YELLOW PINE INTERESTS.

H. H. Snell, of the Lathrop Lumber Co., Birmingham, Ala., chairman of the reclassification committee of the Southern Pine Association, presented very fully the position of the southern manufacturers of pine. Mr. Snell read into the record the answers of his committee to the questions propounded by the commission in its pamphlet dated June 20 regarding the testimony to be developed at this inquiry. He referred to the resolution adopted by various lumber manufacturing associations at their meeting in Chicago on September 16, 1915, in which it was recommended that there be no change in the classification of lumber or lumber products which might result in different rates on the ordinary and customary products of the lumber manufacturing plants, whether shipped in straight or mixed carloads.

Position of Yellow Pine Men.

In its answer to the questions, the reclassification committee stated that the present situation was unsatisfactory because of the discrimination on the part of the carriers in publishing exceptions or tariffs applying from one lumber producing section of the country more liberal in their provisions than those applying to another lumber producing section. It also stated that a uniform classification throughout the whole country is feasible and desirable. In more specific detail Mr. Snell, on behalf of his committee, stated that with regard to a difference in rate on rough and dressed lumber, as has been proposed, the committee answered that "the element of value is not determinative, as some rough lumber is worth more than some dressed lumber and vice versa, depending upon grades. By rating both the same, these value conditions are equalized." This is illustrated by the committee in No. 3 common flooring, which is less valuable than the A grade or boards rough and would move at the higher rates. The committee pertinently asks: "If the lower charges on the higher valued article would be satisfactory to the carriers, how could they expect the higher charges on the lower valued article to be satisfactory to ourselves?"

Other potent reasons were given for the maintenance of the present status.

Regarding competition, the committee stated that lumber is today produced largely in the border sections of the nation and all species compete with each other in the eastern, central and middle sections of the country. Yellow pine for finishing purposes competes wtih redwood, white pine, cypress, oak, birch and other woods in that territory. Yellow pine flooring competes with white pine, maple, gum, hemlock, oak, beech and birch flooring in the same territory. Yellow pine dimension competes with fir from Oregon and Washington, with hemlock and Norway pine from Minnesota, Wisconsin and Michigan. Cypress shingles compete with redwood shingles from California, with red cedar shingles from Washington and Oregon, with white pine and white cedar shingles from Washington and Michigan. Yellow pine lath compete with cypress from southern producing territory, redwood and fir from the west coast, hemlock and white pine from Michigan and Wisconsin, spruce from Canada and Maine.

"In fact the output of southern pine mills comes in competition with lumber from all other lumber producing territories, wherever and whenever such lumber is adapted to the same purpose and enters into common use."

Relative to Transit Provisions.

The statement of Chairman Snell as to transit provisions and privileges was that they were necessary in the movement of lumber, but should be uniform in all sections of the country and the carriers should receive recompense for all extra service rendered. There are many small sawmills scattered throughout the yellow pine territory and dressing in transit becomes a necessity in their case. For similar reasons creosoting in transit is necessary. The committee, however, condemned the practice of many concerns putting car loads of lumber in transit prior to their sale and said that there should be a reconsignment charge of not less than $5 a car, which would tend to minimize the abuse of the privilege. The committee contended that the yellow pine manufacturer must be allowed to ship any or all of the items manufactured by the ordinary planing mill in any one car in order to economically and successfully operate his plant. The consumer also requires the same privilege to construct his building.

Regarding the shipment of extra long timbers, the committee recommended that when these shipments are made on two or three cars the carriers should be allowed a minimum that would not be less than the proper minimum for a car of sufficient length to carry the shipment. The rule

INTER-INSURANCE MAY TAKE DAILY PAPER INFLUENCE TOO SERIOUSLY.

Is is very possible to take daily paper influence on the inter-insurance matter altogether too seriously; for we have known—before now—of instances of daily papers setting up hurdles of arguments against this and that just for the purpose of getting the THIS and the THAT to put up a little money for advertising in the publication that had had the lovely "hurdle" IDEA.

There is utterly no doubt but that the shingle manufacturers have found that to be a fact—at least they have if they have made close investigation. At all events the LUMBER WORLD REVIEW has found it to be true.

The attitude of the Toronto, Canada "Saturday Night" is so totally out of the way, and so entirely lugged in to be made a part of the scenery that we reprint an article from that publication of June 17 and follow with a letter from E. B. Walker, general manager of the Lumber Manufacturers' Inter-Insurance Association of New York.

The title of the article in the Toronto "Saturday Night" was "Look Closely to Your Inter-Insurance." The article follows in the quoted paragraphs below:

"Recent developments in inter-insurance in Canada should cause those who are accepting policies with inter-insurers to carefully investigate the character of the contract into which they are entering.

"The Lumbermen's Indemnity Exchange of Seattle, an inter-insurance organization, insured the Forest Mills Timber Co. of Comiplex, B. C., for a fire loss which occurred on April 4, 1915. This firm had $170,500 insurance with the Lumbermen's Indemnity Exchange, and $62,500 with licensed companies. The latter paid the loss, but the inter-insurers refused to pay, and the Forest Mills Timber Co. sued a member of the Inter-Insurance Exchange, the Adams River Lumber Co., Limited, also located in British Columbia, for its proportion of the loss, as the Adams River Lumber Co., Limited, was located within the jurisdiction of Canadian courts. However, the Adams River Lumber Co. refused to pay on the ground that the Lumbermen's Indemnity Exchange was not authorized to engage in the business of fire insurance in British Columbia, and that the Adams River Lumber Co., Limited, was not empowered to make an insurance contract. This latter point is a matter of very great importance, because many firms in Canada are entering into inter-insurance contracts, and it is doubtful whether their charters or the law permit them to engage in an insurance business as inter-insurers. If that be the case, then the contracts are absolutely valueless. One of the objections in connection with inter-insurance is that suit must be brought against each member of the inter-insurance organization in the event of a disputed claim and as these members are scattered all over the American continent, the cost of collection would be enormous.

"Inter-insurance should not be engaged in by any firm until the rights of all the parties are clearly established, which is not the case in Canada, and it certainly should not be undertaken with unlicensed companies under any circumstances."

Herewith, appended, is Mr. Walker's reply in the shape of a quotation of a letter from him, dated as follows:

"New York, N. Y., July 10, 1916. The Editor, The 'Saturday Night,' Toronto, Canada.

"Dear Sir: In your paper of June 17, on page sixteen, is an article entitled, 'Look Closely to Your Inter-Insurance.'

"In this article, referring particularly to the Forest Mills loss, which loss was disputed by the Lumbermen's Indemnity Exchange of Seattle, you make certain statements which are not true. You make the statement that one of the objections in connection with inter-insurance is that suit must be brought against each member of the inter-insurance organization in the event of a disputed claim, and that as these members are scattered all over the American Continent, the cost of collection would be enormous.

"I am enclosing herewith a pamphlet entitled 'A Reply to an Attack on Inter-Insurance,' which I think pretty well covers the situation. I would be obliged if you would kindly rectify the misstatement made in your paper, or advise me of any further comments you might have to make in the matter.

"Awaiting your further advices with interest, I remain

"Yours very truly,

"E. B. WALKER."

Digitized by Google

adopted in the southeast for shipments to Central Freight Association territory of 34,000 lbs. for the initial car and 17,000 lbs. for each trailer seems fair.

Mr. Snell was cross examined at considerable length, especially on the point of where the line of demarcation was between lumber and a higher product. He took the ground that his own company manufactured nothing but lumber and did not believe that any two people could agree where the line should be drawn.

MR. WISNER SUPPORTS PRESENT CLASSIFICATION.

Frank G. Wisner, treasurer of Eastman, Gardiner & Co., Laurel, Miss., was the next witness, but did not finish his testimony at this session. Mr. Wisner stated that he endorsed the position outlined by Chairman Snell. In his opinion the product of the sawmill should take a uniform lumber rate. He stated that it is in the line of economy for lumber to be surfaced and otherwise worked at the sawmill instead of at other points. It is not only better for the manufacturer, but better for the consumer. The manufacturer's charge for working lumber is generally 50 cents a thousand feet and if it is done at destination points or at custom mills enroute, it would probably cost at least $1 a thousand feet and perhaps $1.50 or more. This extra cost must necessarily fall upon the consumer and if a differentiation were established as between rough and dressed luumber, this cost would also fall upon the consumer. Mr. Wisner's examination was suspended until the next day.

Tuesday Forenoon's Session
July 11, 1916

POSITION OF THE SOUTHERN CARRIERS.

At the opening of the session Tuesday morning a statement was presented by C. L. Rixey, jr., of Washington, D. C. representing Southern railway lines. In this statement Mr. Rixey set forth the position of his clients, which, in its general features, may be summed up as follows: The southern lines understand that neither the measure of rates nor their reasonableness are involved in this proceeding and that testimony will not be presented with reference to the amount of the present rates or the adequacy of the revenues at present derived from the transportation of lumber and lumber products. He states that rates on lumber were originally established to provide for the movement of rough lumber and that the lumber list had been extended from time to time to include such other articles, without any corresponding change having been made in the rates themselves.

The southern lines understand that the investigation involved is a question as to whether wooden articles partly or completely manufactured should take the rate applying on lumber and whether lumber dressed or partly manufactured should be continued on the existing lumber basis.

The southern lines will confine their activities to adjustments in the producing sections of the Carolinas, southeastern and Mississippi Valley territory. The southern lines are firmly convinced that a number of articles in the present lumber list should be graded higher than lumber and their efforts to submit suggestions to the commission as to a revision of the lumber list are in reply to the direct interrogatories propounded by the commission in this proceeding.

The commission has stated in the Eastern Wheel Co. case, in the Anson, Gilkey & Hurd case and in the Yellow Pine Sash, Door & Blind Manufacturers' Association case that there should be a reclassification of the lumber list and if a revision is to be made with a view to establishing uniformity in southern territory that the revision submitted by the southern carriers, to be further explained in these proceedings, is the best solution that can be offered.

It is the position of the southern carriers that when the manufacturing process has been carried to a point where a new commodity is created, the rate relation as compared with raw material is destroyed and it is impracticable to undertake to fix rates on processed or finished wooden articles with any fixed relation to rates on lumber.

The southern carriers are of the opinion as to lumber and lumber products produced in the south that uniformity is practical as to the great bulk of the product.

MR. WISNER'S TESTIMONY CONCLUDED.

The examination of Frank G. Wisner was resumed on Tuesday morning. His testimony was confined [illegible] to the customs followed in distributing the lumber and to the practical features of its production. The purpose of the inquiries was very largely for the enlightenment of the commission as to the degree of manufacture of products taking the lumber rate. He stated that if a higher rate were charged for dressed lumber than for rough lumber, the mills would be forced to refrain from shipping dressed lumber, in which event lumber would be sent to custom planing mills near the point of consumption. This would make the cost of dressed lumber higher to the consumer. If the planing mills were forced to shut down in consequence of this proposed reclassification, he knew of no purpose for which they might be operated and they would become a dead investment.

Attorney Rixey inquired whether, if the commission should instruct the railroads to form a new classification, the line would not be drawn only between rough and dressed lumber? Mr. Wisner stated that this might be the easiest way to settle the question, but not the most logical.

MR. KEITH ON RECONSIGNMENT.

Charles S. Keith, president of the Southern Pine Association, made a very earnest statement regarding the transit car question. He said that he had suggested to Commissioner Parry, of the Federal Trade Commission, that there should be a joint hearing between the Federal Trade Commission, the Interstate Commerce Commission and the carriers and shippers of lumber on the subject of the transit car. He stated that the transit car privilege had grown to be an evil of such proportions that it had entered into the field of unfair trade practice by putting in transit cars for which the shipper

CHARLES S. KEITH, OF KANSAS CITY, MO., President Southern Pine Association.

has no orders and which are sold before they reach destination and are reconsigned. Also that by reason of the large amount of cars placed in transit, many of which are not sold before reaching their destination, it has become necessary to re-bill them to other points, which has a tendency to create congestion at terminal points ahd cause a shortage of cars for legitimate business. In his opinion the Interstate Commerce Commission would probably consider only the reasonableness of the charge for reconsignment, but in Mr. Keith's opinion the matter should be handled as a dual proposition; not as a reconsignment question, but as an unfair trade practice for the purpose of doing away with the abuse of the transit car privilege. In his opinion $25 a car would not be an excessive charge. Some might consider $5 a car as a reasonable charge for this privilege in the coal industry, but not so in lumber, which has a value much greater than coal. Regarding the reclassification of lumber as between rough and dressed stock, Mr. Keith stated that it would result in an increased transportation burden, and would probably have the effect of reducing the amount of lumber planed at the mill plant. It would also break up the averages secured by the mill men for their product.

Mr. Keith said that the lumbermen had no quarrel with the present classification, but if a new classification is ordered, which resulted in an increase in freight rates, then the lumbermen would want to go into the whole subject of freight rates to show the inequality of lumber rates as compared with those of other commodities. They would want to know why a carload of grain, worth $900, went from Kaansas City to the eastern seaboard at a cost of $146, while a car of lumber, worth $340, took a rate of $144, and a car of live stock, worth $3,200, went for $72.60. Lumber is bearing now a higher cost of transportation than it ought to bear, but the lumbermen have no complaint to make about the present situation.

STATEMENT OF THE WESTERN TRUNK LINES.

O. W. Dynes, attorney for the Chicago, Milwaukee & St. Paul railroad, presented a statement setting forth the position of the lines in Western Trunk Line territory. This was substantially as follows. (1) The lumber list now in effect on lines in Western Trunk Line territory is satisfactory and should not be enlarged or materially changed; (2) it should include the products of logs generally produced by the ordinary lumber mill and planing mill; (3) it should not include lumber products that are manufactured beyond the usual status of stock lumber and should exclude articles ordinarily the products of industries classed as factories as a counter distinction from mills engaged in sawing logs and planing or finishing stock lumber; (4) the list should be comprehensive enough to enable small shippers and dealers as well as large to avail themselves of the benefit of carload rates; (5) the carriers agree with the statement made on behalf of the West Coast Lumbermen's Association and others to the effect that a uniform classification, applicable throughout the country, of lumber and its product is not practical in view of the varying conditions under which the traffic is produced and moved in different parts of the United States; the carriers operating in Western Trunk Line territory feel that the classification, now practically uniform on shipments originating in that territory and the tariff rules and regulations applicable thereto, are suitable to conditions under which these carriers operate and cannot be changed consistently or economically to meet the terms of uniformity existing in other territories, where many conditions appear to be essentially different.

MR. JONES, OF FLORIDA, TESTIFIES.

W. Frazier Jones, of Jacksonville, Fla., president of the Georgia-Florida Sawmill Association and general manager of G. F. Baxter & Co., manufacturing yellow pine and cypress lumber at Pensacola, Fla., expressed himself as being opposed to any change in the present classification. He said that the product of the saw mill was all lumber in some form and that there could be only one rate as heretofore. The only complaint that had been expressed by the members of his association was that there was a lack of uniformity in the lumber rate. However, he did not believe in any change in the rates on rough and dressed lumber. This, he said, would open wide the doors in encouraging dishonesty in the lumber trade and a premium would be placed upon dishonorable practices. Many years ago, when there was a differential between rough and dressed lumber, a large part of the product was billed out at the lower rate.

Tuesday Afternoon's Session
July 11, 1916

MR. HALLOWELL GIVES TESTIMONY.

R. M. Hallowell, president and general manager of the Industrial Lumber Co., of Elizabeth, La., stated that in his opinion the lumber manufacturer actually needed to have a planing mill as an adjunct to his saw mill operations. Planing mills were located at lumber producing points from motives of economy, because the planing mills could handle the lumber easier from the saw mill than if it were sent out rough and planed or surfaced at some custom mill enroute to the consuming market. He did not believe that the planing mills were profitable, but the manufacturer was compelled to have them in order to cater properly to the needs of the trade.

MANUFACTURING PROCESS IS DESCRIBED.

C. P. Myer, assistant general manager of the Kirby Lumber Co. at Houston, Tex., presented much testimony of a technical character pertaining largely to the various processes of manufacture at the saw mills. He stated that only about 70 percent of all the timber felled in the woods actually reached the saw mill and that 50 percent of this 70 percent became ultimately waste material. He stated that it was difficult to say how much of

Digitized by Google

this lumber could find a market with the box industry, this being dependent entirely upon the nature of the material. He did not know of there being any box factory in the Texas yellow pine district operated in connection with a saw mill. In his opinion the box making business could be made successful only by those who were regularly engaged in that industry as a specialty. He stated that a thousand feet of logs would weigh from 10,000 to 12,000 pounds and that the lumber manufactured from that would weigh only 2,000 to 2,500 pounds and the difference was waste. After the lumber had been dried there was a further loss of 28 to 30 percent on account of the evaporation. Mr. Myer said that the Kirby Lumber Co. had never operated a planing mill at any of its plants for the reason that it never saw one that was operated at a profit.

MR. KIRBY'S POSITION.

John H. Kirby, president of the Kirby Lumber Co., said that he had been in the lumber business for thirty years and none of the products that he manufactured took anything but the lumber rates. What he wanted was uniformity. Because there was a little steel in the main spring of a watch no one could claim that watches should be shipped on the same rate as steel rails. He did not know of any advantage that might accrue to the lumber manufacturer, dealer or consumer that could be derived through a differential on rough and dressed lumber. There might be a lot of things manufactured from wood that might take a different rate than a lumber rate, but there was no more reason for the same rate in such instances than for applying the same rate to watches and steel simply because watches have some of their parts made of steel. The theory of the lumber business, he said was to find a fair average price for the product, so that it might all be moved to the consumer. If the commission undertook to make a differential based on value or grades, it would be worse than the opening of Pandora's box, and more rats would escape than could be killed. If the system of grading up were to be devised it would disturb the averages, would be demoralizing and lumbermen would be at a loss how to contract for delivery. He did not see how it would be possible to base lumber rates on the value of the product, as in that case there would not be anything shipped above No. 2 common. He thought demoralization would result in the lumber industry if the existing rate on rough and dressed lumber were disturbed.

VIEWS OF A CYPRESS MANUFACTURER.

S. M. Bloss, of the Lyon Cypress Co., Garyville, La., extensive manufacturers of cypress, stated that if there were a differential made between rough and dressed lumber, the railroads would not be able to police their shipments. Because lumber was either rough or dressed, that would be no ground on which to base a differential. The dressing was done for the accommodation of the customer just as though each board had been wrapped up and a charge was made for the wrapping. The lumber was the same whether rough or dressed and possessed little difference in value. He said that a man with a three days' growth of beard on his face was the same man after he had been shaved as before.

Mr. Bloss favored the uniform classification of lumber. He said that ninety-five out of every hundred orders received by his company calls for ten or more items in the same car, so that if his charges were to be based on the highest graded article in the car, the rate would be prohibitive. The lumber would then have to go forward on class rates or less than carload rates, or, as another alternative, the consumers would use some other wood. Mr. Bloss compared cypress as a commodity in the lumber market to fancy pickles in a grocery store. He said that cypress stumpage was very high in price and manufacturers leave very little in the swamps aside from the foliage.

MR. NELSON RECITES SOUTHWESTERN CONDITIONS.

M. B. Nelson, vice-president and general sales manager of the Long-Bell Lumber Co., Kansas City, Mo., stated that his company operated nine saw mills manufacturing yellow pine and one manufacturing oak and that these mills were located in Arkansas, Louisiana and Texas. His company produced 475,000,000 feet of yellow pine annually and 18,000,000 feet of oak. Mr. Nelson was asked particularly regarding the technical points of lumber manufacture from the woods to the car. He stated that the present classification of lumber and forest products was not working any hardship on the lumber interests. He was asked about box factories, but said that the company at one time operated two box factories, which were not now in operation because the company had reached the conclusion that it did not know anything about the box making business; that it could be conducted successfully only by those who specialized in the trade and were located near to consuming points. He stated that waste in the woods and at the mill was utilized in one way or another, but instead of turning it into boxes the company found that more could be gotten out of the waste by making lath or short lumber. The company might have made money had the railroads been willing to haul the boxes for nothing. He did not think there was much money in the business excepting to those who made a specialty of it.

In answer to a question made by Attorney Burchmore, Mr. Nelson stated that fir manufacturers on the Pacific coast would ship doors and sash in their cars with lumber and this, however, did not interfere with the sale of yellow pine in the states west of the Mississippi.

Wednesday Forenoon's Session
July 12, 1916

The Northern Pine Association, with a membership of sixteen concerns operating twenty-four mills manufacturing white pine lumber, was represented at the hearing by L. S. Case, of St. Paul, who is in charge of the general Weyerhauser sales interests.

POSITION OF THE NORTHERN PINE MEN.

The testimony of L. S. Case, of St. Paul, was reinforced by exhibits of lumber of various grades and worked in various forms, mostly 6 inches in length and in the shape of mouldings, flooring, siding and other standard products. Mr. Case stated that the Northern Pine Association represented two-thirds of the white pine cut of Minnesota and that it is satisfied with the existing classifications of lumber in its territory. Mr. Case took each of these samples which were exhibited and explained the method of grading. He showed first a board in the rough and then the corresponding board dressed. This enabled the commissioner and his assistants, as well as others interested, to obtain a good idea of what has been described by some of the witnesses as planing mill products.

Mr. Case testified as to the process of manufacturing lumber and showed photographs of the Cloquet Lumber Co., among them being the picture of the interior of a car loaded with rough lumber, flooring, lath and shingles. In the course of his testimony he defined lumber as being the product of logs where manufacture has not proceeded further than running through a planing machine or a resaw.

Regarding transit cars, Mr. Case stated that there were two legitimate reasons for reconsigning, one of which was that the consignee refused the shipment or that the consignor was bankrupt. He was asked by Commissioner Meyer whether he thought that if one reconsignment were permitted per car it would stop the evils complained of, but Mr. Case expressed the opinion that it would not. The commissioner further asked that if reconsigning were entirely dispensed with whether it would not result in transit shipments being made to rate-breaking points and this would admit of the continuance of reconsignment.

In the course of his testimony Mr. Case stated that the dressing of lumber is primarily for the convenience of retailers in order that they might keep their stocks in good condition under the smallest investment possible.

TESTIMONY FROM A RETAIL STANDPOINT.

J. R. Moorhead, Kansas City, Mo., secretary of the Southwestern Lumbermen's Association, presented his views regarding the shipment of mixed cars. In a general way his testimony reinforced that of the manufacturers on this point. Members of his association, he said, were in harmony with the position maintained by the manufacturers on classification. He thought if any changes were to be made it would be desirable to have the same classification throughout the country. The retail trade, he believed, could not be satisfactorily conducted without the advantageous purchase of mixed cars, containing both rough and dressed stock, and if this were discontinued, in his opinion, many of the retail yards in the small towns would be closed. He estimated that 80 percent of the lumber purchased by members of his association was in mixed cars. He stated that in thirty years' experience he had known of less than ten claims for loss and damage on dressed lumber. He believed thoroughly in the idea that the place for dressing the lumber was at the mill, as if a dealer came into a lumber yard and wanted 2x4 dressed and was not able to get it excepting in the rough, he would do without rather than go to the expense of having it dressed. One of the great advantages in having lumber dressed at the manufacturing plant is that orders may be filled rapidly and accurately and he believed that the retail lumber trade appreciated these features.

Wednesday Afternoon's Session
July 12, 1916

More testimony was taken regarding the position of the retailers on the question of a change in classification at the afternoon session. Those who testified were E. F. Hunter, of Chillicothe, Ill., operating a line of retail yards in central Illinois, and John W. Barry, of the Hawkeye Lumber & Coal Co., Cedar Rapids, Ia.

RETAILERS ENDORSE PRESENT CLASSIFICATION.

Mr. Hunter stated that experience and observation had led him to believe that dressing and surfacing lumber at saw mills where the lumber is produced instead of at custom mills, located at some intermediate point between the saw mill and the dealer, was in the nature of economy, not only for the retail lumberman but for the consumer. If there were any higher cost of dressed lumber inaugurated, it would result in higher prices to the consumer who buys his stocks from the country yard. He expressed the opinion that small retailers would lose much of their business if this differential were placed in effect, because it would result in reducing the consumption of lumber materially.

John W. Barry testified along the same general lines as Mr. Hunter and Mr. Moorehead. He said that the saw mills were able to dress lumber cheaper than were the custom mills, which might be located anywhere between the saw mill and the retailer. He believed that the loading of mixed cars was in the interest of both the consumer and the dealers. If lumber were dressed at the custom mills there would be an inevitable rehandling charge, but also probably there would be the reshipment of this lumber to the retailer on local instead of through rates, which would make the lumber cost much more. Where the dressing is preferred at points of production the manufacturer can more easily sort up his stocks to meet the requirements of the retail trade. He thought if mixed cars were done away with it would result in a large number of retailers going out of business. The only benefit that could be derived from this change in reclassification would accrue to the carrier.

STATEMENT OF NORTHERN MANUFACTURERS.

F. M. Ducker, representing the Northern Hemlock & Hardwood Manufacturers' Association, presented a statement prepared by his association, which was in substance as follows.

He said that the product of the eighty-two members of his association comprised hemlock, maple, birch, elm, oak, basswood and ash, of which 60 percent was hemlock, 14 percent maple, 14 percent birch, 6 percent basswood, 4 percent elm and 1 percent each of ash and oak. Hemlock, which constitutes the bulk of this production, is marketed in Wisconsin, Michigan, southern Minnesota, northeastern Iowa, northern Illinois, northern Indiana, nothern Ohio, Pennsylvania and New York. With regard to hardwoods, the consumption is more general and they are distributed throughout the entire country. The principal competitors of hemlock, he said, were yellow pine and Douglas fir, while the competitors of the northern hardwood originated in nearly every part of the country. The association in 1914 produced 833,513,000 feet of lumber and shipped 626,999,000 feet. Of the quantity shipped, 49 percent went out rough and 51 percent dressed. In hemlock the highest grade produced is No. 1 common and this comprised 44 percent of the total production of the northern mills. He stated the attitude of the association as being in harmony with those in most of the other territories, in that no difference in rates should be made as between rough and dressed lumber.

MR. OSBORN'S TESTIMONY.

The position of Mr. Ducker was reinforced by the testimony of A. L. Osborn, of Oshkosh, one of the prominent members of the same association. Mr. Osborn said that the eighty members of his association produced 1,000,000,000 feet of lumber annually in the ratio of 60 percent of soft woods and 40 percent of hardwoods. He was satisfied with the present classification on rough and dressed lumber. He

Digitized by Google

recommended, however, that a lower rate on waste material might permit manufacturers to make useful articles out of that part of the log that is now regarded as worthless, because it could not stand the present freight charges. He thought, however, that a uniform lumber list would prove helpful to the trade.

Thursday Morning's Session

July 13, 1916

The position of the Michigan Hardwood Manufacturers' Association was presented in a statement filed by J. C. Knox, secretary, who was the first witness on Thursday morning.

MICHIGAN HARDWOOD MANUFACTURERS' STATEMENT.

Secretary Knox stated that the Michigan Hardwood Manufacturers' Association was a voluntary organization of sixty-seven lumber manufacturers and was organized in July, 1906. The principal woods manufactured comprise ash, basswood, beech, birch, rock elm, soft elm, maple, hemlock, tamarack, pine, Balm of Gilead, balsam and spruce.

"The products of this association consist of rough and dressed lumber in its various forms, list of which is shown on pages 48 and 49 of report published by the National Lumber Manufacturers' Association entitled "Before the Interstate Commerce Commission" in which report is found the answers to certain questions asked by that honorable body and is now a part of the record of these proceedings.

"The woods manufactured by the members are generally marketed as follows: Hemlock in lower peninsula of Michigan, northern part of Indiana and Ohio and Pennsylvania. Hardwood is marketed in all parts of the United States.

"Yellow pine and fir are the main competitors of our hemlock, while our hardwoods compete with other hardwoods in most sections of the country. Our position is fully set forth and made a part of the record as indicated by our replies to questions asked by the commission under date of August 2, 1915, and in other statements presented through the National Lumber Manufacturers' Association.

"In the experience of members of this association value cannot be considered as a determining factor in the classification of rough and dressed lumber, as the difference, if there be such, is only the added cost of dressing.

"We consider the planing mill to be as important a part of our industry as the saw mill, for the reason that the public will not accept our rough lumber for building purposes, the demand being imperative that the lumber be milled.

"Our lumber requires no special expedition of movement, is not a seasonable crop, but is moving steadily at all seasons of the year in all kinds of equipment, including stock, box, flat or gondola cars.

"Statements presented by us through the National Lumber Manufacturers' Association show a very small proportion of loss and damage to either rough or dressed lumber as compared with the large tonnage hauled.

"It is our opinion that no difference should be made in the rates as between rough and dressed lumber in whatever form they may be and that such changes would only tend to increase the waste, causing a loss of tonnage to the carrier as well as the manufacturer and consumer in general.

MAPLE FLOORING MANUFACTURERS HEARD.

Charles R. Abbott, chairman of the traffic committee of the Maple Flooring Manufacturers' Association and sales manager of the Cummer-Diggins Co., Cadillac, Mich., testified on behalf of the maple flooring manufacturers. He stated that the average annual shipments of the members of the association for the last seven years were about 165,000,000 feet and that this represented 70 percent of the production of maple flooring in the United States. He traced the growth of the industry from its inception thirty-five years ago and while at first it was made up on special order, it has now come to be a regularly recognized commercial article. He described the characteristics of maple and its adaptability for flooring and also gave a description and the uses of the several grades.

Mr. Abbott stated that the average value of maple flooring was as high as that of firsts and seconds [illegible]. He gave a complete description covered by the members of the [illegible]enue derived by the carriers, [illegible]s per car, the average va[illegible]verage contents per car. He showed that the freight paid averaged $92.02 a car and that the average loading was 40,607 pounds. The loss and damage claims were negligible, being only about 3 mills per thousand feet. The average freight charges are 13.6 percent of the value of the product, which he regarded as a high percentage to contribute to the carrier for transportation and asserted that flooring was only dressed lumber and that the large market which has been gained is due to the efforts of the Maple Flooring Manufacturers' Association in its advertising campaign. He asserted that the average value of the flooring is actually less than that of the higher grades of hardwoods and that to increase in any way the freight rate on this product would in reality only penalize the efforts of the lumbermen to utilize all of the hardwood log.

Mr. Abbott also detailed the answers that had been filed with the Interstate Commerce Commission on the twenty-nine questions propounded.

THE ANNUAL BUSINESS MEETING OF THE NATIONAL LUMBER MANUFACTURERS' ASSOCIATION.

The board of governors of the National Lumber Manufacturers' Association held its annual business meeting in the Auditorium Hotel, Chicago, July 11, and transacted little else than routine business and the election of officers for the year. The officers elected were:

President, R. H. Downman, New Orleans, La.

First vice-president, Charles S. Keith, Kansas City, Mo.

Second vice-president, R. B. Goodman, Wis.

Third vice-president, J. H. Bloedel, Seattle, Wash.

Treasurer, John W. Blodgett, Grand Rapids, Mich.

Secretary, R. S. Kellogg, Chicago, Ill.

Bruce B. Burns, of Huntington, W. Va., president of the Hardwood Manufacturers' Association of the United States, was named as director to succeed R. M. Carrier.

R. S. Kellogg was re-elected secretary. E. A. Sterling continues as manager of the trade extension department and H. S. Sackett as forestry expert.

Following the meeting of the National Lumber Manufacturers' Association the Forest Products Exposition directors met and discussed plans for the coming year. Some tentative ideas were really talked of, principally concerning the matter of raising money for any project that might be brought forth. The officers of the Forest Products Exposition Co. were elected and are the same as those of the National Lumber Manufacturers' Association.

Following the general meeting there were meetings of the National Lumber Manufacturers' Inter-Insurance Exchange directors and of the Forest Products Exposition directors.

In conclusion he said that the association emphasized the point that its business was in furtherance of conservation. Hardwood flooring utilizes the short cuttings of lumber down to 9 inches and any effort to make useful the smallest piece of lumber and to eliminate waste is in direct accord with the government's policy of the conservation of natural resources and especially those of the forests.

MR. STRABLE'S TESTIMONY ON FLOORING.

George Strable, president of the Strable Lumber & Salt Co. and also president of the Bliss & Van-Auken Lumber Co., of Saginaw, Mich., and a member of the grades and traffic committees of the Maple Flooring Manufacturers' Association, stated that he had been in the lumber business throughout his business life and in the hardwood flooring business sixteen years. Mr. Strable's testimony was mainly in the nature of describing from a practical standpoint the manufacture of hardwood flooring. He stated that the lumber as it arrived was in the rough and was neither graded nor sorted, comprising all lengths, all widths up to 16 feet, and all thicknesses up to 4 inches. The first effort is to sort and grade the lumber and out of this his company sells the firsts and seconds and select No. 1 common. This leaves No. 2 and No. 3 common which goes into flooring, as well as the poorest of the No. 1 common. The company also utilizes the short pieces from the slab which would otherwise go into the refuse pile and these pieces are cut down to 7 inches in length.

The next step in the process is to kiln dry the lumber and from this it goes into the mill. The rip saw rips it to widths and the next step is the planer, which is in general structure like the ordinary planing machine in a planing mill. This machine surfaces the lumber on each side and also tongues and grooves it, all in one operation. It can also be hollow-backed at the same time that the other dressing is done. The boring of hardwood flooring for nailing has lately been eliminated, he said. From the planer the board goes to the machine which surfaces the lumber on each side and also eliminates the defects and which also end-matches it. After the board is end-matched it is graded and sorted to length and the stock is tied in bundles ready for shipment.

As to the cost of the manufacture of flooring, Mr. Strable said it differed in various localities at various mills. The lumber cost on a thousand feet of hardwood flooring is $5, but a quantity of poor lumber which would not otherwise be used has been recovered. The average selling value of the flooring F. O. B. mill is $33.66 per thousand, which is a great deal less than the value of the better grades of rough maple lumber and that the average value of the lower grades of rough lumber required to produce 1,000 feet of flooring was about $25, plus the labor cost and estimated overhead expense of $3 a thousand feet, making a total of $33.

TESTIMONY FROM CLEVELAND WOODWORKERS.

P. J. Walsh, traffic manager of the Theodore Kundtz Co., Cleveland, Ohio, manufacturing sewing machine woodwork, church work, automobile bodies, school furniture and items of that description, testified regarding the securing of a lower rate on logs. He said that the company obtained its logs in Mississippi and transported them to Cleveland where they were cut up into sizes suitable for their purposes, manufacturing lumber and veneers. Most of these logs are gum, but considerable material was brought from other parts of the south and southwest in log form.

Mr. Walsh stated that the company's mill plants at Cleveland were valued at $250,000 and that between 400 and 500 men were given employment. He was asked by one of the attorneys why the company did not move its plant to Mississippi for the manufacture of veneers and lumber, but stated that the company could not afford to abandon its Cleveland investment and that labor at other centers would not be as favorable in Mississippi as in Cleveland.

Ferdinand Gruess, lumber buyer for the Theodore Kundtz Co., stated that the freight on logs from Mississippi to Cleveland was about $2.40 a thousand feet as a minimum and that the maximum was about $10 a thousand feet. He said that the advantage of having the logs brought to Cleveland was that they were utilized to the extent of 100 percent, there being no waste owing to the fact that all the refuse could be disposed of in Cleveland.

COMPARISON OF PRICES ON ROUGH AND DRESSED STOCK.

George N. Breece, of Charleston, W. Va., president of the West Virginia Timber Co., and also a member of the Grayling Lumber Co., of Monroe, La., and Arkansas City, Ark., gave testimony regarding the utilization of waste lumber and also regarding the production of flooring. Much of his testimony was along lines similar to that given by Charles R. Abbott and George Strable regarding the manufacture of flooring. However, he stated that the price of hardwood flooring on the present market was considerably below the rough lumber of corresponding grade. For instance, firsts and seconds plain oak lumber is delivered in Detroit at $61 to $62, while clear oak flooring is selling there at $54. Select oak boards are sold at Detroit at from $52 to $54, while select oak flooring is sold there at $46 to $47. No. 1 common oak boards are quoted at Detroit at $40 to $42, while No. 1 common oak flooring is selling there at from $34 to $35. No. 2 common oak boards delivered at Detroit are quoted at from $29 to $31.

Digitized by Google

while the factory flooring made from this grade is sold there at $16. He said that the operation of making oak flooring was substantially the same as that of maple flooring.

Mr. Breece displayed a number of samples of chair legs, backs and other small parts of furniture which he had manufactured at West Virginia from slabs and edgings and other waste. He presented one piece which he said sold for $20 a thousand feet board measure and the No. 2 common boards from which it is made are quoted at $26 at the mill. The railroad asks 6 cents more per hundred pounds for this material than it does for the lumber. He thought that this sort of stock ought to move for less than the lumber rate. He said that the freight paid on cars of such material range from $145 to $155. The product weighs 4½ pounds to the foot and had a rate of 32.4 cents to New England territory whereas the lumber rate was 26 cents.

INFORMATION AS TO PARQUETRY.

J. W. Mayhew, assistant to the president of the W. M. Ritter Lumber Co., Columbus, Ohio, gave testimony regarding oak flooring largely along the same lines as given by Mr. Breece. However, a large part of his testimony was devoted to parquetry flooring, which, he said, was manufactured into very short lengths 12 inches and up and cost more to manufacture than the regular flooring. A large percentage of parquetry is made from lumber that could not be used for regular flooring. His company's plant employs seventeen men and turns out only 4,500 feet of this flooring a day. It was manufactured largely from slabs and other waste material and in his opinion should be moved at the same rates as lumber. He also spoke to some extent of dimension stock, of which his company is a large producer and which also he believed should be classified under the lumber schedule.

Thursday Afternoon's Session

July 13, 1916

In securing information concerning the California, Washington, Oregon and Inland Empire lumber situation, the first witness placed upon the stand was F. G. Donaldson, of Seattle, traffic manager of the West Coast Lumbermen's Association.

MR. DONALDSON TESTIFIES ON BEHALF OF WEST COAST.

Mr. Donaldson presented a great mass of statistics on behalf of the entire lumber industry west of the Rocky Mountains. He stated that statistics compiled from fifty-two fir mills showed shipments of 33,722 car loads, of which the average freight paid was $200.18 a car. On this great volume of business the claims for loss and damage totalled only $6,700, or 19.6 cents per car. The statistics given represented 25 percent of the movement. He stated that the freight paid on west coast lumber shipped to eastern territory exceeded the value of the lumber on all stock shipped over a 37-cent rate, value being estimated at the mill.

Mr. Donaldson submitted answers to the twenty-nine interrogatories given in the outline of testimony to be developed by the Interstate Commerce Commission as made up by the commission. He submitted a large number of exhibits, among which were the following: A list of the commodities now taking lumber rates from the north Pacific coast and those taking over lumber rates; a table showing the production and distribution of lumber in the states of Oregon and Washington for the three years, 1912, 1913 and 1914; distribution of red cedar shingles by states from representative mills in Oregon and Washington in 1914; average prices of western Oregon and Washington lumber products during 1915; table showing number of car loads of forest products shipped by rail by forty-one representative mills in California and Nevada, thirty-five in southern Oregon and four in Arizona, showing weight, freight charges paid, loss and damage and other data; table showing destination by states of car load shipments of forest products from pine mills in California, Nevada anad southern Oregon for 1910, 1911, 1912 and 1913; table showing car load shipments of pine from points of origin in California for the same years; rail shipments originating at redwood mills in 1914; various tables showing domestic and foreign shipments of redwood from Humboldt, Del Norte and Mendocino counties for various months of 1915 and for each month in both redwood and white wood from January, 1912, to May, 1916, inclusive; table showing redwood shipments by month and year from 1894 to 1915 inclusive.

Mr. Donaldson stated that the average haul of the 33,722 cars of fir to which he had given previous reference, was 1,000 miles and that the average rate on these shipments was 36 cents a hundred. Mr. Donaldson stated that he saw no reason why, because a different name was given a forest product, there should be charged a different rate than that on another item made in the same way and of the same character.

Mr. Donaldson proved a most interesting witness and showed himself thoroughly well posted on every detail of the Pacific coast and Inland Empire lumber transportation questions. He was well fortified with statistical matter and it was so arranged as to substantiate the points he made in various statements as to classification and weights and other important matters.

Thursday Evening's Session

July 13, 1916

At the session on Thursday evening, the testimony of F. G. Donaldson was concluded and he was followed by A. Larsson, traffic manager of the California industries, inclusive of the California Redwood Association and the California White & Sugar Pine Association.

TRAFFIC MANAGER LARSSON'S TESTIMONY.

Mr. Larsson's statement was substantially as follows: He agreed with the opening statement filed on behalf of the Pacific coast lumbermen by Attorney Joseph N. Teal. He also concurred in the replies that had been given to the twenty-nine interrogatories promulgated by the Interstate Commerce Commission under date of June 20, 1916. He said that if any discrimination now exists in the lumber list by not being uniform in different sections of the country, such lists can be easily and justly broadened without serious disturbance in present commercial conditions or to railroad revenue, while a change by splitting up into two or more groups is bound to hurt someone and result no doubt in a general rate advance on articles if placed in two, three or four groups, as the case may be. He expressed the opinion that the railway carriers, wishing to conserve or increase their revenues, would do so generally by upward revision instead of by lowering rates in the first group, if a segregation were made.

Mr. Larsson stated that the same list of articles shown in the present tariff was shown in the Southern Pacific coast local tariff of April 1, 1900, with such commodities as were added from time to time. Also the tariff effective April 1, 1907, on eastern traffic showed that broad mixtures were then included in the joint rates to Central Freight Association territory, comprising substantially all the articles now in the lumber list on a 60-cent rate to Chicago, a 70-cent rate to Cincinnati and Detroit territory, a 75-cent rate to Pittsburgh and Buffalo territory. He believed that in considering any change of long existing policies the burden of proof should rest upon those seeking the change and the real reasons they give for making such a change should be carefully scrutinized.

The Interstate Commerce Commission, in Paper Mills Co. vs. the Pennsylvania railroad, used the following language: "Where a regulation pertaining to transportation has been in force a long period of time, business interests become so adjusted thereto that any abrupt and material change is almost certain to produce undue and therefore unlawful discrimination." He said: "A long distance commodity rate made on blanket zones is not necessarily comparable with rates on mixtures from other points if both commodities scheduled fulfill a reasonable need under different conditions for the district from which each apply. Certain tariffs in the southeast, shown in the list of the Interstate Commerce Commission rate study, state that doors, cement, brick, lumber and other products are moved at one rate, but the witness would not suggest that the Pacific coast should have brick and cement added to the lumber list unless a straight classification based on class rates might be more scientific, if there is such a thing as real science in classification, but not as to commodity rates which are covered largely by commercial conditions.

"In my opinion, one who produces products of lumber remotely situated from source of raw supply should not expect to have rates or classification adjusted for the purpose of taking care of the loss in transporting the waste produce by differences in classification.

"In my opinion fair average commodity rates and liberal mixtures on products of the log, when made to fit the needs of trade adjusted to present commercial conditions, is best for consumer and the public generally.

"For local conditions the list of articles in a commodity rate is not necessarily comparable with rates or mixtures on commodity rates, based on zone system or rates covering long distance hauls.

"Summing up the situation, we believe the list now in use from California in a general way, will stand any fair test and all lists should be amplified rather than restricted to fit commercial conditions and to meet the evolution of new practices in manufacturing, arising from time to time if the carriers secure a fair return and no discrimination results. Generally our lumber list is satisfactory at the present time, except as to recent adjustment in I. C. C. Tariff 1011 (R. H. Countiss, agent) effective July 1, 1916, which adjustment, we understand, to be temporary pending decision in this case."

SECRETARY COOPER PRESENTS TESTIMONY.

A. W. Cooper, of Spokane, Wash., secretary of the Western Pine Manufacturers' Association, said that Mr. Donaldson's testimony had expressed substantially the position of the manufacturers of Inland Empire pine. In a typewritten statement he set forth the character and territory covered by the Western Pine Manufacturers' Association. He stated that it had fifty members who operated sixty-one saw mills and produced annually 1,200,000,000 feet of lumber of a value of approximately $20,000,000. The saw mills in the association covered about 80 percent of the pine production in the territory. Idaho white pine and western pine constitute 60 percent of the total output in that district, the remainder being made up of fir, larch, cedar and spruce. These woods produce almost entirely low grade lumber and are mostly sold below cost of production. The bulk of the production of the Inland Empire mills is shipped into the prairie states west of the Mississippi river and in late years about 10 percent has been marketed in the territory between Chicago and the Atlantic coast. A great deal of this product goes to the retail lumber dealer, although much is consumed by factories. Mr. Cooper said that the greatest problem presented in the Inland Empire lumber industry was to market the mixed woods and the lower grades of pine. The uppers in the two pines do not exceed 15 percent and the mixed woods, comprising fir, spruce, larch and cedar, are 95 percent low grade and cannot, therefore, be marketed at a very great distance from points of production, as the transportation in cost renders the delivered price prohibitive.

Mr. Cooper presented figures taken from reports received from one of its largest mills, which shipped in the trade in the four year period inclusive of 1912 to 1915, a total of 25,635 cars of lumber. The average rate of freight paid was 37.6 cents a hundred pounds. On red fir and larch, which comprise between 25 and 30 percent of the production, the transportation charge on a 37-cent rate constitutes 106 percent of the average mill value of those woods. Over eighty-three percent of the product of the Inland Empire is shipped dressed.

The position taken by the Western Pine Manufacturers' Association is that its members are unable to see any justification for distinction in the classification of rough lumber as distinguished from dressed lumber. The needs of the industry would not be served by such a radical change. From the carriers' standpoint it is a matter of indifference whether they haul a car containing rough or dressed lumber, since there is no difference in the rate involved, the cost of handling or the car loading. The dressing can naturally be performed better and more economically at the producing point than at the point of delivery. Fifty-three percent of the rough lumber shipped from the Inland Empire is in mixed cars with dressed stock and the business has been developed along the line of increasing mixtures of car lots, so that straight car lots have become a small part of the business. Many cars contain from ten to fifteen items and there are cars with as many as sixty or seventy items, this being the result of consuming requirements.

Mr. Cooper said: "A large part of the log sells below the cost of production—some of it very much higher than the cost—but the needs of the consumer require that these move together in mixed cars. What we want, then, is an average rate that will move them in this way. Any effort to differentiate between the products of our man-

Digitized by Google

ufacturing plants, either on the basis of value or degree of manufacture in the matter of classification, will only complicate our business without compensating advantage to any one, and it may disrupt its very foundation."

In conclusion Mr. Cooper expressed the views of the association as being entirely satisfied with the present classification of lumber and its products in the Inland Empire territory.

Friday Morning's Session
July 14, 1916

MR. McMILLAN'S TESTIMONY ON REDWOOD.

W. R. McMillan, manager of the Hammond Lumber Co., operating an extensive sash and door plant at Eureka, Cal., in addition to its redwood lumber plant, stated that he had his early lumber education in the northern white pine country. He stated that 80 percent of the lumber product of Humboldt county was redwood, 15 percent Douglas fir and 5 percent white pine. There is considerable waste in manufacturing the redwood logs into lumber, due largely to the necessity of removing the bark before sawing and the large diameter of the logs, which were about 6 to 15 feet in diameter, while the bark was 22 inches thick. Mr. McMillan had an exhibit of several pieces of redwood lumber for the information of the commission. He stated that from 1,000 feet of redwood lumber there could be thirty-five doors manufactured, that these doors cost 76 cents each or $26.60 for the product of 1,000 feet and this did not yield any profit. One of his pieces exhibited was 1¾x1¾—24 inches long. This was a baluster blank. He said if it were 6 to 8 feet long it would be called something else. He expressed the belief that the name of the item made no difference in the classification. He thought that a door, requiring no different means of transportation and supplying an equal weight, should move on the same basis as lumber. He stated that the minimum carload on knocked down sash was 24,000 pounds and on lumber 30,000 pounds. He thought that if there were a more uniform classification of lumber it would help the producer in many ways. The California industry was built up on the shipment of mixed cars and if any differential be made between rough and dressed lumber the mixed car business would be seriously affected. The redwood people, he stated, favored uniform classification throughout the United States as far as practicable. Much of Mr. McMillan's testimony was devoted to demonstrating the large amount of waste to be found in manufacturing redwood logs into lumber.

Friday Afternoon's Session
July 14, 1916

At the opening of the session in the afternoon Judge Wimbish filed a price list of lumber f. o. b. the mill on southern lumber on behalf of the National Lumber Manufacturers' Association.

REPORT ON YELLOW PINE SHIPMENTS AND VALUES.

The southern pine report was compiled by A. G. T. Moore, assistant secretary of the Southern Pine Association. The report on southern pine is a summary of figures received from twenty-seven lumber companies operating forty-five mills during 1914. The statement shows the total number of cars shipped, number of feet of lumber per car, average loading weight per car and average value per car, this latter item being $248.57. Of the total lumber shipped 7 percent was dressed stock. The average value of the lumber shipped in that year was $13.38. The total loss and damage claims on 77,306 cars amounted to $11,161.06. Forty-nine of the subscribers to the Southern Pine Association reported that they had invested in planing mills the sum of $13,975,675, which represents probably between 40 and 50 percent of the total investment in planing mills of the entire association.

Another exhibit submitted by Judge Wimbish and prepared by Mr. Moore was that the percentage of freight charges to the mill value of the lumber was 42.22 and that the average mill value was $14.13 a thousand. Other exhibits presented on behalf of the yellow pine people showed statements of cost, realization and earnings by months from 1912 to 1915 inclusive of twenty-eight representative concerns operating sixty sawmill plants. Another exhibit showed the names and addresses of lumber companies who are subscribers to the Southern Pine Association and their monthly average production.

MR. DAHLBERG'S STATISTICS ON NORTHERN WOODS.

Statistics compiled by B. G. Dahlberg, of St. Paul, were made up from reports furnished to the National Lumber Manufacturers' Association from the other affiliated associations, aside from that representing southern pine. These exhibits cover every activity of the various associations. One gave the total shipments of forest products for the months of January, May and September last year of eighty-six mills throughout the United States. These mills shipped in the months named a total of 17,125 cars, average weight per car 48,368 pounds; average freight rate 20 cents; average invoice value at mill $373.30; average haul, 670.3 miles. It was also shown that the percentage of freight charges at these mills to the invoice value of the lumber at the mill was 26.9 percent; total freight charges paid $1,724,332.73; loss and damage claims filed $1,110.96; average weights per car from 39,969 pounds to 73,478 pounds. Average invoice value per car range from $171.92 to $720.59.

In exhibit No. 2 was shown the average value of lumber shipped per ton, ranging from $10.12 for Georgia-Florida to $18.74 for California and for all territories $15.43. Claims filed on cars of rough lumber average 3.8 cents a car and on dressed lumber 4.7 cents a car. Another exhibit showed that the lumber represented 4.1 percent of the total revenue tonnage for all lines in the United States for the fiscal year ended June 30, 1914. Lumber furnished greater tonnage for the railroads than that of any other exhibit except coal.

MR. WENDLING'S TESTIMONY.

W. R. MacMillan at this time concluded his testimony relative to the position of the redwood

GEORGE X. WENDLING, OF CINCINNATI, O.

lumber and sash and door manufacturers, and George X. Wendling, formerly president and general manager of the Weed Lumber Co., Weed, Cal., but now vice-president and general manager of the Dalton Adding Machine Co., of Cincinnati, O., who for thirty years was actively engaged in the California lumber trade, was placed upon the stand at the earnest invitation of his old time close business associates in California.

Mr. Wendling had been very prominently identified with association work until he took up his new line of business six months ago and displayed a complete knowledge of the subject. He described the growth of the lumber industry in California and also recited the requirements for a first class lumber plant according to modern ideas. He detailed the operation of manufacture and told what was necessary to be done in order to refine the product so that, as shown in the operation of the Weed plant, there was a waste of less than 6 percent. He described the several grades of clear and shop. He took occasion to call attention to the fact that many people have an idea that because the material is surfaced it has been increased in value, which is not true. At efficient plants, he said, the cost of surfacing is so infinitesimal that it hardly enters into the cost of refinement. Modern machines operate with a speed of 250 feet a minute. Surfacing is done mainly for the convenience of handling. The upper grades move largely to the seaboard, while No. 1 shop is very largely moved to eastern territory. The lowest grades of pine are cut into box material.

Mr. Wendling was shown some planks of shop lumber and described how clear lumber was cut out of the No. 2 shop grade. When all the better values are taken out of the shop plank, the balance is reduced to box shooks for the shipment of fruit. Out of some of the small pieces are obtained the sash cuttings, the endeavor of the manufacturer being to save all of the waste.

Mr. Wendling stated that there were about thirty pine mills being operated in California today and that the investment was between $25,000,000 and $30,000,000, while there were in the neighborhood of 22,000 to 25,000 men employed. He stated further that the present groupings in California in the railroad tariff represent a growth of over thirty years and that it was generally satisfactory to producers as well as to users that the classification as now applied be unchanged. Twenty-five years ago there were just two grades of lumber in California, one clear and the balance common. Time has brought great changes in the matter of grading and in the matter of reducing the grades to the ultimate best values.

In Mr. Wendling's opinion a classification that allows the widest manufacture of the greatest portion of the log leads to the widest use of the raw material and to a lowering in price to the public.

Mr. Wendling further stated that the name of an article of lumber has nothing to do with fixing the rates and said that in his opinion the various names by which the products of lumber are known are merely the draperies of the industry, "just as the garments you wear, a collar being a collar and a coat a coat."

With regard to loadings he stated that heavier loadings were made with the mixed cars than with the straight cars, because it was possible to use the visible space of the car to better advantage.

Relative to the stock door as manufactured on the Pacific coast, Mr. Wendling said that it was no more valuable than the trim or frame that goes around the door. It comes out of the same stock. He said that the doors were made out of a cheap product and are brought into a high grade by taking the clear stock out of the waste.

Mr. Wendling reviewed the development of the sash and door industry from the early part of the nineteenth century, when all of the door making and planing was done by hand. He further stated that in his opinion the manufacture of doors should be done where the lumber is manufactured. He described the manufacture of sash and said that in his opinion they should not take a higher rate than lumber. On cross-examination Mr. Wendling stated that about 70 percent of the logs coming to the sawmill go into low grade and about 30 percent of No. 2 shop and better is found. In the plant where he operated at Weed the waste was only about 6 percent out of the 70 percent of low grade. As illustrative of his testimony, two 14-foot pieces of factory plank were exhibited, one No. 2 and the other No. 3, which showed the method of cutting. He was further interrogated regarding the manufacture of panels and built-up material on the coast and stated that an average value of a carload of built-up panels was something like $1,500 or $1,600.

MR. STODDARD, OF OREGON, TESTIFIES.

George Stoddard, a prominent lumber manufacturer of La Grande, Ore., stated that his company, the La Grande Lumber Co., operated four mill plants, one at Perry, Ore., one at Baker, Ore., one at Wallowa, Ore., and one at Santa Cruz, Cal. About 90 percent of the product is Oregon white pine, the balance fir and larch. Mr. Stoddard said that in a general way the operations of the pine industry, as described by Mr. Wendling and Mr. Cooper, entirely expressed the situation. He described the growth of the market since 1889 when he went to Oregon. Mr. Stoddard said that it is desirable that the same rate be applied on various kinds of lumber and lumber products. He said that 95 percent of his company's shipments were in mixed carloads. He stated further that the lumber people in his part of the west were generally satisfied with the present classification.

A. C. DIXON, OF OREGON, TESTIFIES.

A. C. Dixon, general manager of the Booth-Kelly Lumber Co., Eugene, Ore., chairman of the transportation committee of the West Coast Lumbermen's Association, stated that his company operated four plants, two running and two closed down. The four plants have a ten-hour capacity of 100,000,000 feet a year, and the two plants that are now being operated have a capacity of 70,000,000 feet a year. He said that when the company first started operations in 1898 practically all of the cut was shipped rough. Since then conditions have

Digitized by Google

changed, so that 85 percent of it is now surfaced or finished.

Further, Mr. Dixon said that he concurred in the testimony offered by the other witnesses from the coast. He was asked by Attorney Teal if he thought it would be practicable to classify lumber by grade or by its being rough or clear. Mr. Dixon stated that if the responsibility rested upon him, he would not be able to advise how to do it and did not think it could be done and leave the industry in a workable condition. He thought it would disorganize the industry for a long time. He did not believe that cut up stock should be given an additional rate above lumber.

Attorney Teal asked Mr. Dixon concerning any competition he might have observed with substitutes for lumber and its products and he stated that there was an intense and growing competition with substitutes for lumber. Within his limited experience, he said, some lumber items had passed entirely out of use, these items being what used to be sold and shipped by the train load. Nothing in this line is sold now because substitutes have taken their place. Two of the items he named were fencing and sidewalk lumber. On the point of the relative value of dressed lumber and rough lumber Mr. Dixon was shown a piece of aeroplane stock which he said was sold in the rough at about $60 a thousand. The purpose of the exhibit was to show that the dressing of the stock did not add any value, as the rough lumber was worth more.

WASHINGTON MANUFACTURER GIVES VALUABLE INFORMATION.

F. B. Hubbard, the veteran lumberman of Centralia, Wash., stated that he had heard the testimony of Mr. Donaldson, Mr. Dixon and the others and that the conditions had been correctly described by them and he concurred in their statements. Mr. Hubbard spoke of his experience in shipping telephone and telegraph cross-arms. These were taken in various sizes from 2¼x3¼—2 feet up to 6 feet, 8 inches. He had shipped 110,000 pounds of these cross-arms in 100,000 capacity cars. He knew of no reason why the rate on these cross-arms should be higher than on lumber. He said that cross-arms were about the best sort of freight the railroads could get on the Pacific coast and they were all after them. Mr. Hubbard spoke of the removal of the Chehalis Sash & Door Co. from his town to the location of the sawmill plant at McCleary, about thirty-five or forty miles distant. The manager of the plant told him that he saw no reason why he should ship his lumber from McCleary to Chehalis for the manufacture of doors. Mr. Hubbard said the plant that was dismantled was worth from $75,000 to $100,000.

Friday Evening's Session

July 14, 1916

Commissioner Meyer announced that the subject of handles would be considered at the evening session and that the west coast inquiry would not be taken up until Saturday morning.

TESTIMONY AS TO HANDLE MATERIAL.

R. P. Wilkins, traffic manager of the American Fork & Hoe Co. and also the National Handle Co., with headquarters at Cleveland, Ohio, submitted a number of exhibits relative to handles. He said there was a lack of uniformity in the classification of handle products. He showed a number of pieces of ash which were used for the manufacture of various kinds of handles and are usually known as handle material turned to shape, but not finished. He understood that in some territories the rate upon the squares and the rounds is the same, but he understood that in the conference held in the rooms of the Central Freight Association June 7 to June 19, 1915, a recommendation had been made to have them take 20 percent over the lumber rate. He said that this material could not stand so much advance. In answer to a question by Examiner Hines, Mr. Wilkins stated that the handle material moved in straight carloads and average loads were above 40,000 pounds; also he said that the average value of a car of rough turned handle material is $972.80. He said that he had been handling the traffic of the company for over ten years and had never had a dollar's worth of loss or damage on handle material with one exception and that was when a car was destroyed by fire.

FURTHER INFORMATION AS TO HANDLES.

John H. Frame, general superintendent of the National Handle Co., Fort Wayne, Ind., was called upon to testify as to the classification on handles. He said that his company operated at Blytheville, Ark., Fort Wayne, Ind., Frankfort, Ind., and Findlay, Ohio. The timber at Blytheville was obtained by rail from that vicinity. It was principally ash and mostly came in the log, but occasionally in planks or slabs. Mr. Frame presented some photographs illustrative of the various items, especially samples of implement handles, hay forks, etc.

Saturday Morning's Session

July 15, 1916

Henry G. Klopp, general manager of the Spokane Sash & Door Co., Spokane, Wash., was the opening witness on Saturday morning. Mr. Klopp's testimony was mainly with regard to the transit proposition. He stated that he was thoroughly in accord with the position taken by the other witnesses from the Pacific coast. Mr. Klopp stated that he had formerly been engaged in business in Minneapolis, but had been attracted to the west and before going out there to locate he visited and made a thorough investigation of manufacturing conditions and other features. A great many of the sawmills in the northwest had no planing mills attached to them and therefore had to get their dressing done at some point in transit to the destination of the product. As far as his own factory was concerned, the product was sold mostly in the Pacific northwest. He believed if any change were made in the classification prejudicial to the west coast lumbermen that the consumer would simply have to pay more for his goods. The tariffs were now in the main satisfactory.

Mr. Klopp had investigated very fully the subject of waste and said that in his own operations the percentage of waste was 29.3 percent, of which 18.4 percent was firewood. He said his company cut up in 1914 8,965,786 feet of lumber and shipped out in manufactured articles 6,335,475 feet. He said that he was in favor of a rate basis that would allow a heavy mixture of lumber and the products of the factory in a carload.

TACOMA SASH AND DOOR MAN TESTIFIES.

R. G. Glanville, traffic manager of the Wheeler-Osgood Co., Tacoma, Wash., gave a brief history of the establishment of the company at Tacoma in 1889 and said this was the first concern on the coast to make cedar doors. In the early days they did not believe that fir was adaptable to door manufacture, but now the product was largely of fir and very few cedar doors were made. The company operates a sawmill of a daily capacity of 150,000 feet; has in connection a planing mill and sash and door factory and has about 550 employees. The doors moved in mixed car lots largely. Mr. Glanville said that the mixed car proposition was necessary to the prosperity of the Pacific coast operators.

ANOTHER FIR MANUFACTURER HEARD.

Charles F. Pratt, treasurer of the Robinson Manufacturing Co., of Everett, Wash., stated that his concern operated a sawmill plant, a planing mill and sash and door factory at that point. He had formerly been engaged in the manufacture of hubs and spokes in Wisconsin some thirty-five years ago. He went into the manufacture of sash and doors out west because the raw material was easily obtained. The majority of the product is fir. He stated that he approved of the testimony given by the other Pacific coast witnesses and believed that the shipment of their products in mixed cars would be necessary.

REDWOOD OPERATOR TESTIFIES.

Captain E. A. Selfridge, jr., president of the Northern Redwood Co., of San Francisco, with mill at Korbel, Cal., stated that his company had been manufacturing redwood during the last fifteen years. Out of the twenty-one mills producing redwood in the state, fifteen of them belong to the redwood association and represent 85 percent of the output of that lumber. He thought that doors should move at the lumber rate and in general concurred in the views expressed by Mr. McMillan in his testimony. He was also in accord with the testimony of F. G. Donaldson, who was the first witness on behalf of the coast lumbermen. Captain Selfridge stated that he was satisfied with the existing classification on lumber and lumber products and thought that the ordinary output of the California mills should take the same rate to eastern territory.

Saturday Afternoon's Session

July 15, 1916

At the opening of the session Saturday afternoon Judge Wimbish presented a statement for the record covering carload weights on North Carolina pine products.

J. H. Townshend, secretary and manager of the Southern Hardwood Traffic Bureau, read a statement prepared jointly by John W. McClure, of Memphis and himself. The principal feature in this statement, which is published almost in full in the first part of this report, was that all lumber should not necessarily take the same rate.

John M. Pritchard, secretary of the Gum Lumber Manufacturers' Association, approved thoroughly the position outlined in the Townshend-McClure statement and stated that it represented the views of the manufacturers of red gum. Mr. Pritchard was questioned briefly by Mr. Townshend and also by J. V. Norman as to the veneer industry.

EASTERN SASH AND DOOR INTERESTS HEARD.

A. P. Bryant, traffic manager of Curtis Bros. & Co., manufacturers of sash and doors at Clinton, Iowa, stated that he represented not only that concern but also the sash and door factories on the Mississippi from Muscatine to Dubuque. Mr. Bryant stated that he had been engaged in the sash and door traffic department since February, 1910, and prior to that had been engaged in the railroad freight business from 1884. He stated that his company received its white pine mostly from California and Oregon; its fir from Oregon, Washington and Idaho; its spruce largely from Washington and Oregon; its yellow pine chiefly from Arkansas, Louisiana and Texas; its cypress from Louisiana and its oak principally from Arkansas. He introduced an exhibit showing the inbound shipments of lumber according to the territory in which it originated and by species as received by eight sash and door factories on the Mississippi river last year. Another exhibit showed the outbound carload shipments of sash and doors and other mill work in 1915, according to the territory to which shipped and also covering the shipments of the same eight factories. He stated that there was a considerable lack of uniformity in the rates on sash and doors, some of which were lower than the lumber rate and some higher.

Mr. Bryant stated that the opinion of the members of the Wholesale Millwork Association was that sash and doors should take a rate 20 percent higher than the lumber rate. Some of the illustrations given on the sash and door rates in eastern territory as compared with lumber to Trunk Line territory, Central Freight Association territory and to Texas as applied to lumber were as follows: The rate from Clinton to New York on lumber is 27.3 percent, while the sash and door rate is 36.5 percent. From Clinton to Columbus, O., the lumber rate is 14.7 percent, while the sash and door rate is 18.9 percent. From Clinton to Texas common points the lumber rate is 38 cents and the sash and door rate is 33 cents, in this instance the sash and door rate being below the lumber rate. However, a lumber rate from Clinton was not a factor, as there is no lumber now produced there. He did not believe it fair for the carriers to put sash and doors and mill work on a lumber basis, but they should be higher, as sash and doors are manufactured articles. After a brief cross-examination by Attorney Teal, the inquiry was adjourned until Monday morning.

Monday Morning's Session

July 17, 1916

A. P. Bryant, of Clinton, Ia., who began his testimony on Saturday afternoon, was the witness on the stand at the opening of Monday morning's session. Mr. Bryant stated that his concern had to meet the competition of those manufacturers who are situated closer to the consuming territory than his concern. He spoke of Clinton having formerly been a large lumber manufacturing point, having at one time the largest sawmill in that state. He spoke of the cut stock used by his company, which he said came from the McCloud River Lumber Co. mill at McCloud, Cal. It was planed and cut up at Sisson, Cal., and came to Clinton on a lumber basis. He thought that it would be to the advantage of the industry to have a uniform classification of lumber.

Mr. Bryant was shown several samples of cut up stock, among which were items that heretofore had taken the lumber rate. He gave an illustra-

Digitized by Google

tion of the various combinations of rates to Clinton, thence to Goshen, Ind., and other points where the lumber rate is very much out of line. On cross-examination by Attorney Donnelley, he stated that he was dissatisfied with the entire rate adjustment. He said, however, that rather than have the present relationship changed he would prefer to retain the existing classification.

Attorney Rixey, of the southern lines, spoke of the different rates for northern shipment and for southern shipment. For instance, from Louisville to Atlanta the rate is 19 cents, while from Atlanta to Louisville the rate is 22 cents and he asked of Mr. Bryant which of these rates should be used as a basing rate.

MR. MORGAN, OF OSHKOSH, TESTIFIES.

J. Earl Morgan, president and general manager of the Morgan Co., one of the large sash and door factories of the country, stated that his company operated a factory at Oshkosh and had jobbing interests at Chicago, Detroit and Baltimore; also operated a sawmill at Foster City, Mich., and at Colville, Wash. He described the nature of the business done and the methods employed in the manufacture and distribution of their products. He said that the sash and door trade of the country was divided into four sections, the eastern, southern, middle western and Pacific coast. The Morgan Co., he said, used pine from the west, yellow pine from the south and all the hardwoods. He made a very enlightening description of a modern planing mill. In his opinion moldings should be considered on a higher rate, although there is some difference of opinion on this subject.

Mr. Morgan was shown a piece of wood and was asked what it was and stated that it was an "astragal." The piece was an inch and a half wide and is made from 6 feet, 6 inches to 10 feet long, this length depending on the length of the door where it is used. At the request of the attorney, Mr. Morgan stated that the astragal was used on folding doors as a sort of stop and was similar to a weather strip. Mr. Morgan was also shown balusters, stair-rails and other millwork items and explained their uses and gave his ideas about how they should be classified. He said that in his factory the raw material was mostly No. 2 shop, though they used some No. 1. Most of this stock comes to the factory surfaced on two sides and is kiln dried, although there is some in the rough. The core blocks, which are brought from the coast, cost about $26 a thousand feet delivered at Oshkosh, the average weight being 3,250 lbs. Mr. Morgan described cut stock as lumber, being generally in the knock-down, surfaced two sides and cut to specified lengths. He explained the difference between stock work and odd work, stating that his factory produced over 60 percent of stock work and distributed both odd and stock work over the country.

Monday Afternoon's Session
July 17, 1916

The testimony of J. Earl Morgan, of Oshkosh, having been unfinished at the forenoon session, was continued. Mr. Morgan was shown photographs of stickers, mortisers and other sash and door machinery and was asked to explain their uses, which he did. Also he explained the whole process of manufacturing sash and doors, there being brought in for the purpose a door put together, but not glued, so that it was easily taken apart and each piece described. In a similar way he explained the manufacture of open sash and of outside blinds. He expressed the opinion that there should be a difference in the rate between lumber and finished mill work. He thought that there should be one classification on doors and mill work, stating that doors are always shipped in completed form.

On cross-examination by Attorney Teal, Mr. Morgan stated that he had been in active charge of the Oshkosh factory since 1893. At the present time the product is 50 percent pine doors and 50 percent hardwood doors. He stated that yellow pine doors were not regarded by the trade as being the equal in quality to either pine or fir.

SASH AND DOOR TRAFFIC EXPERT'S TESTIMONY.

W. E. Clumpner, traffic manager of the Oshkosh Traffic Association, Oshkosh, Wis., stated that he represented the six sash and door companies at Oshkosh, the Moore & Galloway Co., of Fond du Lac, the Cream City Sash & Door Co., of Milwaukee, the Rockwell Manufacturing Co., of Milwaukee, the Hardwood Specialty Co., of Neenah, the Anson, Gilkey & Hurd Co., of Merrill, and the Curtis & Yale Co., of Wausau.

Mr. Clumpner presented tables for the record regarding lumber and sash and door rates to and from Oshkosh and to and from various points. He said that the product from the factories he represented was distributed as follows: Eastern Trunk Line territory, 26.56 percent; Central Freight Association territory, 27.21 percent; Chicago territory, 7.33 percent; Western Trunk Line territory, 33.68 percent; southeastern territory .80 percent; southwestern territory, 1.35 percent; western and Canada territory, .74 percent. He stated that the sash and door rate to points south of the Ohio river was 20 percent higher; to Memphis, Tenn., 20 percent higher, and to the southwestern territory 30 percent higher than the north-bound rate. From Wisconsin points to west coast points building material took a 50 percent higher rate than the east-bound rate. He stated that he did not think that there should be any difference in the classification on thin lumber or veneer than on thick lumber. He said that there were very few carloads of open sash shipped long distances in recent years. Being asked the rate from Oshkosh to Louisville on building material, he stated that it was 21.1 cents. While he did not think that furniture should be shipped on a lumber rate, he believed that veneers less than one-sixteenth of an inch thick should be where the line is to be drawn in the way of a higher rate.

CHICAGO WHOLESALE LUMBERMAN TESTIFIES.

Henry A. Sellen, vice-president and general manager of the Morgan Sash & Door Co., Chicago, stated that he is chairman of the Wholesale Mill Work Association committee which had in charge the answers to the interrogatories propounded by the Interstate Commerce Commission in Docket No. 8131. The Wholesale Mill Work Association, comprised the principal manufacturers and distributers of mill work in the territory east of the Rocky Mountains excepting the southern lumber producing areas. The members of the association distribute their mill work in the southeast into Florida, in the southwest to Texas, into the Missouri river territory and also into eastern territory. Mr. Sellen stated that he did not think it was proper that sash and doors should be carried upon the lumber basis and that the members of his association were of the same mind.

A large part of Mr. Sellen's testimony was upon the lines of the answers to the seventeen questions, which gave a list of articles taking building material rates and a list of articles considered as ordinary products of saw and planing mills.

In cross-examination by Attorney Teal, Mr. Sellen stated that the Wholesale Mill Work Association had sixty-seven members, of which about fifty are affiliated in one way or another with manufacturers of doors, the other seventeen being independent.

Monday Evening's Session
July 17, 1916

Sam Fryer, of Chicago, traffic manager of the Sash & Door Credit Bureau and a leading rate expert in the door trade, stated that there is no fixed relation between sash and door rates and lumber rates at the present time. Mr. Fryer said that he had record of 524 cars of mill work received in Chicago from Wisconsin points, of which 411 were mixed cars, 57 were straight cars of sash and 32 straight cars of mouldings. Also he had record of 128 cars received from Mississippi river points, of which 115 cars were straight doors, 109 mixed cars and 4 mouldings. From the Pacific coast he had record of 314 cars and of these 161 were doors, 100 mouldings and 50 mixed. There was no track kept in his bureau of the lumber receipts in addition to the above. However, there were 128 cars of mouldings received from the southwest and 3 cars of mouldings received from the southeast. Of the outbound cars from the Chicago territory there were 418 cars which went into Central Freight Association territory, 62 to Eastern Trunk Line territory, and 84 into the southeastern territory, 24 into Western Trunk Line territory, 3 to Utah and Colorado, and one to the territory comprised of Arkansas, Texas and Louisiana, making a total of 752 cars. The average loadings of these cars was 31,571 pounds. Mr. Fryer stated that claims for loss and damage on outbound cars averaged $1.05 a car and on inbound cars, 4 cents a car.

D. H. Devins, of the Central Local Service Bureau, Columbus, Ohio, represented the opinion of eighteen wholesalers east of the Indiana-Ohio line. These comprise jobbers at Toledo, Ohio; Wheeling, W. Va.; Pittsburgh, Pa.; Buffalo, N. Y.; Cleveland, Ohio; Akron, Ohio; Columbus, Ohio; Cincinnati, Ohio, and Baltimore, Md. Another witness who testified along the same line as Mr. Devins was H. S. Straussberger, of the Radford & Wright Co., Duluth, Minn.

VENEERS AND BUILT-UP PANELS.

D. E. Kline, of the Louisville Veneer Mills, Louisville, Ky., and chairman of the transportation committee of the National Veneer & Panel Manufacturers' Association, was the first witness called on behalf of the veneer interests. Mr. Kline is a pioneer in the veneer industry, in which he has been engaged for twenty-seven years. He gave a brief history of the industry and referred to the statement of the Forest Service made in its report in 1911, which is: "Veneer is very thin lumber." Mr. Kline stated that 97½ percent of the production of veneers in this country is for domestic use. Out of the total, 37½ percent is red gum and one of the principal uses of these veneers is mirror backs.

Mr. Kline described the process of manufacturing rotary cut, sawed and sliced veneers and said that as a rule it was similar to the manufacture of lumber. He stated that the veneers were the product of the log and not of the lumber and the only difference between veneers and the rough lumber is the thickness, or rather thinness, or that they are cut with a knife instead of a saw, as might be the case. He stated that loss and damage claims were almost unknown in the veneer trade, as he had been compelled to file but two claims in his entire career, covering twenty-seven years. He stated that in his opinion a uniform classification of veneers would simplify matters to a great extent.

AS TO UNIFORMITY AND CLASSIFICATION.

A. E. Solie, traffic manager of the Central Wisconsin Factory Bureau and of the Rotary Birch Club with headquarters at Wausau, Wis., testified regarding the lack of uniformity in veneer rates and also in built-up veneers in the several territories. In his opinion veneers should take the lumber rate and built-up veneers might take a slightly higher rate, but he would be inclined to restrict this proportion to about 10 percent above the rate on lumber. He stated that owing to the present classification considerable veneer was being disposed of one-fifteenth of an inch in thickness where the line was drawn on one-sixteenth of an inch on the fifth class. The remainder of Mr. Solie's testimony was postponed until Tuesday morning.

Tuesday Forenoon's Session
July 18, 1916

A. E. Solie, of Wausau, testifying on behalf of the Rotary Birch Club, and other veneer manufacturers of Wisconsin, again took the stand at the opening of the Tuesday morning session. His testimony generally was to the effect that veneers should take the regular lumber rate.

SOUTHEASTERN VENEER MAN ON STAND.

J. T. Ryan, secretary of the Southeastern Veneer Association, High Point, N. C., testified on behalf of his association and the manufacturers of veneers generally in the southeast. He expressed the opinion that there should be no discrimination against lumber on account of its thickness and that the same rate should apply whether it is one-thirtieth of an inch in thickness or one inch. He told something about the classification and rates on veneers in the southeastern territory and gave an exhibit prepared from data furnished by the members of his association, which gave all the essential features that might enlighten the commission. He stated that wood panels have a lower rate than doors.

DOOR RATES COMPARED WITH FINISHED PRODUCT.

Bruce Clark, general manager of the Cabinet Veneer Co., Greenville, N. C., stated that he agreed with the evidence introduced by Mr. Kline on the previous evening. He said that doors can be moved from the Ohio river to southeastern points at lower rates and longer distances than built-up wood panels can be moved out. Some of the raw materials used in the manufacture of doors take a higher freight rate than does the finished product. He estimated that there were $250,000 worth of veneered doors shipped into the southeast from northern plants. In several ways he confirmed the testimony regarding veneers heretofore produced.

O. C. Lemcke, president of the Underwood Veneer Co. Wausau, Wis., stated that the company's production was mainly in veneers, heading and lumber. He stated that the most valuable grade of

Digitized by Google

veneer was the one-eighth inch thickness and all veneers are shipped in mixed cars rather than in straight cars. Mr. Lemcke manufactures mainly birch.

Further evidence was given by C. B. Allen, manager of the veneer department of the Anderson-Tully Co., Memphis, Tenn. Mr. Allen stated that No. 3 oak was offered at $12.50 a thousand; that quartered oak was shipped out as high as $90 a thousand. He confirmed the testimony advanced by his competitors relative to the value of the average car of veneers and he said they were worth from $300 a car to $2,700. The rate now in effect is 3 cents above the lumber rate to the Ohio river on compound rates.

Statistics had been compiled on forty cars on which the average loading was 44,845 pounds and the average value $1,383.98 a car. In the compound wood he said he had records of thirty cars of which the average weight was 36,719 pounds and the average value $747.36. Mr. Allen testified as to the samples of built-up box shooks and described their manufacture and distribution. He said that the box shooks took the lumber rate. Regarding claims, he stated that only three had been filed for damage in the last five years and these were mostly for amounts less than $100.

TIE INTERESTS ARE HEARD.

Howard Andrews, president of the National Tie Co., Nashville, Tenn., was the next witness and testified regarding railroad ties. Commissioner Meyer said that the only question regarding railroad ties was whether they should take a rate lower than lumber, the commission having already held that they should not take a higher rate than that commodity.

Mr. Andrews stated that he had been engaged in the exclusive tie business for sixteen years. In his opinion the tops of trees and the product of the large limbs could not be moved on the present rates. He stated that the treatment of ties had caused the use of low grades of timber and that they were of a much lower value than ordinary lumber. In his territory treated ties were based on a value of about $3.25 a ton as compared with lumber at $8 a ton, while logs were valued at $3.50 a ton. The average loading as compared with lumber is about 25 percent below. Tie loads are about 60,000 pounds, while lumber weighs about 45,000 pounds and logs 30,000 pounds. The railroads pay a freight of 27 cents per tie to Chicago territory and 15.2 cents a tie to eastern points, making a total of 42.2 cents a tie for freight. In Mr. Andrews' opinion it would be better to lower the rate for ties and by that means the railroads could get them very much cheaper. Some of the roads in the south allow treated ties to move on the basis of 75 percent of the lumber rate where they are low grade and are manufactured from cull timber.

Examiner Fred H. Esch, of the commission, heard the remainder of the testimony regarding ties in the large room on the ninth floor of the Auditorium, while the main inquiry regarding box lumber was held in the south room.

Tuesday Afternoon's Session
July 18, 1916

The box interests had a hearing on Tuesday afternoon with R. J. Goodwillie, of the Goodwillie Bros. Co., on the stand. Mr. Goodwillie made a statement of the position of the box industry, in which he said that it utilizes the very lowest product of the log. The box makers, he stated, did not ask for lower rates, but if any change be made they requested that box lumber be given a lower rate than other lumber. Probably from 80 to 90 percent of the lumber that goes into the manufacture of box shooks would have no other market.

The position of the box makers, as announced by Attorney Jefferys, was that the classification of box lumber in its present state is satisfactory, but if there should be a reclassification that the box industry would ask for a lower rate than lumber.

Mr. Goodwillie stated that the material of which boxes are made is sold at 25 cents a cord in the woods, but when it gets to the box factory it is worth $3 a cord.

EXPERT TESTIMONY ON BOX LUMBER.

Charles F. Yegge, manager of the box department of the Chicago Mill & Lumber Co., Chicago, stated that he had been engaged in the manufacture of box shooks since 1892. He stated that a large part of the box shooks turned out by his concern in the southwest was from gum, the stumpage of which was supposed to be worth about $1 a thousand. He said that the average waste on that product was from 40 to 45 percent. The use of containers of all descriptions is increasing in use every year. He was asked if he would be satisfied with a net profit of $1.50 a thousand on box shooks, after deducting all expenses, and said that he would be. He denominated box makers as the "scavengers of the forest" and was unable to see how their industry could be profitable if the freight rate on box lumber would be increased. Box makers had not thought of asking for anything, but if the Commission is going into the question of reclassification, the box interest ought to have a lower rate. If the lumber rates are to remain as they are, the box people will be satisfied. Mr. Yegge stated on cross-examination that whenever there was a good market for red gum, the company sells it to outside parties, but when the market is poor the company uses it for the manufacture of boxes. There have been several periods during the last five years when the company was unable to sell any gum lumber whatever.

INROADS OF THE SUBSTITUTES.

B. F. Masters, of the Rathborne, Hair & Ridgway Co., Chicago, which operates two factories in Chicago and one at Cloquet, Minn., stated that he approved the statements made by Mr. Yegge and Mr. Goodwillie regarding the classification of box lumber. He expressed himself to the effect that he would be well satisfied with a net profit of $1.50 a thousand in the manufacture of boxes. He stated that there was considerable competition from fiber board and corrugated stock and that the use of these products had deprived the box manufacturers of a large part of their output. He stated that the fiber board and corrugated board boxes entered the market about a dozen years ago and that the use of those packages was growing all the time. He said that the raw material had advanced from about $6 to $18 at the mill. In the ten years last past the prosperity of the wooden box business has decreased. In his opinion, box shooks and raw material should take lower rates than lumber.

MR. NUFER TESTIFIES.

W. L. Nufer, of the Virginia Box & Lumber Co., Petersburg, Va., stated that his company had two plants in Michigan, four in Pennsylvania, one in West Virginia, three in Virginia and one in North Carolina. He said that his company did not utilize waste materials to the same extent as some of the other companies, but used low grade lumber. The difference between the value of the raw material and the finished box was largely labor, and that about $9 a thousand could be ascribed as straight labor cost. In his opinion, the wooden box industry was on the wane, largely through the competition of other kinds of containers. This condition seems to be general. He said that he had nothing to add to the testimony of the other witnesses, but endorsed their views. Any advance in rates on box lumber would mean an advance in the cost of boxes. As far as he was concerned, he would not be satisfied with a profit of $1.50 a thousand.

A MEMPHIS CONCERN TESTIFIES.

T. J. Morris, sales manager of the box department of the Anderson-Tully Co., of Memphis, Tenn., stated that the product of his department was largely rotary cut box lumber, sometimes called veneer. He had observed the tendency of the railroad companies to conserve the interests of the lumbermen on their own lines. He spoke of the use of willow for boxes. This product had never been sold prior to three or four years ago. At some points the rates on willow are higher than either cottonwood or gum. He stated that freight rates play an important part in the marketing of the product, as well as getting the raw material in. In his opinion, any change made in the rates on box lumber should be in a downward direction.

A VETERAN BOX MAKER TESTIFIES.

J. G. Goodwillie, of the Goodwillie Bros. Co., Chicago, with factory at Wausau, Wis., stated that he went to Wausau about thirty years ago in order to get nearer the source of supply of box lumber. He himself had established the industry in that section and had by agreement established rates on the production. He had been able to secure labor at favorable wages and had built up a satisfactory industry. However, his profit during the last ten years, he said, had averaged only $1.37 a thousand feet on the lumber used. He thought it would be a grave injustice, after having established this industry where none had existed before, to be threatened with annihilation by readjustment of the rates. The general testimony of all box men was that the present rates on box lumber should be lowered and that box shooks should be maintained on the present basis.

Tuesday Evening's Session
July 18, 1916

At the session on Tuesday evening, the box interests were again heard, the first witness being F. C. Gifford, of Chicago, secretary of the National Association of Box Manufacturers. Mr. Gifford stated that he had had a traffic experience of twenty-one years and had been engaged with the box manufacturers over two years. He said that the box makers were paying either too high a freight on their raw material or too much on their product. They were not seeking reclassification, but are satisfied with the present situation. If any change is made, they desire to establish a lower rate than lumber. Mr. Gifford stated how often the box industry contributed to railroad earnings, from the raw material in the forest to the shipment of the boxes and their use afterward in many cases. He stated that an advance of 1 cent a hundred pounds would mean 21 cents a thousand feet and this 21 cents, taken from the $1.37 profit shown, is a big cut. Mr. Gifford was unable to recall any reduction in the rates on raw material for many years; all have had a tendency to advance. In his opinion, the industry is loaded down about as heavily as it can be. Attorney Rixey asked Mr. Gifford if he would favor different rates on different grades of lumber and the witness replied that it would be a very difficult proposition.

SLACK-BARREL-COOPERAGE INTERESTS.

V. W. Krafft, of St. Louis, Mo., chairman of the freight committee of the National Slack Cooperge Manufacturers' Association, and traffic manager of the Ozark Cooperage & Lumber Co., said that in a general way he was opposed to any change in lumber classification. In his opinion the reconsignment privilege was almost indispensable. He explained the difference between slack cooperage and tight cooperage, and spoke of the uses and values of the respective products.

Wednesday Morning's Session
July 19, 1916

The slack cooperage interests continued their testimony on Wednesday morning when F. S. Charlot, president of the Ozark Cooperage & Lumber Co., St. Louis, Mo., presented the case from his company's standpoint. He stated that the average carload of slack cooperage was 37,000 pieces of staves, 16,000 sets of heading and 6,500 hoops, and that the annual consumption of the industry was about 2,600,000,000 board feet. He gave a complete description of the methods of manufacturing staves, heading and hoops, and said that the industry could not stand any increased cost of transportation. On cross-examination he said he was not suggesting any changes in the present classification. The value of staves is about $6.25 for No. 1 and $4 for No. 2, with the mill run at $5. The value of a car of staves, hoops and heading in Arkansas ranges from $400 to $450.

MR. HARRISON TESTIFIES ON SLACK COOPERAGE.

C. L. Harrison, of Cape Girardeau, Mo., secretary of the Himmelberger-Harrison Lumber Co., stated that he had been engaged in the lumber business fourteen years and in the manufacture of slack heading about three years. He thoroughly agreed with the position taken by Mr. Charlot. He said that the utilization of timber for slack cooperage materially aided in clearing land for agriculture, his own company having sold about 30,000 acres of land thus cleared. Before going into the manufacture of slack cooperage, the company had made an extensive investigation as to the best method of utilizing the small stumpage. He stated that the timber used in the cooperage plant was exclusively small stock, ranging from 8 inches to 16 inches in diameter, and if the small trees were not utilized for this purpose they would be left on the land and deadened.

HEARING OF TIGHT STAVE MANUFACTURERS.

The manufacturers of tight cooperage were given a hearing on Wednesday, the first witness being Walker Wellford, of Memphis, Tenn., president of the Allied Cooperage Interests of America. Mr. Wellford said that he had been engaged in the tight cooperage business in the Memphis territory since 1887. He said that as a rule cooperage stock is moved at or less than the general rate on forest products. About 1,114,000,000 feet were used annually in the industry. He described

Digitized by Google

the process of the manufacture of tight barrel staves and said that the product was made direct from the tree, being a parallel process with the manufacture of lumber. He described the various items of tight cooperage, including whiskey staves, oil barrel staves and the cheaper staves used for heavy commodities. He showed samples of barrel shooks in one package assembled for export, in order that it could be in a small compass for storage in the ocean steamers. He told how the tight barrel staves were manufactured with the use of a drum saw and exhibited samples of staves and heading in various stages of manufacture. On cross-examination Mr. Wellford stated that he was satisfied with the present classification and that rates on tight cooperage should not be higher than the rates on lumber.

Wednesday Afternoon's Session
July 19, 1916

Before Examiner Esch a hearing was accorded to the telegraph and telephone pole industry, especially that relating to the northern and Inland Empire territory.

THE POLE INDUSTRY DESIRES RELIEF.

C. P. Lindsley, of the Lindsley Bros. Co., Spokane, was the first witness and he stated that the principal trouble with the industry was in the shipment of long poles, where two or three cars were required for their transportation. Because of the high cost of the idler car, the shippers of the northwest were not able to compete with cypress and chestnut poles at, for instance, Cincinnati. The minimum weight of poles loaded on two cars is 66,000 pounds and on triple car shipments 99,000 pounds, and these are shipped on the lumber rate. However, 50-foot cypress poles would be delivered in Cincinnati at $12 to $12.50, while 50-foot cedar poles from his territory could not be delivered for less than $16, this on account of the higher charge made for the idler cars. He said he knew of no arbitrary on any other product besides cedar poles and long timbers.

Attorney Donnelley, of the Transcontinental lines, stated that in his opinion this hearing was outside of the Commission's province as it related to a question of rates and not of classification.

N. E. Boucher, Minneapolis, Minn., secretary of the Northern White Cedar Association, stated that the rates on doubles and triples on long poles was 10 cents above the carload rate.

THE TIGHT COOPERAGE INQUIRY RESUMED.

Before Commissioner Meyer, at the main hearing, the tight cooperage inquiry was resumed, with F. P. Cory, vice-president of the McClure Co., Saginaw, Mich., on the stand. Mr. Cory testified chiefly in regard to the silo business. He said that he had been manufacturing silos for eleven years, principally of fir and yellow pine staves. During all this time there has never been but one claim for damage and that was when a car jumped the track. In his opinion, silo staves should take the same rate as lumber. The value of a car of silos containing about five silos in the knock down is about $1,000.

G. J. Bolender, traffic manager of the Kalamazoo Silo & Tank Co., Kalamazoo, Mich., stated that the chief trouble with the silo business was that his company had to pay fifth class rates from Kalamazoo, whereas his competitors pay the lumber rate upon their product. Because of this a uniformity in rates is greatly to be desired.

VEHICLE AND IMPLEMENT STOCK.

E. W. McCullough, secretary and general manager of the National Vehicle & Implement Association, stated that 70 percent of the production of this stock was within a radius of 300 miles of Chicago. He was shown samples of axles, spokes, rims, hubs, double trees, and described each product.

John Kittredge, of the International Harvester Co., stated that implement stock moved on a class rate instead of a commodity rate. He displayed various shapes of implement material in the rough and also some of the finished material, in hubs, pole stock, rims, singletrees, etc.

Wednesday Evening's Session
July 19, 1916

At the session on Wednesday evening the testimony of John Kittredge, of the International Harvester Co., was concluded and H. J. Milling, rate clerk of the same company, testified. His statements generally regarded the rate of freight on various classes of implement and vehicle material.

M. R. Campbell, of M. R. Campbell, Inc., manufacturer of hubs and spokes at Tullahoma, Tenn., and Jasper, Ala., stated that in the manufacture of spokes he was ahead of the log scale by from 25 to 50 percent, while in quartersawing the manufacturer falls short of the log scale by from 25 to 33 percent, thus showing how closely the log is utilized in making this class of stock as compared with any other process of manufacture. He stated that if the classification were changed, about one-half of the spoke manufacturers would have to get out of business. The industry is not prosperous, principally on account of the increasing use of automobiles. At the present the hubs and spokes are paying the lumber rate, which was as much as the industry could stand.

Thursday's Session
July 20, 1916

The business of gathering in all of the evidence that was to be offered to the commissioner was simplified on Thursday by starting a subsidiary hearing, conducted by Fred H. Esch, examining attorney for the commissioner, who, during the last day, listened to evidence from E. H. Scott, assistant commission counsel of Iowa, and Walter Huncke, traffic superintendent of the Western Silo Co., of Des Moines.

THE VERY HEART, CORE AND PURPOSE OF THE HEARING AS EXPRESSED BY CHAIRMAN MEYER ON FRIDAY, JULY 21.

The Chairman:—Let me suggest before we go further with this cross-examination that, as has been stated here before by other witnesses, this is an inquiry by the commission and not a lawsuit, and the functions of those participating are primarily affirmative rather than negative; and it is not for you to insist that everything that has been placed on the table that is not in accordance with your judgment must be removed. Rather it is for you to put your offerings on the table and then let the commission exercise its judgment as to what it will accept and what it will refuse.

Mr. Scott testified for the lumber shippers of that state and declared that he and those he represented wanted prevailing rates. Mr. Huncke testified in like manner.

During the progress of the hearing B. Faisst, of Silica, Ark., claimed the attention of the examiner as a witness, praying for such a classification of tent-poles and the like as would make the rate uniform, however high or low it might be. Mr. Faisst was of the opinion that there were not more than 100 cars of this material shipped annually and that it was only a by-product of his business.

The principal witness in the general hearing under Commissioner Meyer was Henry Blakely, general freight agent of the Northern Pacific Railway, about whose testimony it might be said the whole thing was summed up in this one expression of Mr. Blakely: "The Transcontinental lines, in subscribing the opening statement of the Pacific coast lumber manufacturers and shippers, declared they were willing to continue under present arrangements and that means they are willing to let the rate classifications of lumber stand as they are at present."

Several hundred pounds of white metal could easily be used up in recounting the ins and outs of Mr. Blakely's testimony, but nobody loves a printer well enough to do that. The quoted words above tell the story.

THE FIRST RECONSIGNMENT PROTEST.

There were three endeavors to place testimony in the records to justify the reconsignment of lumber custom which has been discussed so much recently in connection with railway rate matters and reclassification.

This movement was started by A. Fletcher Marsh, of the Lumbermen's Association of Chicago, and entered into without much preparation and consisted in the production of two witnesses—the first A. J. Aldworth, of the Fullerton-Powell Lumber Co., of South Bend, Ind., and P. S. Fletcher, of the D. S. Pate Lumber Co., of Chicago.

Mr. Aldworth appeared in the afternoon of Thursday, July 20th, before Examiner Esch, declaring his affiliation, that he was interested in hardwood shipments, practically all oak, around 5,000 cars of hardwood lumber a year and 85 percent of which was reconsigned, 90 percent of that reconsigned before arrival at reconsigning points.

Mr. Aldworth said that he understood that testimony had been introduced on the reconsignment and diversion of lumber in transit and that it had been proposed to the commission that a fixed and uniform charge of $25 a car be assessed. Witness had no information as to why the proposition had been made. He claimed that in the conduct of a wholesale lumber business free reconsignment is absolutely a commercial necessity, and the discontinuance of it would have a demoralizing effect, not only on the wholesale business but would result in a terrible hardship on a number of small sawmills scattered throughout the country. Mr. Aldworth said that "in addition to this it would embarrass the consuming trade, who depend largely upon quick buying and prompt delivery, and that there are thousands of sawmills located throughout the country whose operation virtually depends upon the wholesale lumber dealer, these small mills being in active competition with the large sawmill manufacturers." Mr. Aldworth said that small mill owners were without capital to finance their operations and were thus compelled to obtain capital from the wholesaler, who advances certain moneys to enable the small mill men to cut their product; so Mr. Aldworth argued that any condition of the character mentioned imposed upon the wholesale dealer would react upon the small sawmiller.

Mr. Aldworth also advanced the opinion that the privilege of reconsignment largely made the wholesaler possible by the consequent keeping apart of the manufacturer and consumer, and that it was not only a necessary part of the wholesale lumberman's equipment, but was recognized as such by the act to regulate commerce, in the fifteenth section thereof.

Mr. Aldworth also advanced the necessity of reconsignment as a means of securing qualified weights on carload shipments, and said that the commission should take into consideration the testimony of same during their recent investigation of weighing practices. The witness entered into a technical discussion of that reason which is of interest only to the record. He quoted the Central Commercial Co. vs. Louisville & Nashville, 27 I. C. C. 114-115, quoting the statement of the commission, by page and paragraph. He thought also that a "reconsigning privilege has been voluntarily extended without cost by a large majority of the carriers," so that it was "only fair to assume that the cost of reconsignment, prior to the arrival of the cars at first destination, is so immaterial as to be of little consideration." He thought that if it had been material the carriers would have long since discontinued the practice. He considered that the big manufacturers were fathering the movement on account of "greed and selfishness, simply trying to put the small millman and the wholesaler out of business."

EXAMINATION OF P. S. FLECTCHER.

An evening session was held by Examiner Esch for the examination of Percival S. Fletcher, sales manager of the D. S. Pate Lumber Co., Chicago, and the Stuart Lumber Co., Brinson, Ga., the first named being a wholesale house and the last named a manufacturing institution.

Mr. Fletcher was very positive in his statement and predicated his opinion on over twenty-five years of active experience as a lumberman. He said: "A number of sawmills are not equipped to ship to anyone but wholesalers, as they manufacture only a few items and it would be impossible for them to market their output in any other manner." Continuing Mr. Fletcher said: "Reconsignment of cars is necessary under present conditions and if cancelled or penalized would cause great injury to the wholesaler of lumber, to a large number of manufacturers, to the railroads, to the retailer and to the public."

At one place in his testimony Mr. Fletcher summed up his reasons as follows: "That a wholesaler could by this method take better care of his customers, make better deliveries, handle a great-

er volume of business and be in a position to keep a line on his shipments and know exactly how they were traveling."

Mr. Fletcher was cross-examined by A. G. T. Moore, of the Southern Pine Association and H. H. Snell, of the Lathrop Lumber Co., the witness reaffirming his statements and especially insisting that transit cars were made necessary because of delays in shipment.

MR. BERGK GIVES DELAYED TESTIMONY.

Before Examiner Fred H. Esch, a hearing was accorded to E. J. Bergk, assistant to G. L. Curtis, general manager of Curtis Bros. & Co., and the Curtis Lumber & Millwork Co., of Clinton, Ia., who had not been able to attend on Monday. Mr. Bergk stated that the loss in weight as between the lumber and the finished door was about 33 1-3 percent and the loss in weight in making cut stock into doors from 18 to 23 percent. He stated that the fir door sells for 2 points or about 20 cents less than the pine door as made in the Mississippi river district or in Wisconsin.

Friday Morning's Session
July 21, 1916

J. E. Crosland, of the Louisville & Nashville Railway, took the stand and his testimony throughout was in affirmation and in defense of "Central Freight Association P. S. M. No. 878 proceedings and conferences to consider uniform list of articles which lumber rates for differentials higher shall be applied," held at Chicago, August 4 and 5, 1914, May 12 to 14, 1915, and June 7 to 19, 1915, as well as "the facts and answers submitted by the southern lines in response to questions propounded by the Interstate Commerce Commission in a printed circular June 20, 1916, entitled "Outline of Testimony to be Developed."

Mr. Crosland's testimony might be summed up as first maintaining that carriers "cannot conceive that conservation has any bearing on rate making;" that "rough lumber rates are the basis under which nothing in the form of logs, bolts, bark, wood or other forest products are entitled to a lower rate." From this basis forward in four groups under an attenuated cross-examination, he insisted that rates higher than lumber, taking 5, 10 and 20 percent plus in Groups 2, 3 and 4, were arrived at in the committee's recommendations, of which he was chairman, without regard to technical knowledge of the subject of remanufacture, but were based upon the general experience as carriers' ratemaking representatives. The list taking the increased rates include products in each case representing "a degree higher in manufacture."

Friday Afternoon's Session
July 21, 1916

R. N. Collyer, of New York, chairman of the official classification commitee, was one of the important witnesses at the hearing on behalf of the railroads and the questions which he answered had been prepared before hand and the answers similarly prepared. His testimony was in the general way of opposition to any change in the present classification.

E. R. Oliver, assistant general freight agent of the Southern Railway, testified in line with practically everyone, carriers and representatives. He said that it was not practicable to have a uniform list of lumber covering the entire country, that the principal producing territories and carriers serving them should have a list that would apply and meet the demands of peculiar local conditions looking into the best all around compromise as between them in competitive, distributing and consuming territory.

Saturday Morning's Session
July 22, 1916

Charles Barham, general freight agent of the Nashville, Chattanooga & St. Louis Railroad, was the first witness called and went voluminously into the experience of his road in making low rates and getting low grade tie material, which would otherwise go to waste, into the market. He was specifically in accord with the demand that where the exigencies of a local nature were sufficient that the railroads should be permitted within certain limits to engage in such practice. He qualified his attitude, however, in this regard with the statement that where a rate of this sort was in contemplation that would work a hardship to the neighboring and competitive roads or producers, it should be stopped. In conclusion, he epitomized his attitude with the statement that he "would like to feel free to make rates high if I commercially can; low if I commercially must."

E. P. Bates, assistant freight traffic manager of the Pennsylvania railroad and also representing the Trunk Line Association, was the second witness and introduced his testimony with a statement of opposition to transit privileges on lumber. He said that the policy of his concern in connection with diversion of cars in transit was that if a car could be caught before arriving at its original destination, a charge of $2 was made for diversion. Otherwise, a charge of $5 was made. He was also opposed to a uniform classification for rate basis to be applied to all sections of the United States and insisted that the present rate structure was the result of many years of experience through which hundreds of millions of tons of lumber and its products had been handled on a basis satisfactory both to the carrier and producer.

Mr. Bates was followed by W. K. Sanderson, general freight agent of the Maine Central, who testified against the practicability of a uniform rate reclassification applicable nation-wide and asked to be permitted to make rates to fit peculiar necessities and exigencies of the case.

W. W. Collin, jr., legal representative of the Central Freight Association and assistant to the general solicitor of the Pennsylvania Lines West of Pittsburgh, anounced that they would accept and adopt the testimony presented by J. E. Crosland and in reply to an inquiry from Commissioner Myer stated that this acceptance also covered his testimony after cross-examination.

TRAFFIC EXPERT BRADLEY TESTIFIES.

H. S. Bradley, traffic manager of the Ann Arbor railroad, representing the Central Freight Association, was put on the stand for supplemental testimony and went on record as being absolutely opposed to any readjustment of rates from their present basis and testified that present conditions were satisfactory alike to roads, carriers and shippers. He was also opposed to any uniform lumber list applicable to all sections of hte country. While this was more or less in contradiction to replies to the interrogatories of the commission, he stated that after having heard all of the testimony submitted from the various sections of the country, he could not but admit that any uniform list would at once and automatically constitute an unnecessarily rigid freight structure debarring carriers from important and other producing sections from meeting conditions, not only as they might be peculiar but as they might change in their relationships. He insisted that each territorial group had and must of necessity have its peculiar rate levels based on local conditions.

SOME CHANGES THAT ARE SUGGESTED FOR THE REVENUE BILL WHICH ARE OF INTEREST TO TIMBER OWNERS.

Washington, D. C., July 22.—(Special Telegram to the LUMBER WORLD REVIEW.)—Whether or not any changes will be made in the revenue bill of special interest to the lumber industry by the senate cannot be foretold at this time. The paragraph of interest to the lumber trade, as reported by the ways and means committee to the house, reads: "A REASONABLE ALLOWANCE FOR THE EXHAUSTION, WEAR AND TEAR OF PROPERTY ARISING OUT OF ITS USE OR EMPLOYMENT IN THE BUSINESS OR TRADE; AND IN THE CASE OF MINES, INCLUDING OIL WELLS OR GAS WELLS, A REASONABLE ALLOWANCE FOR DEPLETION OF RAW AND OTHER MATERIAL DEPOSITS NOT TO EXCEED 5 PERCENT OF THE GROSS VALUE OF THE MINE FOR THE YEAR IN WHICH THE COMPUTATION WAS MADE, AND IN THE CASE OF TIMBER A REASONABLE ALLOWANCE FOR STUMPAGE NOT IN EXCESS OF OR CAPITAL ACTUALLY INVESTED IN THE TIMBER SOLD OR REMOVED DURING THE YEAR IN WHICH THE RETURN IS MADE."

The house, before passing the bill, adopted the following amendment to the timber end of the clause on the suggestion of Claude Kitchin, chairman of the ways and means committee: "With respect to timber purchased prior to March 1, 1913, a reasonable allowance not in excess of the fair cash value of such timber on March 1, 1913."

L. M. LAMM.

Saturday Afternoon's Session
July 22, 1916

The first witness in the afternoon was J. L. Sheppard, of Memphis, assistant general freight agent of the Illinois Central. He testified on the same exact lines as the Southern Railway witness, E. R. Oliver.

The substance of Mr. Sheppard's testimony was that on the Illinois Central conditions were such that it would not be practical to establish any relationship as between lumber and other products of wood, such as sash, doors, etc., that might be uniform; that their own conditions were such that it was necessary that the rates on these other products of the forest should be made without relation to lumber and he testified that veneer should take higher than lumber rates.

After Mr. Sheppard, Mr. Padget, of the Queen & Crescent, testified along the same lines.

J. M. Souby, who is general attorney for the Kansas City Southern railway, stated that he represented the Southwestern lines and he would put on the stand a man who was with the Cotton Belt, a Mr. Lehman, who testified that he thought that rough and dressed lumber should all take one rate; no differentiation should be made between rough and dressed lumber but that one classification throughout the United States was not practical. There was nothing else of any particular consequence in his testimony, except that he also thought veneer should be higher than lumber and he was also subjected to cross-examination.

THE CHAIRMAN'S FINAL REMARKS.

The chairman announced he had previously given out dates for the briefs, but said they would like to have them made November 1 and answers November 20, and he said all argument would be heard in December, probably the first week. He expressed pleasure for the way the case had been conducted, at the wide interest taken during the proceedings and that so many men were willing apparently to make some sacrifice of time to attend. Then some one got up and thanked the chairman for his almost unbelievable patience. There was a general all-around handshaking and the most interesting conference on lumber classification that was ever held was—formally—at an end at 4:15 p. m. However, before the final breaking up, Chairman Meyer, as he glanced at the lumber which had accumulated in his chambers during the two weeks of the hearing, suggested that all the "exhibits" should be taken to Washington, as the other commissioners might want to see them. Some one wanted to know if "mixed car rates" might be allowed on the lot. That was the last word.

KANSAS CITY WHOLESALERS PROTEST CONCERNING RE-CONSIGNMENT.

R. E. Renfro, president of the Byrne-Renfro Lumber Co., of Kansas City, Mo., arrived in Chicago on Saturday morning, July 22, with the idea of making an endeavor to put in oral testimony before Commissioner of the Interstate Commerce Commission Meyer, but was too late to enter the program and so addressed a letter to Chairman Meyer, signed by the Byrne-Renfro Lumber Co., Buschow Lumber Co., Greason-Grayson Lumber Co. and the Saunders-Turner Lumber Co., of Kansas City, expressing practically a similar line of argument as was presented on Thursday before Examiner Esch by A. Fletcher Marsh, with this difference—that they argued that by no other method than the reconsignment method could many thousands of small tracts of timber ever be marketed.

These Kansas City people introduced a letter, also, from the Garrison Lumber Co., a small mill, which concern said that even a charge of $5 per car would be an order to shut down many hundreds of saw mills.

A FIRST AID MANUAL FOR LUMBERMEN.

The industrial department of the international committee of the Young Mens Christian Association has issued a "Lumbermen's Safety First—First Aid Manual" for the general information of those engaged in the lumber industry and for instructing employees in first aid to the injured. The pamphlet is profusely illustrated with practical examples of first aid and the subject is covered thoroughly in its seventy pages. The pamphlet was prepared by Dr. J. E. Sparks, superintendent of the hospital of the Crossett Lumber Co. at Crossett, Ark., and Dr. E. H. T. Foster, of Charlotte, N. C., secretary of the industrial department of the international committee of Young Men's Christian Associations.

The Latest News of the Lumber World

VERY LATEST WORD CONCERNING PACIFIC COAST CONDITIONS AND GREAT MASS MEETINGS THERE.

Portland, Ore., July 24.—(Special Day Press Telegram)—The continued longshoremen's strike and the lack of tonnage are forcing Pacific coast cargo mills into the rail trade in the middle west and east. On Thursday and Friday, July 27 and 28, as previously wired, there will occur what at this late hour promises to be the largest conference of all Pacific coast lumber interests which ever convened at Seattle.

The Inland Empire and California sugar and white pine men will hold a joint conference at Bend, Ore., August 9 and 10.

Preparations are going on rapidly for the meeting of the Western Forestry & Conservation Association and the Pacific Logging Congress, which will gather at Portland, Ore., October 24 to 28 inclusive. There never has been such a prospect of a general eastern invasion of trade by west coast and Inland Empire products as at the present time. There will be difficulty in prognosticating what the result will be.

STAFF CORRESPONDENT.

VIOLENT HURRICANES SWEEP THE SAWMILL SOUTH.

A variety of hurricanes, cloudbursts and other wet and windy visitations have very materially damaged the sawmilling interests from Jacksonville to Mississippi. The L. N. Dantzler Lumber Co., of Gulfport, lost a 3-masted schooner, the captain, his wife and the crew also being lost.

The storm in the neighborhood of southern Alabama and northern Florida seemed to have damaged the Alger-Sullivan Lumber Co. at Century to some extent, put the Stuart Lumber Co.'s plant at Brinson under water and placed the Babcock Lumber Co at Babcock, Ga., in the same category. It has strongly interfered also with the business of the Atlantic Coast Lumber Co. at Georgetown, S. C.

The severest damage seems to have been done, however, in western North Carolina, where at least a score of lives were lost and several millions of dollars of damage done. The damage to lumber interests in that section seems to have been so great as to have elicited the active co-operation of that enterprising body of men, the Western Carolina Lumber & Timber Association, who, through the governor of North Carolina, are taking methods of salvaging the lumber which would otherwise be lost.

IN THE WAKE OF THE STORM.

Hattiesburg, Miss., July 12.—The tropical storm that struck here last Wednesday afternoon did not do as much damage to timber as was at first thought. In the immediate vicinity of Hattiesburg the timber loss is very little. Practically all of the timber that has blown down is defective and very little was uprooted, probably due to the fact that the heaviest wind came before the ground was thoroughly wet. The wind was followed by a heavy downpour of rain, which washed out dummy lines, and this will put the little mills out of commission for several weeks, as well as the railroads running into the city. The N. O. M. & C. has so far been unable to get trains through to Mobile. The G. & S. I. has not been able to get any trains through to Gulfport, also the N. O. & N. E. has been unable to get trains through from Hattiesburg to New Orleans. All of which is due to washouts.

All telephone and telegraph wires have been down along these lines, but the wires have been repaired, and reports received from the towns in the [illegible] of the storm are to the effect that little timber was blown down. The timber section southeast of here has not been heard from, but it is thought that the timber damage will be much less than damage done to plants and railroads. Directly west of here the damage was very slight.

A number of mills had their stocks demolished and sustained other damages. Several suffered some loss by fire, and nearly all had timber damaged, a good part of which they will be able to recover without heavy loss.

BUILDING OPERATIONS FOR JUNE, 1916, SHOW LARGE INCREASE.

The official reports of building permits issued during June, 1916, in 103 of the principal cities of the country, compiled by the American Contractor of Chicago, show a great increase, amounting to 44 percent, over the operations in the same cities in June, 1915. The total figures for building permits last month in the 103 cities were $91,768,080 as compared with $63,890,860 for the corresponding month last year. This is the largest increase of any month thus far in 1916.

Of the 103 cities for which figures are given, sixty-seven show gains and thirty-six losses. The greatest gain in percentage in any of the large cities was shown in New York, which, with Brooklyn and the other boroughs, shows a gain of 117 percent over last year. The gain in Chicago was 45 percent and in Philadelphia 33 percent. Other notable gains were: In Cincinnati, 14 percent; Cleveland, 15 percent; Denver, 106 percent; Detroit, 85 percent; Indianapolis, 48 percent; Kansas City, 29 percent; Memphis, 12 percent; Minneapolis, 25 percent; New Orleans, 120 percent; Portland, Ore., 114 percent; San Francisco, 130 percent. A rather contradictory situation is shown in the Puget Sound country, where Seattle shows a loss of 29 percent and Tacoma a gain of 260 percent. The condition of the building industry is especially gratifying when it is considered that a large amount of construction work is held up because of the scarcity and high price of steel and other forms of building material, save lumber, which is available at low prices, comparatively speaking.

During the first six months of the year the total value of building operations in the cities named was $484,786,616, as compared with $381,264,854, for the first six months of 1915, this showing an increase of 27 percent. An analysis of the six months' building operations by sections shows a gain in New England territory of 17.1 percent; in the middle states of 20 percent; in the western states of 23.6 percent; in the northwestern states of 57.3 percent; in the southwest of 6.1 percent; in the southern territory of 22.5 percent and in the Pacific coast states of 30.4 percent.

Reports from eleven cities in Canada show a decrease during the first six months of 11.2 percent from the record last year. The figures for June, 1916, are as follows:

City.	June, 1916 Estimated cost	June, 1915 Estimated cost	Gain	Loss
Akron, Ohio	$1,323,455	$355,225	272	....

THE RECONSTRUCTED CITY.

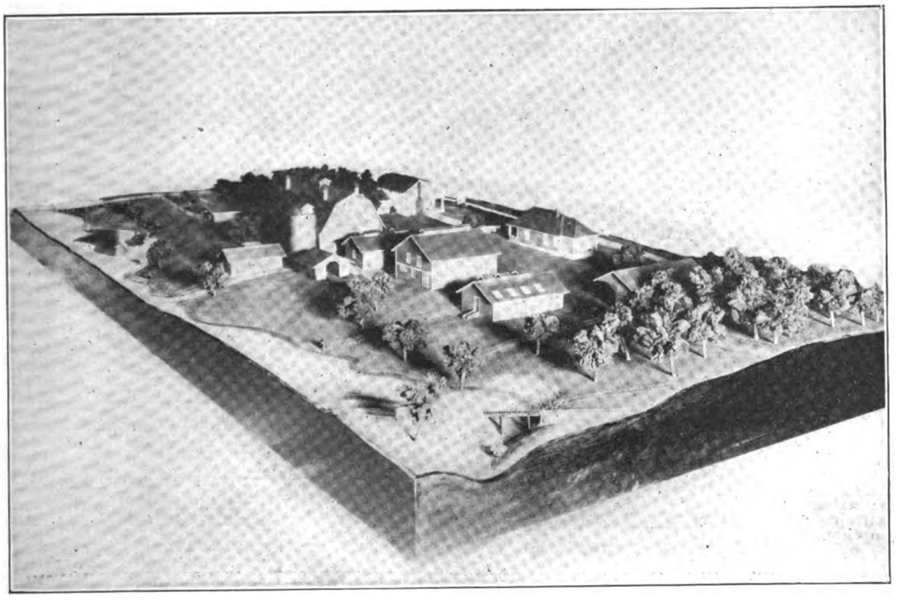
"The Reconstructed City" is the name of the world's exposition now being held in Paris, France, beginning on May 15, and lasting for four months. "The Reconstructed City" is a French national exposition to teach, even at this early date, how to rebuild the war-wrecked portions of northern France, when the war is ended. That the French government is already planning on an entire reconstruction of the cities destroyed by the movements of armies back and forth across the northern provinces is evidence of foresight of an unusual type.

It is to be a French exposition entirely, and America's part has been only the sending by lumber manufacturers of an exhibit showing the possibilities of American timber in this work of reconstruction.

"The Reconstructed City" is in several sections, different parts of the exposition being devoted to such departments as road-building, city planning, city residence construction, city industrial buildings, and rural work. In some cases the city planning department will work for an entire reconstruction on entirely new lines of the cities which have been wrecked by bombardment. In other cases only building construction along the old streets will be required. The road work will be important, also, for shells have raised havoc with the famous highways of northern France. Ruined farms will be no small part of the problem of reconstruction.

The Southern Pine Association, through its European agent, learned of the projected exposition, and was able to get an exhibit, not only of southern building types, but of typical American structural work on the last ship leaving New Orleans before the exposition. The American lumbermen have a series of models of buildings for city and farm, including a small mill construction building for industrial purposes, and models particularly of farm buildings, such as an ideal barn, swine house, poultry house and granary. Photographs of groups of these buildings are included and the balance of the exhibit is made up of samples of southern pine in various stages, from the original timber to the finished lumber. One of the unique features of the exhibit will be a relief plan of an ideal farm, with model buildings worked in, and a landscape effect with hills in relief, streams and roads.

THE EXHIBIT OF THE SOUTHERN PINE ASSOCIATION AT THE EXPOSITION OF THE RECONSTRUCTED CITY IN PARIS, IN CHARGE OF W. J. DREWRY, EUROPEAN REPRESENTATIVE OF THE SOUTHERN PINE ASSOCIATION, WHERE MR. DREWRY DISTRIBUTES SOUTHEN PINE LITERATURE PRINTED IN FRENCH. THIS HAS CAUSED MORE INTEREST IN PITCH PINE IN FRANCE THAN ANYTHING ELSE THAT HAS EVER BEEN DONE.



PICTURED OF "MODEL FARM" DONE AT THE INSTANCE OF THOSE IN CHARGE OF THE "EXPOSITION OF THE RECONSTRUCTED CITY" NOW BEING HELD IN PARIS, FRANCE, IN WHICH THE SOUTHERN PINE HAS FAITH AND OF WHICH THIS IS ONE OF THEIR EXHIBITS.

SCIENTIFIC RESEARCH DISCREDITS ASPHALT SHINGLES IN BOSTON AND UPHOLDS THE BUILDING COMMISSIONER IN HIS OPPOSITION TO SPECIAL LEGISLATION.

They have had a parrot and monkey time of it over asphalt shingles in Boston recently and apparently will have as long as Patrick O'Hearn remains the building commissioner of that learned city.

There is in Boston an organization called the United Improvement Association, which may be honest enough in its purpose, and which desires to see that asphalt roofs are given to the citizens of Boston and even went to the extent of seeing to it that special legislation was passed by the state legislature to bring this about.

It seems though that some conservative got at the bill before it finally passed and put in the saving clause that the building commissioner of Boston, while he might not prevent the use of asphalt shingles on Boston roofs, still was given discretionary power as regards the standard of asphalt shingles. This building commissioner, Patrick O'Hearn, objects to wooden shingles, although he admits that they make tight and durable roofs; and he objects to asphalt shingles because they are not in his opinion made thick enough.

The United Improvement Association recently issued to the citizens of Boston, a plea for the asphalt shingle introducing statements concerning the fire resisting qualities of the shingles by reference to the ordinary layman's method of testing fire resistance with a blow-pipe, and generally urging the people to get out and make public sentiment against Mr. O'Hearn's rulings.

Whether all this inspired the shingle demand for a REAL test of the asphalt does not appear. Nevertheless a real test has been made by Arthur D. Little, Inc., the National and Internationally known chemist of Boston and an announcement was made there on July 19, which shows that the asphalt shingle is not sufficiently fire resistant; that it practically contains no wool binder; that it is now running 15 percent or something like that to wood pulp, old rags, etc., establishing without question the contentions of Patrick O'Hearn, whose ruling was evidently based upon common sense and practical knowledge, which people sometimes arrive at without scientific assistance.

At all events asphalt shingle's claims over slate and the like are nil in the land. This Boston decision will have a very damaging effect on the sales of asphalt shingles, which thirty-five manufacturing firms are making and selling in this country, unless they make the shingle of such a standard of excellence as to actually meet the requirements.

NORTHERN HEMLOCK AND HARDWOOD ASSOCIATION.

The summer meeting of the Northern Hemlock & Hardwood Manufacturers' Association, it is announced, will be held at the Hotel Pfister, Milwaukee, Friday, July 28. There will be no set addresses and papers and the meeting will be primarily a business session, discussing hardwood grading and inspection and the steps that are being taken in the way of safe-guarding the interests of the members.

The Latest News from Washington

Lumber World Review, Washington Bureau, 208 District National Bank Building

L. M. LAMM, Staff Correspondent

APPROPRIATION FOR FOREST SERVICE AND FOREST LANDS PASSED.

Washington, D. C., July 22.—The senate last week passed the agricultural appropriation bill, which includes the annual appropriations for the Forest Service.

The appropriation this year for the Service aggregates $5,574,735, as against $5,553,256 for last year. In addition this year the bill carries an appropriation of $1,000,000 for the acquisition of forest lands on navigable streams, which is for the continuation of the National Forest Reservation Commission under the old Weeks Law. In addition the bill provides an appropriation of $2,000,000 for purchases for next year under the same act.

An appropriation of $25,000 is also included in this year's bill which was added as an amendment by Senator Ransdell, of Louisiana and which is for further experimentation of the use of wood in the manufacture of kraft wrapping paper. Experiments have already been carried on by the Forest Products Laboratory, at Madison, Wis., but the experts there want to make some "commercial runs" at various paper mills to see if their theories developed in the laboratory are commercially practicable. The appropriation will be utilized in this way.

NEW PROCEDURE IN LUMBER INVESTIGATION GOES INTO EFFECT.

Washington, D. C., July 21.—Federal Trade Commissioner Will H. Parry is no longer in charge of the lumber investigation being carried on by that body. The lumber investigation, together with all other investigations and any that may be taken up in the future, will be under the direct charge of a board of three economists. In other words, instead of any one commissioner being in charge of any one investigation, as has been done in the past, the new economic board will handle all of them. This new procedure has just gone into effect.

There has been much speculation here relative to this investigation and when any report could be expected from the commission. According to officials of the commission much has been done but a great deal yet remains to be done. It was expected that a report would be made to congress before this time but it is doubtful at this writing if a report will be made to this session of congress, it being assumed that it will adjourn on September 1 or thereabouts.

REPORT OF EXPORTS AND IMPORTS FOR YEAR ENDING JUNE 30.

Washington, D. C., July 20.—According to government reports the exports for the fiscal year ending with June amounted to $4,345,000,000 and the imports were valued at $2,180,000,000, making a total foreign trade for the year of over six and a half billion dollars, which is much larger than any previous total in the history of American commerce.

Statistics show that it was in 1872 that our foreign commerce first exceeded one billion dollars. By 1900 it had crossed the two billion dollar mark, by 1907 it had exceeded three billion, and by 1913 had risen over four billion, remaining around that level until the year just ended, when the six billion dollar mark was exceeded. Imports first exceeded one billion dollars' value in 1903 and are now a little more than twice as much as at that time. Exports first rose above one billion dollars' value in 1892 and are now four times as much as in that year.

THE RURAL CREDITS BILL BECOMES A LAW.

Washington, D. C., July 20.—President Wilson has, since our last issue, signed the rural credits bill, providing for the establishment of a system of farm land mortgage banks to handle the long-time mortgage loans of the farmers of the country.

The enactment of this law presents an achievement in four years that is almost unparalleled. A definite need existed, but the term rural credits and the systems in successful operation in Europe were little understood by the masses of the people of this country.

The movement was initiated at a meeting of the Southern Commercial Congress in Nashville, Tenn., in 1912, and approximately $100,000 was raised by that organization to commence the work afterwards completed by congressional action.

TARIFF COMMISSION BILL INCLUDED IN NEW REVENUE BILL.

Washington, D. C., July 6.—Provision is made in the revenue bill which has just been introduced in the house by Representative Kitchin, chairman of the Ways and Means Committee, for a tariff commission. The tariff commission as planned in the bill is really the Rainey bill, or in other words, the administration's tariff commission bill. Few and slight changes only are contained in the committee's bill.

The bill provides for six members for the commission, to be appointed by the president, not more than three of whom are to be members of the same political party. After the first appointments the members of the commission are to hold office for twelve years. A provision is made in the bill that "no person shall be eligible for appointment as a member of the commission who has been elected to or served in the Senate or House of Representatives of the United States."

Each of the members of the commission, according to the present bill, is to receive an annual salary of $10,000. The bill further provides that the commission shall have power to "investigate the tariff relations between the United States and foreign countries, commercial treaties, preferential provisions, the effect of export bounties and preferential transportation rates, the volume of importations compared with domestic production and consumption, and conditions, causes, and effects relating to competition of foreign industries with those of the United States, including dumping and cost of production." Other duties are also imposed upon the commission such as the making of investigations as requested by the president and congress.

The Cost of Production Division of the Bureau of Foreign & Domestic Commerce, Department of Commerce, is to be transferred to the commission when it comes into existence.

Provision is also made in the revenue bill for "unfair competition."

PROFESSOR COMPTON JOINS STAFF OF FEDERAL TRADE COMMISSION.

Washington, D. C., July 6.—Prof. Wilson Compton, of Dartmouth University, a well known writer on lumber economy has just joined the staff of the Federal Trade Commission. It is understood that Prof. Compton's first assignment will be on the lumber investigation, where it is expected he will do some very good work. Prof. Compton has given much study to the question and has written quite extensively for the lumber trade press.

INTERSTATE COMMERCE COMMISSION HEARINGS

Only one lumber hearing is now on the docket of the commission in a lumber case between now and our next press date, that being the one to be held on July 29 at Houston, Tex., before Examiner Bissell, of the Commission, in case No. 8728 of the West Lumber Co. et al., against the M. K. & T. Ry. Co. of T., et al. Practically no cases will be heard during the month of August.

INTERSTATE COMMERCE COMMISSION SUSPENSION ORDERS.

The commissioners have suspended until January 9, 1917, the operation of certain schedules contained in tariffs of R. H. Countiss, agent, and F. W. Comph, agent. The suspended items contain increased rates on lumber and other forest products from points in California to points in New Mexico.

The operation of certain schedules appearing in supplements Nos. 11 and 12 to Agent F. A. Leland's I. C. C. tariff No. 1096 has been suspended until January 31, 1917. The items named in these supplements name increased rates on lumber, carloads, from certain points in Arkansas and Oklahoma to Chicago, Ill., and various other destinations.

The commissioners have suspended until February 18, 1917, the operation of certain items contained in supplements to I. C. C. tariffs of the Missouri Pacific and the St. Louis & Iron Mountain.

The suspended items name increased rates on lumber, carloads, from Arkansas City, Ark., to Memphis, Tenn., and other destinations.

INTERSTATE COMMERCE COMMISSION DECISIONS.

Among some of the lumber decisions handed down the last two weeks are the following:

In the case of the Nashville Lumbermen's Club against the Louisville & Nashville et al., the commissioners say:

"Rates and regulations applied to the transportation of hardwood lumber shipped to Nashville, Tenn., and subsequently reshipped to points north of the Potomac and Ohio rivers, not found unreasonable or unduly discriminatory. Complaint dismissed."

Commenting on case No. 7607 of the Advance Lumber Co., of Birmingham, Ala., against the Atlanta, Birmingham & Atlantic Railroad Co., et al., the commissioners say:

"Demurrage charges at Birmingham, Ala., on five carloads of lumber shipped from Chelsea and other Alabama points to Avondale, Ala., milled there, and reshipped to interstate destinations, found to have been unlawfully assessed. Reparation awarded."

An opinion in case No. 8346, involving J. V. Stimson, of Huntingburg, Ind., and a portion of Fourth Section application No. 1548, has been rendered by the commissioners. They say:

"1. Defendants' rate of 10c per 100 pounds for the interstate transportation of carload shipments of lumber from Huntingburg, Ind., to Shelbyville, Ind., not found to have been unreasonable or unjustly discriminatory. Complaint dismissed.

"2. Fourth Section, Application No. 1548, denied to the extent that authority is sought in it to continue rates on lumber from Rockport, Rock Hill, Troy, Tell City, and Cannelton, Ind., to Shelbyville, Ind., which are lower than the rate contemporaneously applicable on like traffic from Huntingburg, Ind., and other intermediate points to Shelbyville."

The commissioners have handed down a rather important decision in regards to their investigation into the lumber rate changes in the Pacific coast-southwest changes. They say:

"Proposed increased rates on lumber and lumber articles from points in Oregon, Washington, Idaho, Montana, and Western Canada, to points in New Mexico, Oklahoma, and Texas, not justified."

Relative to their investigation into the changes of rates on forest products from Arkansas points they say:

"Proposed cancellation of joint carload rates on lumber and on rough stave bolts from certain stations on the Blytheville, Leachville & Arkansas Southern Railroad to certain stations on the St. Louis & San Francisco Railroad, justified."

In disposing of their investigation into lumber rates from Louisiana points the commissioners say:

"Proposed increased rates on lumber in carloads from Leesville and other points in Louisiana on the Kansas City Southern Railroad to Galveston and intermediate points in Texas on the Gulf, Colorado & Santa Fe Railway, found not to have been justified and the schedules under suspension directed to be canceled."

Personal News Notes

D. W. Ferry, Chicago manager of the McLeod Lumber Co., 1329 Monadnock building, this city, has been spending a few days during the heated term at South Haven, Mich., where his family is located for the summer.

Frank N. Snell, of the Louisiana Red Cypress Co., New Orleans, La., and Charles L. Barnett, of the Collier-Barnett Co., sash and door wholesaler of Toledo, Ohio, were in Chicago together a day or two last week. Mr. Snell installs his family every summer at Green Lake, Wis., and was on a visit in the north. He delivered one of the leading addresses at the World's Salesmanship Congress at Detroit, Mich., on July 12. The connection of Mr. Snell's name with Mr. Barnett's arises from the fact that these two prominent lumbermen have been close friends ever since their boyhood days and they never miss an opportunity to fraternize when they meet, which is usually at a lumber gathering.

C. Perry Lindsley, general manager of the Craig Mountain Lumber Co., Winchester, Ida., and of the Lindsley Bros. Co., Spokane, Wash., was in Chicago last week and participated in the reclassification hearing. Mr. Lindsley is especially interested in the long pole proposition, his testimony being to the effect that rates on the "idler" car used in transporting the long poles and the minimum weights on the shipments are somewhat to the disadvantage of the Idaho pole interests.

M. J. Fox, general manager of the Von Platen Lumber Co., Iron Mountain, Mich., was one of the interested attendants at the classification hearing here held recently. Mr. Fox reported an excellent demand for lumber, and combined a few advantageous sales of hardwoods during his visit here.

A. H. Whitmarsh, manager of the Wm. Buchanan interests of Texarkana, Ark., and one of the best known yellow pine lumbermen in the southwest, passed through Chicago last week on his way to his southern home after having spent some time with his family, who are located at their summer home at Charlevoix, Mich. Mr. Whitmarsh made a welcome call on his friends in the LUMBER WORLD REVIEW office.

The Kraetzer-Cured Lumber Co., of Moorehead, Miss., of which Ben F. Dulweber, of Cincinnati, is the principal owner, has recently established an office in Cihcago in charge of Henry F. Hooper, son of Edwin E. Hooper, secretary of the Lumbermen's Association of Chicago.

One of the most welcome visitors at the Interstate Commerce Commission's reclassification hearing held in Chicago recently, was George X. Wendling, vice-president and general manager of the Dalton Adding Machine Co., of Cincinnati, O. Mr. Wendling has been in the adding machine business only about six months and his large army of friends in the lumber trade have not forgotten him and as a result he was most cordially greeted by those who were in attendance at the hearing. He says that he likes his present business and is making a great success of it, as his friends knew he would do. It will be remembered that he was formerly, for many years, the head of the Weed Lumber Co., Weed, Cal., and was one of the most active lumbermen on the coast and in fact, in the entire country.

A new warehouse for the better distribution of oak flooring has been opened in Chicago by the E. L. Bruce Co., of Little Rock, Ark. The company has leased premises at Twelfth and Canal streets and will have its offices in connection. It is one of the most convenient locations for this class of business that could be found. Mr. Bruce expects to get in plenty of stock right along and will soon have the office and warehouse fitted up for his occupancy.

A. L. Porter, of Spokane, Wash., secretary of the Western Retail Lumbermen's Association and president of the National Builders Bureau, with offices at 1839 Transportation building, this city, arrived in Chicago from the coast last week and after a conference with his associate, W. L. Denniston, went right back west. Mr. Porter is very proud of the July number of the "Western Retail Lumberman," which he publishes in the interest of the retail association and the latest number of which was just issued. Mr. Porter has some very good articles in the paper for the retail lumbermen and especially adaptable to those in his territory, which covers a considerable slice of the western half of the country. He reports that the National Builders Bureau is progressing favorably.

Alfred J. Cross, of the C. L. Cross Lumber Co., this city, is spending his week ends at Oconomowoc, Wis., where his family is occupying a cottage.

W. L. Saunders and Charles R. Abbott, of the Cummer-Diggins Co., Cadillac, Mich., and Henry Ballou, general manager of the Cobbs & Mitchell interests, of Cadillac, were among the prominent lumbermen who were in attendance from Michigan at the classification hearing. Charles T. Mitchell, president of the Michigan Hardwood Manufacturers' Association, and J. C. Knox, secretary of the association, were here several days on the same mission.

NATIONAL COMMISSARY MANAGERS.

Russell E. Lee, secretary of the National Commissary Managers' Association, announces the seventh annual convention to be held at the Hotel La Salle, Chicago, Tuesday, Wednesday and Thursday, August 8, 9 and 10. No man interested in company store management can afford to miss the program that will be presented at this meeting. Men of national reputation will speak and it will be a splendid opportunity for the commissary men to meet hundreds of other men in the same line of business and discuss problems of commissary management.

HARDWOOD INSPECTION IN JUNE.

The National Hardwood Lumber Association has issued its monthly report of inspection work for June, showing 8,524,566 feet of lumber inspected by the salaried inspectors and 4,400,360 feet inspected by the fee inspectors, a total of 12,924,926 feet. The amount reinspected by Chief Inspector H. A. Hoover was 162,646 feet, which makes a grand total of 13,087,572 feet.

Applications for membership have been received during the month from the following concerns: Nelson-Jacks Lumber Co., Shreveport, La.; Beaumont Lumber Co., Beaumont, Tex., Southern Star Lumber Co., McKenzie, Tenn., Clearfield Lumber Co., Inc., Clearfield, Ky.

Secretary Frank F. Fish announces that a man representing himself as D. E. Willis or G. E. Willis, whose permanent address is unknown, has recently been in the Kansas City district and also at several Louisiana mill points. Mr. Fish states that this man has no authority whatever to issue certificates for his association nor has he any connection with the association.

OBITUARY

CHARLES G. SCHILLING.

St. Louis, Mo., July 20.—Charles Gerhard Schilling, sales manager of the Crossett Lumber Co., Crossett, Ark., died at the Alexian Bros. hospital, St. Louis, Monday evening last, at 7 o'clock. He had a nervous breakdown from overwork about ten days previous to his death and was taken to the hospital. The funeral took place from the Wagoner Undertaking Co.'s parlors, Wednesday afternoon at 2 o'clock and the body was taken to the Missouri crematory where it was incinerated.

Mr. Schilling was born in Cologne, Germany, December 28, 1875, and came to this country when a child. After attending school at St. Mary's, Kansas, he was employed in the post office at that place from 1893 to 1894. In 1894 he entered the employ of the J. T. Thomas Lumber Co., at Topeka, Kan., and remained there until 1898, when he became associated with the Saline River Lumber Co., at Draughon, Ark. Then he went to Chicago and became connected with Crandall & Leavitt in the hardwood lumber business. From there he came to the W. T. Ferguson Lumber Co., with which company he was connected for several years as sales manager. Later he became sales manager of the Crossett Lumber Co. and came to St. Louis a couple of weeks previous to his death to open a sales office. Mr. Schilling is survived by his wife and one son.

F. D. TORRENCE.

Findley D. Torrence, one of the leading retail dealers of the country and at one time president and for many years treasurer of the Ohio Retail Lumber Dealers' Association, of which his son, Findlay M. Torrence, is now secretary, passed away at his home in Xenia, Ohio, on June 25.

Mr. Torrence was engaged in the lumber business in Xenia for sixty years and was president of the McDowell & Torrence Lumber Co. at the time of his death. He was also treasurer of the Lumbermen's Mutual Insurance Co., Mansfield, Ohio, which he aided in organizing many years ago. He was president of the Home Building & Loan Co., of Dayton, Ohio, and a director in the Xenia National Bank at Xenia. He took a great interest in public affairs and served for several years as president of the Xenia city council. Mr. Torrence was a gallant soldier in the civil war, serving in the Sixteenth Ohio Battery and was mustered out at the close of hostilities. There were none who knew Mr. Torrence who did not admire him for his splendid social qualities and uniform courtesy.

Beside his widow he leaves two sons, Ridgley Torrence, of Boston, Mass., and Findlay M. Torrence, of Xenia, and a daughter, Pauline Torrence. The son Ridgley is a literary man and widely known as a poet and playwright.

Seattle, Wash.—Carnation Lumber & Shingle Co.; $100,000 capital. L. B. Swafford, Carton Burnett.

North Yakima, Wash.—Rovig Lumber Co.; $100,000 capital. R. D. Rovig, I. Rovig and Gus Lindman.

Damascus, Va.—Rainey-Minton Lumber Co.; $15,000 capital. E. T. Rainey, president; W. A. Minton, secretary and treasurer.

Bath, Me.—Morse Bros., Inc.; $100,000 capital. (Lumber, etc.) Herman L. O. Lingg.

Texhoma, Okla.—The Resident Lumber Co.; $10,000 capital. H. L. Choate, W. F. Cline and R. B. Choate.

Detroit, Mich.—National Lumber & Manufacturing Co.; $25,000 capital.

Buffalo, N. Y.—Pearce & Pearce, Inc., realty, construction, lumber, etc.; $10,000 capital. A. E. Sullivan, L. L. Pearce and A. H. Pearce.

Wilmington, Del.—Castner, Curran & Bullitt; $1,500,000 capital. (To deal in coal, coke, lumber, etc.) Herbert E. Latter, Norman P. Coffin and Harry T. Farrow.

New York, N. Y.—The Mayer Lumber Co.; $10,000 capital. Robert Kloor, James F. Reynolds and Hugo Mayer.

Wauseon, O.—The Weldon Handle & Lumber Co.; $10,000 capital. G. W. Evilsizer, Howard Lewis, Frank M. Hackett and others.

Orlando, Fla.—Southern Millwork Co.; $50,000 capital. J. L. Payne, president; T. Picton Warlow, vice-president, and J. P. Williams, secretary-treasurer.

Maytown, Fla.—Maytown Lumber Co.; $10,000 capital. R. C. Middleton, president; W. H. Dean, general manager.

Tampa, Fla.—Bates-Hudnall-Jetton Co.; $50,000 capital. J. E. Bates, president; J. L. Hudnall, vice-president and secretary; M. M. Jetton, general manager and treasurer.

Lockridge, Okla.—Lockridge Grain & Lumber Co.; $10,000 capital. S. W. Hogan, J. B. Plum and N. M. Hogan.

Bon Weir, Tex.—J. H. Coffman Lumber Co.; $25,000 capital. J. H. Coffman, B. J. Parritt and R. E. Pearson.

Meridean, Wis.—The Meridean Lumber & Fuel Co.; $10,000 capital. Harold A. Shaw, George B. Orlady and Frank Pierce.

Spokane, Wash.—The Jurgens Lumber Co.; $5,000 capital. Adele M. Jurgens.

Vancouver, Wash.—Etna Logging Co.; $20,000 capital. W. W. McCredie, J. R. Harvey and A. C. Chumasero.

Tuscaloosa, Ala.—The McGehee Veneer & Lumber Co.; $30,000 capital. A. M. McGehee, J. T. Harne and H. H. David.

Ottawa, Ill.—The L. M. Bayne Lumber Co.; $35,000 capital. L. M. Bayne, C. M. Bayne and Bert E. Cook.

Chicago, Ill.—The Hayes Lumber Co.; $5,000 capital. Roger Hayes, Charles Kramer and F. Pullman.

Everett, Wash.—The Everett Sash & Door Co.; $10,000 capital. William Rasmussen, Louis L. Rasmussen and George A. Bell.

Waycross, Ga.—The Southern Pine Products Co.; $300,000 capital.

Shreveport, La.—The Colfax Timber Co.; $5,000 capital. J. B. McKnight, president; J. H. McNeeley, vice-president; S. B. Strother, secretary and treasurer, and Frank Conly, manager.

McCaysville, Ga.—The Copperhill Timber & Mineral Land Co.; $340,000 capital. Jos. P. Vestal, John H. Vestal, J. W. Brooks and others.

New Mills

Nelson, B. C.—C. L. Wiley, of Seattle, Wash., is building a shingle mill near here.

Emmett, Ida.—The Boise-Payette Lumber Co. will erect a new lumber mill which will have a daily capacity of 200,000 feet.

Macon, Ga.—The Macon Veneer Co., lately incorporated, will erect two buildings and install equipment to manufacture veneers; daily capacity 15,000 feet.

Homestead, Fla.—The Miami Lumber Co., lately incorporated, of Miami, Fla., will operate a lumber plant here with a daily capacity of 10,000 feet.

Jonesboro, Ark.—The Wegman-Mason Milling Co. will erect a sawmill which will have a large daily capacity.

Albany, Ga.—The Reynolds Bros. Lumber Co., of Franklin, N. C., will build a mill to cut cypress and hardwood timber with a daily capacity of 40,000 feet.

Houlka, Miss.—Geo. C. Brown & Co., of Memphis, Tenn., have purchased a hardwood timber tract and will build mill.

Johnson City, Tenn.—The Doe Mountain Lumber Co. has purchased 12,000 acres timber land and will build mill.

Townsend, Tenn.—The Little River Lumber Co. will rebuild its plant lately burned.

Business Changes

Chino, Cal.—The William Sullivan Lumber Co. has been succeeded by the Chino Lumber Co.

Arriba, Colo.—The E. S. Johnson Lumber Co. has been succeeded by Charles G. Carlbom.

Cerro Gordo, Ill.—B. F. Huff has been succeeded by the Cerro Gordo Lumber Co.

Chicago, Ill.—The Osgood & Richardson Co. has been succeeded by the George B. Osgood Lumber Co.

Woodson, Ill.—W. G. Russell & Son have been succeeded by the La Crosse Lumber Co., of Louisiana, Mo.

Correctionville, Ia.—The Smith-Hovelson Lumber Co. is out of business.

Louisville, Ky.—The Boyd Hardwood Lumber Co. has changed its name to the Boyd Hardwood Lumber & Coal Co.

Edgar, Mont.—The A. P. Stewart Lumber Co. has been succeeded by John Rogers (Inc.) with headquarters at Billings.

Homestead, N. J.—The Hollingshead-Kernan Co. has consolidated with the Edward Kernan Co.

Bridgewater, N. C.—Abernathy, Lyerly & Co. have been succeeded by the Lyerly Lumber Co.

Toledo, O.—The Tolelo Bending Co. has reduced its capital stock from $60,000 to $52,500.

Falls City, Ore.—The Falls City Lumber Co. has been succeeded by the Falls City Lumber & Logging Co.

Sauk City, Wis.—Dresen Bros. are now the Dresen Lumber Co.

Bringhurst, Ind.—The Voight Lumber Co., of Lilbourn, Mo., has opened a yard here.

Indianapolis, Ind.—The American Lumber & Export Co. has closed its office here.

Louisville, Ky.—H. A. McCowen & Co., Inc., have moved to Memphis, Tenn.

Grand Rapids, Mich.—Maley & Wertz, of Evansville, Ind., have opened an office here.

Stanford, Mont.—The Basin Lumber Co. has sold out to the Stanford Mercantile Co.

Newark, N. J.—The East Side Building & Lumber Co. is now known as the Port Newark Building & Lumber Co.

Wheeling, W. Va.—The John W. Beltz & Sons Co. is now the J. W. Beltz & Sons Construction Co.

Ladysmith, Wis.—The Flambeau River Lumber Co. has increased its capital from $200,000 to $300,000.

Stewart, Ala.—A. M. McGehee, of Tuscaloosa, has purchased the entire plant and equipment of the Stewart Veneer Co. for a consideration upwards of $30,000 and will assume charge and operate this concern immediately.

Minneapolis, Minn.—M. Bintner, of Bintner & Lawson, sash and door manufacturers, has sold his interest in the firm to John Nelson. The company will henceforth be known as the Nelson & Lawson Co.

Marengo, Ill.—The J. H. Patterson Co. has increased its capital from $15,000 to $35,000.

Manatee, Fla.—M. G. Rushton is now the Rushton Lumber Co.

Grand Rapids, Mich.—The Alt & Batsche Manufacturing Co. has increased its capital to $25,000.

Chicago, Ill.—The Kraetzer-Cured Lumber Co., of Moorehead, Miss., has opened an office at 11 South La Salle street, this city.

St. Louis, Mo.—The Hummelsheim Lumber Co. has changed name to the Shellabarger Lumber Co.

Fires

Asherton, Tex—Fire swept the Asherton Lumber Co. yards causing loss of $20,000, fully covered by insurance.

Seattle, Wash.—The dry kilns of the Sobey Manufacturing Co.'s shingle plant at Ballard burned; loss $25,000.

Indianapolis, Ind.—Shed of the Wabash Veneer Co. burned.

Nauvoo, Ill.—All of the lumber and sheds in the yards of the Taber Lumber Co. burned; loss $30,000.

Bellingham, Wash.—Three dry kilns and 2,300,000 shingles at the Bloedel-Donovan Lumber Mills, Lake Whatcom plant, burned; loss about $9,600, covered by insurance.

Wausau, Wis.—The Mohr Lumber Co.'s sawmill, planing mill, box plant and factory burned; estimated loss $100,000.

McNary, La.—Mill of the W. M. Cady Lumber Co. burned; loss estimated at $150,000.

Pharr, Tex.—Yard of the Pharr Lumber Co. burned; will be rebuilt.

Gladewater, Tex.—Fire destroyed the planer belonging to W. W. Bradley. Fifty thousand feet of lumber in the yard burned, also two box cars; the planer was valued at $3,000.

Indianapolis, Ind.—Fire in the plant of the Greer-Wilkinson Lumber Co. caused damage of $3,000.

Stables, La.—Twenty or more buildings owned by the Gulf Lumber Co. burned; loss estimated at $50,000.

Salem, Mass.—The lumber mill of A. M. Joly damaged by fire to the extent of $10,000.

Middleton, Ore.—E. M. Chandler's sawmill burned; loss $12,000.

Townsend, Tenn.—The Little River Lumber Co.'s sawmill, ice plant, dry kiln and engine house burned; loss $75,000.

The News Miscellany of the Lumber World

Middle States News

BUFFALO, N. Y.

Buffalo, N. Y., July 22.—This city had quite a number of lumber visitors during the Shriners' convention at the middle of the month, but they were on pleasure bent and did not call as a rule at the lumber offices. The convention brought a greater throng to the city than has been seen here for years, the estimated number of outsiders being about 300,000. Among lumbermen taking a prominent part in the proceedings were F. M. Sullivan and Chester Oschuetz, who were at the head of divisions in one of the big parades.

From present indications the building permits for August will nearly come up to those of July, when the total cost was $1,691,000, or a little in excess of last year. During one week this month the permits amounted to $528,000, which is an exceptional record. A good deal of brick, stone and cement building is being done, somewhat to the overshadowing of lumber, but there is nevertheless a good percentage of frame construction and a fair call for millwork.

The shortage of labor is affecting the work of the lumber yards, as well as of the woodworking industries. While it generally pays to advertise, it is not paying as well as sometimes, for certain lumber yards are finding it expedient to keep a standing advertisement in the newspapers in the hope of getting a fuller supply of laborers. Probably every yard here is shorthanded and few questions are asked when an applicant for a job appears. The big industries of the city are also much in need of men. They are paying the highest wages in years.

Wood block paving which was laid on Chapin parkway a short time ago has not met the requirements of the situation—not from any defective conditions in the wood itself, but because of a lack of good foundation underneath, which leaves the finished work in wavy shape.

North Tonawanda interests have formed the Hope Operating Co., with capital of $1,250,000, to develop property near Thessalon, Ont. It consists of 108 acres, with a sawmill and other equipment formerly owned by the Foss estate of Bay City. The timber is mostly white pine, and it will be manufactured during the next six years. Members of the company are G. A. Mitchell, J. L. Crane and L. S. De Graff.

* * *

NEW YORK, N. Y.

New York, July 22.—J. F. Drescher, eastern sales manager of Bloedel-Donovan Lumber Mills, is on a trip to the headquarters of the company at Seattle. Mr. Drescher has been representing the Bloedel-Donovan interests in New York for the past two years, and during his stay here has made a fine record in spite of the unforeseen handicaps to west coast lumber, such as the outbreak of the war and the subsequent closing of the Panama canal. Since the canal slides and the war made water transportation impossible, Mr. Drescher turned about and developed a new line of trade that could be served by all-rail shipments and made a big success of the undertaking.

The Mayer Lumber Co. is the name of a new concern recently incorporated to engage in the retail lumber business in Brooklyn. The head of the concern is Hugo Mayer, who was formerly associated with his father in the lumber, sash and door business in Brooklyn.

Northern States News

LINCOLN, NEB.

Lincoln, Neb., July 20.—The partnership heretofore existing between J. W. Holmquist, A. C. Holmquist, A. G. Heine, Henry Heine, M. P. Miller and John Moseman, in the Holmquist Grain & Lumber Co., has been dissolved by mutual consent. J. W. and A. C. Holmquist will continue business under the old name at Oakland, Craig, Bancroft and Rosalie, while the other partners, under the firm name of Moseman-Heine Co., have taken over the yards at Emerson, Thurston and Pender, with headquarters at the last named place.

The well-known firm of Curtis, Towle & Paine Co. of this city have purchased the sash and door business of E. Horn of Topeka, Kan., and will shortly open a branch of the Lincoln house at that point, which will enable them to give better service to their Kansas trade than they are at present able to do. This branch will be brought up to the standard required by the "Curtis Service," and will be a valuable addition to the Kansas commercial interests. Since the completion of their new addition last fall, and the removal of their offices to the new building, they have one of the most complete and convenient sash and door factories west of the Missouri.

The firm reports a very satisfactory business and attribute a large part of their increase in business to the "Curtis Service" branch of their activities. This service has proved to be of great benefit to the customers who have made use of it, and its use is constantly increasing.

* * *

MINNEAPOLIS, MINN.

Minneapolis, Minn., July 22.—The continued high stage of water is making it difficult for the Mississippi and Rum River Boom Co. to manage the big log drive from Brainerd to Minneapolis, where the logs are destined for the mills of the Northland Pine Co. Even after logs reach the millpond they are often swept out of booms by a sudden rise of water. Extra booms and men are required to keep the vagrant logs in tow.

P. M. Parker, of the Parker-Kellogg Lumber Co., returning from a tour of inspection of mills in the northern part of the state, reported that his firm is doing a big business in lath this year. The various mills under contract with his firm are turning out an average of four carloads a day of lath, and shipments are going forward to supply building demands.

H. W. Squier, well-known representative of west coast lumber manufacturers in Minneapolis territory, is now with the W. L. Joyce Co., wholesalers of hard and soft wood lumber. The firm has an office in the Lumber Exchange, Minneapolis, and Mr. Squier will have charge of the yard stocks and also visit the retail trade.

W. R. Gray is manager of the Park Lumber Co., which has leased the sheds and yards of the St. Croix Lumber Co., in the Midway district between Minneapolis and St. Paul. The new firm will conduct a retail lumber yard.

The Humbird Lumber Co. has added Charles E. Sipes to its sales force, to travel out of the Minneapolis office, and G. B. Patterson, to cover Montana territory.

E. I. Garland, an experienced sales manager, is now handling the sales for the Weyerhaeuser Lumber Co., in territory east of Minneapolis.

W. I. Carpenter, jr., who was graduated from Princeton in June, has joined his father in the lumber business in the Lumber Exchange, Minneapolis.

Pacific Coast News

PORTLAND, ORE.

Portland, Ore., July 12.—An excursion is proposed by Portland business men in which lumbermen will participate, owing to the importance of the district to the lumber industry of the Pacific coast to a considerable extent, to Coos Bay, Ore., where the C. A. Smith interests are located. The excursion marks the opening of the Willamette Pacific railroad from Eugene, Ore., to Marshfield, Ore., and the completion of the railroad bridge at the Umpqua river, and which opens this district to eastern rail trade.

Announcement has been made that the Southern Pacific, the Great Northern and the Northern Pacific railroads will make effective at an early date a tariff allowing shipments of lumber via Portland to territory in Montana, Minnesota and other eastern points on the northern lines at terminal rates. Heretofore the mills on the Southern Pacific railroad in Willamette valley were excluded from these lines.

John W. Blodgett, of Grand Rapids, Mich., heavily interested in western timber lands, has been a visitor on the Pacific coast some time. He was in attendance at the annual meeting of the Booth-Kelly Lumber Co., Eugene, Ore., in which he is interested.

The Oregon branch of the Western Pine Manufacturers' Association held an interesting meeting here recently. The regular semi-monthly meeting of the association will be held at Bend, Ore., early in August. Fifty million feet, out of a goal of sixty million, has been pledged for the organization of a box bureau of the association. This will be organized at the August meeting.

* * *

SEATTLE, WASH.

Seattle, Wash., July 19.—The big six-masted American barkentine E. R. Sterling, of Seattle, has arrived in Sydney, Australia, with a cargo of 2,526,000 feet of lumber loaded here for the Australian government. The lumber was supplied by the Schwager-Nettleton Mills and $85,000 was paid for it. The vessel owners received $45,000 for carrying the cargo. The Sterling is chartered ahead until the latter part of 1917. Including the voyage just ended, the charters will net the vessel owners $150,000.

The codfishing schooner Fortuna has been chartered to take lumber from Puget sound to Chile and Peru. She will carry 250,000 feet. This is one of the smallest boats ever chartered for this trade and indicates how eager lumbermen are to get carriers for their products. The little brigantine Harriet G. also has been chartered to take lumber from Puget sound to South America. She will carry 300,000 feet.

Lumbermen of this city have received information that the Union Pacific system soon will make a reduction in lumber rates from the Pacific northwest to Missouri river, Kansas and Nebraska points of five cents a hundred. It is believed other transcontinental railroads will meet this reduction. This cut, it is declared, will be of great benefit to the lumber interests of this section of the country, as it will enable them to better compete with the yellow pine manufacturers of the south.

The state of Washington's annual payroll in the lumber industry will total $5,700,000, according to an assessment call of the state industrial insurance commission. The commission has issued a call for an assessment of 2½ percent for the months of April and May. The assessment will yield $167,000.

The barge Henry Villard carried 450,000 feet of lumber to the Copper River & Northwestern railroad at Cordova, Alaska, this week.

The Japanese steamer Hokkai Maru, under charter to Mitsui & Co., is in Seattle to take a cargo of lumber to South America.

The Canadian government is asking for bids on 4,000,000 feet of 12x12 Douglas fir timbers and 1,000,000 feet of 3x9-inch stuff to be delivered by rail at ship's side in Halifax. Another interesting order by the Canadian government is a large quantity of spruce for aeroplanes. The government is willing to pay from $200 to $225 a thousand feet for this material, which must be quarter sawed.

Gulf Coast News

HATTIESBURG, MISS.

Hattiesburg, Miss., July 15.—The recent tropical storm which swept over this region did much damage to lumber mills.

The J. J. Newman Lumber Co. had very little timber to blow down, but their mill was unroofed. Some of the blow pipes blew down, which compelled them to close down until Saturday morning, when they started up on full time again.

The Brookhaven Lumber Co. lost part of the roof of their mill. Part of their blow pipe system and slab conveyor was blown down, but the damage has been repaired and they are again operating.

WEST COAST LUMBERMEN'S ASSOCIATION

SEATTLE - White Building - WASH.

The Poplarville Sawmill Lumber Co., at Poplarville, had several miles of its logging road washed away and the dam of its pond blew out. The dam has been repaired and the mill is in operation this week.

Bentley & Emery, of Richton, lost one stack and water tank at mill No. 1; also portions of the roof from mills No. 1 and No. 2. Their blow pipes at the planing mill are also down. Their railroad is badly washed in places and one long trestle over Bogue Homa creek is damaged to considerable extent. It will likely be ten days or two weeks before they can start their mills. They lost but little timber.

The Robinson Land & Lumber Co., Chicora, who were in the center of the storm, say that the damage to their timber will hardly be over five percent, and a good part of which they will be able to recover without any serious loss. Their railroad was but very little damaged, and only a small trestle or so washed out. The damage to the plant is also small, with several stacks being down and a roof or so somewhat damaged. They are now running one mill and will have everything in shape to go ahead with mill No. 2 within the next few days. It was their large timber that fell and a large percentage of which is red heart.

Southwestern News

KANSAS CITY, MO.

Kansas City, Mo., July 22.—The settlement of the building strike here is the biggest news development of the last two weeks. A compromise satisfactory to all parties was arranged between the striking building laborers and the Builders' Association. The decision affects 2,000 men and a number of the largest construction jobs underway here. The agreement was a compromise, the laborers receiving a 2½ cent advance in wages per hour. Originally they asked a 5-cent increase.

The new scale will give the men 37½ cents an hour and plumbers' helpers 40 cents an hour. Although 22 independent contractors had already acceded to the proposal for a 5-cent advance, the compromise offer of 2½ cents came from the union representatives at the conference.

Another labor agreement that lumbermen were interested in was that in the coal fields of Missouri, Kansas, Oklahoma and Arkansas. So closely related are the lumber and coal interests that the conference of miners and operators just ended here has been closely watched by lumbermen. The miners received a wage increase of from 3 to 5 cents a ton.

Crop reports continue to be an optimistic item in the news and recent rains have done much for the corn, the only farm crop not now safe.

• • •

LITTLE ROCK, ARK.

Little Rock, Ark., July 22.—The Twin City Hardwood Co. of Minneapolis, Minnesota, on July 17 closed a deal with the Pine Bluff Chamber of Commerce for the purchase of a site in Pine Bluff on which will be erected a plant for concentrating and shipping hardwood timber. The company proposes to ship at least three hundred cars from the Arkansas plant during the first year, and probably will double the amount the second year. It is stated that the deal involved some $50,000.

More than 15,000,000 feet of timber in Clay county, Arkansas, owned by the Brooklyn Cooperage Co., of Poplar Bluff, Missouri, was ruined by the recent wind storms, according to reports from Corning, Arkansas. The young and second growth timber was also badly damaged, it is said. On account of this great loss it is estimated that the company will finish cutting its holdings in Clay county about three years sooner than it had expected.

Material and tools for the construction of the Fort Smith, Subiaco and Eastern railroad have been received at Dardanelle. It is proposed to begin the grading work at three points along the line at the same time, so that the work may be better facilitated. The steel for the new road has been purchased from the Rock Island and will be assembled at Dardanelle.

Working on a contract secured by the parent company, the John Deere Plow Co. of Moline, Illinois, the Fort Smith Wagon Co. of Fort Smith, Arkansas, is now busily engaged in getting out the principal parts of 1,000 army wagons for the United States government. All of the wagons, except the wheels, will be made at Fort Smith. The wheels will be turned out by the plant at Moline. Oak, hickory and poplar will be used principally in making these wagons, which are to be of medium weight and built to stand hard service under almost all weather conditions. They are for use by the commissary department of the army and are designated as escort wagons. They will be equipped with heavy canvas tops. The total contract price is said to approach a half million dollars, and an early delivery is specified in the contract.

Central Southern News

NASHVILLE, TENN.

Nashville, Tenn., July 22.—The record of the supervisor of buildings of Nashville shows building permits for June amounting to $290,843, compared with $107,702 the same month last year. Building in Nashville for the first half of the year amounts to several million dollars.

Furniture manufacturers in this territory have inaugurated an organized system of advertising to the public the reasons for the tremendous increase in the cost of manufacturing furniture. It is shown in page newspaper advertisements that raw material has advanced all the way from 2 to 5,000 percent in cost. One manufacturer writes that lumber of all grades has advanced an average of about 20 percent, and finishing materials have shown corresponding increase. Tabulated statements of advances in lumber are printed, showing advances from 2 to 45 percent.

The name of Baker, Jacobs & Co., well known hardwood manufacturers and dealers, has been changed to Henderson Baker & Co. Mr. Baker purchased the interest of A. P. Jacobs, who retired some time ago, and the change in name will not mean any change in the present organization of the company, which operates several plants in Tennessee, and has central distributing offices and yards in Nashville. Cosmo Roberts, well known member of the trade, is associated with Mr. Baker.

The W. F. Bradley Lumber Co., Tracy City, Tenn., has moved its plants to Brewton, Ala., where it will operate mills for the manufacture of oak, ash, dogwood and persimmon dimension stock. A large area of timber land in the vicinity of Brewton has been purchased from Miller Lumber Co., of that place, and will be developed. Owing to recent storms and heavy rains completion of the plants will be delayed.

• • •

MEMPHIS, TENN.

Memphis, Tenn., July 22.—The new bridge over the Mississippi at Memphis has been opened for traffic and both freight and passenger trains have been using this structure since July 15. Only one track has been completed so far but the other will be ready shortly and most of the roads making any use of the Harahan bridge are already routing all their trains that way. This bridge is expected to prove a big aid to the lumber trade because furnishing greatly increased facilities for the handling of logs, bolts, staves and other rough material into Memphis from the west and for sending out lumber and other finished products bound for western points. It is also anticipated that the new bridge will play an important part in the development of West Memphis, the new industrial town across the river, and that it will also add greatly to the value of both timbered and cut over lands in eastern Arkansas. Lumber interests here have extensive holdings in that territory and they are already finding an improved call for both standing timber and cut over lands since the building of this bridge has led to plans for the construction of new roads that will furnish facilities for development not heretofore at hand.

Harry Bonner has opened the new mill at Augusta, Ark., recently acquired from J. H. Bonner & Sons with which he is connected. This mill will be operated in connection with the larger mill of the same company at Jonquil, Ark. Mr. Bonner said before leaving that there had recently been a decided increase in demand for cut over timberlands and that his brother had succeeded in making several quite satisfactory sales for this purpose.

O. M. Krebs, manager of the McLean Hardwood Lumber Co. at Memphis, has been spending a great deal of his time at Little Rock recently, where he is looking after the construction of the hardwood mill of the McLean-Arkansas Lumber Co. This new mill is located at Argenta, a suburb of Little Rock. Mr. Krebs will continue to look after the business of the McLean Hardwood Lumber Co. at Memphis but he will also continue supervision of

Digitized by Google

the business of the McLean-Arkansas Lumber Co. The plant at Argenta will be completed by October 1. In the meantime the McLean interests have secured plenty of timber in Arkansas to supply both the Memphis and Argenta plants for a number of years.

Inland Empire News

SPOKANE, WASH.

Spokane, Wash. July 21.—Cascara bark is one of the most valuable assets of the lands owned by the state of Washington, according to Clark V. Savidge, Washington state land commissioner, who made a recent trip to Spokane. Large quantities are to be found on practically all of the state land, and in order that it, together with timber and other valuable material, may be preserved, Commissioner Savidge is sending out a warning to keep trespassers off the state land.

Articles of incorporation have been filed for the Western Cedar Pole Preservers Co. of Spokane, Wash., giving the following named Spokane men as incorporators: Robert M. Fullerton, Edward A. Lindsley, Howard C. Culver, Otto S. Hanson and Milo P. Flannery. The officers of the corporation are: Otto S. Hanson, president; Howard Culver, vice president; Edward A. Lindsley, secretary; Robert M. Fullerton, treasurer, and Frank Culver, of the Sandpoint Lumber & Pole Co. of Sandpoint, state agent. The capital stock of the company is $25,000. The company has purchased ten acres at Sandpoint, Ida., north of Spokane, on which they will erect their creosoting plant. This plant will be equipped with vats and appliances whereby a carload of poles may be treated at one time.

The reclamation service has entered into a contract with the Kittitas Lumber Co. at Ellenburg, Wash., west of Spokane, for the sale of the timber on the Lake Keechelus reservoir site, amounting to approximately forty million board feet. The logging will be done by the reclamation service, who will deliver the logs to the boom in the lake near the sawmill. It is estimated that an average of 75,000 board feet of logs will be delivered to the mill boom daily.

A joint meeting of the members of the Western Pine Manufacturers Association and the California Association of Soft Woods will be held at Bend, Ore., August 8 and 9. At a meeting of the Spokane, Wash., division of the Western Pine Manufacturers' Association, held this week, it was unanimously decided to join with the California lumbermen in a two days' discussion of uniform manufacture and uniform grades.

The new buildings of the Inland Empire Paper Co. at Spokane, construction and equipment of which will cost $225,000, are nearly done. The bleaching plant will be in operation by September and the sulphite plant in November, according to R. S. Talbot, the general manager. Construction of the two main buildings, which will inclose the wet machine and steam rooms, is about at an end. They have an area of 45 by 162 feet, two stories high. The bleaching plant will have an area 45 by 144 feet and a height of two stories. Sixty per cent of the work has been done on the digester building, which will have a floor area 30 by 60 feet and a height of 100 feet. The three acid plants are half done. These will be one story and cover an area 60 by 100 feet.

* * *

COEUR D'ALENE, IDA.

Coeur de'Alene, Ida., July 20.—Supervisor M. H. Wolfe of the Forest Service, stationed at Coeur d'Alene, has closed a contract for 54,000,000 feet of saw timber in the vicinity of Leiberg creek, a branch of the Little North Fork river in north Idaho, with the Rose Lake Lumber Co. of Rose Lake, Ida., for $135,000. It is estimated that 35,000,000 feet of the total is white pine, which was bid at $3.50 a thousand feet. The timber stands on about 3,000 acres but the cutting will only be a partial one. The forestry office has estimated that it will take five years to make the cutting, but this time may be lessened by the company if the work is rushed. The Forest Service will mark the timber which is to be cut. Besides the 35,000,000 feet of white pine, the trees to be marked will be of mixed varieties. The company will pay in amounts to cover about two months' cutting in advance.

The Coeur d'Alene forestry department, at Coeur d'Alene, is placing before the public, in co-operation with other national reserves throughout the country, a modern form of educating the public in the care of the national forests in the way of motion pictures. Films will be released in nine cities, as follows: Missoula, Mont.; Wallace, Ida.; Coeur d'Alene, Ida.; Newport, Wash.; Libby, Mont.; Great Falls, Mont.; Helena, Mont.; Billings, Mont., and Bozeman, Mont. The following is the list which will be shown: "What a Careless Hunter Can Do," "The Work of the Forest Range," "Recreation and Watershed Protection," "In a Forest in Utah," "Live Stock Grazing on National Forest," Yellow Pine Logging in National Forest," "A Forest Fire in California," "Lodge Pole Tie Making in Utah," and "Lodge Pole Lumbering in Colorado."

Ohio Valley News

EVANSVILLE, IND.

Evansville, Ind., July 22.—Grimwood & Hinton, lumber manufacturers, of this city, report that they have been buying up a great many walnut stumps during the past few months. The stumps are sent away to Grand Rapids, Mich., New York and other cities and are cut up into veneer, and the veneer is then sold to piano manufacturers. The company is in the market for walnut stumps, twenty-four inches over at the small end and thirty-six to forty-two inches in length, and these stumps bring from 10 cents to 30 cents a foot.

Final settlement has been made of the estate of the late Bedna Young, who was killed here several months ago when the automobile in which he was riding was struck by another automobile. After the costs had been paid, the estate was valued at about $152,000, and this was divided between the widow, Mrs. Mamie Young, and son, Thomas Young.

Lumber manufacturers are interested in work being resumed on the government dam, No. 48, on the Ohio river, seventeen miles below here. New contractors recently took over the dam, which, it is expected, will be completed some time next year at a cost of over $2,500,000.

Building material men are busy and architects and contractors report plenty of work. The strike of the local plasterers is still on, but it has not materially affected building in this section.

* * *

CINCINNATI, OHIO.

Cincinnati, O., July 22.—The Highland Body Manufacturing Co., of Cincinnati, has been given the contract for furnishing the government with 100 one and a half ton auto bodies at $123 each, and the Troy Wagon Works, of Troy, Ohio, secured a contract for 200 similar bodies at $136.75 and 200 three-ton bodies at $152.60.

Word was received here last week by lumbermen from Ohio senators and First Ohio district representative that the senate had adopted an amendment to the agricultural appropriation bill appropriating $1,000,000 this fiscal year and $2,000,000 next year for enlarging the Appalachian Forest Reserve.

Lumbermen here were advised recently that owing to the great difficulty experienced by lumber exporters in general in securing bottoms and the tremendous increase in ocean freight rates, that the Axim Transportation Co. had been incorporated under the laws of Kentucky to build steamships for its own use and to engage in business as ship owners, brokers, managers of shipping property, barge owners, freight contractors and forewarding agents. The capital stock is $5,000, divided between the three Mengels who conduct the importing firm of C. C. Mengel, Jr., & Bro. Co. The concern is a heavy importer of lumber, especially great quantities of mahogany and some Circassian walnut.

* * *

LOUISVILLE, KY.

Louisville, Ky., July 22.—D. E. Kline, of the Louisville Veneer Mills, has returned from Chicago, where he went to testify in the reclassification hearing on behalf of the National Veneer & Panel Co., of whose traffic committee he is chairman.

The use of trade acceptances is generally approved by local lumbermen, who find that their customers are willing to give acceptances covering accounts which are not taken care of in the discount period. The acceptances can be handled at a lower rate of interest than ordinary commercial paper.

Wet weather in the country districts has made it difficult to get out logs, and some of the mills in this district are beginning to wonder whether their supply will last until conditions have improved sufficiently to enable hauling to be done.

PAEPCKE LEICHT LUMBER COMPANY

The Current Trend of the Lumber Market

General Market Review

This is the normally quiet season of the year and it is only in periods of extraordinary activity that there is much life in the lumber movement in midsummer. However, there are numerous factors entering into the problem which are likely to affect the lumber demand when the fall trade opens up, conspicuous among them being the crop situation. Some damage has been developed in the spring wheat territory by rust and there are prospects that the crop will fall short of the report of July 1, but just how much can not be determined until the next government report is issued. Regarding corn, however, the condition is steadily improving and it is likely that the corn crop will show a gain in the government estimates to be made next week.

In the southern pine territory there is some indication that the low point in the trade barometer has been reached and that the volume of business is again on the upward trend. On the west coast the same indications prevail, although demand there is below normal. The fact that a large part of the product that had been intended for export must be marketed eastward, does not promise well for the immediate future of values. Trade in hardwoods, however, is holding up well and while conditions are not all that might be hoped for, the adjustment between supply and demand is fairly well balanced. Reports from the furniture expositions are more favorable than were at first reported, which indicates an increasing demand for the furniture woods a little later.

NORTHERN AND WESTERN PINE.

Just now there is no visible activity in the demand for northern pine and the trade is settling down to possibly a few weeks of subnormal movement. Low grades are moving rather actively for box purposes and there is some trade on factory lumber in consequence of the steady operation of the door and mill work factories. The western situation is unchanged. Prices are holding well and stocks are not crowding the market.

SOUTHERN PINE.

A slightly improved sentiment is visible in the yellow pine trade, there being a better movement of lumber into northern and western territory and more encouragement for stocking up for fall trade by reason of the improved condition of the crops. Some of the line yard buyers have been getting into the market lately, as they usually do when other buyers are not conspicuous. The fact that the line yard people are in the market should help matters materially. Stocks at the mills are very full and any relief of this kind just now is acceptable. However, production has been curtailed materially in the last few weeks and there is evidence that there will be further curtailment, so that by August 1 there ought to be a much brighter condition observed. While no actual advance has been scored it is quite evident that some of those who were making any kind of a concession two or three weeks ago are now disposed to hold for a better figure. There is already some talk about car shortage and for this reason intending buyers are probably looking more favorably on replenishment.

NORTHERN AND SOUTHERN HARDWOODS.

General reports from over the country indicate that hardwoods are in fairly good condition, especially as compared with other kinds of building material. There is no striking demand, but the movement is fair. Prices are well sustained and prospects for trade are improving steadily. The furniture expositions that have been held this month are largely attended and buying is reported much heavier than either a year ago or last January, and it is said that some of the buyers have felt sufficiently encouraged to return to the expositions for a second visit and add to their lines. In the way of interior trim the demand is only moderate, but building prospects are so good that without much doubt the demand for inside finish will score a steady improvement from this time forth.

Some weakness has developed in certain hardwood lines, but oak is holding its own in good shape. It is said that No. 1 common white oak is quoted at about $2 or $3 more than a month ago. Even No. 2 common is bringing a slightly better price. Gum is steady and is getting its share of the going business. Manufacturers report that they are able to dispose of their low grade stock without much trouble and at fair prices, particularly in the way of box grades. Ash is in fair shape, with stocks moving regularly and at prices quoted hitherto.

In the northern woods birch is the feature as usual and is holding its own. Stocks of birch are not particularly large and there is no disposition shown to sacrifice them, unless at profitable figures. Maple has shown no change in either price or demand. The manufacturers of maple flooring report an excellent business, which calls for a great deal of low grade raw material. Thick maple is in continued fair demand and prices are holding at the usual level. The furniture trade is taking considerable of this stock now on the basis of the improvement shown at the various expositions. Automobile stock, in all the various woods and inclusive of maple, ash, birch and poplar, is in good request. Recently walnut has shown a gain in demand and the movement is increasing with prospects of a return to the activity of a year ago.

MR. SIMMONS' REPORT ON THE WEST AND NORTH COAST MARKETS OF SOUTH AMERICA IS READY FOR DELIVERY.

We are delighted to announce the receipt of Special Agent Roger E. Simmons' report as above.

It is an immensely practical report, as was his report on the "East Coast of South America," and should be in the possession of every lumberman of the United States interested in the distribution of lumber in South America. It is a companion piece to the other report, which should ALSO be in the hands of the lumber manufacturers shipping in that direction.

Fifty cents will buy both of these books and anyone desiring them should write direct to the Superintendent of Documents, Washington, D. C.

CYPRESS.

As the result of their splendid advertising, the cypress people are enjoying their full proportion of the somewhat reduced volume of business at this midsummer season. Prospects in the west and southwest, where much cypress is used in a retail way, are stimulating demand in that territory considerably. There is also a fair movement into factory channels. Prices, of course, are held up at the usual figures and there is abundant indication that the fall trade will open up in good shape within the next two or three weeks, evidence of this being already visible.

HEMLOCK.

Northern manufacturers were fortunate in having marketed a considerable proportion of their hemlock product early in the year, so that few of them are carrying any uncomfortable stocks at present. The result is that they are holding their stocks at about the same prices that prevailed a month or two ago, mainly about $2 off the list. The lower prices of yellow pine have naturally affected to some extent the volume of demand at the hemlock mills, but there is no great amount of complaint on this score.

SHINGLES AND LATH.

The reduced output of shingles caused by the strike has been instrumental in keeping the market on a rather firm basis. Trade is not heavy in any section, but the supply of transits is restricted and the market therefore is not crowded. Recent sales have been based on $1.90 at the mills for clears and $1.50 for stars. Occasionary clears bring 5 cents more, making delivered prices in Chicago territory of $3.11 to $3.16 on clears and $2.57 on stars. There is no change in the white cedar shingle price and the movement is slow.

Southwestern Markets

A correspondent writes us from St. Louis as follows: "The yellow pine market has slightly stiffened here, but the volume of business has shown little gain. The better feeling in yellow pine is undoubtedly due to the curtailment which is practically universal throughout the southwestern yellow pine producing country.

ST. LOUIS, MO.

"Retail business throughout the southwest has been exceptionally good considering the fact that the harvest season is in full blast all over the wheat belt. The fact that the crops are again promising and that harvesting weather has been unusually favorable, makes the retailers expect a good fall trade. The Kansas wheat crop will probably surpass that of last year and be second only to the bumper crop of two years ago. As soon as the harvest rush is over a good demand for yard stock is expected.

"Hardwood men continue optimistic. Trade is fully up to normal for this season, with the outlook for fall trade unusually bright. The better grades of oak are in best demand here. An exceptionally large amount of oak flooring will be sold in the southwest this season, dealers predict. Hardwood prices are practically unchanged."

* * *

"During the past two weeks the yellow pine situation in this territory has enjoyed some improvement, both in demand and prices and prospects are considered very bright for a steady increase for the season. Prices generally have held their own during the dull period, which has now passed, and in some instances they are advancing, this being especially true of car siding. Some buyers have voluntarily paid from 50 cents to $1 more for siding. Dimension is held quite strong and seems to be on the verge of enjoying an advance.

SHREVEPORT, LA.

"According to various reports reaching the mills hereabouts, there is a big volume of business waiting to be placed, and the buyers are not going to wait much longer. Crop conditions are unusually promising, and, with the wheat harvest on and cotton laid by, the farmers are getting into the market. The rural demand is expected to prove very healthy and helpful, for the farmers enjoyed prosperity last year and are going to enjoy it again this year, judging by the present conditions.

"The car shortage is about over and all the cars desired are being obtained, but the millmen are apprehensive as to the future. A big crop movement, they fear, will result in another heavy shortage.

* * *

We have received this report from a well-known manufacturer of Kansas City: "With reference to the lumber market, in our opinion, conditions are right now at the turning point for better demand and better prices. We believe that the manufacturer realizes that he is only injuring himself when he makes more lumber than the trade will consume and trying to force his production on a market that does not want it at a reduced price.

KANSAS CITY, MO.

"In this territory, demand is increasing, and buyers are taking the offers made by better class of shippers more readily than heretofore. Crop conditions are excellent and everything points to an upward turn of the market."

And general lumber conditions in the Kansas City district are thus reported: "The yellow pine business here is increasing rapidly with the ending of the rush of the wheat harvest in the agricultural districts, on which this city is largely dependent for business. The fact that the wheat crop will exceed all estimates is one of the things that is encouraging local lumbermen. Yellow pine dealers and manufacturers admit that the present price situation is not all that could be desired.

"Line yard concerns have been buying rather

Digitized by Google

freely at the low prices and there seems to be a disposition to stock up rural yards. Both yard and shed stock have been moving freely. There is also a better inquiry from the car builders and some good bills of siding have been booked by local firms.

"Cypress has been selling in larger volume in most parts of this territory. Planing mills have been good customers of cypress dealers. The sale to industrial concerns in the east is also reported good. Local business has not been large, but is expected to increase in the next few weeks, and country trade is also confidently expected to show a big improvement.

"Hardwoods are in good demand for the season of the year, especially country yard business. The rural demand for hardwoods is unprecedented. The mills are cutting almost to capacity and in spite of the season when trade is expected to slacken there is no great surplus collecting, local representatives of hardwood manufacturers say.

"West coast woods are in just moderate demand. Prices are firm and in some cases even strong. The demand for white pine in this district is only about normal. Little redwood is being sold and only a limited quantity of fir, part of that going to silo firms."

Middle States Markets

We have received this report of the metropolitan market: "While the lumber market is now in the midst of the mid-summer dullness,

NEW YORK, N. Y.

there are indications of good times to come this fall, and even the present is not without its good side. Generally speaking, the wholesale market has gone off both in volume and so far as values are concerned.

"It is not difficult to account for the falling off in volume and the reasons also account for the lower prices. It is simply a matter of plenty of stock on hand and bought. The freight situation when at its worst a few weeks ago found many yards short of material and a heavy demand for all kinds of lumber brought the retailers into the market with a deluge of orders, the like of which had not been seen for years. Much of this buying was in the way of forced anticipation, and orders were placed when all indications pointed toward delayed shipment, and there were many duplications of orders made necessary that the dealers might have something in stock to meet the urgent demands of their customers. With the clearing up of the congestion at freight terminals there has been a decline in demand. Labor disturbances, too, have tended to hold back much work that should now be nearing completion, with the result that now the yards have either in pile or on the rails more lumber than usual for this season of the year, and until the market catches up with the supply, buying will be restricted to immediate needs. This is the general situation and makes the market.

"Values are down, in keeping with the market's purchasing power, and as there seems to be plenty of lumber available for such orders as are being given out, there is small likelihood of any change for at least six weeks.

"In connection with prices, it may be noted that the hardwoods are being held generally firm, which demonstrates the soundness of the conditions that led to the increased values in these stocks some months ago."

* * *

Conditions in the Buffalo district are described as follows: "The lumber trade has been rather quiet during the past two weeks,

BUFFALO, N. Y.

but prices are holding steady as a rule, and it is believed that they have passed the minimum, so far as the building woods are concerned, at least. The efforts to bring about curtailment of supplies seem to have met with some success thus far, and dealers say that prices are showing a firmer tendency than earlier in the summer. The storms that have occurred in the south are also having a sustaining effect on prices.

"One of the strongest woods just now is hemlock, with No. 1 stock holding particularly well. Producers have not been able to fill orders promptly for all of this lumber wanted, though they admit that low-grade hemlock has been weak in tone, with prices off $1 or more. It is likely to be several weeks yet before any great additions to the quantity of dry hemlock available are made. Not so much stock is coming down the lakes as in past seasons, due to the scarcity of boats as well as of labor.

"Not much activity is shown just now in the hardwood trade and the tendency is to buy in small lots. The manufacturers of war munitions are buying more cautiously and it is said that their orders are not so numerous as a while ago. However, most of these concerns are still very busy on orders previously taken, and they will probably have work for some months at least. The furniture trade is busy and is employing more mahogany than anything else. Other chief hardwoods at present are maple, oak and ash. Thick stock is strong in price. Maple flooring manufacturers have advanced their quotations and some say they are oversold, though prompt shipments are sometimes getting concessions. Plain oak prices show the effect of a good supply of stock, and no active market.

"Shingles from the Pacific coast are beginning to arrive here in greater numbers, the congestion at the head of the lakes having been cleaned up to a large extent. The receipts are not large enough to pile up any large supplies, but retailers are now able to fill their requirements more promptly. Prices are about steady."

* * *

This report comes to us from Philadelphia: "There has been little change in the market during the past two weeks; what

PHILADELPHIA, PA.

there has been is on the side of improvement. The movement is about normal for this season of the year, but prices are unsatisfactory.

"The building record for June showed an increase in this city of $1,319,170 over that of June last year, reaching a total of $5,193,020 for the month, and the indications are for increasing building of houses and of industrial plants as the season advances.

"The railroads, while doing some buying, are not buying heavily, but the yard trade shows a steady movement of lumber.

"Hardwoods are moving well and prices show fair changes; oak, birch, maple and basswood are in good demand. Cypress and white pine are in fair demand. Yellow pine shows signs of recovery and North Carolina pine is in better demand.

"Lumbermen generally express themselves as expecting a stronger market as the season advances."

South Atlantic News

A lumberman writes us from Jacksonville as follows: "High freight rates and scarcity of bottoms continue to embarrass

JACKSONVILLE, FLA.

the lumber trade, and there are no immediate prospects of the situation improving.

"Trade with the interior is better, though there is nothing of an exceptional nature to mark the trade. The mills are fairly busy, and the market has felt the stiffening of yellow pine prices.

"Lumbermen throughout this section are more optimistic than for some time."

* * *

A manufacturer of yellow pine lumber and shingles in Florida writes us as follows: "Lumber conditions with us have been prac-

HOSFORD, FLA.

tically normal the past four months, with prices varying very little. The demand is still good.

"We could sell all the lumber we are making at prevailing prices if we could get cars. But the car shortage, which has been with us for forty days, is quite serious at present, in fact we are getting only about half the cars we need."

Inland Empire Markets

We have received this report of the Spokane market: "The lumber market in this locality has shown no increase in activity within

SPOKANE, WASH.

the last few days, but lumbermen are confident of good trade soon. The crops throughout the section supplied by the Inland Empire mills are in fine condition and abundant harvests are certain.

"The mills are running on good time and report orders satisfactory and inquiries abundant.

"High water in the regions north and east of Spokane forced a few mills to suspend temporarily last week and menaced the mills. Several million logs and poles were released, but most of them will be recovered by their owners.

"Building in Spokane continues active. Building permits issued by the city during the first eleven days of July nearly equaled the total amount issued for July, 1915."

The Lumbermen's Headquarters

Ohio Valley Markets

CINCINNATI, OHIO

This report of satisfactory conditions in the Cincinnati market has been received: "A critical stage in the lumber market in Cincinnati has been successfully weathered the last couple of weeks, the production situation, especially in the case of yellow pine, showing much better signs and the threatened set-back in the price list has been averted, at least temporarily, and experts on the market are inclined to believe permanently.

"The price list still shows some weakness, notably in yellow pine, while the hardwoods, both northern and southern, are strengthening daily, and some material gains are reported from day to day. The yellow pine slump has been caused chiefly owing to over-production, and while the hardwood market in Cincinnati reflects conditions in the yellow pine market to a certain degree, in this instance the weakness in the soft woods is not influencing the balance of the market to any marked degree. Large manufacturers began to curtail their output a few weeks back, fearing a slump in the demand for their finished products, but recently their requests have about reached normal again. This is especially true with the automobile manufacturers, many in this section being favored with big government orders. The furniture manufacturers are ordering again in good volume, especially in the case of gum. The latter wood is quite a feature of the market right now. Oak, in the lower and better grades, shows some material gains.

"Building operations are going along at a lively rate, with prospects of a big late summer demand and well-sustained demand through the fall months."

* * *

LOUISVILLE, KY.

A correspondent well informed on market conditions in the Louisville market writes as follows: "Though the number of orders received during the past month has been somewhat smaller than has been the rule for the past several months, business has been booked in sufficient volume to enable local yards to keep busy. In fact, this has been a better month than usual, as considerable business covered by old orders was taken care of. Buying at present is not in the amounts noted a few months ago, being principally in single-carload lots, but consumption has been sufficient to require rather active buying on the part of many users.

"Prices have been steady, and in view of the activity in the furniture trade, the automobile industry and others, a big fall business is looked for.

"Ash and walnut have been helped some of late by a rather persistent demand for export purposes. Gum is selling well, and poplar is in good call. Plain oak is moving only fairly well and good quartered oak is also somewhat slow."

* * *

EVANSVILLE, IND.

A man well informed on the hardwood situation in Evansville and southern Indiana writes as follows: "There has been little or no improvement in trade with the hardwood lumber manufacturers in this section during the past two weeks. Trade is rather sluggish and the manufacturers express the belief that things will not get any better until about the first week in September, when they look for a decided change for the better in business.

"Some of the large mills in this section are closed down. While business is not at a standstill, things are extremely dull, but manufacturers say this is no more than they had expected for this time of the year. Prices are holding up very well and there is no disposition to cut and slash prices. The demand for quartered white oak remains fairly good and gum is moving along fairly well at this writing.

"Logs continue to come in freely and the prices are about as high as they have been in several seasons past. The various hardwood-consuming plants are being operated on pretty good time, both in this city and at Henderson, Ky.; Owensboro, Ky.; Tell City, Ind., and Jasper, Ind.

"Furniture manufacturers say that this will be the best year in their history from present indications. Table and chair manufacturers, as well as desk, wagon and carriage manufacturers, report a fair volume of business just now. Reports from the south and southwest, where many of Evansville's manufactured products are sold from year to year, say that business conditions are quite promising at this time. Retail lumber dealers report a good summer trade, while sash and door men say that indications point to this year finishing much better than 1915."

* * *

CHARLESTON, W. VA.

A manufacturer of hardwoods in West Virginia writes as follows: "As for general conditions of the lumber market in our territory, we have had good business and satisfactory prices, but shipments have been made on short notice, and we have no orders extending any distance into the future.

"Special construction business is exceptional; however, such orders are all placed for prompt shipment.

"We look for quite an improvement in demand for lumber between now and September first, as conditions in July are really better than we expected."

Pacific Coast Markets

SEATTLE, WASH.

A correspondent sends the following report of the Seattle market: "Curtailment of output continues to be one of the chief features of the market of the Pacific northwest. Some mills are operating only five days a week, and there is considerable talk of cutting down to a four-day week. It is generally believed by manufacturers that this is the only way the market can be stabilized at this time, owing to the small volume of business now arriving on the coast.

"According to a new discount sheet recently issued, it is felt that fir dimension now is at $4.50 off the list. It is not strong at this figure and many dealers look for another concession of 50 cents before the fall buying begins. The yellow pine market is watched with interest by the fir lumbermen, and owing to the softness of the southern product there is little likelihood of the fir market showing signs of firmness.

"Red cedar shingles are in light demand. Mills generally continue to operate, but with logging camps closed there is every indication that the output of shingles soon will be curtailed. Stars are quoted around $1.45 and $1.50, coast basis, with clears at $1.85 and $1.90.

"Most logging camps on the coast are closed and probably will remain so throughout this month, as owners are unwilling to take chances with logs deteriorating in the water during warm weather. The supply now in the water, it is believed, will be entirely adequate for all demands for the next month or two.

"Off shore trade is about the same as it has been for many months. Lack of tonnage and high rates are preventing many shipments."

* * *

PORTLAND, ORE.

We have received the following letter from Portland, reciting conditions there: "High water in the Columbia and Willamette rivers is seriously interfering with the operation of some of the mills in this district. The river at Portland this week reached 23 feet 6 inches above zero, which is the high-water mark of the year. Several mills in the district are temporarily closed until the water recedes.

"The longshoreman's strike and lack of tonnage seriously handicaps off-shore shipments. San Francisco has not taken any lumber since the strike began, and as a consequence cargo mills are suffering. Several of them have been forced to close and will remain down until after the difficulty is settled. These factors, with a general close-down at this time, are effecting a considerable curtailment in this district."

* * *

RAYMOND, WASH.

This report of general conditions in the northwest comes from a lumberman of Washington: "We are looking for a very good fall trade from the middle western states and feel that if the mills will continue their present policy of curtailment for at least another month we will be enabled to have a better than ordinary run of business for the next few months to come.

"Very unfortunately, the cargo mills at this time are not in position to ship their output by boat, and this of course will have quite an effect on the rail trade, as many of them continue to run and force their stock upon a market that under ordinary conditions has not had to assume this extra load. If there were a normal cargo demand off shore and coastwise, the rail prices would be higher than they are now. We understand that stocks at almost all mills are broken and that the market is actually in the mill men's

hands if they will only be judicious enough not to try to sell more lumber than the market will absorb."

* * *

RANIER, ORE.

A leading manufacturer of doors, sash and millwork in the northwest writes us as follows: "We have sufficient volume of business to keep us busy for at least sixty days. However, the door, window and millwork business is the larger end of our business and we cater largely to mixed car business, consisting of house bills. Naturally we reach some trade in that way that is not characteristic of the larger mills.

"While we know there is some business being placed at lower prices than those shown on our discount sheet, we have not found it necessary to make a lower price to secure sufficient business to keep us in operation."

Northern States Markets

MINNEAPOLIS, MINN.

A correspondent sends us this report of conditions in the Minneapolis district: "The slacking season in lumber buying has not been as noticeable this year as formerly. Northern pine has been moving with great regularity and at firm prices. Prices have been of uniform level since early spring. It is expected things will quiet down now for thirty days, but every indication for heavy fall trade is in the air. Small grain crops never looked better. City building is at high tide and the tide seems to be rising. All the sawmills are running full time.

"The present demand is for general stocks, mostly in mixed carlots as dealers are filling broken assortments. Hemlock inquiries are growing heavier from the rural yard dealers, a condition based on the prospective increased demand from farmers later this fall. Factory trade is active, and the call for low grade material is clearing the surplus. Boards and dimensions are in very good demand, and, in this territory prices have been maintained at good level. Considerable green stocks have to be shipped to fill quick call orders, so low have reserve stocks fallen.

"The sash and door factories report business enough booked now to keep them active until increased fall business comes, as they predict it is sure to develop.

"Prices are strong with a tendency to advance. Hardwood stocks, especially northern oak, thick birch and maple, are low. Present prices are not considered satisfactory and an advance is not unexpected.

"White cedar poles and posts have been moving in fair volume, but railroads have failed to do as much buying of cedar ties as dealers have looked for before the fall moving of grain starts. Shed posts are low in supply and prices have a tendency to stiffen."

* * *

OMAHA, NEB.

Market conditions in Nebraska are reported as follows: "Prices of yellow pine and west coast lumber are steadier and show some advance. We have no doubt that the next two weeks will see a marked advance in both woods.

"Weather conditions have been ideal all the season and the crop of small grain is a record-breaker, while the excessive heat of the past two weeks has brought the prospect of a bumper corn crop to almost a certainty. We ought to experience an unusually large fall trade in the yards throughout Nebraska.

"The shingle market continues rather unsatisfactory, with the manufacturers attributing the condition to the removal of the tariff, when most of the trouble really comes from their own laxness in manufacture, which is bringing its owh punishment."

New England Market

BOSTON, MASS.

A lumberman of Boston reports New England market conditions as follows: "Reports from practically all the large retail centers show a fairly active movement of lumber from the yards and that most of the dealers are making fair profits, but complaints are loud of lack of stability in prices of stocks purchased by them.

"Wholesalers throughout New England report a fairly active trade in hardwoods and prices steady; they report business in western woods and in yellow pine as lighter and prices unsettled. Factory stock and heavy construction timbers continue to lead in demand.

"Freight transportation has improved throughout the district, though the embargo over the New Haven lines was tightened during the movement of troops to the Mexican border. The removal of so many men connected with the industry and the excitement incident to the Mexican situation have temporarily affected conditions.

"More serious complications have resulted from labor troubles among the woodworkers in the mills, factories and building trades of Springfield, Lowell and Boston. The strikers demand larger wages, shorter hours and closed shop. The strike situation in Boston is still serious."

Gulf Coast Markets

NEW ORLEANS, LA.

A correspondent writes us from New Orleans as follows: "The export market situation shows little change. No further easing off of freight rates has been reported. There has been an increase in the volume of inquiries, and the indications are for an increase in orders for hardwoods. Exports to South America represent a fair business considering general shipping conditions. The bulk of shipments cleared the last ten days are for Isthmian, Central American and West Indian destinations. Small parcel shipments were made to English and Scandinavian ports.

"There has been a perceptible stiffening in the yellow pine market, due to the curtailment going on throughout the south and to the enforced closing of mills because of damage to mills by storms in many sections. The manufacturers have the situation well in hand."

* * *

ORANGE, TEX.

A lumberman of Orange has written us as follows: "Manufacture of lumber continues unabated at the Orange mills, and preparations for operation on a larger scale go on apace, although neither prices nor demand are altogether satisfactory at present.

"The stocks in the yards here are low as a result of the large quantity of lumber going out through export channels and for the increasing ship-building industries springing up here. There are at present three large schooners in course of construction, all of long leaf yellow pine.

"There is general confidence among lumbermen in the outlook for fall trade, though no great increase in business is looked for before the first of August."

Central Southern Markets

MOBILE, ALA.

A lumberman writes us from Mobile as follows: "The two weeks just past have brought little change in general market conditions. But the terrible storm which practically cut Mobile off from the rest of the world for the greater part of a week made necessary much local building and repair work. There will be a great demand for lumber and other building material for several months to come, as there is hardly a building in the city left intact.

"The river front and the marine interests suffered the heaviest losses. Staves and lumber in great quantities were washed away. Local sawmills suffered such damage that they are not yet running."

* * *

NASHVILLE, TENN.

This brief but comprehensive report of the lumber market has been received: "Demand for lumber continues fairly active, and prices are being maintained. Some members of the trade are of the opinion that dry stocks will be further reduced within the next few weeks, and it is regarded as probable that there may be a shortage of important lines for fall use.

"There is good demand for plain oaks, ash, some grades of poplar and chestnut. The box factories of the Nashville district are reported to be doing good business for this time of the year, and furniture manufacturers have been buying freely.

"Export business has been of little consequence, but not much has been expected in this department. Flood conditions in many southern states have affected the movement to some extent and have caused the closing down of mills in many sections."

Positions

PARTNER WANTED.

A young man of experience and ability with capital and satisfactory references can obtain an interest in a well-established retail lumber and fuel business of thirty-five years' standing in Appleton, Wis.

This yard is located in the heart of the city, is one of the best organized in the state for handling lumber and fuel at a minimum expense.

Young blood is wanted to expand the business.

References: The First National Bank or any other bank in Appleton.

MILLER LUMBER CO., Appleton, Wis.

WANTED.

Good all-around box mill man. Write, with references. BOX B, St. Maries, Idaho.

SALES MANAGER.

Experienced (over twenty years) sales manager would like to correspond with concern with a view to position as sales manager. Has handled southern pine, white pine, cypress and Pacific coast woods. About 40, married, and will go to any section. Address "MO," care Lumber World Review.

WANTED—POSITION AS SALES MANAGER.

A qualified sales manager, with yellow pine manufacturing experience, a clean record, with results, ample endorsements from former employers and well and favorably known to the lumber fraternity and has recently completed a special investigation in certain wood industries for the government with a view to trade extension, is now at liberty and desires to re-embark in the selling of yellow pine.

I do not claim the ability to set the world afire, but I can deliver the goods, as I have done heretofore.

Manufacturers know that the dependable man is not to be found every day.

If you are interested in my proposition, please address J. R., care Lumber World Review.

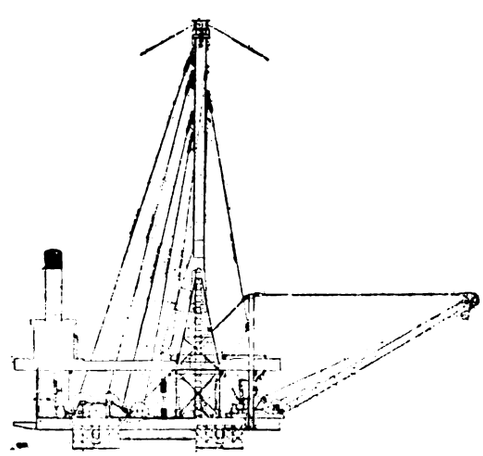
WANTED—SALES MANAGER.

With moderate capital for new screen door factory in Michigan. Experience in sales department necessary. Position will be open in August, 1916. Correspondence invited. Address "T. M." care Lumber World Review, 1740 Transportation Building, Chicago, Ill.

A WELL KNOWN MEMPHIS FIRM INSTALLS TWO NEW MILLS.

Memphis, Tenn., July 22.—The Anderson-Tully Co. is rapidly completing the installation of the band mill acquired some time ago from the Bennett Hardwood Lumber Co. A short time ago this firm began tearing down its old mill with a view to installing the one already mentioned. This step was taken because the Bennett mill is both newer and of larger capacity than the one which it is replacing. The Anderson-Tully Co. is also tearing down its larger hardwood mill at Vicksburg, Miss., and will begin August 1 with the construction of a plant which will cost about $75,000 and which will have a daily capacity of 60,000 to 75,000 feet.

It is estimated that it will require sixty to ninety days to complete the new mill. In the meantime the company will operate its smaller mill at Vicksburg on double shift so that material may be supplied for the big box factory at that point. The Anderson-Tully Co. finds it necessary every now and then to buy both cottonwood and gum in the lower grades for use in its box plants at Memphis, Vicksburg, and Madison, Ark., and the increase in the capacity of its sawmills is being made with a view to reducing the amount of such lumber that has to be bought in the open market.



SHEVLIN INTERESTS ORDER MORE LIDGERWOOD SKIDDERS.

In order to take care of the increased log supply demanded by the new mill which is being erected at Bend, Ore., the Shevlin interests have placed an order with the Lidgerwood Manufacturing Co. for another portable steel spar combined overhead skidder and loader. This skidder will be a duplicate in type, but of a larger size than the one they have now in use at Bend.

This machine, the last ordered, will make the thirteenth Lidgerwood cableway skidder ordered by the Shevlin interests.

The illustration shows the general drawing of the new machine to be furnished, and will represent the modern Lidgerwood overhead cableway skidder and loader.

BOX MANUFACTURERS' SEMI-ANNUAL.

New York, July 22.—The semi-annual meeting of the National Association of Box Manufacturers will be held in this city August 23, 24 and 25. The sessions will be held at the Belmont Hotel. At the same time the North Carolina Pine Box & Shook Manufacturers' Association will hold its meeting.

NEW SAWMILL RESAW WITH INTERIOR RETURN ROLLS.

In the May-June number of "Yates Quality," a magazine published by the P. B. Yates Machine Co., Beloit, Wis., there appears the announcement of a new type horizontal resaw recently placed on the market by that company.

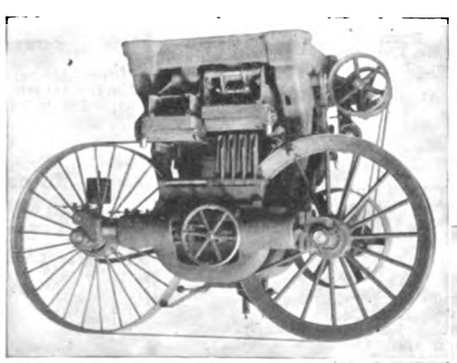
This new machine, which is known as the Type H61 Horizontal Resaw and which is shown in the accompanying illustration, is something quite out of the ordinary for a sawmill resaw and promises to establish a new order of manufacturing methods in many existing mills.

The unique feature of this resaw is the addition of a set of return rolls mounted within the machine itself for returning the uncut portion of the slab or deal directly through the machine to the infeed operator for subsequent sawing. This makes it possible to completely resaw a slab or deal into the desired thicknesses with a minimum amount of handling and the minimum amount of travel of the material. Instead of sending the uncut portion of the slab on a circuitous trip around the mill over a long line of live rolls the outfeed operator simply passes it back through the machine to the infeed end.

The advantage claimed for this resaw is that it can be installed in any existing mill that may have room for a resaw but without enough additional room for the necessary return rolls. With this resaw those mills which have been denied the advantages of a resaw through lack of sufficient floor space for both resaw and return rolls may now profit by the economical methods of manufacture made possible through the use of this type of machine.

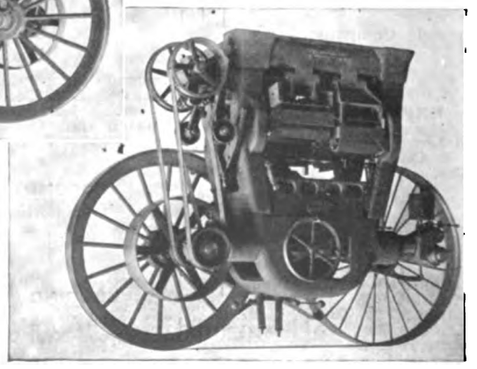
The announcement referred to gives a very complete description of the Type H61, its numerous advantages and possibilities, in addition to which is shown a large mill plan with the position of the resaw shown on the mill floor and its relation to the other mill equipment.

The P. B. Yates Machine Co. announces that a copy of "Yates Quality" containing this and many other articles of interest will be sent free to officials of lumber companies making request of its Beloit, Wis., office.



THE ILLUSTRATION OF THE INFEED END OF THE YATES TYPE H61 HORIZONTAL RESAW AT THE TOP, CLEARLY SHOWS THE ARRANGEMENT OF THE FEEDING AND RETURN ROLLS. THE FEED ROLLS ARE MOUNTED AT THE RIGHT HAND SIDE IN AN ADJUSTABLE FRAME THAT MAY BE **RAISED AND LOWERED TO PRODUCE THE DIFFERENT THICKNESSES OF LUMBER. THE RETURN ROLLS ARE AT THE LEFT MOUNTED IN A STATIONARY FRAME AND**

BELOW IS SHOWN THE OUTFEEDING END OF THE SAME MACHINE. THE MATERIAL COMES FROM THE SAW ON THE LEFT HAND SET OF ROLLS, AND THE UNCUT PORTION IS RETURNED ON THE RIGHT HAND SET TO THE INFEED OPERATOR.



SUFFICIENTLY ABOVE THE SAW LINE TO GIVE AMPLE CLEARANCE TO THE SLAB ON ITS RETURN THROUGH THE MACHINE.

50 H-P G.-E. Motor Driving Trimmer and Transmission Booth-Kelly Lumber Co., Springfield, Ore.

Electric Power Reduces Mill Costs

If you would build a lighter mill building, but one story in height, consider electric power from G-E apparatus.

For a low upkeep and more continuous operation due to lessened vibration and definite limit to the power which can be applied to each machine use G-E apparatus.

Reduced fire hazard follows the separation of lath mill, picking table and hog house from saw mill which is possible with electric power.

To use much less power due to greatly lessened friction losses drive each machine with a G-E motor.

Let us refer you to satisfied users. Send for bulletin No. 4962, today.

General Electric Company

General Offices: Schenectady, N. Y.

District Offices in:

Boston, Mass. — New York, N. Y.
Philadelphia, Pa. — Atlanta, Ga.
Cincinnati, Ohio — Chicago, Ill.
Denver, Colo. — San Francisco, Cal.
St. Louis, Mo.

Sales Offices in All Large Cities 6293

The great economies of G-E motor drive are not confined to logging operations, but are evident throughout the mill. The following list shows a few of the many lumber mills with G-E installations:

SCRIBNER'S LOG BOOK

Over 1,500,000 of these books have been sold. It has had a larger sale than any book of its kind. It has a log scale, lumber tables and an abundance of other useful information. Price prepaid 25 cents.

Lumber World Review
608 So. Dearborn St., Chicago

A New Book

LOGGING

The Principles and General Methods of Operation in the United States

By Ralph Clement Bryant, F.E., M.A., Manufacturers' Association Professor of Lumbering, Yale University.

8vo, xviii 590 pages, 133 figures.

Cloth, $3.50 Net

The information which is contained in this book can be applied by the lumberman in his daily work.

The chief facilities and methods for the movement of timber from the stump to the manufacturing plant, especially logging railroads, are discussed at length.

Greatest emphasis has been laid on features about which there is not much written material available.

"OPPORTUNITY!"

A LEGEND: A while ago some poet or philosopher made the statement that opportunity knocks but once on every man's door. That may be the disturbance at your door right now!

THE ELECT: If you are just out of timber and not ready to retire; or if you have yellow pine saw mill sense and manly vigor and need a chance where your knowledge and integrity will matter more than the money in your pocket-book; if you have a clean bill of health—a healthy yellow pine saw mill intelligence, a healthy set of morals and a healthy financial record, whether or not it has amassed you money—then you are of the elect, and it will be impossible for you to avoid investigating this opportunity.

UNUSUAL: The word "unusual" does not henceforth belong to the Pacificcoaster, with which to excuse untimely rains, for it can be applied directly to this proposition, for it is "unusual" for a man to sell a saw mill with timber behind it, that is running profitably, and on a rising market. If you have enough curiosity to make you worth while, you will now open your door and listen!

WE KNOW: Yes, sir, we know of a mill, with yellow pine timber, which can be put into your possession tomorrow, running—if you are the man, and will only speak up and claim your opportunity. Let us tell you about it!

TIMBER SUPPLY: There are ten million feet of beautiful long leaf yellow pine timber, on a twelve-year cutting lease, within half a mile of a river that will run logs all the months of the year except three or four, which is the basis upon which this proposition is founded—plus an opportunity to buy Fifty Millions more of such timber from the farmers in the community. Mill is located higher up on a certain logging river than any of its competitors, so it has "first chance" of purchase of all logs on that stream.

LOGGING COSTS: Both "custom" purchases and "contract logs" have been and will continue to be deliverable at the haul-up chain at $6.00 a thousand. At least a million feet of logs are in the pond ready for cutting, right now.

THE LOCATION: Mill is in a southeastern state, less than 50 miles from tide-water and fine dockage and on the Atlantic Coast Line Railroad.

THE FREIGHT RATES: There is a freight rate of $1.25 a thousand to ship-side; 17c rate to Virginia gateway; 25c rate to Philadelphia; 28c rate to New York and Pittsburgh, and 25½c rate to Chicago. Location near large sea-port where great overplus of empty cars accumulates, making car shortage impossible.

JUST FOR YOU!

MILLING FACILITIES: Plant eercted about four years ago; $10,000 spent during last few months to put it in best possible repair; consists of circular 25,000 feet per day capacity; 2 engines to operate mill; 3 large boilers, plenty of power and all possible collateral machinery; recently erected L. Moore Dry Kiln Co. kiln; storage sheds for dry stock; timber ramp to hold fifteen or twenty car loads; lease on mill site for fifteen years; quarter mile steel rail and small locomotive for switching; ten houses for employees and many others available in the village; has shingle, lath and stave mill.

PRICE AND TERMS: If you are the proper man you can buy this whole outfit, timber inclusive, for $50,000 or, you can purchase a half interest in it, the other half to be retained by a wholesale yellow pine concern which now owns this opportunity. If you are not the proper man you cannot buy it at any price. The owner will agree to handle the cut of this plant or not, just as the purchaser may like, even if the purchaser takes only a half interest.

THE SECRET: Of course you want to know why the present owner will give you such an opportunity. That is completely and entirely his affair, and if you mean business and if you have any interest in the proposition, as we have here truthfully set it forth, drop a line or send a wire to us and we will put you in touch with the owner.

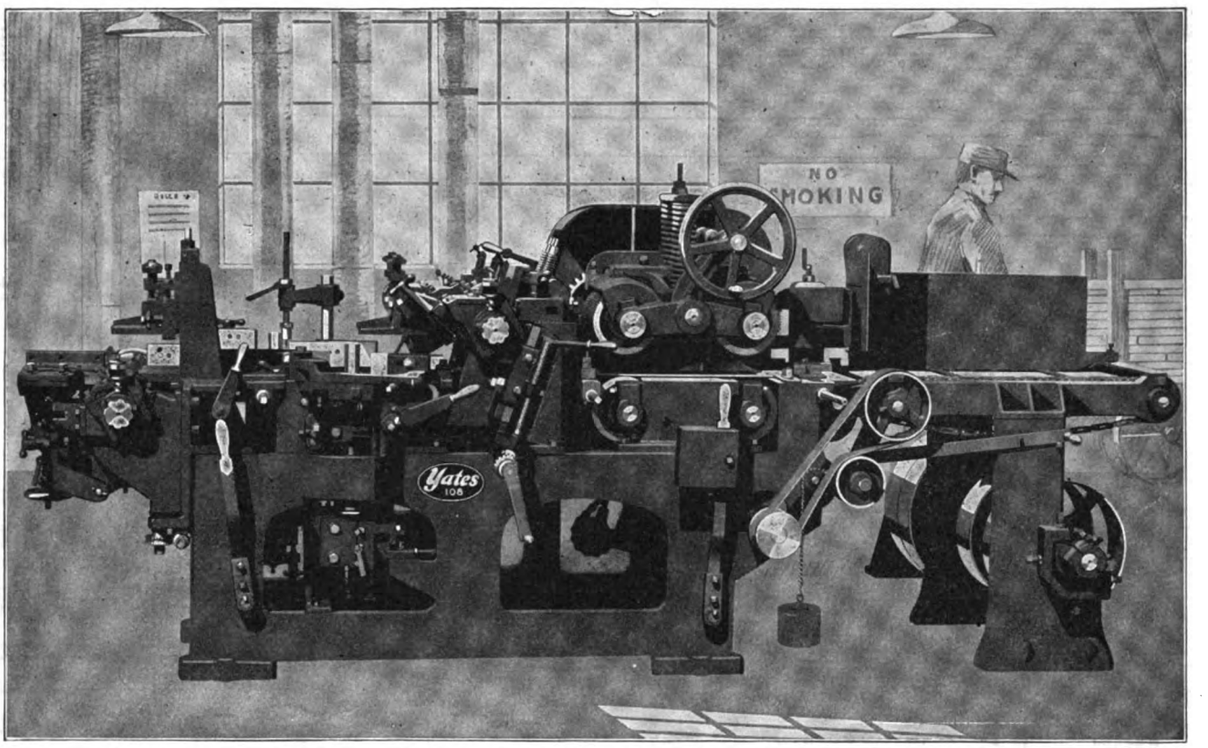
TWO HUNDRED AND TWENTY FOUR MILLIONS MOSTLY OAK

OAK OAK OAK

No Need to Worry
About Holding Labor



A Yates Number 108 Moulder will prevent it. It's a prod that hastens the gait of your production without increasing your pay roll. Its easy adjustments and steady performance solve the migrating labor problem because it makes the workman contented with his job.

Yates - formerly BERLIN **No. 108 Moulder**

is the machine that has prodded production in more than One Thousand Two Hundred plants in America and Canada. Its quick set-ups save production time—its fast feeds multiply output. Four to six times old sticker output is easily possible. Its grinding and jointing devices make best work easy to get and increase profits by bettering grades—often 40 to 60 per cent. When provided with hopper feed it "eats up" short stock as fast as one man can supply it. So strongly built that you can "speed 'er up" with safety to meet rush orders. Gives such universal satisfaction everywhere that it has been called "The Everpresent Moulder."

Detailed information free, without obligation. Ask for Circular 108.

Our Trade-Mark "Electric" is stamped on underside of our flooring

We are members of the Maple Flooring Manufacturers' Association

Maple, Beech and Birch Flooring

In addition to our large production of the standard thickness 13/16 inch flooring, we make annually between two and three million feet of 3/8 inch thick.

This Thin "Electric" flooring is put up in a variety of sizes, woods and selected features to supply the varied requirements of the home builder.

When used in new buildings it is laid over a smooth subfloor. But a great deal of it is laid over old floors to modernize older buildings.

Our superior lumber and manufacturing efficiency make the "Electric" a standard of comparison. Why take a chance? Order the standard.

Practical instructions for laying, finishing and taking care of hardwood floors are yours for the asking.

Use modern feed rollers

(instead of a bottle of liniment for the edgerman's back)

COLEMAN FEED ROLLER (that never wears out)

The Coleman Feed Roller removes the dull roller handicap from the edgerman and gives him a chance to make more money for you. Let machinery do the work of machinery—the "armstrong method" is out of date.

Dull feed rollers mean too much "armstrong" and not enough headwork on the part of the edgerman. He's only human and with the shot-gun feed behind him pushing him along he is working for speed and not for grades. He's *got to do it.*

Coleman Feed Rollers take right hold of the stock (without marring) and snatch it along the minute it touches them. They are *always sharp* because they can be resharpened any day AT NOON right where they are. *Nothing to wear out but replaceable feed bars.* They save you hundreds of dollars per year but "cost no more." Ask us to prove this by a few figures.

TO PROVE UP ON THIS: 30 DAYS' FREE TRIAL ON YOUR EDGER

He Who Looks Before He Leaps

We have occasionally mentioned in this advertising the fact that a large number of electrotype cuts, with suggestions for retail dealer advertising, can be furnished by the Southern CYPRESS Manufacturers' Association and a letter addressed to any one of the undersigned will bring full information with reference to this service.

It is probably a fact that a great many retail dealers do not appreciate the merits of these cuts and the CYPRESS suggestions which go with them. The Secretary of the Lumbermen's Association of Texas, as a part of the service he renders to his members, supplies cuts and printed matter to back up the retail advertising in which the cuts are used, and he has written that these cuts are sent only on demand, but that ninety percent of the stuff going out of his office to the retailer lately has been from the CYPRESS Association. Recent orders from him alone have called for more than one hundred electrotype cuts, all of which have been used several times by different retail dealers.

And now comes Findley M. Torrence, Secretary of the Ohio Association of Retail Lumber Dealers, with a serious criticism in his official Bulletin to all members of the advertising cuts furnished by the lumber manufacturers' associations. He states that, of the five associations furnishing electrotype cuts, the CYPRESS Association is the only one furnishing electrotypes which are of real benefit to the retail dealer and which invariably get results.

We mention these two cases of retail association secretaries merely to prove the statement made at the beginning of this advertisement—that many of you Retail Dealers do not know what complete service will be rendered to you by CYPRESS if you will only give your permission.

Write to any of us and then watch the results.

FOUR BIG MILLS **ANNUAL CAPACITY 200,000,000 FT.**

Digitized by Google

GIRDLING THE EARTH WITH HOUSES

THE STORY OF VOLUME:

The volume of lumber produced in the mills of this company each year is sufficient to build a good-sized house every mile round the earth.

Stop and think what it means to buy **quality lumber** from a company that can so standardize its quality as to keep up a demand for a quantity it must manufacture, sufficient to build one good-sized house every mile round the earth.

Think what it means to have an annual demand for **quality lumber** in such an aggregate as to form a train shipment of twenty-four thousand three hundred and sixty-six cars, each car billed to a lumber buyer or on an export order.

Imagine a train of cars one hundred and eighty-four miles long. That represents the annual output of the Long-Bell Lumber Company's mills.

The largest yellow pine milling capacity under the control of a single organization is the Long-Bell Lumber Company, with capacity for manufacturing over one and a half million feet of lumber per day.

With three hundred working days the capacity shows an output of over four hundred and fifty million feet per annum.

This enormous production of **quality lumber** is possible to be manufactured by one organization only because of the company's efficient management.

It is only possible to manufacture **quality lumber** representing over one and a half million feet per day because of the demand by dealers and consumers in this and foreign countries which is increasing in volume every year.

There is a reason why the Long-Bell Lumber Company manufactures an increased quantity every year and is able to sell its daily output of one and a half million feet.

THAT REASON IS QUALITY

The standardization of lumber began with the Long-Bell Lumber Company a great many years ago.

A **quality standard** was established which made a reputation while it built up the volume and this standard of quality has been guarded with care by the mill managers who are jealous of the splendid reputation thus attained.

But more than all this the record made by the Long-Bell mills for PROMPT SHIPMENT has caused dealers, all over the world, to repeat and continue to repeat their hurry-up orders once they have had a taste of this **quality lumber** and these quick delivery shipments.

Think of a record established by one lumber organization which shows an average time of eight and a half days from the arrival of orders at the mills until the cars were loaded, on the entire 1915 year's production.

It is YOU, Mr. Dealer, who gets the benefits of this **quality lumber** and these record shipments.

It is you, Mr. Lumber Dealer, who makes it possible for these mills to produce **quality lumber** and get it out for you on record time. The Long-Bell Lumber Company is mindful at all times of your needs, your requirements, and your customers' demands.

A large lumber mill organization can increase its business only by the most refined attention to the minutest detail of the finished product.

A leader of quality and volume can only maintain its supremacy by its attention to these details, and so careful and so watchful are the mill managers and their foremen in their constant scrutiny of every step of the progress of lumber manufacturing from the log to the car door that you may be assured your cars of lumber at all times will bear YOUR most careful scrutiny.

There is a salesman in your territory, authorized to quote you the lowest prices we are making on Long and Short Leaf Yellow Pine, Forked Leaf Brand Oak Flooring, Oak lumber, Straight or Mixed car lots, etc.

An inquiry by postal, wire or letter brings a quotation or salesman to you when you want one.

QUALITY
SERVICE
CAPACITY

MEANS MUCH TO RETAILERS:--

The "Exchange" mill companies spend a substantial additional amount more than necessary to make QUALITY stock, uniform grades, highest manufacture and closest inspection. We do not *add* the word QUALITY to our stock:—WE BUILD IT IN. *Costs us more.*

SERVICE:—Our selling organization follows closely the policy of taking orders for stock on hand only, for immediate release, and as a result, most of our orders for regular stock are completed within one to five days after receipt at mills. (70 per cent of all kinds of orders in January 1916 were shipped during January). *Costs us more.*

CAPACITY great enough, but not too big. 9 plants cut about 750 to 800,000 feet of lumber per day, and every foot of it good lumber.

All this means IN-BUILT VALUE TO THE DEALER. *Costs us more to produce,* but our claim departments are very little expense to us, and we are able to sell with less expense to our mills, because the right kind of stock is quite a bit of a salesman itself, and works without charge. Besides, the satisfaction of doing business on a SQUARE, ROCK SOLID—HONEST—FAIR BASIS is certainly SOME satisfaction.

IF YOU HAVEN'T LINED UP ALREADY FOR "EXCHANGE QUALITY-SERVICE-CAPACITY," YOU'LL FIND A NEW MEDICINE FOR SICK Profit and Loss accounts, and increased satisfaction in selling the best, in commencing NOW.

Not Only White Enamel

But

Stained and Varnished Finishes

as well

Can Be Successfully Carried Out On

Arkansas Soft Pine

Being a practically non-resinous wood in the finish grades, it is not necessary to shellac the raw surface, but instead the chosen stain of whatever color is applied *first,* insuring a perfectly uniform absorption. Shellacs and varnishes are then applied and rubbed down.

We urgently recommend machine sanding as against hand work on the bench. All finish should be so worked wherever possible. This treatment in combination with the above method of final application insures a beautiful satin-like surface to the completed work.

Arkansas Soft Pine is properly suitable for woodwork in fine residences, apartments, churches and offices. It is being *nationally advertised.* It is identified by a registered trade mark. Its manufacturers *stand behind it.*

What better selling arguments could you put to your trade Mr. Dealer? Better let us quote on your next car.

All stock bearing the Arkansas Soft Pine Trade Mark is manufactured and sold exclusively by the following companies:

Crossett Lumber Co	*Crossett, Ark.*
Eagle Lumber Co	*Eagle Mills, Ark.*
Edgar Lumber Co	*Wesson, Ark.*
Freeman-Smith Lumber Co	*Millville, Ark.*
Fordyce Lumber Co	*Fordyce, Ark.*
Gates Lumber Co	*Wilmar, Ark.*

Take George's Advice

He said in his farewell address:

"In time of peace prepare for war."

'Tis well said; and so we say to you:—Now while business is a little slack it is the best time to fill in your stock and prepare for the war of demand which is likely to strike you very soon. Mobilize your forces and be ready when the first gun is fired. Then you can say with Commodore Perry, "We have met the enemy and they are ours."

The best ammunition you can have for this war is

North Carolina Pine

Its value has been proven on many battle fields, where the enemy has been driven off in confusion. Good for every use about the house, but especially valuable and attractive as interior finish, floors, etc.

By-the-way, George Washington's home was built of North Carolina Pine, and has well withstood the wear of the intervening years. You may safely recommend it to your customers. Write us for further information.

The success of the Frost-Johnson Lumber Company methods is not a question for argument—it is a proved fact. The evidence is convincing and overwhelming. The list of Frost-Johnson customers is rapidly becoming a roster of the great names of the retail lumber field.

Why? Because lumber dealers are rapidly awakening to the imperative need for better methods of increasing their sales—for the necessity of giving uniform grades of lumber and prompt delivery so as to retain the patronage of the lumber user.

You can enjoy the same advantages that other lumber dealers are enjoying

The promptness with which we ship consignments of lumber, the extreme care with which we assort the lumber in order to assure absolute uniformity of grades, and the efforts made by us to please our customers in every detail of every transaction, have appealed to the highest business judgment of progressive lumber dealers.

¶ It costs you no more in the beginning and it's cheaper in the end

Our six large lumber plants in Texas, Louisiana, and Arkansas are equipped with the finest saw mill machinery that money can buy, and also possess the best loading and shipping facilities procurable. Put us to the test by sending us your next order for yellow pine lumber.

Be sure to send for our price list, which tells you the cost of any grade of yellow pine lumber DELIVERED.

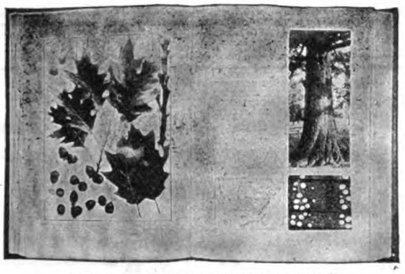
Hough's American Woods

A unique and most useful publication illustrated by actual specimens, showing 3 sections of each wood, mounted in separable pages, with full text.
Its author has been awarded the special Elliott Cresson gold medal on account of its production.



Hand book Opened at Red Oak

Hough's Handbook of Trees

Is photo-descriptive and will enable one without a knowledge of botany to recognize the trees at any season of the year. Most useful for one wishing to know the trees.

If interested in woods or trees from whatever standpoint, write for information and sample specimens. See our exhibit at the Panama Exposition, Mezzanine Floor of Palace of Education.

Romeyn B. Hough Co.

Box 21 Lowville, N. Y

American Forest Trees

By the late Henry H. Gibson
Edited by Hu Maxwell, Wood Utilization Expert

The book is beautifully printed, and is handsomely bound in half leather, dark green roan back and corners, with basket cloth sides, silk head-bands, gold stamping on the back, and gilt top.
The work is illustrated in sepia with more than 100 full-page halftones from photographs covering all the chief commercial varieties of virgin forest timber growing in the United States, and also with numerous engravings from drawings showing leaf and flower forms, etc.
The price of the work is $6.00, delivered by express or mail.

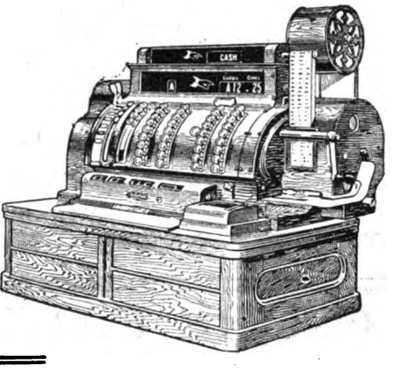
W. R. Pickering Lumber Company Purchased 15 Receipt-Printing Registers for their Stores

THE Pickering Company, of Kansas City, operates five company stores in the South. They recently purchased fifteen receipt-printing registers for use in these stores.

THE Pickering Company made a thorough investigation of various systems used in handling transactions between clerks and customers, and were convinced that the N C R was the best for their needs.



Things Considered by The W. R. Pickering Lumber Co. When They Purchased Complete N C R System

Its Cost of Operation
The number of clerks necessary to carry it out.
The reduction of auditing expenses.

Protection that it Gives to
The owners against loss of records and inaccuracy.
The customers against mistakes and disputes.
The clerks by removing temptation.

Information Furnished
Accurate records of each day's sales.
Volume of business done by each clerk.
Complete report for auditing purposes.

Service
It is quick.
It is accurate.
Clerks give undivided attention to customers.

Convenience
The registers are located where the most sales are made at rush hours.
This saves time for clerks.
It enables the clerks to wait on more customers.
It makes buying easy for customers.

National Cash Registers Pay for Themselves Out of the Money They Save

NCR Service
A printed receipt or sales-slip with every purchase

Registration for trademark and copyright applied for.

Look for this sign in store windows.

IN THE EARLY DAYS

lumber was a word used to describe things that were useless or of little value. The Lombards were the money lenders of the middle ages. A Lombard-room was a room used by pawn brokers to store their pledges consisting of household goods and things of cumbersome or bulky nature. Later such space was termed "lumber room." Lumber, therefore, represented in those days nothing of consequence.

NOW

we know lumber as timber sawn into the form of beams, joists, boards, planks, and especially that which is smaller than heavy timber. The word brings to mind boards of even running thickness and width, clear, straight, strong, durable, with grain or figure, according to species, that will harmonize with any setting. Lumber now occupies a place in civilization that makes it indispensable to mankind, keeping step with every progressive move in manufacture. Ours is the lumber of the modern kind.

We know that we know lumber as it is now known.

We want you to know that we not only know lumber but know how to make it.

One little order will prove we can make good.

I ALLOW NEW PHILOSOPHERS OF THE PRESENT TIME are working threadbare the two words "vision" and "imagination" almost as much as they are beginning to make a "hissing and a by-word" out of that long suffering word "efficiency." You can praise an attribute of humanity so much and so loud and throughout so much lapse of time that although it started in as a VIRTUE the reiteration will make it ultimately appear as a VICE.

We do not need in THESE times to have a great amount of "imagination" or an inordinate amount of "vision" with which to do forecasting or pick up agreeable topics for editorial observation. There is so much to write about—every item of it jumping up and kicking its heels together and screaming at the top of its voice "Use Me!" "Take Me!" "I'm the idea you want," etc., etc., right over there in the foreground that a fellow has to kill off a whole lot of INSISTENT subjects in order to make room for just what simply MUST be printed.

We have already made our record and stated our opinion that the European war has had the beginning of its end, and paid our respects to the British Black List, and passed those matters along to the abeyance pile, and it is not a BIT difficult to determine that the great throbbing questions of the hour are the possibilities of a general national strike of railway employes, the car shortage and the curtailment of the lumber product.

The "Curtailment" Question.

THE "LUMBER WORLD REVIEW" HAS DONE more on this curtailment question than all other publications put together, and has today on its editorial tables more information, twice over, than it can publish. The best that can be done in this connection is to simmer down the essence of the information as an editorial opinion. Before doing that, however, we wish to call attention to not less than four pages of information which we have printed elsewhere under the caption "An Immediate Necessity for Curtailing Lumber Production," which is the third installment of the most extensive printing of a list of sawmills having the appearance—by their statements—of handling their business along proper lines that it has EVER been the privilege of this writer to have seen in print.

It indicates that the lumber manufacturers of the country have gotten into the habit of having lucid intervals, and that there might be such a thing ahead of us as a general return of lumber manufacturing interests to the realm of commercial sanity before the trees are all marketed.

We are STILL of the opinion that so-called "Supply and Demand" do not cut the figure in the rise and fall of values in the lumber trade which they do cut in other lines of business. If they did, it would be an easy matter for an operator to arrive at the value of his product, and KNOWING the VALUE there would be no excuse for the lumber trade of America failing to get value for its product and to become an even-tempered, normal business, as opposed to its now being a sort of commercial roulette, which may run red one minute and black the next; pay off 35 for 1 one month, or eat up your fortune the next!

If there is a general knowledge that everyone is making LESS lumber by at least 40 percent than two months ago, and that general knowledge has stiffened up the yellow pine market and the stiffened yellow pine market has helped the Pacific coast lumber trade and the general uplift has put a little backbone into the hardwood trade, then—Dear Standpatter, that is a psychological effect that has helped—and NOT a knowledge of the supply of lumber on hand or a knowledge of the "demand" for lumber—for no man born of woman ever DID know how much lumber there was on hand, or how much of it had gone into consumption during the previous week.

So we argue that if all OTHER lines of trade may predicate their market values on the known condition of the supply of their goods, and the demand thereof—which it is possible to do in iron and steel and in cotton and in wheat and corn and oats and hogs and sheep and grain, etc.—then the LUMBER manufacturer should have the privilege of drawing a little stamina out of the psychology of an interesting curtailment story. THAT was the only straw in sight, and although straws are not supposed to afford land-locked harbors for drowning men, the LUMBER TRADE—at LEAST—has been able to make a pretty secure life raft out of the curtailment straws we have helped to weave together.

Look Out for the Car Shortage.

WE USED TO GET TOGETHER AS A CLASS and have great mass meetings, four or five hundred strong, in which we resolved that the Government was not a nice boy, and that the railroads were unbearable and the life of the Republic in danger, and, that therefore there should be no more "car shortage" or "demurrage problem," or whatever railroad trouble there was apparent at the time. But now these things are the problem of the Interstate Commerce Commission—the "annual car shortage" being a stock problem, beginning regularly along about "hay-fever time" and dying out again after grain and so-called perishables have helped themselves.

We are all conscious that lumber never has had a fair division of either freight expense or shipping facilities since it began to be a business, but it might be, you know, that we are just about at a point where all such matters may be rectified, having just had a chance to tell all our troubles concerning freight rates to the Interstate Commerce Commission. Having also just about kept the Federal Trade Commission busy every minute since it was organized, we OUGHT very SOON to come to a point where lumber would gain enough standing in the community to solve the car shortage and all other problems.

In the meantime, if the retailer expects to get any more lumber this summer and fall he had better order it, not only to save himself some money in the general uplift of values that is going on—but what is QUITE as important—in order to get just what lumber he orders.

How Shall Lumber Be Trade-Marked?

THERE IS NOT AN ADVANCED THINKER in the lumber trade who has not already determined for himself that lumber must be trade-marked! But how?

Really we had thought that it would never be necessary to ask that question in the editorial columns of the LUMBER WORLD REVIEW; but it IS necessary and we are asking the question.

A cypress company in Florida says it can be done with a fifty-cent-per-day-darkey and a rubber stamp, or in default of a rubber stamp that this black boy shall be furnished with some kind of die which he will place on the end of each board and properly strike with a hammer.

In the latter part of the winter of 1915-16 it seemed that there would be simultaneously ready for the market not less than two trade-marking machines—one which would mark BOTH ENDS of each board—simultaneously—as the board came off the trimmer; and the other—which would BURN the name into ONE end of the board electrically, as it came off the trimmer.

At that time ONE lumber association, as we had understood, practically proposed to use the machine which was intended to mark both ends of the board, and to make the installation of the machine a regular association activity, just like any other membership duty, such as living up to the grading rules, giving so-many-cents-per-thousand for association advertising; contributions to the general fund for the support of the association, etc.

Another association of lumber manufacturers was considering BOTH of the proposed mechanical methods of marking, and we believe had ordered a machine of each kind to be made and to be installed each in separate plants—or both in the same plant in order to determine WHICH of the machines were the better of the two, or which one was worth while.

That association, we believe, also contemplated making a blanket contract for enough machines to furnish each member of its body with a trade-marking device, and also contemplated adopting the trade-mark and the application thereof as an association activity, rather than the leaving of the question of—"trade-marking or not"—elective with the individual members of the association.

This last mentioned idea was—if crystallized and put into effect—going to be a wonderful step toward the solidarity of any association which adopted the proposition, etc., etc.!

Also, it was proposed that that body was going to furnish each member of its association with a machine or several machines as needed, at flat cost—the inventor to get his reward from a royalty of a certain portion of a cent per thousand for all the lumber the machine or machines might trade-mark!

Now, as we look at the matter, from the all around vantage view of our Wide East Windows, it seems that a fly is sticking his feet in the ointment. It SEEMS there are dissenters from the idea of a royalty proposition; that there is a feeling growing up in regard to a scheme of trade-marking—en masse, as it were.

Dissenters are putting up the plea that there is not enough similarity in the quality and character of the product of ANY association membership of ANY class of lumber to make it possible to hive all these qualities under one brand; that there is bound to be such a dissimilarity of the products of the various mills that their material could not—in justice to the ENTIRE membership—be sold all under ONE trade-mark; that the only way out is for each concern to adopt a DIFFERENT trade-mark; that it is quite enough trouble to keep the lumber product of any one sawmill running regularly, one month with another, let alone to make that product uniform with two or three hundred other sawmills producing nominally the same kind of lumber.

And so it goes—now you see it and now you don't—like the little pea under the shell in that reprehensible gambling game.

Someone has said that it MUST take longer to become unanimous in a republic than under any other form of government, when it is desirable that there be unanimity in some political movement. It seems to us now—since we got into this trade-marking trend—that the lumber manufacturers have taken on in a BUSINESS way some of the attributes that are supposed to make republics move slowly toward the common good.

Anyway, how about this trade-marking proposition? Are we going to trade-mark en masse, or are we going to trade-mark individualy, or are we going to trade-mark at all? Are we going to let the darkey do the trade-marking? Are we going to trade-mark on one end or both ends of the piece? Are we going to "hammer" in the trade-mark or "burn" it in? Are we going to make trade-marking an association activity with machines at cost; or are we going to pay 75 percent more for the machines and buy them outright and go counter to the spirit of the times, by putting such a premium on the invention of trade-marking devices, as will make them as plentiful as other overproduced woodworking machinery?

Great Railway Strike Apparently Averted.

ADVICES FROM WASHINGTON, RECEIVED two hours before this issue of the LUMBER WORLD REVIEW went to press, contained no more information on this subject than the simple fact of the movements of the mediation board.

As we said in a bulletin to the heads of all lumber manufacturing associations in the United States on August 4, the opinions of every high official of the government and of the railroads and the labor unions seemed to have been at variance with the oft-repeated and too often printed ideas of Harry A Wheeler, chairman of the railroad committee of the Chamber of Commerce of the United States—that "a strike is inevitable."

We protested then and we protest now against any great amount of speculation on this subject, for it gets nowhere and does no good.

Finally the Associated Press telegram from New York on the afternoon of August 9 brought the good news that the brotherhoods had accepted the offer made by the Federal Board of Mediation and Conciliation to mediate their differences with the railroads. This, for the time being at least, averts a great national catastrophe.

We have no inclination to enter into a discussion of this subject, but one may GUESS, you know—and our GUESS is that anything so improbable as an entire shut down of the transportation facilities of the United States, at this or at any other time, is just about as likely a happening as that tomorrow morning the sun should rise in the west.

Circulation in Dry Kilns

A New Method of Drying in Superheated Steam by Means of the Rapid Circulation Process

By HARRY D. TIEMANN, Consulting Engineer in Kiln Drying

In Four Parts—PART IV.

Copyrighted, 1916, by the LUMBER WORLD REVIEW.

PRESENT PRACTICE:—Many kinds of wood, probably the great majority, are injured if dried at a high temperature from the green condition, and probably all kinds are rendered more brittle by such treatment. Some softwoods, however, such as pine, fir, some cedars, and Douglas fir are not injured for the purposes for which they are used by the excessive temperature.

THE USE OF SUPERHEATED STEAM.

Superheated steam is being used with more or less success for the rapid drying of such woods. This is usually accomplished at approximately atmospheric pressure, so that the temperature of saturated steam is 212° and the amount of superheat is the number of degrees above 212° to which the steam is heated. The available heat for evaporating moisture is, therefore, the product of the quantity or weight of steam which comes in contact with the lumber times the degrees to which it has been superheated. The great dangers in the use of this medium are the high temperatures usually required, and the fact that the heat is very quickly parted with, so that the steam soon becomes saturated. This causes very unequal drying in practice, since the portion of the pile of lumber which receives the incoming steam dries very rapidly, due to the high degree of superheat (and consequent low humidity), while that portion where the heat leaves the pile will dry very slowly or not at all, as the steam may become saturated or nearly saturated in passing through the pile.

STEAM TEMPERATURE MUST BE RAISED.

As ordinarily used it becomes necessary to raise the temperature of the entering steam to an excessive degree, often 300° F. in order to secure sufficient heat in the far portion or the interior of the pile. This is apt to cause severe injury in checking and otherwise to the near portion of the pile, with which the high temperature steam first comes in contact. So long as the lumber is thoroughly wet, no injury will be produced by the excessive superheat, because it is impossible to heat the wet lumber above 212° at atmospheric pressure, but the danger comes as soon as the free water has evaporated and the lumber thus becomes subjected to the vapor at a high temperature and *low humidity*.

ACCORDING TO THE IMPROVED METHOD.

THE NEW PROCESS:—It was remarked above that the evaporative capacity of the superheated steam was proportional to the product of the number of degrees of superheat above 212° and the quantity coming in contact with the lumber. It therefore follows that if the quantity be increased, the temperature may be correspondingly reduced for the same amount of evaporation. This principle I put into operation experimentally about a year or more ago. It is remarkably simple of application. The excessive circulation is produced by injecting high pressure steam in the kiln through a perforated steam pipe in a suitable manner so that the vapor is made to circulate through the pile at high velocity. Superheating is produced by ordinary steam pipes placed in the jets of live steam, as well as by the use of high pressure steam for the jets. In this manner I have found it unnecessary to raise the temperature of the superheat above 220° to 225° to produce exceedingly rapid drying. This reduction in the degree of superheat overcomes the two chief objections to the use of superheated steam, pointed out above, namely, the unequal drying effect and the danger of checking the lumber, and also avoids the necessity of heating the lumber to an excessive degree when the steam enters the pile.

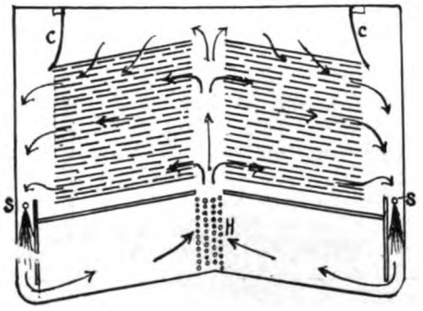

FIG. 1.—SIMPLE ARRANGEMENT FOR USE OF HIGH VELOCITY SUPERHEATED STEAM METHOD WITH INCLINED PILING SYSTEM. SS, STEAM JETS. H, HEATING COILS. CC, CURTAINS.

DIFFICULTY IN PRODUCING UNIFORM VELOCITY.

The main difficulty encountered in the practical application of this principle of high velocity circulation was in the difficulty of producing anything like a uniform velocity through different portions of the pile. This is on account of the momentum of the vapor moving so rapidly. By continual experimentation this difficulty has been overcome by a suitable arrangement of the pile, the steam jets and the heating coils. The perfecting of the process in the removal of this difficulty is due to the labors of my co-workers, J. E. Imrie and Norman Betts, and the principle is now in a shape to be made use of in commercial operation.

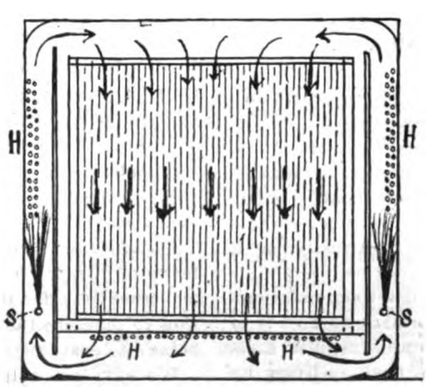

FIG. 2.—ARRANGEMENT FOR USE OF HIGH VELOCITY SUPERHEATED STEAM METHOD WITH EDGE PILING SYSTEM. SS, STEAM JETS. HH, HEATING COILS.

EDGE STACKING IN THE KILN.

The best success is attained by means of edge stacking the lumber in the kiln, and placing the perforated steam pipe in a side chamber or flue running the length of the kiln, about 18 inches wide and opening top and bottom to the main drying room. The jets should be placed near the bottom of the flue and pointing upward so that the circulation is upward in the flue and *downward through the lumber*, thus conforming to the principles of the natural downward circulation as pointed out in my former articles. The heating pipes should preferably be placed in the flue, but may be placed beneath the lumber if more convenient. In operating, a temperature of not over 225° should be secured at the point where the steam enters the lumber and the greatest attainable velocity should be produced. Very uniform spacing of the lumber is essential, so that as nearly as possible equal quantities of steam shall pass through each layer.

It should be noted that no air is present when this process is used, and that some escape should be provided for the excess steam either through condensation on the floor and removal by drainage, or through small openings to the outside air.

LOWER TEMPERATURES THAN 212° MAY BE USED.

Superheated steam does not necessarily need to be used at atmospheric pressure. By using a closed cylinder and producing a partial vacuum either by condensation or by a pump, lower temperatures than 212° may be used. Such processes have been tried, but the higher attenuation of the vapor at pressures less than atmospheric necessitates a much greater quantity by volume to pass through the pile of lumber in order to produce the same drying effect.

Steam under pressures greater than atmospheric has also been used, but while this requires a smaller quantity by volume it necessitates a higher temperature, which is very undesirable.

APPLICATION OF NEW METHOD.

In applying this method, it can be readily combined with my spray-condenser system, by the addition of the water sprays and the pipe condensers in the spray chambers. By this combination, the drying may be hastened towards the end of the operation without necessitating an excessively high temperature to end with. This is desirable also where very dry wood is required.

In the illustrations the water sprays and condensers are not shown. In Fig. 1 the condensers would be placed on the side walls, immediately above the steam jets SS, and the water sprays alongside the steam jet pipe. In Fig. 2 the condensers could be placed beneath the lumber, where the heating pipes are shown. There is no place, however, for the water sprays in this arrangement.

In the Realm of the Lumber Manufacturer

Paper No. XXII

Being a Description of the New Plant of the W. G. Ragley Lumber Co., Ragley, La.

By BOLLING ARTHUR JOHNSON

MARTIN J. RAGLEY AND THE "TRADE MARK."

This department is usually devoted to unconventional sorts of "First Reader" stories about the rise and progress of model sawmill organizations and illustrations from photographs of their plants.

These articles, under the broad heading of "In the Realm of the Lumber Manufacturer," vary as the occasion demands, but are usually written and printed to illustrate some labor-saving phase of the business or some economy of construction or to convey some lesson which can be secured by good EYE-SIGHT rather than by THICK SPECTACLED study.

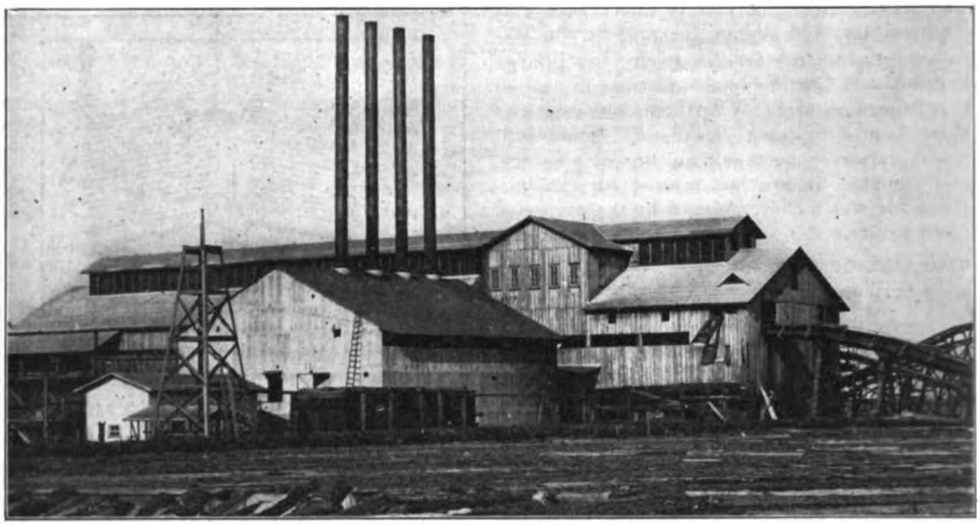
The reader will be especially attracted in this account of the rise and progress of the W. G. Ragley Lumber Co., of Ragley, La., by its method of handling lumber on electric carriages, by the economy in piling lumber and by the simple methods of piling which in themselves help preserve and keep the lumber in position thus avoiding checking until the lumber is either shipping dry or ready for the rough shed or planing mill or—what is more to the purpose—remains peacefully straightened out and dry in the yards of the company.

CONCERNING THE ILLUSTRATIONS.

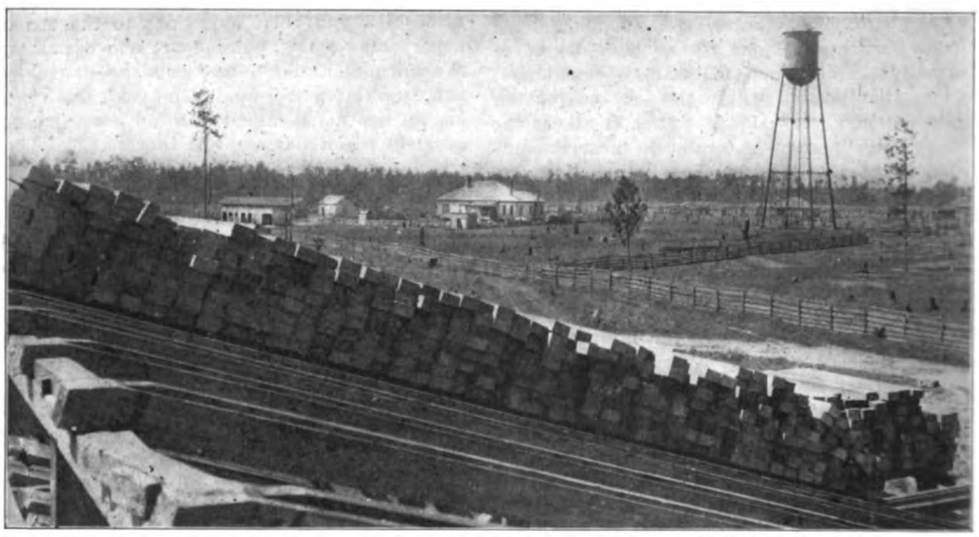
Right at the top of the first page of this story, leaning on a timber that carries a portion of the trade mark used by this company, we have utilized an unconventional picture of Martin J. Ragley as an initial letter to the story.

At the bottom of the first two pages is a panoramic view of the plant showing the whole sweep from left to right from a point at the southern side of the yard, at Ragley.

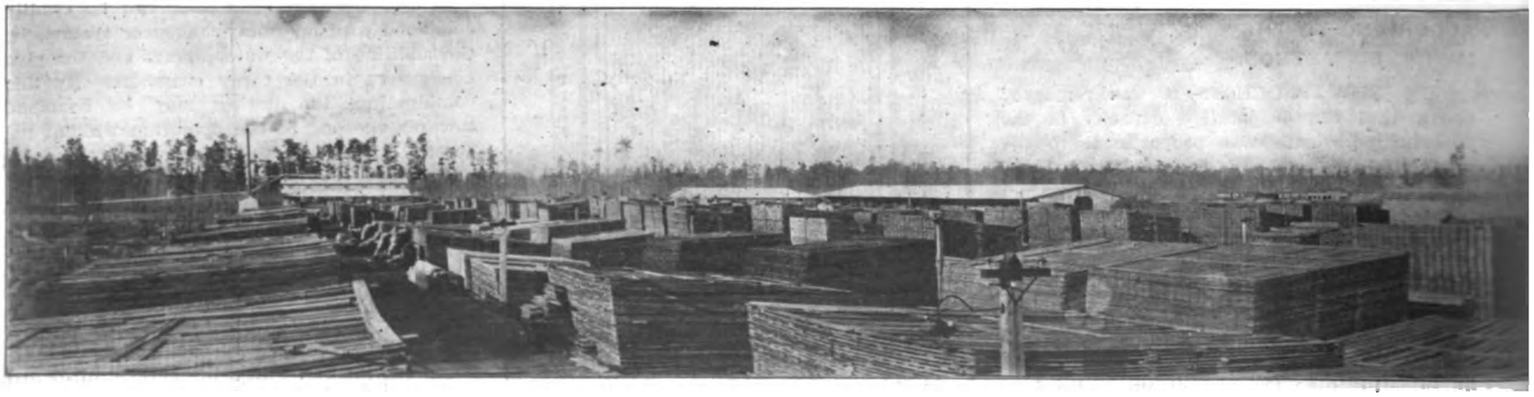
On the first page of the story is a picture of the sawmill plant at Ragley, taken from across the log pond, and a close-by view, also of the railroad tie ramp, with the water tower in



VIEW OF THE SAWMILL OF THE W. G. RAGLEY LUMBER CO. AT RAGLEY, LA., AS VIEWED FROM ACROSS THE LOG POND—CAPACITY 3,000,000 FEET OF LOUISIANA LONG LEAF YELLOW PINE PER MONTH.



VIEW OF THE RAILWAY TIES "RAMP" OF THE W. G. RAGLEY LUMBER CO. PLANT AT RAGLEY, LA.—TIES ARE AMONG THE SPECIALTIES MANUFACTURED BY THIS COMPANY.



The Planing Mill. The Sawmill.

SEVEN PLATE PANORAMA OF THE ENTIRE W. G. RAGLEY LUMBER CO. PLANT TAKEN FROM A CENTRAL POINT SOUTHEAST NORTH-EAST

Digitized by Google

the distance. On the second page of the story is a view of the north side of the dressed lumber shed showing the careful manner in which the lumber is stored, and on the last or fourth page of the story will be found two magnificent timber pictures occupying almost an entire column in length, showing "Calcasieu Long Leaf" pine in its virgin beauty.

EARLY HISTORY.

Ragley, La., the site of the mill of the W. G. Ragley Lumber Co., is twenty-two miles north of Lake Charles, La., on the Lake Charles & Northern division of the Southern Pacific railroad and one may visit the plant by leaving Lake Charles in the morning at ten minutes after eight o'clock and returning to Lake Charles at six o'clock in the evening.

Ragley, La., lies in Beauregard parish and the timber possessions of the company are in Beauregard and Allen parishes. Construction work was begun on the new Ragley plant in November, 1913, and the mill was ready for running on September 1, 1914, but the formal starting of the mill was postponed until March 10, 1915.

The W. G. Ragley Lumber Co. is capitalized at $600,000. The officers of the company are: W. G. Ragley, president; Martin J. Ragley, vice-president; S. H. Fullerton, secretary, and Frank Goepel, treasurer.

TIMBER POSSESSIONS.

The original timber holding of the company in Beauregard and Allen parishes was 225,000,000 feet of that variety of pine known the world over as "Calcasieu Long Leaf." Since the mill began running the company has bought as much timber each month as it has cut, so that it owns today as much standing timber as was originally purchased.

The reader will understand that the two parishes mentioned were originally a part of the far famed Calcasieu parish, whose timber possessions were first invaded by that seer and prophet of old Twenty-Second street days, A. G. Van Schaick, of Chicago.

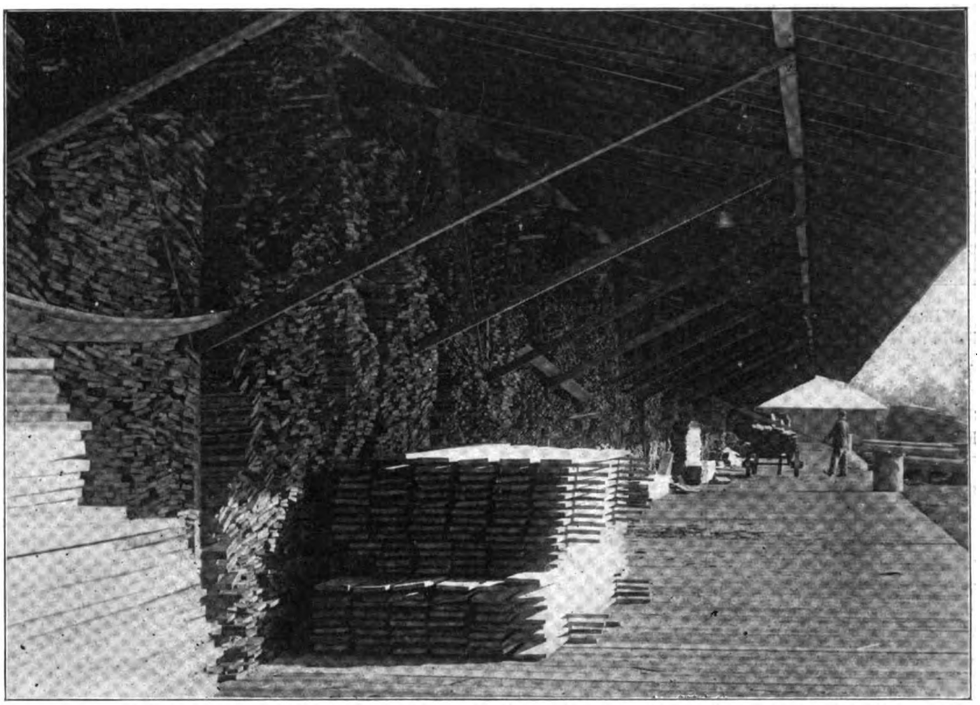
In that part of the south the business of lumbering is not a "mixed" proposition, as there is no hardwood growth and nothing but long leaf of the purest, straightest variety. The land is level, all timber is easy of access and readily hauled and delivered to the logging road. Up to date the cutting of the W. G. Ragley Lumber Co. has averaged 15,500 feet of lumber, log scale per acre.

THE WOODS WORK.

The logs are hauled in at Ragley, La., over a track built of 52-pound rails, standard gauge, and before the operation is finished the total railway building will aggregate at least fourteen miles.

The logging is all done by the simplest process known to the craft of yellow pine sawmilling operation, the logs being brought to the track by that standard logging device, the Lidgerwood combination two-line skidder and loader, which, wherever used, has been, as it is in this case, a fine example of what can be done in economical mechanical log handling.

The logs are hauled in to a made pond which is 400x600 feet in area and holds about 750,000 feet of logs. The log trains are hauled by two locomotives of the Lima Locomotive Works of what is known as the "2-6-2" type, which, translated into plain language, means two lead trucks, six drivers and two rear drivers. These locomotives weigh 37½ tons each.



THE ROUGH LUMBER SHED OF THE W. G. RAGLEY LUMBER CO. AT RAGLEY, LA., WHICH IS CONSIDERED ONE OF THE BEST LUMBER SHEDS KNOWN TO THE TRADE IN THE SOUTHWEST.

THE SAW AND PLANING MILL.

The saw and planing mill plants of the W. G. Ragley Lumber Co. might be characterized as of a type without "frills." The architecture of the buildings and the arrangement of the floor plans of both the sawmill and the planing mill are of the simplest design known to sawmill building, and of a labor saving character in the arrangement.

Almost all of the so-called first grade sawmills of the present day and time are much larger than the W. G. Ragley Lumber Co.'s plant, but none of them are of more economical arrangement and none of them will make any more money for the owners in proportion to the investment and the cost of running the plant, which, after all, is the real consideration in the erection of sawmills.

The sawmill is the McDonough type of construction and is a circular with a top saw. There is also on the saw floor a Wicks 32-saw gang, and what is claimed to be the largest edger ever brought to the southern states—9-foot in the clear—erected by the McDonough Manufacturing Co. The trimmer is also a McDonough.

The carriage of the sawmill will carry lengths up to 46 feet. The feed is of the revolving shot-gun variety and was manufactured by the Beaumont Iron Works of Beaumont, Texas.

The sawmill building stands north and south as to general direction and is 52 by 238 feet in area, two and a half stories high.

There is no provision for the making of lath or shingles at this plant, the whole thing being a straight away proposition for the manufacture of lumber. The average monthly capacity of the plant since its inception has been not less than 3,000,000 feet.

The planing mill is located in a building 84x146 feet in area. The planing mill consists

altogether of Hall & Brown Woodworking Machinery Co. machinery manufactured in St. Louis and consists of four machines, one sizer, one molder, two matchers—all of the high speed type.

The power for running the planing mill is generated in a boiler of 250 horse power and transmitted by the well known Brownell type of engine. The power for the sawmill plant is generated in five boilers generating 1,000 horse power and is transmitted by a Hardie-Tynes twin engine 22 x 30 in size, made at Birmingham, Ala., and by wire rope transmission.

The sawmill is run entirely with this power and through this medium enough live steam is furnished for the dry kilns.

FOLLOWING THE LUMBER.

Indulging in our usual method of getting at the handling of the lumber we will follow it from the tail of the mill through the dry kilns and onto the yard and in the various directions it is carried, and as we proceed, describe the collateral handling of the lumber.

The good lumber is stacked from the transfer chains directly on the dry kiln trucks and transferred by an electric arrangement direct to the dry kilns. From the kilns it is taken on its own wheels to a stall in the rough lumber shed.

The dry kilns are the L. Moore Dry Kiln Co. moist type, planned and arranged by that veteran of dry kiln engineers, Lafayette Moore of Jacksonville, Fla., and consist of two rooms 20 x 104 feet in area with a capacity of 40,000 feet per day.

If it is to be stored the rough lumber is taken to the rough lumber shed which is of magnificent capacity and construction 90 feet wide and 352 feet long, with a truck track running through its center. In this shed the lumber is separated into widths, grades and lengths, so an entire load may go to one stall in the rough shed.

Of course, when the lumber comes out of the dry shed it is often run direct to the planing mill on stock stuff and always carried there when it is necessary to do so on direct orders.

The handling of the common lumber at Ragley, La., is one of the most interesting features of the business, and is a thing that we have specifically referred to in our account of the illustrations, which this article contains.

The common lumber is dragged from the sorting chains on the east or left hand side of those chains and put in racks as shown in the illustrations, and sorted, the No. 1 and No. 2 together and the No. 3 by itself. The No. 1 and No. 2 being also sorted and kept separate as to lengths, and all the No. 3 which is of one width going together, and so is sold together, in lengths of from 6 to 20 feet.

We have especially shown how the No. 3 and even other stock is piled on the yards in uneven lengths by the interlapping of the odd ends in the center of the stack, which is something the writer does not remember to have seen elsewhere and is worthy of special mention here.

The special features of the handling of this lumber are the two electric tractors used; these were manufactured by the Kentucky Wagon Co. of Louisville, Ky. Each weighs 3,600 pounds and is handled by two darkies, who would not swap their jobs for anything short of driving a 24-horse team to a peacock-bodied circus wagon.

This tractor at Ragley, La., which handles the common lumber, hauls not less than 60,000 feet per day and could handle twice that much. And it is to the writer a marvelous fact that no more of these machines are to be found in use in the south than are now employed. This machine seems to us to solve many very trying problems, but the sale of it has evidently not been pushed with that vigor which should prompt its speedy introduction, or else it may be that in the trying times of lack of profit in the lumber trade of the south the manufacturers of lumber are fearful of following off after new mechanical gods.

The other tractor referred to is used in the service of the planing mill and transports the lumber from the yard to the planing mill, the lumber being put on buggies and hauled by the tractor wherever desired.

The general plan of the yards at Ragley is as the illustrations show, viz.: a system of elevated tram ways and a scheme of piling the lumber "down" and "up" from those tram ways. There are in the company yards about a mile and a quarter of these trams of a universal width of 20 feet and the company aims to always keep on hand a well balanced stock of lumber, and not over the maximum quantity of 8,000,000 feet.

PROTECTION AGAINST FIRE.

The superior fire protection and the cleanliness and sanitary arrangement of the plant and of the buildings for all employees of every class are the facts which stand out longest in the memory.

The fire protection is modern to the last feature. There is a fifty-thousand gallon tank elevated 75 feet; an Underwriters' pump of 750

SHOWING AN ELECTRICAL TRUCK UPON ITS WAY TO THE PILING GROUNDS AT RAGLEY, LA.

ABOVE ILLUSTRATES METHOD OF PILING LUMBER SO THAT IT CAN BE HANDLED BY THE ELECTRIC TRACTOR.

FOREST SCENE IN THE LONG LEAF TIMBER ON THE POSSESSIONS OF THE W. G. RAGLEY LUMBER COMPANY, RAGLEY, LA.

gallons per minute capacity; the water pipe mains are 6 inches in diameter and the laterals all 3 inches and 4 inches and such a liberal supply of mains has been instituted as to render thorough protection to every portion of the plant and environment; and Martin J. Ragley, vice-president and general manager of the institution, has instituted various fire drills which render the employees ever on the alert in the matter of accomplishing the best sort of service in case of fire.

The notable things in regard to this plant at Ragley are its fortunate location to catch the trade "coming and going," that is, its equipment and location for indulging in both the domestic and foreign trade at the same time or in catering almost wholly to either one of those lines, if that be considered more desirable.

ESPECIALLY CONCERNING THE EMPLOYEES.

Next to Mr. Ragley in the management of the business at Ragley, La., should be especially mentioned E. H. Crosson, sales manager; W. P. Marsh, assistant sales manager; C. A. Yarboro, auditor; T. J. Gannon, mill foreman; Wylie Taylor, woods foreman; J. H. Clark, skidder foreman; R. Q. Simonton, yard foreman; T. D. Ferris, planing mill foreman; W. H. Riddle, shipping clerk, and C. D. Wise, store manager.

There are all told about 275 employees, and

MARTIN J. RAGLEY, VICE-PRESIDENT AND GENERAL MANAGER OF THE W. G. RAGLEY LUMBER COMPANY, RAGLEY, LA.

everything either has BEEN planned and executed for their comfort or is being done or will be done in the near future.

A store is kept, not especially as an investment for the business as much as it is for the convenience of the employees. This store is, however, run on a business basis and maintained by a trade asked to spend a reasonable price for its goods.

There is a barber shop and a billiard parlor connected with the business part of the town, and when the writer was last in Ragley, La., he was especially attracted to a great bath house which had been erected for the use of the employees, and which may be used in both winter and summer weather.

There is a modern school and church building with a demonstration farm attached and run in connection with the school. During the school months there are nearly 100 pupils in the school at Ragley that are being taught the basis of an English education coupled with domestic science and such vocational helps as every American youth should secure and has a right to expect.

ANOTHER VIEW IN THE TIMBER OF THE W. G. RAGLEY LUMBER COMPANY OF RAGLEY, LA.

The school building—a two story structure with auditorium, stage, etc., is a purely W. G. Ragley Lumber Co. enterprise and was not erected in conjunction with parish or state expense. The course of study is practical, and complete in every feature.

A Great Tribute Paid to "Rite-Grade" Shingles

Being a General Summing Up of the "Rite-Grade" Red Cedar Shingle Campaign of Publicity to Date, and Pointing out Its Results

When the big lumber convention at Seattle adjourned and the shingle men began to take stock they found that never in the history of the business had they had such reason for congratulation, because they were convinced finally and forever that their red cedar shingle organization was positively of the right kind and on the right track. The convention did a world of good in the "get-together" movement, and it is not a word too much to say that red cedar shingle mills, dealers, wholesalers, the officers of the Shingle Branch, and everyone concerned felt an optimism never before experienced.

If there was one single thing more than another that made its effect felt in the direction of optimism and in the direction of assuring the shingle manufacturers and all the red cedar shingle interests that they must organize, it was, perhaps, the brief but emphatic speech of Dr. Suzzallo, president of the University of Washington, and one of the greatest students and exponents of economics in America.

THE ADVICE OF A THINKER.

The statements made by Dr. Suzzallo were entirely unsolicited, entirely unanticipated. They were the thoughts, the advice of a thinker, a man who knows the ins and outs of big business, and he paid a great, wholesome tribute to the efforts of the shingle manufacturers:

"You have done the right thing," said Dr. Suzzallo. "You have unified yourselves. You have adopted a brand for your shingles, you have standardized that product, and you are advertising that name. Let the people know what you have, and if there is quality they will remember it. That is what the great buying public of America wants, and what it must have. And you are doing that. You are telling them in the big national magazines and the farm papers, in the trade papers and in your literature, all about the wonderful lasting qualities of red cedar shingles, all about their utility and great architectural beauty.

"You are showing them how to properly nail shingles, how to lay them to insure greatest use, which grades to use for particular purposes. You are giving them building ideas, building information and at the same time you are furnishing the wholesaler and the retailer suitable helps in the way of stability, inspection, names of prospective builders and advertising signs to help him in his tasks of selling and distribution. And by this effort the shingle manufacturers, the wholesaler and the dealer are finding confidence in each other, because they find themselves in and backed by an organization with 'confidence' spelled out strong and bold."

RITE-GRADE PLAN A SUCCESS.

This all means, in practical business terms that the Rite-Grade red cedar shingle movement is a success. The mills of the association are showing renewed vigor now in their selling campaign; they are using their advertising space especially for "Rite-Grade" in the trade journals more liberally; they are using special Rite-Grade envelope literature; in a word, they are after orders. As to the wholesalers, there is a marked increase in interest.. They find Rite-Grade shingles profitable; they find them up-to-grade; they feel the big factor of "organization" for the good of all with the big fact placed before them that "organization is the life of trade."

Regardless of other things, the Rite-Grade campaign had substantial evidence of its success to offer at the lumber convention. The labor troubles are all over, and there was a lot of expression from manufacturers that they would give their principal efforts to Rite-Grade. Secretary Wyckoff had stacks of letters to show that the Rite-Grade advertising campaign had accomplished its purpose, so far as establishing a trademark and putting Rite-Grade on the red cedar shingle map with a mighty emphasis.

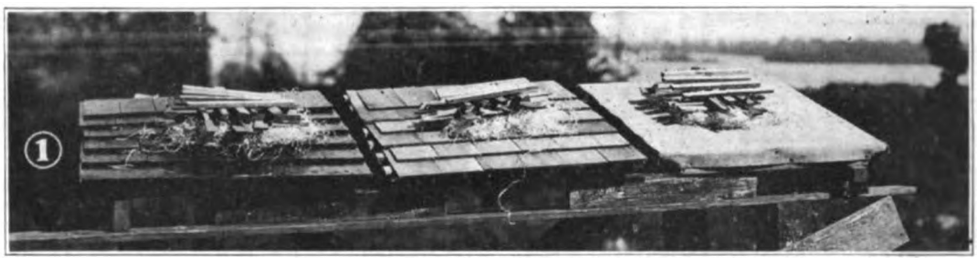
BIG ADVERTISING CAMPAIGN FOR FALL BUSINESS.

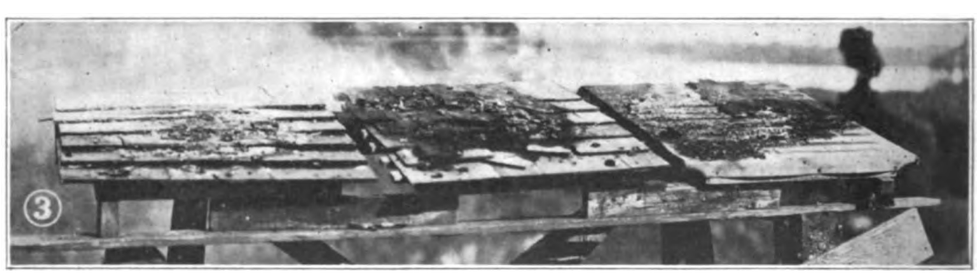
The fall campaign promises to be bigger in its scope, and will aim to widen distribution of red cedar shingles. The bugaboo that the mills could not hold the grade is completely dis-

THE recent fire retardant test which is referred to in our news story of the semi-annual convention of the West Coast Lumbermen's Association was a great triumph in itself for "Rite-Grade" shingles, but the general attitude of the lumbermen present at that meeting and the remarkable speech of Dr. Suzzallo, the president of the University of Washington—particularly that part of it which pertained to the shingle question—were events which we have endeavored the best we possibly could to crystallize.

We are printing in this article three high-class engravings of the fire retardant test which gives the finest visual evidence of the test that has so far been printed.

We recommend the reader of the LUMBER WORLD REVIEW to read carefully and assimilate thoroughly this article, to which and to the conclusions deduced we are glad indeed to give high approval.—Editor.





No. 1.—Shows three sections of roofing, the first a section of Red Cedar shingles dipped in a preparation called "Mineralite." The 2nd plain dried "Rite-Grade Red Cedar Shingles; 3rd, a Section of so-called "fireproof roflong," sold by one of the Seattle Roofing dealers—all ready for the fire to be lighted.

No. 2.—Shows the three sections of roof sometime after the fire had been lighted showing that the "Mineralite" had been stained by the action of the fire, but not charred; the red cedar shingles burning slowly, and the so-called "fireproof roofing," as it had burned through in 70 seconds, and the sheathing on fire.

No. 3.—After the fire shows that "Mineralite" protected the shingles permanently, the Red Cedar Shingles burned through but not to the sheathing, the "prepared" roofing burned fiercely and showed that it was completely burned, and the sheathing beneath ignited, on the under as well as on the top side.

pelled. Repeat orders for Rite-Grade shingles are a regular thing. Evidence from dealers in plenty is received that the Rite-Grade shingles are the finest and most stable product that they have ever received, and that consumers have caught on, that they demand and insist on Rite-Grade. The quality of the association shingle and the fact that it is an advertised product, make a tandem factor that tells. Repeat orders from carpenters, builders and satisfied letters from owners are becoming more and more the accepted thing, and with the anticipated more vigorous push that mills and wholesalers henceforth will give to Rite-Grade the consumer interest will have a bigger chance and become of more established and insistent character that cannot be ignored by the whole trade.

The way in which the consumer and dealer regard Rite-Grade may be judged from such letters as the following, duly forwarded by the recipients to Secretary Wyckoff of the Shingle Branch:

FOREST INDUSTRY CONFERENCE.

Portland, Ore., July 31.—The annual "forest industry conference" of the Western Forestry & Conservation Association and the annual Pacific Logging Congress will be held jointly again this year, in Portland, October 24 to 27. These are the two largest gatherings of Pacific coast forest interests, being attended by lumbermen, state and government officials and railroad representatives from the five western timbered states from Montana to California and from western Canada.

At the Portland meeting the first two days will be under the auspices of the Western Forestry & Conservation Association, an alliance of all Pacific coast forest protective organizations. October 24 will be devoted to protective problems and October 25 to matters of general lumber interest, including such topics as the government's lumber study, Canadian lumber affairs, foreign trade, and better correlation of organized effort to improve the industry. Representatives of the Federal Trade Commission, the Forest Service, the Department of Commerce and the National Lumber Manufacturers' Association will be present. October 26 and 27 the Pacific Logging Congress will be in session to discuss improvements in logging practice, leaving the last evening by special train to spend the 28th in the Grays' Harbor camps to see field demonstrations.

Special railroad rates to the joint conference will be made from all western points. Arrangements for the first two days' program are being made by E. T. Allen, manager of the Western Forestry & Conservation Association, and for the logging program by G. M. Cornwall, secretary of the Pacific Logging Congress.

Pacific Grove, Cal.,
July 20, 1916.

West Coast Lumbermen's Association,
Seattle, Wash.

Gentlemen:

We are now using our first car of "Rite-Grade" cedar shingles; consider them A-1; in fact, the best we have handled, our customers speak very high of them. A satisfied customer is a booster, so you can see where we are in line for more "Rite-Grades."

Thanking you for courtesies shown, we beg to remain

Yours truly,
Loma Lumber Yard,
(Signed) By O. E. Chase.

Cottonwood, Ida.,
July 26, 1916.

West Coast Lumbermen's Association,
Seattle, Wash.

Gentlemen:

Received your letter yesterday, and also one some time ago in regard to Rite-Grade red cedar shingles. I got my second car today. I must say they are dandy. My customers are asking me every day: "Ben, when are you going to get some more of those shingles?" So I am telephoning them tonight. I thank you for the advertising sign and the shingle, the roof of ages. These shingles are packed and branded to the grade and it is a pleasure to sell them to our customers.

Yours very truly,
Cottonwood Lumber Yard,
(Signed) J. B. Kreiger.

Zion City, Ill.,
July 12, 1916.

West Coast Lumbermen's Association,
Seattle, Wash.

Gentlemen:

We are going to build this fall or next spring, a house, and are going to use "Rite-Grade"shingles on roof and walls, and would appreciate your sending the "Farm Buildings" booklet, for which is enclosed the required postage. Also "Bungalow Homes Book."

Your advertising has been observed for some time.

Thanking you in advance for the courtesy, I remain

Yours very truly,
J. H. Hawkins.

DEALERS RECOGNIZE GREAT IMPETUS OF RITE-GRADE.

The dealer is having all his own way, too, with the association shingle. The association has determined that all it can do for the quality of Rite-Grade shall be done, and all dealer criticisms as to thickness have been promptly met by the adoption of a rule that Rite-Grade red cedar shingles shall be stated and enforced as to thickness in terms of the green shingle as well as the dry. The mills were unanimous in this, and hereafter there can be no kicks by dealers on the score of lean, dry thickness, both the green and dry thickness being specified clearly in the grading rules.

There has been a very satisfactory distribution of Rite-Grade shingles, and the Honolulu trade has begun to buy them, in fact, there is an important foreign inquiry, some 20 to 30 letters received so far. As a matter of fact, Rite-Grades are distributed in every state of the Union and in western Canada, which indicates extent of the Rite-Grade effort so far.

UNFAIR COMPETITION OF PATENT ROOFING.

There is another feature of the organization movement which is looming up in front of the red cedar shingle manufacturer bigger and bigger every day, and that is the dissemination of important information, and the protection of red cedar shingle rights against the vicious attacks of its competitors, and particularly those competitors who are falling out of their paths of righteousness to do their worst. Carloads of misleading literature, tons of libelous printed matter, acres of knocking magazine space, form a part of the patent roof proceeding to overcome the wooden shingle, and another part is that played by the politics of the patent roofing interests in obtaining legal restrictions against cedar shingles. There is unanimity today among shingle manufacturers and all interests that this propaganda must be fought, and this was emphatically brought out at the lumber convention.

BIG TRIBUTE PAID TO RED CEDAR SHINGLES.

The dual features of legal restriction and of the innate serviceability of the wooden shingle, which seem to insist on every interest coming to the front to take a hand in the organization effort, is well brought out in the following letter from the Southern Pine Association to the Lumbermen's Association of Seattle:

"I wired you today saying that the wooden shingle has again demonstrated its great superiority over other forms of rough covering in the recent heavy rain and windstorms in the southeastern cities. In the vicinity of Birmingham and through the east and south the rainfall approached 12 inches in 60 hours, literally soaking all kinds of composition roofs, so that the wind rolled them up. I might add incidentally that this rain penetrated all forms of brick and cement construction, whereas the wooden houses remained dry. The wooden shingles were not loosened by the winds, as were slate and asbestos shingles. Much of the property damage, which proves to be great, was caused by water destroying the contents of buildings, and in most cases the water entered because of defective roofing.

"Prejudice against shingles is directed wholly toward their inflammability and not sufficient emphasis has been made of their resistance to heavy rainfall and of their superiority over other types of roofing in windstorms, which are anything short of cyclones.

"No doubt you will be able to obtain evidence of specific instances confirming the above statement."

The lesson in all of this is plain, self-evident; it tells the dealer and wholesaler, as well as the mills, that the spirit of co-operation is the soul of renewed vigor and a builder of bigger, better, more profitable business to all concerned.

GREAT SOUTHERN LUMBER CO. CARES FOR ITS MEN OF THE NATIONAL GUARD.

Among the first of the big patriotic employers of Louisiana to announce their purpose to show their patriotism in a practical way,—to show their feeling that, if a man is willing to risk his life for the world's greatest nation, his employers should be willing to open their pocket-books to aid his dependent families and relatives,—was the Great Southern Lumber Co., of Bogalusa, La. Immediately after the president had issued his order mobilizing the National Guard the Bogalusa company announced that they believed in preparedness and that, while they could not say definitely just what amount would be appropriated, they could assure any man in the company's service that he could enlist without fear that his family might suffer by his absence. They also stated that every man's position would be held for him until he returned from federal service.

On Friday evening, July 14, at the Hotel Bentley, in Alexandria, the Great Southern Lumber Co. gave a banquet to Company "G," including a number of the staff officers and several citizens of Alexandria. At this banquet a telegram was read announcing the decision of the company to pay the single men with dependent relatives, and married men in company "G" who had been in its service, $30 per month and house rent, and to the other single men $10 per month. While this will cost the company approximately $1,200 per month, it was stated that the company was glad to show in this practical way to the citizens of Washington parish and Louisiana their appreciation of the co-operation given to the Great Southern Lumber Co. since the construction of the big plant at Bogalusa was begun.

An Immediate Necessity for Curtailing Lumber Production

Opinions Concerning "Running Conditions" and "Lumber Stocks" from Many States

Part III.

By BOLLING ARTHUR JOHNSON

We believe this curtailment movement has just about been Nationally crystallized and that in so far as it is possible to get new information on the subject that we are nearly at the end of our endeavor in that particular.

Some queer things have been developed in this quest of ours which are worth mentioning.

Either the Pacific coast and the Southeastern operators consider that they have not been spoken to on the subject—AS A CLASS—or else possibly, the MAJORITY of them have shut down, or suddenly concluded to go out of business. We are led to make these statements on account of the lack of information from those localities.

Practically all of the people who are especially concerned in the matter of curtailment are the yellow pine manufacturers, if we are to judge by the letters we are receiving.

Apparently, also, the most entirely satisfied manufacturers are those who are cutting white pine lumber, for—barring one or two letters which showed no great interest in the affair—we have not heard from that quarter at all.

In this issue of our publication we have managed to get something like uniform information from the various people who have been good enough to furnish us ANY information at all, by our final letter on this subject, to the trade sent out ten days ago, wherein we asked just two questions flat:

"How much lumber did ou make per month before you curtailed?" And, "How much lumber are you making per month now?"

If the reader will keep those two queries in mind it will help him understand the facts we print concerning the various people who have reported.

Probably the most interesting thing published in this department at this time is our comparative statement of conditions on the west coast and in the yellow pine district as evidenced by the barometers issued from New Orleans on July 21 and July 28 and from Seattle on July 22 and July 29.

The West Coast Lumbermen's Association report for August 5 had not been received when we went to press. The Southern Pine Association report is at hand for the week ending August 4, and shows that shipments exceeded production at 154 southern mills for that week, 23.50 percent, and that the actual production of lumber was only 15.04 percent below normal, whereas it was 17.59 percent on July 28 and 20.53 percent on July 21. Orders have fallen off, also in the southern pine territory, only showing 1.92 percent increase August 4 as compared to 12.18 percent for July 28 and as compared to 8.91 percent for July 21.

As we go to press today we are wondering, REALLY, if the time will ever come when the manufacturers of yellow pine lumber will have the courage of their convictions. This is not criticism but rather a direct query, looking for information based on conditions as they seem to exist from legitimate information in hand.

We have gladly spent a great deal of energy and space in our publication for the last three issues in an endeavor to encourage curtailment as a factor in preserving the solvency of a sadly agonized and floundering trade, and although this business concerns the manufacturers of lumber to the extent of millions of dollars, where it concerns a mere newspaper only hundreds of cents, the lumber manufacturers as a class treat the efforts of trade newspapers with dalliance and unflattering lack of attention.

One manufacturer of lumber, the W. T. Ferguson Lumber Co., of St. Louis, Mo., who advertises that it has a capacity of 1,000,000 feet a day, recently took the large and bellowing bull by the horns, writing the following letter to all its sales force:

"Effective at once, on account of the severe car shortage, we will be unable to accept any orders until further notice. We are getting practically no cars at all, and the railroads offer no relief in the near future. We have a large number of orders unshipped, and feel that we owe it to our customers to ship the orders we already have booked before taking further business. Our decision in this matter has been reached after consideration of the fact that prices are higher now than when some of our unshipped orders were taken. We will advise you at once when we are again in position to accept business. Kindly acknowledge receipt of this letter, and oblige."

Looking, earlier this morning at the high altitude of the order side of the Southern Pine Association's "Barometer" for the week ended July 28, we got very airy and sure of things and made a prophecy concerning the effect this would have on the lumber production of the Pacific coast, and we shall let that prophecy stand over there under the boiling barometer, even although we have just had an opportunity to discuss the Southern Pine Association's barometer of August 4.

These two phases of observation only indicate how difficult it is for an observer to put his finger on that "flea" known as "lumber market conditions."

Even in the face of ALL these statistics yellow pine lumber is worth $1 to $1.50 more than it was twenty days ago—on July 21.

ALABAMA.

Choctaw Lumber Co.	Silas	New plant. Shut down ten days in July. No stock on hand. Will run.

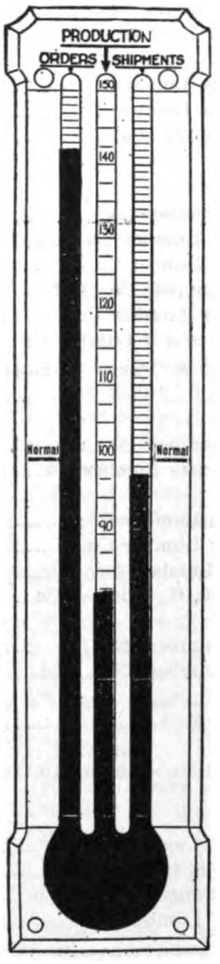
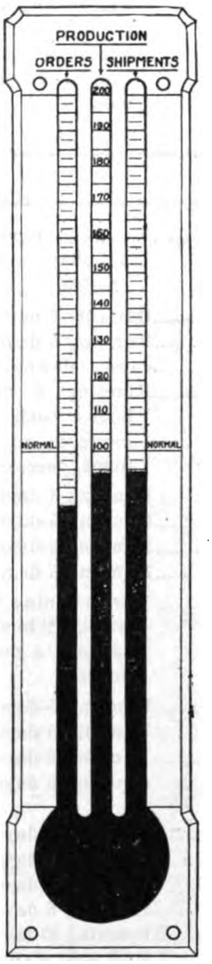
SOUTHERN PINE BAROMETER WEEK ENDING JULY 21.



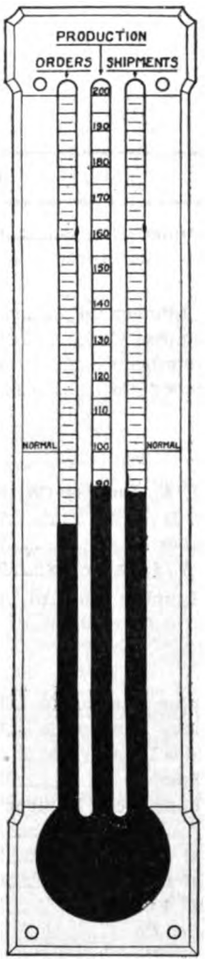
SOUTHERN PINE BAROMETER WEEK ENDING JULY 28

SOUTHERN PINE REPORT JULY 21.—With 150 mills reporting production sunk to 80, just equivalent to a point where shipments were to be found. The orders then rose to 110, as shown in the cut above at the left hand side. That left the 150 mills with 18,130 cars of orders on hand, the balance in feet of 234,242,070. During that week the 150 mills had received orders for 5,358 cars to contain in feet 104,689,962. They had begun the week remember with 16,647 orders on hand and they quit the week with production and shipment normal and the barometer itself shows what happened to the orders.

SOUTHERN PINE REPORT JULY 28.—What a wonderful report this is compared to the report of July 21, for 158 mills received orders for 7,230 cars of lumber or 141,266,970 feet, an increase of over 36,000,000 and the shipments during the week were 4,995, as opposed to the shipments of 3,875 cars the week before. Note also how shipments increased to 98 degrees and production increased only 2 degrees, standing at 82, when the week before they had been "Even Stephen," both standing at 80. The increase in orders compared with the last previous report equalled 12.18 percent, as opposed to an 8.91 percent of the week before; the week ending with orders in excess of normal production 42.32 percent.



WEST COAST BAROMETER WEEK ENDING JULY 22.



WEST COAST BAROMETER WEEK ENDING JULY 29.

WEST COAST REPORT FOR JULY 22.—There is not the resilience to the west coast market noticed in southern pine production, but there WILL be in their report for the week ending Saturday, August 5, which on August 9, had not arrived in Chicago. If interested in market prediction and will take note of this, you will be inclined to think the LUMBER WORLD REVIEW a prophet. Orders were below normal production 14 percent, with actual production 6.1 percent below normal; orders below actual production 8.50 percent and, while shipments were only .17 percent below actual production, they were 6.17 percent below normal production.

WEST COAST REPORT FOR JULY 29.—Production seems to have increased about a half degree and shipments fallen off a half degree, the former standing at 90 and the latter at 89 or thereabouts, according to the barometer. The week of July 22 these two conditions were even at about 94 degrees. Shipments have also fallen back about 5 degrees, standing at 2.80 percent below actual production. The shipments did exceed the orders by 8.40 percent. Unshipped orders for export have accumulated over 2,250,000 feet during the week, the shipments falling off about 1,000,000 feet comparing the week of July 29 with the week of July 22.

		tinuously 11 hours per day.
King Lumber & Oil Co.	Unadilla	Had been running 5½ days, 9 hours each; now shut down, from 4 saws in January to 2 saws in July.
Thompson, John R.	Quitman	Running 10 hours a day, 5 days per week.

INDIANA.

North Vernon Lumber Co., North Vernon		Two bands cutting hardwoods, each mill 18 days, 10 hours in June. Stock low, as compared with January.

LOUISIANA.

Anacoco Lumber Co.	Guy	Monthly capacity 1,332,559; cutting 1,135,705.
Alexandria Lumber Co.	Alexandria	Running 5 days a week.
Anacoco Lumber Co.	Grabow	Running 5 days a week.
Big Pine Lumber Co.	Colfax	Closed down.
Bowie Lumber Co.	Bowie	Running 6 days; 11 hours each. Being cypress, no curtailment necessary.
Bolinger, H. A., Lumber Co.	Shreveport	Running 4 days a week.
Bolinger, S. H., & Co.	Reeves	Running 5 days a week.
Brown Lumber Co.	Shamrock	Running 5 days a week.
Bentley, J. A., Lumber Co.	Zimmerman	Running 5 days a week.
Bryceland Lumber Co., Ltd.	Bryceland	Were running 6 days a week, 11 hours; now 18 days a month, 11 hours.
Brooks-Scanlon Lumber Co.	Kentwood	Running 5 days a week.
Bowman-Hicks Lumber Co.	Oakdale	Running 5 days a week.
Caddo-Rapides Lumber Co.	Alexandria	Running 5 days a week.
Crowell & Spencer	Long Leaf	Running 5 days a week.
Calcasieu Long Leaf Lumber Co.	Lake Charles	Running 4 days a week.
Central Coal & Coke Co.	Neame	Running 4 days a week.
Central Coal & Coke Co.	Caroon	Running 4 days a week.
Cady, W. M., Lumber Co.	McNarry	Running 5 days a week.
Elton Lumber Co.	Hutchinson	Running 4 days a week.
Elton Lumber Co.	Elton	Will shut down 30 days.
Elton Lumber Co.	Hutchinson	Closed down.
Enterprise Lumber Co.	Alexandria	Running 5 days a week.
Forest Lumber Co.	Oakdale	Running 4 days a week.
Frost-Johnson Lumber Co.	Campti	Running 4 days a week.
Frost-Johnson Lumber Co.	Mansfield	Running 4 days a week.
Frost-Johnson Lumber Co.	Montrose	Running 4 days a week.
Germain & Boyd Co.	Atlanta	Running 5 days a week. May reduce to 4 days if conditions do not improve.
Great Southern Lumber Co.	Bogalusa	Running 5 days a week.
Gulf Lumber Co.	Fullerton	Running 5 days a week.
Houlton Lumber Co.	Houltonville	Idle.
Hudson River Lumber Co.	DeRidder	Running 4 days a week.
Huie-Hodge Lumber Co.	Hodge	1 mill closed down.
Hurricane Creek Lumber Co.	Lake Charles	Running 5 days.
Iatt Lumber Co.	Colfax	Closed July 1.
Industrial Lumber Co.	Oakdale	Monthly capacity 1,500,000; cutting 750,000 feet.
Industrial Lumber Co.	Elizabeth	Running 5 days a week.
Industrial Lumber Co.	Calcasieu	Running 5 days a week.
Johnson, W. F., Lumber Co.	Campti	Running 5 days a week.
Krause & Managan	Westlake	Monthly capacity 1,500,000; now cutting 1,100,000.
King-Ryder Lumber Co.	Bon Ami	Running [illegible] week.
Lee Lumber Co.	Tioga	Running 5 days per week, 10 hours a day. Were running 6 days a week.
Louisiana Longleaf Lumber Co.	Victoria	Running 40 hours.
Louisiana Longleaf Lumber Co.	Fisher	Running 40 hours.
Louisiana Saw Mill Co.	Glenmora	Monthly capacity 2,800,000; cutting 2,250,000.
Louisiana Central Lumber Co.	Standard	Running 4 days a week.
Louisiana Central Lumber Co.	Clarks	Running 4 days a week.
Lock-Moore Lumber Co.	Westlake	Running 5 days a week.
Longville Lumber Co.	Longville	Monthly 7,100,946; now 5,158,136 monthly.
Louisiana Long Leaf Lumber Co.	Alexandria	Mill not running.
Long Pine Lumber Co.	Fisher	Running 4 days a week.
Ludington Lumber Co.	Ludington	Running 4 days a week.
Lyon Lumber Co.	Garyville	Running approximately 20 days a month, 11 hours a day.
Lyons Lumber Co.	Kernan	Running 6 days.
Meridian Lumber Co.	Meridian	Running 5 days a week.
McNarry Lumber Co.	McNarry	Running 5 days a week.
Newell Lumber Co., Ltd.	Eunice	Running 5 days a week.
Natalbany Lumber Co.	Hammond	Running 5 days a week.
Pawnee Land & Lumber Co.	Pawnee	Running 5 days a week.
Poitevant & Favre Lumber Co.	Mandeville	Running 4 days a week.
Powell Lumber Co.	Edna	Running 4 days a week.
Peavy-Byrnes Lumber Co.	Kinder	Monthly capacity 3,000,000; cutting 2,000,000.
Pickering Lumber Co.	Pickering	Running 4 days a week.
Pickering Lumber Co.	Barham	Running 4 days a week.
Rapides Lumber Co.	Woodworth	Running 4 days a week.
Ragley, W. G., Lumber Co.	Ragley	Monthly capacity 2,807,093; cutting 1,932,275.
Sabine Lumber Co.	Zwolle	Running 5 days a week.
Sabine Lumber Co.	Colfax	Monthly capacity 4,000,000; cutting 3,250,000.
Sanford, F. L.	Zona	Running 4 days a week; 11 hours.
Schwing Lumber & Shingle Co.	Plaquemine	Cutting cypress; no curtailment necessary.
Southern Lumber Co.	Myrtis	Idle; mill burned.
Springfield Lumber Co.	Springfield	Idle.
W. G. Strange Lumber Co.	Newlin	Running 40 hours.
Tremont Lumber Co.	Winfield	Monthly capacity 6,765,441; cutting 4,750,000.
Weaver Bros.	Weaver Spur	Running 5 days a week.
Weaver Bros.	Boyce	Running 5 days a week.
Weaver Bros.	Couchwood	Running 5 days a week.
Weaver-Hearne Lumber Co.	Couchwood	Running 50 hours.
F. B. Williams Cypress Co.	Patterson	Cutting cypress; no curtailment necessary. Properly advertised.
Williams Bros.	Oberlin	Running 5 days a week; 10 hours.
Wyatt Lumber Co.	Gandy	Running 60 hours.
Urania Lumber Co.	Urania	Running 5 days a week.
Victoria Lumber Co.	Victoria	Running 4 days a week.

MICHIGAN.

Kneeland-Bigelow Co.	Bay City	Running six days per week; no curtailment compared with January.
Louis Sands Salt & Lbr. Co.	Manistee	Were running six days a week, 20 hours in January; now running six days, 10 hours.

Digitized by Google

Williams Bros. Co.	Cadillac	Were running six days per week; 10 hours a day; now 22¾ days, 10 hours.
Wisconsin Land & Lumber Co.	Hermansville	Running 25 days; 10 hours; short crew.

MINNESOTA.

Minnesota is a "short horse, soon curried":

J. Neils Lumber Co.	Cass Lake	Running 26 days; 520 hours. One-half stock on hand now had in January.

MISSISSIPPI.

Here is the revised Mississippi list:

Bienville Lumber Co.	Forest	June cut 2,208,300; cut July 1,876,800.
Batson-McGehee Co.	Millard	Never did run night and day. Were making 50,000 daily. Now shut down for 30 days or longer.
Bay Springs Lumber Co.	Bay Springs	Normal Product 635,000 per month; running 4 days per week; curtailing 135,000 feet per week.
Bentley & Emery	Richton	Normal product 3,000,000 per month; not curtailing.
Bentley & Emery	Richton	Running 60 hours.
Brookhaven Lumber & Manufacturing Co.	Hattiesburg	3 days 1 mill; other mill idle.
J. Bounds	Moss Point	Idle.
Buckwalter Lumber Co.	Union	Normal monthly 1,600,000; now cutting 1,340,000.
Central Lumber Co.	Brookhaven	40 to 50 hours a week.
Central Lumber Co.	Bogue Chitto	40 to 50 hours a week.
Champion Lumber Co.	Kiln	Idle.
Cybur Lumber Co.	Picayune	Monthly capacity 3,600,000; cutting 2,400,000.
Crosby Bros. Co. Stillwell-Crosby Co.	Canton	Mills closed down. Was producing 3,600,000; normal product 4,800,000.
Cotton State Lumber Co.	Meehan Junction	Running full time day only; 125,000 feet per day. Was down 11 months in 1915.
Cotton States Lumber Co.	Meehan Junct.	Running 5 days.
DuBois, John E.	Lake	Normal monthly 2,000,000; cutting 1,000,000.
Eastman, Gardiner Co.	Laurel	Normal monthly 5,800,000; cutting 5,000,000.
Enochs Lumber Co.	Fernwood	Shut down through June.
Finkbine Lumber Co.	Wiggins	Shut down June 24 for 3 weeks, 105,000 feet per day, normal.
Finkbine Lumber Co.	Wiggins	Closed.
Futvoye-Paterson Co.	Shuqualak	Running 60 hours.
Gilchrist-Fordney Lumber Co.	Laurel	Running 60 hours.
Griffin, J. M.	Blodgett	Normal product 1,500,000 feet per month; shut down for 30 days June 15.
Gray, C. L., Lumber Co.	Meridian	Will curtail.
Hall & Legan Lumber	Morton	Running two-thirds.
Hemphill Lumber Co.	Rhodes	Running 10 hours, 26 days per month. Will likely not curtail until all night running is stopped.
Hinton Bros. Lumber Co.	Lumberton	Monthly 2,500,000; cutting 2,200,000.
Homochitto Lumber Co.	Bude	Have been curtailing 165,000, per week for several weeks.
Jordan River Lumber Co.	Kiln	Running 10 hours a day; no night run.
Lumber Mineral Co.	Arbo	Burned.
Lumber Mineral Co.	Arbo	Idle; mill burned.
Marathon Lumber Co.	Laurel	Normal monthly 3,600,000; now cutting 2,900,000.
Moore-Haggerty Lumber Co.	Hattiesburg	Monthly normal 2,800,000; now cutting 1,350,300.
Major-Sowers Lumber Co.	Epley	Curtailing 1 day a week.
Mississippi Lumber Co.	Quitman	Curtailing 1 day a week.
Native Lumber Co.	Howison	Running 60 hours.
Newman, J. J., Lumber Co.	Sumrall Hattiesburg	Reduction July over May 12.8 percent.
Richton Lumber Co.	Richton	Curtailing 1 day and 1 night each week; cutting 140,000 to 170,000 each 10 hours. Contemplating 4 days a week.
Rosa Lumber Co.	Picayune	Curtailing 1 day and 1 night, 100,000 feet a week.
Schryver Lumber Co.	Louisville	Running 2 saws, 5 days, and 1 saw, 4 days a week.
Ship Island Lumber Co.	Sanford	Monthly capacity 1,250,000; now cutting 800,000.
Sumter Lumber Co.	Electric Mills	No curtailment; normal product 4,000,000 a month.
Tallahatchie Lumber Co.	Philipp	Hardwoods; running 10 hours; 26 days per month.
Vinegar Bend Lumber Co.	Vinegar Bend	Curtailing 1 day a week, 100,000 feet a week.
Wausau-Southern Lumber Co.	Laurel	Normal monthly 6,163,000; now cutting 3,920,000.
White, J. J., Lumber Co.	Columbia	Losing 15% of time account of bad luck.

OREGON.

Brown Lumber Co.	Cottage Grove	Ran 73 hours in January; 280 hours in June.
Carlton Consolidated Lumber Co.	Carlton	Not making any lumber; made none in January.
Falls City Lumber Co.	Portland	Closed down since July, 1915.

TEXAS.

Alexander Gilmer Lumber Co.	Remlig	Running 5 days.
Angelina County Lumber Co.	Keltys	Monthly 2,484,000; cutting 1,600,000.
Beaumont Saw Mill Co.	Beaumont	Running 5 days a week.
Central Coal & Coke Co.	Conroe	Running 4 days a week.
Carter, W. T., & Bro.	Camden	Running 5 days a week.
Carter-Kelley Lumber Co.	Manning	Running 4 days a week.
Frost-Johnson Lumber Co.	Nacogdoches	Running 4 days a week.
Fidelity Lumber Co.	Doucette	Running 4 days a week.

Digitized by Google

Keith Lumber Co.	Beaumont	Running 5 days a week.
Kirby Lumber Co.	Houston	No night runs; 3 of the 13 mills idle; balance running but 5 days a week.
Livingston Lumber Co.	Buck	Running 55 hours.
Lutcher & Moore Lumber Co.	Orange	All mills running 5 days.
Lufkin Land & Lumber Co.	Lufkin	Running 4 days a week.
Myer, R. A., Lumber Co.	Honey Island	Running 5 days a week.
Miller-Link Lumber Co.	Orange	Running 5 days a week.
Pickering Lumber Co.	Haslam	Running 4 days a week.
Palmetto Lumber Co.	Beaumont	Running 2 weeks a month.
Rice, J. S. & W. M.	Houston	Running 2 weeks a month.
Southern Pine Co.	Diboll	Running 5 days a week.
Sabine Lumber Co.	Houston	2 mills; running 5 days a week.
Temple Lumber Co.	Pineland	Running 95 hours.
Texas Long Leaf Lumber Co.	New Willard	Running 50 hours.
Trinity Co. Lumber Co.	Groveton	Monthly 3,500,000; cutting 2,300,000.
Thompson Bros.	New Willard	Running 5 days a week.
Thompson Bros.	Trinity	Running 5 days a week.
West Lumber Co.	Houston	3 mills; running 5 days a week.

WASHINGTON.

Northwest Lumber Co.	Seattle	Shut down since October, 1913.
Port Blakely Mill Co.	Port Blakely	Apparently have not been running this year.
Seattle Lumber Co.	Seattle	Shut down since June, 1913.
Walsh Lumber Co.	Rock Cut	Apparently have not been running this year.
Weyerhaeuser Lumber Co.	Everett	Monthly capacity 18,000,000; now cutting 15,000,000.
St. Paul & Tacoma Lbr. Co.	Tacoma	Mill capacity reduced over 50 percent.

VIRGINIA.

Montgomery Lumber Co.	Suffolk, Va.	Full time during June; now curtailing 30 percent.

Constructive Salesmanship

The Salesman's Influence on the Product He Sells

(Delivered before the World's Salesmanship Congress at Detroit, Mich., July 12, 1916.)
By R. B. GOODMAN, of Goodman, Wisconsin.

As we have listened to the various speakers of this congress, salesmanship has become to us a word rich with meaning. Specifically, the function of selling is a link in the chain of industrial organization—a highly specialized function, yet one of almost unlimited content, touching closely upon every field of human thought and action. Now I ask you to think of salesmanship, not as a specific function only, but as a quantity permeating all industrial enterprise. In this larger meaning, salesmanship is co-ordinate with production. However beautiful or fantastic, simple or intricate the pattern of our industrial fabric, its warp and woof are manufacture and marketing, production and exchange, making and trading, engineering and salesmanship.

It may be urged that so large a meaning takes us beyond the scope of the individual salesman. I do not think so. Although the greatest interest and the greatest profit will be largely confined to the specific functions of salesmanship, this larger aspect has also its definite lesson and its practical message to the salesman. My particular subject deals with something more than successful selling. I will endeavor to point out how the intelligent, constructive salesman is influencing the product that he sells, and how the quality of salesmanship is shaping our industrial progress. I shall use the lumber industry, but only to illustrate the principle; any other great basic industry would serve the same purpose, and you may, whatever your line of work, apply the argument to your own salesmanship in your own line.

SALESMAN OCCUPIES ADVANTAGEOUS POSITION.

The salesman, dealing as he does with the user, directly or potentially; dealing also, most obviously, with the product; and representing the producer of this product, occupies the most advantageous position in the whole field of business enterprise.

His, the opportunity to know human nature in all its infinite variety, prejudice, custom, whim, caprice, and common sense. the opportunity to study the technic his product, both as to the manner of its production and as to the manner of its use. His is not the dry, bleached knowledge of books or corporate reports, but the living, fluxing, compelling knowledge of daily contact with this going concern we call civilization. I am quite aware that salesmanship is an art. That honesty, personality, persuasiveness are essentials to the art, but he who uses these to bridge the lack of essential knowledge of his line grows old on the road and behind the counter.

CONSTRUCTIVE KNOWLEDGE NECESSARY TO SALESMANSHIP.

The keen competition, which is the ozone in the air the salesman breathes, makes this constructive knowledge a necessity. The more truly he senses human needs, the more thoroughly he understands the process of production, the better he knows his product, and the more alert he is to the shifting sands of circumstance, the greater his selling advantage. I am thinking of lumber. You may be thinking of automobiles, and you may be thinking of a stock of merchandise. It is all the same. The constructive mind that has mastered these things is the true business builder. He is the man the business is looking for. Not in lumber only, but in every industry, you find the constructive salesman of yesterday is the business manager of today. You find in steel, in automobiles, in textiles, in lumber, in insurance, that these industries are what they are today because the managers of today were the salesmen of yesterday.

This is very natural. Pretty nearly everything is made to sell. Selling is the thing and the master of selling dominates the industrial world. See what salesmanship has wrought. It made the dollar watch, the thousand dollar car, the hundred dollar bond, the five and ten cent store. Salesmanship has made that now quite universal convenience we call the package, and has put a federal statute behind the label on that package. It has put the band on the cigar. It is now putting a trade-mark on lumber. Salesmanship put the safety device on the razor, the starter on the automobile, the photographic negative on a film instead of a glass plate, the gasoline into the fount at the corner of the street. Salesmanship has put the guarantee on most of the things you buy, from a manufacturing plant to a pair of socks. Show me anything in your department store or warehouse or in Sweet's Index, or your buyer's guide that salesmanship has not put its stamp upon, has not helped make more suitable to your need, and easier for you to procure.

Our salesmen sell our lumber, but they are not content with that. They have begun to tell us how to make it, how to cure it, how to dress it, how to grade it, how to manufacture lumber to meet the consumer's needs, and now they are telling us how to advertise it.

ENFORCED CHANGES IN LUMBER SELLING.

Twenty, ten, even five years ago, the nation's lumbering was carried on by captains of industry—big men, doing big things, in a big way, schooled to overcome the forces of nature, practical mechanics, handlers of men, experts in efficiency, industrial engineers—very few were salesmen. In the early history of our industry, it is an axiom with us that lumber sold itself. Consequently there was little need for salesmen, but in the last five or ten years conditions have become more complex, and among an infinite number of changes in our industrial life one is that lumber ceased to sell itself.

Five years ago the lumber manufacturers from all parts of our great producing regions assembled at their annual convention in Chicago, and the subjects of national interest to them that were discussed were railroad rates and classifications, industrial efficiency, scientific forestry, workmen's compensation, grading rules and inspection. One or two men alluded, in a tentative way, to the possibilities of advertising. At this great convention not a single word was said about salesmanship. In recent years, however, there have been marked changes in the attitude of lumbermen toward the problems of marketing. Last month I attended another national convention of lumber manufacturers in the city of Chicago, and I listened for two days to men of national reputation discussing such subjects as these: develop-

Digitized by Google

ing our foreign markets, why architects and engineers want branded lumber, why retailers want maker's trade-mark, educating the public in the uses of wood. The editor of a metropolitan journal spoke on publicity, lumber publicity; another representative of the press on merchandising lumber; another on advertising. The president of a university talked on co-operation in marketing. If I had not known that this was a manufacturers' meeting, I should have thought it was a preliminary session of the World's Salesmanship Congress.

BEGINNING TO VALUE THE SALESMAN.

My own manufacturing association turned over its last quarterly meeting to its salesmen, with the result that the meeting was of most unusual interest and practical value. Another manufacturing association has instituted a school of salesmanship, concerning which we all hope to hear a great deal. So in the lumber industry, and I believe also in all industries, salesmanship is coming into its own.

The old style lumber manufacturers never have thoroughly digested the idea of salesmanship. They made the mistake of playing fast and loose with the wholesaler and trying to play their own hand at salesmanship before they had learned the game. Their idea of selling was to quote a price low enough to get the order. It was quite common if a buyer was in the market for a car of lumber for a dozen salesmen to call on him before 10 in the morning, each trying to underbid the other.

This situation has been remedied, however, and the wholesaler and the line yard man—that is the lumber salesman—and the old style lumber manufacturer—that is the lumber engineer—are joining forces to their mutual advantage. The sub-title of almost every successful lumber concern today is "manufacturer and wholesaler."

SALESMANSHIP TO DOMINATE THE SITUATION.

Salesmanship is beginning to dominate the situation. Sometimes it has to take a club to do it. "Our mills are running fine," says the manufacturer. "We are making our lumber cheaper this month than any month last year by seven cents per thousand." Then his lumber salesman partner says: "Your profit isn't made on the lumber you produce, but on the lumber you sell." That is the kind of salesman talk that makes the manufacturer sit up. We say that the manufacturer is waking up. He is waking up, because with the salesman firing these kind of bricks at him, he has got to wake up. The lumber salesman is telling him he cannot sell his lumber on price alone. The lumber salesman is demanding a better product to sell—a product graded to meet the consumer's needs, backed by the maker's guarantee. He is demanding new standards of service. He is asking for building plans to go with the lumber. He is asking for expert engineering. He is asking for lumber literature, and for lumber publicity. He is asking for the backing that every other salesman in every other line gets in selling his product, and the lumber manufacturer is giving him what he asks for. He has been slow about it and niggardly, but he is giving to the tune of some five hundred thousand dollars a year for lumber trade extension throughout the entire United States. Five hundred thousand dollars a year is an appropriation of one-twentieth of one percent of the value of the product sold. Think of it! And the surprising thing about it is that with even these meager appropriations the lumber salesmen in our industry are showing tangible results.

PROBLEMS FOR LUMBER SALESMANSHIP TO SOLVE.

Lumber salesmanship has many problems to solve; the building of export trade, the overcoming of destructive competition, the stabilization of the lumber market. With these problems it has gone under the leadership of our worthy chairman, the president of the National Lumber Manufacturers' Association, and guided by able counsel before the Federal Trade Commission in such a manner as to perform a service of national importance, not only to the lumber industry, but to all American industry.

A. L. Porter's "Day of Specialists" Arraignment of "Joiners" in the Lumber Trade, Just Fits the Case

In the current issue of the Western Retail Lumberman, the leading editorial, entitled "A Day of Specialists" by A. L. Porter is a red-hot pot-shot at the general lumber trade of the United States which ought to wing many a lumberman "scatterer" and set him to thinking thoughts of home and business.

Mr. Porter and his associate W. T. Dennison are actively engaged in doing the practical constructive work which Mr. Porter's new organization the National Builders' Bureau has set out to do and is accomplishing in a remarkable way, and we suggest that this editorial of Mr. Porter's referred to be made a lesson-leaf to all the new recruits of that institution. They ought to have it engrossed and hung up at the foot of their beds, where they can see it every morning when they wake up. Here it is in full:

"No one can gainsay the fact that this is a day of specialists. It is a day when one man makes a specialty of one particular line of endeavor.

"Most all business men realize this fact except lumbermen. They scatter their endeavors in practically every field of business activity.

"A man can only accomplish about so much and any individual who makes a big success of a lumber business will have his hands full.

"We are personally acquainted with probably hundreds of prominent lumbermen. Ninety out of a hundred of them spend half of their time, probably more, attending directors' and committee meetings of various organizations and companies entirely foreign to the lumber business.

"If you want to talk to one of these men about the lumber business he will tell you that he is too busy; he has a meeting at eleven o'clock or eleven-thirty or two, or three o'clock, as the case may be. He is away from his office a great deal of the time giving his best thoughts to something outside of the lumber industry, and much of the time when he is in his office, he is meeting a political committee or giving his time to fixing up a speech or address he is going to make before the Chamber of Commerce, the Bankers' Convention, a good roads meeting or something else.

"The average lumberman seems to be willing to give up his time to almost every line of endeavor except the one in which he is most vitally interested, the lumber business.

THAT WAY LIES "RECEIVERSHIPS."

"We personally know of several splendid lumber concerns with large capital who are now in the hands of a receiver and the stockholders will probably lose all of their capital. The men at the head of these institutions originally tried to cover too much territory—too many meetings of life insurance companies, savings and loan societies, Y. M. C. A. Board, Chamber of Commerce, Ad Club, Rotary Club, Real Estate Board, Employers' Association, Bank Directors' meetings—while important matters regarding their lumber business were pushed aside from day to day.

"When a lumber convention is held, many of these men go to the place of the meeting but they have too many outside people to see regarding some foreign institution in which they are interested; too much else to talk about to really pay much attention to the lumber convention or listen to what is said at that convention.

"And if a mere lumber secretary should suggest to any of these men that they prepare a paper on some subject pertinent to the lumber industry, he will almost always refuse, excusing himself by saying that he hasn't the time. They are not only unwilling to take part in a lumber convention, but they are unwilling to listen to those who give the time and thought to prepare some creative suggestions for their consideration.

STOP "NEGATIVE" ACTIVITIES.

"Most of them are very willing to devote their time to some sort of a negative fight to get a freight rate reduced one or two cents a hundred or keep some competitor from getting his freight rate reduced.

"Lumbermen have spent too much of their time and money in negative activity; but if some enthusiast should call a conference to see what could be done to earn 25 or 50 cents a thousand more for lumber, there wouldn't be enough present to call the meeting to order.

"The lumber business will never again be as good a business as in the past unless lumbermen cut out many of the side lines; at least for a while and give their undivided attention and time to problems affecting the lumber industry, and do this until these problems are solved.

"It seems to us a rather sensible idea for the lumberman to confine all of his time, attention, ability and finances for a while to the lumber business—make a specialty of that business.

"It is time for the lumberman to become a real professional in all lines affecting his industry. After that, no one would criticize if he took on other lines of activity."

Doors, Sash and General Millwork Review

Current Conditions of the Country's Market

By LUCIUS E. FULLER

Comparatively healthy conditions are observed in the door and mill work industry throughout the country; and while the volume of current business is not heavy inquiries are in good volume and trade prospects for the fall, measuring all the contingencies in sight, are more than usually encouraging.

Those who have taken the trouble to investigate the country situation say that stocks of millwork with the retail dealers are low and that as a rule their prospects for fall trade are exceedingly good, despite the fact that the crops in several sections of the country will show a considerable reduction from the earlier estimates. It is not believed that the damage done by hot and dry weather to the spring wheat crop and to corn will be serious enough to place any further handicap upon business. On the contrary very little of the crop in those grains is destroyed, but there is undoubtedly a falling off in the yield to the acre and this will be to some extent, as in other years, offset by an increased price. Were the crop situation the only menace to good business during the last five months of the year all would be well, but there are others. There is more or less danger of a railroad strike, as the public generally knows. They hope it may be averted, but at this writing assurances that the strike will not occur are not positive enough. The presidential campaign is invariably a disturbing factor in business and this year is likely to be no exception. The only modification of this situation that might be suggested is that so many and such terrible happenings have threatened business during the last two years that even a railroad strike and a hot presidential campaign combined might not have any appreciable effect on business. The most that can be said is that if the threatened railway strike does not occur the flow of trade will be in general satisfactory. Indications and opinions are for a good volume of trade in both lumber and millwork this fall.

A Prospective Car Shortage.

A factor that will not be overlooked in calculations for fall trade is the freight car situation. Railroad experts have expressed their belief in a decided shortage of cars this fall. The last report by the American Railway Association showed a total surplus of freight cars on July 1 of 67,014 and total shortages of 14,898, leaving a net surplus of 52,116 cars. On June 1, the surpluses were 70,310 cars and the shortages 12,617, making the net surplus 57,693 cars. This is a falling off of about 11 percent in the month, but from reports received this week it is believed that the greater part of this surplus was wiped out during July and that in the August 1 statement, which will appear on Saturday, there will be little surplus shown excepting possibly in coal, gondola and miscellaneous cars. The surplus of box cars on July 1 was 18,000. This is said to be mostly west and northwest of Chicago and on the Pacific coast. Evidently there is no surplus of any kind of cars in the south, there being a dire scarcity reported in many sections. Also it is said that in northern Wisconsin and the upper Mississippi district generally there is a scarcity of cars. This presages a shortage as soon as the new grain begins to move, which will be within the next week or two and buyers of millwork in carload lots will do well to anticipate the car shortage by getting their orders in and have their shipments forwarded promptly.

Reports of Chicago Trade.

The general report of Chicago distributers of doors and millwork is unsatisfactory. Considerable apathy prevailed in buying during the first half of the summer, but since August came in there has been a revival of inquiry and some increase in orders. The more favorable disposition of carload buyers is shown in many inquiries and it is evident that those who are contemplating buying in bulk are well satisfied in their own minds that they should get in the market now, when there is a fairly good chance of getting the goods forwarded promptly. More inquiries for small lots are coming in and evidently the fall business in odd work is to be of as large proportions as a year ago.

Discounts now in vogue are 72 on small lots of No. 1 and No. 2 doors, 70 percent on No. 3 doors, 66 percent on painted doors, 75 percent on glazed sash and 77 percent on glazed sash 100 openings or more.

The August Crop Report.

The country tributary to Chicago is in fairly good condition as regards crops. According to the government report issued August 8, Illinois will show practically as large a yield of corn as in 1915, but will show a heavy falling off in winter wheat. The yield of oats in Illinois is only a trifle less than a year ago. In Indiana the corn crop will be several million bushels larger than last year, according to the August estimate. The oats crop will be just as large and the winter wheat crop will show a considerable reduction, as in Illinois. Wisconsin shows a 10 percent larger corn crop than a year ago and almost 30 percent larger than the crop of 1915. The oats crop in Wisconsin is within a few thousand bushels of the July 1 estimate and is considerably above the five year average. The barley crop in Wisconsin is also larger than indicated on July 1 and also above the five year average. Michigan will have a corn crop approximating the estimate of June 1, but about 10 percent less than the yield last year. In oats Michigan will produce nearly as much as was indicated on July 1, and within 4,000,000 bushels of the five year average, while its winter wheat crop shows a reduction from 20,000,000 bushels to 12,000,000 bushels. From this it is seen that the states comprising what is known as Chicago territory will be in fairly good condition as regards crops and as compared with the rest of the country.

Trade in the Kansas City District.

The sash and door trade in the southwest has been interrupted to some extent by the hot weather recently prevailing, but since the rains came the sentiment has been much improved. At the same time the inflow of estimates has resumed and, while the crop damage there is going to cut considerable figure, the sash and door men are confident that there will be a comfortably large consumption of millwork, and this is indicated by the steady inquiry seen at the wholesale houses. Prices are holding firm throughout the Kansas City territory.

Door Business in the Northwest.

The unquestioned damage that has been done to the grain crops in Minnesota and the Dakotas has somewhat affected the demand for millwork at the factories at St. Paul and Minneapolis. According to the reports the crop of corn in Minnesota will be 15,000,000 bushels more than the yield in 1915 and 22,000,000 bushels more than indicated in the report for July 1. Spring wheat, however, showed a falling off of 23,000,000 bushels or nearly 40 percent on August 1, as compared with the July estimate and will make the Minnesota crop this year only a little more than 50 percent of that of 1915. In North Dakota there is a falling off of 22,000,000 bushels or a 25 percent reduction from the July 1 estimate and almost 60 percent below the extraordinary crop of 1915. South Dakota shows a similar falling off in spring wheat of 25,000,000 bushels, which makes it nearly 50 percent below the July 1 estimate and about 55 percent less than the 1915 crop. It is seen, therefore, that the prospects for door and millwork business in the middle northwest are not of the best, although there are promised extensive building operations in the Twin Cities and the outlook is far from being gloomy.

Ohio River Business.

The factories at Cincinnati report that they are doing as much business as the unusually warm weather permits. There is a fair volume of inquiry observed and the factories have orders for special work that will keep them well occupied through the season. At Evansville the sash and door movement is reported much better this summer than it was a year ago. Country yards are reporting a fair amount of building in the agricultural districts. Building operations throughout that territory are heavy and a good trade is looked for through August and September. Prices are fairly well held.

The Window Glass Situation.

As had been predicted, prices on window glass have been raised by the American factories one point, which makes the present net price from 8 to 11 percent above the discounts promulgated March 10. Stocks of window glass on hand are said to be low and broken. Authorities say that everything in sight will be cleaned up within sixty days, or probably a month before the hand operated factories will be able to start. A number of the machine factories have lately closed down and will remain closed until needed repairs are made. It is stated that the cost of producing glass will be much higher during the coming season's blast and this is bound to make a still higher price on the product. Manufacturers are advising their customers to provide for their nearby wants before the stock on hand is exhausted.

General News of Associations and Clubs

INCREASE IN SHIPMENT OF NORTHERN PINE.

Minneapolis, Minn., Aug. 8.—An increase of 50 percent in shipments for the first six months this year over a like period of 1915 is shown by the report of Secretary H. S. Childs, of the Northern Pine Manufacturers' association. Shipments for the current six months totaled 497,077,614 feet as against 331,575,223 feet, or an increase of 165,502,391 feet. Production figures for the current six months ran ahead of last year's period about 18 percent, the figures being 331,532,962 feet as compared with 280,987,571 feet, or an increase of 50,545,391 feet. Production of lath for the first half of this year totaled 87,903,500 as against 78,335,019 for the like period last year.

Shipments so far this year also show a slight lead over last year, lath shipments for six months this year being 89,101,500 as compared with 86,398,550 for the first half of 1915.

August 11-12—Montana Retail Lumbermen's Association, Great Falls, Mont. Annual meeting.

August 23-25—National Association of Box Manufacturers, Belmont Hotel, New York, N. Y. Midsummer meeting.

August 25—West Coast Lumbermen's Association, Benson Hotel, Portland, Ore. Outing and monthly meeting.

October 24-25—Western Forestry & Conservation Association, Portland, Ore. Annual forestry industrial conference.

October 26-27—Pacific Logging Congress, Portland, Ore. Annual meeting.

THE NATIONAL HARDWOOD CONVENTION REPORT.

Probably no report of a convention that has been printed recently has been of more interest to the members of the hardwood lumber industry of the country than are the complete stenographic minutes of the nineteenth annual convention of the National Hardwood Lumber Association, which was held at the Hotel Sherman, Chicago, June 15 and 16, 1916. The report is contained in a neatly gotten up pamphlet with handsomely embossed cover and printed on excellent paper. The pamphlet is embellished with half tone pictures of the officers, directors and members of the various committees and also with a double page reproduction of the large group picture taken at the annual banquet.

The interest in the proceedings was largely centered in the discussion upon the proposed new grading rules, which covers approximately twenty-two pages of the booklet.

General Resolutions Adopted by the Southern Forestry Congress, Held at Asheville, N. C., July 11-16, 1916

1. White Pine Blister Rust.

Whereas, The imported fungus disease known as the White Pine Blister Rust, which has rendered the culture of American white pines impracticable in many parts of Europe, has already been found in nine states of the Union and probably exists in other states, and

Whereas, This disease is a national menace, not only to all the white pine forests of the east but also to the white pine and sugar pine forests of the west; therefore, be it

Resolved, That immediate, drastic action is necessary if a national calamity is to be averted, and to this end the Southern Forestry Congress strongly urges appropriations by the national government and by all states in which imported 5-leaved pines have been planted, adequate to locate and eradicate all infections, and further recommends that sufficient power be conferred on the officials charged with this work to make eradication effective.

2. Game Refuges.

Whereas, The acquisition of lands by the federal government for the Appalachian National Forests affords an unusual opportunity for restoration and conservation of game, and

Whereas, There are pending before the congress of the United States certain measures authorizing the establishment of game refuges on the national forests under the Chamberlain-Hayden Game Sanctuary Bill (S. 6881, H. R. 11712) and the protection of game on the Appalachian National Forests under the senate amendment to the Agricultural Appropriation Bill; therefore, be it

Resolved, That the Southern Forestry Congress heartily endorses and recommends the passage of said measures, and in the event of their enactment into law, urges active and cordial co-operation of the state officials and local associations with the federal authorities in the establishment of such refuges, in the introduction of big game in suitable localities, and in enlisting public sentiment in favor of game conservation on such forests.

3. Separate State Forestry and Game Organizations.

Whereas, It has been shown by experience that the combination of the state forestry organization with the state fish and game organization operates disadvantageously to both, and tends to reduce the efficiency of both through the division of interest and the division of appropriations from the purposes for which they were attended and

Whereas, A combination of the functions of the forest officers with those of the fish and game officers is especially detrimental to the development of a spirit of hearty co-operation on the part of the general public in the suppression of forest fires, therefore, be it

Resolved, That the Southern Forestry Congress endorses the policy of separate state forestry departments, but recommends close co-operation between the state departments of forestry and of fish and game.

4. Federal Aid in Fire Protection.

Whereas, The excellent progress made in fire protection under the Weeks' Law in states which have come under its operation has fully demonstrated the desirability of this manner of co-operation between the nation and the states, therefore, be it

Resolved, That the Southern Forestry Congress urges the continuation of these appropriations by the national congress, and urges the states which are not now qualified under the law to receive federal assistance to take the action necessary to avail themselves of the government's co-operation.

5. Forest Protective Associations.

Whereas, The control of forest fires is the greatest factor in forest conservation, and

Whereas, Effective control demands affirmative action on the part of not only the public agencies but private interests as well, and hearty co-operation between them, therefore, be it

Resolved, That the Southern Forestry Congress urges private owners of timberlands in each of the southern states to form organizations for fire protective purposes, by means of which the co-operation between all agencies, both public and private, can be made effective.

6. Adequate Appropriations for Forestry.

Whereas, Progress in state forestry requires not only an effective non-political organization at its head, but also sufficient funds to carry on the important work of popular education in forestry, establishment of organized fire protection, assistance to woodland owners in the management of their property, checking erosion, and supervision of such state forests as may be established, and

Whereas, Many southern states which have already made an excellent beginning by the establishment of forestry departments, are as yet without adequate financial support, therefore, be it

Resolved, That the Southern Forestry Congress urges upon the legislatures of the respective states, a more liberal policy in providing funds for the conduct of forestry work, and in passing such additional legislation as may be necessary to make this work effective in practice.

7. Recent Louisiana Law Approved.

Whereas, The recent act passed by the legislature of Louisiana, which provides that the state forestry work be in charge of a trained forester, and that the expenditures for forestry shall equal twenty percent of the revenue derived from the products tax on timber and turpentine, marks a great forward step in forest conservation; therefore, be it

Resolved, That the Southern Forestry Congress heartily endorses this action of Louisiana.

8. Urge Laws and Funds.

Whereas, The states of South Carolina, Georgia, Florida, Mississippi and Arkansas are now without state forest organization and entirely without appropriations for state forestry work; therefore, be it

Resolved, That the Southern Forestry Congress urges upon the legislatures of the above states the serious consideration of laws and funds to improve their present forest conditions.

9. Biltmore Estate.

Resolved, That the Southern Forestry Congress does hereby express its hearty thanks to Mrs. George W. Vanderbilt, Mr. C. D. Beadle, Dr. and Mrs. A. S. Wheeler, and Mr. C. T. Rankin, for making possible the interesting visit to the Biltmore Estate; and for their courteous and greatly appreciated entertainment; and to Mr. Verne Rhodes for the preparation of the valuable booklet on the Biltmore plantations.

10. Women's Clubs.

Resolved, That the Southern Forestry Congress, recognizing and heartily commending the very valuable work done for the spread of the movement for the protection and perpetuation of our southern forests by the general and state federations of women's clubs and the individual clubs and club women of the south, does hearby urge these good and patriotic women to continue and increase their efforts and co-operate as closely as possible with all other organizations with this end in view.

11. Appreciation and Thanks.

Resolved, That the Southern Forestry Congress hereby expresses its appreciation and tenders its thanks to the Governor of North Carolina, to the Mayor and Board of Trade of Asheville, to the S. A. Lynch enterprises, to the local press and women's clubs, and to the management and staff of Battery Park Hotel for the many courtesies extended to the congress and its delegates during their most pleasant stay in Asheville.

WEST COAST LUMBERMEN AT SEATTLE

Hold Semi-Annual Session—Open Shop Generally Favored—E. B. Hazen Suggests Concentrated Effort in Urging Construction of Implement Sheds—The Use of Tractors in Lumber Yards—Interesting Shingle Tests.

Seattle, Wash., August 3.—The semi-annual meeting of the West Coast Lumbermen's Association was held in the Washington Hotel, this city, on Thursday and Friday, July 27 and 28, and was attended by more than 150 lumbermen. The meeting was full of "pep" from start to finish. Three papers were read, one by Valentine H. May, of Seattle, on "The Efficiency of the Small Gasoline Lumber Tractor," another by E. B. Hazen, of Portland, Ore., on "Salesmanship and Advertising," and the third by J. S. Goldsmith, of the Washington Employers' Association, who read a paper on "Where Do You Buy Your Goods?"

In opening the meeting President J. H. Bloedel, of Bellingham, Wash., said that the last six months had been a critical period in the lumber industry, but the lumbermen had succeeded in stablizing the market to an extent never before thought possible and this was done chiefly because there was co-operation among the lumbermen. He said that one thing that the lumbermen had always lacked is confidence in the other fellow, but in the West Coast association during the last six months this confidence has been gained. He stated that the regulation of production is one of the tangible results accomplished by associated effort.

THE OPEN SHOP POLICY FAVORED.

J. S. Goldsmith, of the Washington Employers' Association, in his address on "Where Do You Buy Your Goods," made an appeal to those present to give preference wherever possible to goods that are made in plants where the open shop principle is recognized. This question proved to be the dominating subject of the convention.

Mr. Goldsmith said: "The Employers' Association of Washington does not believe in the black list or the boycott, but it is squarely on record in favor of the open shop. It believes that the lumbermen should have the right to say where he shall buy his goods. The question of the maintenance of the open shop is one that is vital to the lumbermen. The association believes in fair treatment and fair wages for the men its members employ, but is against any attempt on the part of the unions to dictate who the men employed shall be."

Mr. Goldsmith asked the lumbermen to join the association and to instruct their buyers to recognize the open shop principle in placing their orders and to stand solidly behind the work of the Employers' Association.

SALESMANSHIP AND ADVERTISING.

E. B. Hazen, of Portland, had for his subject on the program "Salesmanship and Advertising," but his paper was headed thus: "Plan for Campaign to Help Accomplish the Covering of Agricultural Implements"—at least this is what Mr. Hazen said the subject ought to have been.

Mr. Hazen said in part: "The fir people are doing little as an association in actual practical trade extension. The southern pine people are spending a half million dollars each year in association activities and are aggressively working to create *consumer demand* for their wood in every direction. If we are not ready or able or willing to parallel their effort to push fir as it should be pushed in a large way, are we not ready to begin in a small way? If so, why not concentrate on some one undeveloped consuming possibility? A desultory and scattered campaign would not accomplish anything."

Mr. Hazen went on to say that a gentleman who had traveled leisurely through Europe a few years ago and then came across Canada from Quebec to Vancouver had stated that he was impressed with the contrast between the housed farm implements across the water and the hundreds that he saw exposed to the elements on the prairies of Canada. Abroad none of the implements are left out of doors. A report had been made that only 13 percent of the implements used in Canada are protected from the weather. Conditions in the United States are much the same.

The power of suggestion, Mr. Hazen said, would assist a great deal and would create a demand for large quantities of lumber. Mr. Hazen stated that George M. Cornwall had covered the subject very thoroughly in his paper, the Timberman, of Portland, and that many of the ideas in his paper were from Mr. Cornwall's suggestions made to him.

It was stated that the California representative to the International Harvester Co., after hearing the matter presented regarding the covering of agricultural implements, had endorsed it as eminently practicable. It was wondered at that lumbermen had never given attention to this subject of finding a new market for lumber by following in the wake of the agricultural implement salesman and impressing on the farmer the waste he had been countenancing by failure to cover his implements.

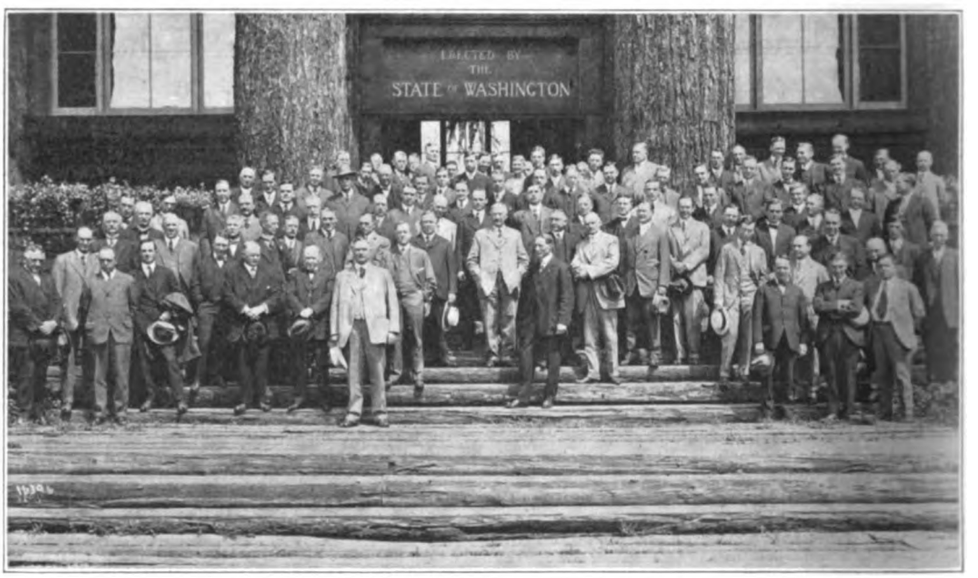
Regarding the possibilities of this new channel of consumption, Mr. Hazen stated that there were 6,000,000 farms in the United States and that probably not over 25 percent of the farmers protect their implements. It was suggested that the sheds should be in four sizes to be outlined with blue prints and that the buildings should be floored; also that the most logical distributer of this new consumptive requirement is the retail lumberman. Some of the ways by which the desired end could be brought about were outlined in letters that had been received from prominent railroad men who promised co-operation with the lumbermen. Those who promised aid in this matter were C. J. Mills, assistant to President Sproule, of the Southern Pacific; L. C. Gilman, of the Spokane, Portland & Seattle road, who said that all the Hill lines would approve the idea and B. L. Winchell, director of traffic of the Union Pacific railroad. Undoubtedly, he said, the Milwaukee road would also help and the agricultural colleges would preach "preparedness" to the farmers all the time.

Professor Ekblaw, of the University of Washington, said that a fair average life for farm machinery if allowed to stand in the open is five years, but if properly cared for the farmer could get from twenty to twenty-five years' service from his machinery. The growing use of the small tractor on farms is a feature which increases the necessity for a well constructed implement shed.

It was recommended that the campaign should cover only California, Oregon, Washington, Idaho, Utah and Montana and might later be extended to other states. With an appropriation of $5,000 to begin with, $3,000 should be used for the salary and expenses of a proper man who understands the agricultural implement business to take charge and $2,000 for booklets, plans, advertising helps, etc. Have the retail dealers prepare lists of farmers to whom this literature should be sent and it should be stated where the lumber for the shed could be secured. Pictures of the various styles of sheds should be shown and pictures also showing the condition of a protected and unprotected implement of equal age. Also moving pictures were suggested to which the farmers would be invited. Manufacturers, he thought, should capitalize the campaign by undertaking to build ready-made implement sheds.

Mr. Hazen quoted from Secretary J. C. Dionne, of the Lumbermen's Association of Texas, who in a recent address said, among other pertinent things: "I have contended that for a retail lumberman to build a yard, put in a stock of building material and then do little or nothing more than to furnish lumber for building projects that have developed without his knowledge or assistance, was business incompetency of the rankest order and would not survive the battle of modern competition unless wonderfully improved upon." Secretary Dionne had also urged the same necessity for action on the part of the manufacturer of lumber.

In conclusion, Mr. Hazen stated that the field for the extension of the lumber trade through the covering of agricultural implements is a big one and has possibilities little dreamed of. He asked "Can we not do this one thing, at least, this year?"



SEMI-ANNUAL MEETING OF THE WEST COAST LUMBERMEN'S ASSOCIATION, SEATTLE, WASH., JULY 27-28, 1916. PHOTOGRAPH MADE IN FRONT OF FORESTRY BUILDING AT THE UNIVERSITY OF WASHINGTON.

EFFICIENCY OF THE GASOLINE TRACTOR.

Valentine H. May, of the McKenna Lumber Co., Seattle, Wash., discoursed on the subject of "The Efficiency of the Small Gasoline Lumber Tractor." He said that he had assisted in working up the design of one tractor, but he was by no means sure that it was the best design that could be developed. At present there are three different makes of small tractors, all built from Ford cars and all similar in appearance. Two of these makes reduce the speed by gears in the drive shaft, the third by means of a chain drive.

The tractors used by the McKenna Lumber Co. have 21-inch wheels with solid rubber tires and are geared so that they run at a little over one-third of the speed of the regular Ford car. In other words, when the speed of the engine would normally send the car twenty miles an hour, the tractor is traveling about seven. Makers of some of the other tractors have adopted a different ratio on the belief that greater speed is desirable. Mr. May thought that a mill having large platform room could possibly utilize a higher speed, but for use on narrow tramways a speed for an outhaul of six to eight miles an hour, returning empty at the rate of ten or twelve miles is about as fast as safety permits. All of the tractors have the same device for attaching the tractor to a two wheel truck of lumber and a bolster in the rear and turning on a circular plane carries the end boards of the load. Chains attached to the bolster are drawn around the load and bind

Digitized by Google

the load to the tractor. These tractors differ from automobile trucks in that the tractive power is gained by the weight of the tractor itself, and not by the weight of the load of lumber. The tractors of the McKenna Lumber Co. have solid cast iron rear wheels, an idea originating with Walter Nettleton. These wheels weigh over 300 pounds each.

Mr. May continued: "We started to operate our first tractor on December 16, 1915. This has been continuously at work ever since. During the snow of last February there were only three days when this tractor was not running. Furthermore, it ran without a breakdown. From December 16 to date the lost time of this tractor (other than the days mentioned) has been a total of four hours, once for a half hour, once for two hours and once for one and a half hours. The cost of repairs has been very small, the chief repair being an extra brace to support the transmission. At the time the the July shutdown this machine was given a thorough overhauling. The transmission and differential were found in good condition, with no renewals necessary. The engine needed only the following repairs: Two new valves, costing 25 cents; one new timer case and roller, costing $1.25; a total of $1.50. The severity of this test is indicated by the fact that in the use of the tractors the engines are kept running continuously. They do not stop during the day except at the noon hour. The first tractor utilizes the same frame and the same axel and springs of the regular Ford. In the other two tractors the size was reduced and made more compact to allow the machine to be more readily handled and turned on the trams. The tread of the Ford car was narrowed 16 inches, from 56 inches to 40 inches; the wheel base shortened 14 inches, from 100 inches to 86 inches. In making these changes much work had to be done and weaknesses developed that were mistakes in judgment as to the points that needed the most strengthening. Theoretically we figured that the weak part was the frame and the rear end, but it would appear that the part needing the most strengthening is the front end, i. e., the front axle, front spring and steering gear. These parts take the unexpected blows due to roughness of the tramways. The weaknesses that developed are, I think, now understood and remedied, but we broke several springs and two front axles before we found them out."

Regarding the saving in cost Mr. May said that in a general way it is about one-half of what it would cost to handle the same material with horses. Or in other words, if hauling by horses cost 12 cents a thousand, a tractor would do the same work for about 6 or 7 cents a thousand. However, the cost varied under different conditions. Gasoline consumption averages about six gallons a day of ten hours.

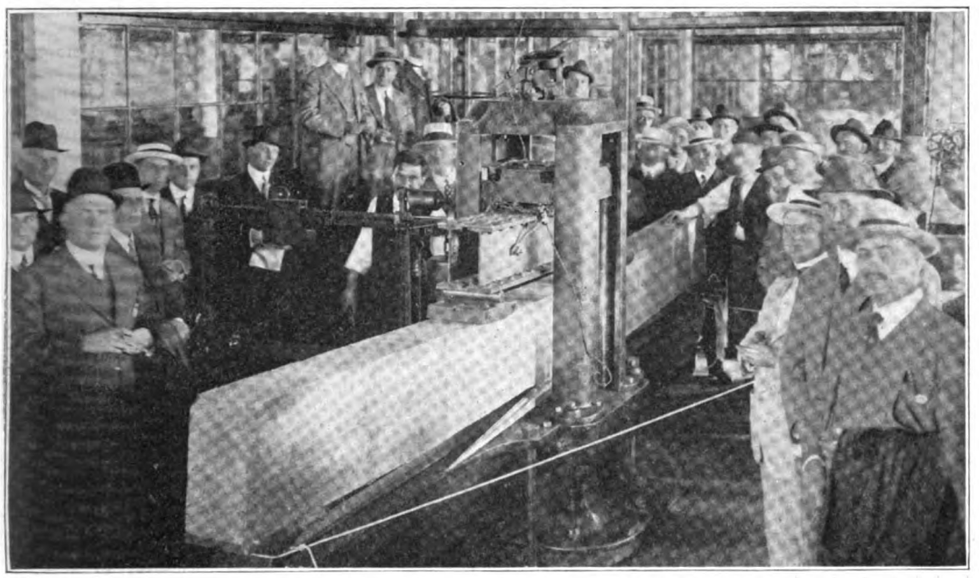
Mr. May said that the yard foreman claims that two tractors would take the place of seven good horses at the mill. The largest load carried, of which he had record, is 2,400 feet of green hemlock, estimated to weigh 10,000 pounds. The tractor can be used to switch freight cars and other work about the plant. As far as the trams are concerned, the expense is not yet determined, but the use of the tractor has been most satisfactory in every way, having solved the problem of hauling and were its costs even as great as horses, it is preferable.

RITE-GRADE SHINGLES.

H. P. Wyckoff, secretary of the shingle branch of the West Coast Lumbermen's Association, told some of the experiences of his branch in the promotion of the "Rite-Grade" shingles and said that in starting it might be better to concentrate on some particular territory. He told of the numerous inquiries received as the result of the advertising, some of them from foreign countries. In some respects, he thought that the shingle manufacturers were not co-operating with the "Rite-Grade" movement as well as they might, especially in the matter of supplying the shingles asked for.

President Bloedel called attention to the fact that many inquiries were coming from Europe now for ready-made houses and he said that the lumbermen should get ready for a great business in this line after the war.

F. B. Hubbard, of Centralia, Wash., was asked to tell of his experiences at the famous reclassification hearing before the Interstate Commerce Commission at Chicago in July and expressed the opinion that no change in classification would be made by the commission in its decision.



TEST OF DOUGLAS FIR TIMBER, 8 x 16 IN. x 16 FT., ON 15 FT. SPAN. SELECTED BY DENSITY METHOD UNDER SUPERVISION OF O. P. M. GOSS, AT TESTING LABORATORY OF UNIVERSITY OF WASHINGTON. BROKE UNDER PRESSURE OF 88,200 LBS., WITH DEFLECTION OF 2 IN. DEMONSTRATION FOR WEST COAST LUMBERMEN'S ASSOCIATION, JULY 27, 1916.

President Henry Suzzallo, of the University of Washington, was to have addressed the lumbermen on "What the University Can Do for the Lumber Industry," but was unavoidably absent and his place was ably filled by Prof. Hugo Winkenwerden, of the forestry department, who told of the close co-operation between the lumbermen of Washington and the forestry department of the university.

SHINGLES MADE FIRE PROOF.

An interesting demonstration was staged for the lumbermen on the campus by the shingle branch of the association. Three small roofs had been built, one covered with shingles that had been treated with a fire retardant stain, composed of mineral salt with a silicon base; another roof was covered with dry red cedar shingles, untreated; and a third roof was covered with so-called fireproof patent roofing, the kind called for in many city ordinances.

Fires of equal size were then kindled on each roof. In one minute and ten seconds after the match had been applied the patent roofing had been burned through, setting fire to the woodwork underneath. So firecely did the flames rage on this roof that they were quenched in order to save the wooden structure beneath.

In five minutes after the fires had been kindled the unprotected shingles were burning, but they did not burn through to the roof boards beneath.

After ten minutes exposure to the flames the shingles treated with the fire retardant stain were in almost as good condition as when laid. They did not catch fire.

TIMBER TESTING.

Another important demonstration made at the college of forestry for the entertainment of the lumbermen was the testing of a timber 8 by 16 inches and 16 feet long, graded according to the proposed new density rules for Douglas fir structural timbers. Before pressure was applied slips of paper were passed to the lumbermen on which they registered their guesses as to what pressure the timber would withstand before breaking. The prize, a box of cigars, for the nearest correct guess was won by J. P. Austin, a newspaper man, whose guess was 88,000 pounds. The timber broke under a pressure of 88,200 pounds. The five lumbermen who guessed next nearest were: P. F. Knight, of the Mutual Lumber Co., who guessed 87,342 pounds; H. L. McCaughey, McCaughey Lumber Co.; E. C. Miller, Grays Harbor Shingle Co.; and St. Claire Dickinson, of Colby & Dickinson, Seattle. A similar contest on another timber which was not so strong was won by J. G. Startup, of the Fir Tree Lumber Co., and E. C. Miller was a close second. The tests were in charge of C. W. Zimmerman, of the United States Forest Service.

VISIT BIG STIMSON PLANT.

After the inspection of the college of forestry, including the wood distillation plant, the delegates motored to Ballard Station, Seattle, and inspected the plant of the Stimson Mill Co. and also the new Lake Washington canal, which has just been completed by the United States government.

THE EVENING BANQUET.

In the evening the lumbermen held a banquet at the New Washington hotel, with J. H. Bloedel as toastmaster.

President Suzzallo, of the University of Washington, was the only speaker at the banquet. Lumbermen who were expecting to hear a pedagogical expounding of scientific facts in language that would make the points vague to the average hearer and which, if understood, would prove of no practical value, were agreeably disappointed. The president pointed out how the University of Washington could be and had been of service to the lumbermen, citing as a case in point how a large order for the Russian government was saved to a Seattle firm through scientific knowledge of the quality of Douglas fir, gained in forest product laboratories such as that maintained at the University of Washington.

"You must get a thorough knowledge of the material which you are selling," said the speaker. "What it will do under certain conditions, what different grades of it can be expected to show and then, when you have your facts, organize them so that they are easy of access.

"The average man is too lazy to go far for information. He is likely to use the wood that he knows about and not take the trouble to look up the others. Liberal advertising is also an essential part of the lumber business, with the adoption of trade names that mean something and that tell the buyer instantly what he is getting."

TAKE TIME TO PLAY GOLF.

Slipping unfinished business into the discard the lumbermen Friday afternoon wound up the semi-annual meeting with a golf tournament at the Seattle Golf & Country Club. A. L. Paine, of the National Lumber & Manufacturing Co., of Hoquiam, won the silver cup offered by President Bloedel, doing the eighteen holes in 75 from a twenty-point handicap. C. E. Patten, of the Atlas Lumber Co., Seattle, with a handicap of 18 and H. P. Wyckoff, with a handicap of 27, finished with scores of 79. Preceding the tournament the delegates were guests of Mr. Bloedel at luncheon.

An open meeting of the committee to consider the revision of the grading rules was held Friday morning. Considerable discussion was heard but the final decision probably will be left to a mail vote of the entire membership of the association. It was decided by the committee, however, to eliminate the proposed No. 3 common fir dimension and to allow 15 percent of hemlock to be shipped with certain grades of fir ceiling and drop siding.

One of the interested spectators at the demonstrations held at the university was Prof. Ralph Clement Bryant, of Yale University.

BALTIMORE BUILDING CODE DELAYED.

Baltimore, Md., Aug. 1.—Unless a special session of the city council is called the new building code that has been given consideration for some time by the commission appointed for that purpose cannot be adopted until fall, as the council has adjourned for the summer.

Digitized by Google

NORTHERN HEMLOCK & HARDWOOD MEN

Regular Midsummer Meeting at Milwaukee Enlivened by Grading Discussion—Vote Favors Delayed Action on Adoption of Separate Rules—Reports Show Material Reduction in Available Stocks—Brighter Prospects for No. 3 Grades.

The midsummer meeting of the Northern Hemlock & Hardwood Manufacturers' Association was held at the Hotel Pfister, Milwaukee, Wisconsin, Friday, July 28, with half the membership represented.

President J. T. Phillips, of Green Bay, outlined matters of importance. He referred to the annual meeting of the National Hardwood Lumber Association held at Chicago June 15. He said the members of the Northern association went there with the idea that the proposed changes in the inspection rules were not what they wanted, but after conferring with other manufacturers throughout the country, they became nearly unanimous in favor of the proposed changes.

The matter had been taken up and discussed in a joint meeting of the Wisconsin and Michigan hardwood manufacturers and they had become convinced that the proposed changes were along the lines of what was needed in inspection rules. It is planned to have a joint meeting of hardwood manufacturers in Chicago the last of October, at which the subject of hardwood rules will be again considered. He stated that Secretary W. H. Weller, of the Hardwood Manufacturers' Association, had suggested to the members of his association last June the advisability of attending a conference at Chicago July 11, but there was nobody present at that conference authorized to represent the Northern Hemlock & Hardwood Manufacturers' Association.

REPORT OF BUREAU OF GRADES.

George H. Chapman, chairman of the bureau of grades, reported on the action of the committee as reflected in the Chicago convention. He stated that at the meeting of the board of directors on Thursday, the bureau of grades had been authorized to employ another inspector, and had done so in the person of Frank Staadt, that in the grading of hardwoods, the lumbermen of Wisconsin had reached a situation that is so important that they could well afford to devote all the time necessary at this meeting to a thorough discussion of the subject. As far as he was personally concerned, he said he would not spend the time to work out a new system of hardwood grading rules unless he were convinced that the members of the association were solidly behind him and also that it would be made a successful system of rules. He said that he did not know where the membership of the association would stand in such a discussion; he thought he knew where Mr. Holt would stand and also where Mr. Osborn would stand, but he did not know exactly where some of the rest of the members would be found. The proposed changes seem to make the Wisconsin lumbermen antagonistic to the wholesale element, but this was not exactly the case, for the manufacturers felt that they must do something and the situation must be well stirred up.

Mr. Chapman reviewed the history of the grading rules advocated by the Wisconsin and Northern Michigan manufacturers. The first rules formulated were all right at the time they were instituted. At that time practically all of the manufacturers sold their stocks to the jobbers, but the situation has changed wonderfully in the last fifteen years. Some minor changes have been made, but in his opinion the rules today are about the same as they had been twenty years ago, there being only a few unimportant changes.

With reference to the effort to change the rules at Chicago Mr. Chapman said: "We did not know what we wanted, and I don't know as we do yet." In his opinion what is needed is a standard grade, especially in cutting lumber in No. 1 common. The manufacturers attending that meeting did not generally know what they desired, but the wholesalers who were there did know and of course they won.

At the conference held in Chicago July 11, under the auspices of the National Lumber Manufacturers' Association, it developed that most of them preferred a middle-of-the-road policy. He believed that if Wisconsin and Michigan could get together on a set of rules governing the northern woods, and the southern manufacturers could decide on a set of rules for their woods, they might be then made a compromise on the competing woods. The step proposed is a pretty radical one, but it does not seem possible other to get what the northern manufacturers want. After it is decided what the hardwood manufacturers as a body desire to have in the way of inspection rules, they could then go to the National Lumber Manufacturers' Association, and secure its endorsement of the proposed changes. It would then be in order to go to the National Hardwood Lumber Association and present the proposed changes in the nature of an ultimatum, not asking them to adopt these rules, but stating that they had been already adopted by the hardwood lumber manufacturers of the north and south and concurred in by the National Lumber Manufacturers' Association. They would also request that the by-laws of the National Hardwood Lumber Association be so changed that the manufacturers control the grading rules committee.

Mr. Chapman admitted that the problem seemed a difficult one to solve, but he believed that if the hardwood manufacturers put their heart into the proposition, they could have a practically perfect hardwood inspection system established inside of a year. "How do you like that?"

MR. OSBORN'S RESOLUTION.

A. L. Osborn, of Oshkosh, offered the following resolution:

"Resolved, That it is the sense of this association that the writing of rules for the grading of hardwood lumber and the interpretation of same should and must be in the hands of the manufacturer of hardwood logs."

Mr. Osborn moved its adoption and it was carried unanimously.

Mr. Osborn read another resolution, which he said he intended to offer, but would defer presenting it until later.

R. B. Goodman stated that he had a resolution to offer before Mr. Osborn presented his second resolution, as he did not believe that the northern manufacturers had yet reached a point where they were justified in taking the step proposed. Mr. Goodman's resolution follows:

"Resolved, That the bureau of grades of this association be instructed to confer with the bureau of grades of the Michigan association and with representatives of the southern manufacturers of hardwoods, who met in Chicago July 11, for the purpose of preparing a complete set of grading rules on all hardwoods produced in the United States; and when they have completed these rules, that they report to this association for further action."

M. J. Quinlan suggested that before taking this step, it might be well to find out how many of the members of the association would stand by the bureau of grades.

MR. OSBORN'S AMENDMENT DEFEATED.

Mr. Osborn offered his second resolution as an amendment to the resolution proposed by Mr. Goodman, striking out all in Mr. Goodman's resolution after the word "Resolved," and continuing it as follows:

"That the bureau of grades be requested to do all possible to bring about at as early a date as possible, an organization of hardwood manufacturers throughout the United States to adopt rules for grading hardwood lumber and provide an inspection department to interpret same."

The amendment was seconded, and Mr. Osborn took the floor and in a strong speech set forth his position. He said in substance: "We are the people who own the trees. The men who do not own the trees have no interest in our welfare in any way whatsoever. The strangest thing to me is that the men who have nothing to do with the manufacturing of lumber have prepared and handed over to us rules for the inspection and grading of our product."

He said that through the commanding ability of the secretary of the National Hardwood Lumber Association, through the wonderful personality of Mr. Fish, his tact, his diplomacy and his work, [illegible] been built up the splendid organization National has today. "We have let we have let Mr. Fish and his asso- o our business. The question now want to continue to have them business, or do it ourselves. At were practically kicked out of the meeting," and in Mr. Osborn's opinion, there is no more hope of getting anything in the way of proper inspection rules out of the National association than there was of making the Lord and Master of the Universe out of his Satanic Majesty.

He did not think there was any chance for the hardwood lumber manufacturers, in that organization, as he believed that the majority of the National members would always hold the same attitude. The idea had occurred to him the preceding day that "it would be just as consistent to write the rules and then hand them over to those we consider our arch-enemies to interpret them." He thought it was necessary to have lumber inspected at the mill everywhere the same.

OPPOSITION TO THE OSBORN RESOLUTION.

C. H. Worcester, of Chicago, who is acclaimed "the peacemaker" in association controversies, stated that he rather favored the resolution proposed by Mr. Goodman. He did not believe that such action as was contemplated by Mr. Osborn's resolution was needed at this time.

George H. Chapman said that he had no particular desire to antagonize the jobbers, as, in one of his companies, he is a jobber himself. He would not like to favor a proposition that would injure the legitimate wholesaler. He knew that there were some unworthy members of the jobbing trade, people without capital or credit, but he, for one, would like to see those shysters put out of business.

R. B. Goodman said that both Mr. Osborn and himself were after the same thing, but by different methods. He thought that Mr. Fish was one of the most capable men in handling inspection matters that he had ever known. He thought that it might be the best way to go ahead and formulate the rules according to their ideas, still maintaining friendly relations with the National association, and then if they should get turned down again at the next meeting, they could within ten hours form an organization such as Mr. Osborn wants.

He called attention to the fact that there were only 31 members represented at this meeting out of 75, and that the matter ought to be submitted to a referendum.

Mr. Osborn asked Mr. Goodman to inform the members why they should turn over to a lot of wholesalers what was probably the most important part of their business.

Mr. Worcester expressed the opinion that it would not be advisable to tear down the structure that it took so long to build up. He thought it might better be repaired than torn down.

M. J. Fox, of Iron Mountain, stated that he concurred entirely with Mr. Goodman in his attitude. He said it was very easy to tear down, but very difficult to build up. He did not believe that the members wanted another hardwood inspection organization. He referred to the action taken by the Michigan association at Detroit on Wednesday. As far as he was concerned, he did not know that the northern manufacturers had much in common with the southern manufacturers of hardwoods. He did know, however, that the northern manufacturers were not getting the prices on the grades as established today.

G. C. Robson, of Merrill, said that the lumbermen of Wisconsin generally favored the position taken by Mr. Goodman.

J. J. Lingle, of Westboro, said that in his opinion if the inspection issue were put up to the National Hardwood Lumber Association again, the members would all be together.

J. C. Knox, of Cadillac, Mich., secretary of the Michigan Hardwood Manufacturers' Association, recited the action taken by his association at Detroit last Wednesday. There was a general feeling that the manufacturers should make the rules, but they did not feel like going ahead as outlined by Mr. Osborn and forming another organization. He said that there were 29 members represented out of 65 and the opinion was expressed that in view of the limited attendance, they did not want to start anything that they couldn't finish.

Mr. Osborn stated that he had never advocated anything in which he felt so great an interest, as

Digitized by Google

the subject outlined in his resolution. He said: "We've been conned and soft-soaped until we have been made to believe that 2 and 2 are 17." He again asserted that the lumbermen who favored a different inspection from that now ruling had the ability to run an inspection business and besides he felt that the association "ought to take over the business that is ours to do."

C. H. Worcester stated that the manufacturers went down to Chicago and asked the National association for something that they did not want themselves. He said that many of those big wholesalers in the National association are fine and broad-minded men, and he knew they were willing to give the manufacturers whatever they want.

M. J. Fox stated that he did not want to see anything done to injure the wholesalers and wanted to see them continue in business. He thought that one of the real problems before the members was that many of the wholesalers are going back into the woods and establishing little mills.

M. J. Quinlan, of Soperton, said that there wasn't a man in Wisconsin, who, before the meeting of the National Hardwood Lumber Association, favored the proposed new rules, nor were there any members of the Michigan association who favored it before going to Chicago. He said he did not wish to vote against Mr. Osborn's amendment, but he said he would have to do it unless Mr. Osborn withdrew the amendment. In his opinion Mr. Osborn's resolution goes too far.

Mr. Osborn insisted upon a vote on his amendment, stating that he wished to put the meeting on record. He did not wish to do anything to injure the wholesalers, who, he said, "are an absolutely necessary adjunct to the lumber business." Mr. Osborn called upon W. A. Holt, of Oconto, for an expression of his opinion.

Mr. Holt said that he was not really in favor of either of the resolutions before the meeting and didn't believe that any definite steps should be taken today. He said that over two-thirds of the National association were wholesalers, and as it requires a two-thirds vote to change the rules, there would be little hope of making such a change as is proposed. He said it was not a simple thing to start another hardwood association and he stated that it was a very serious proposition as to which horn of the dilemma the members should take. He rather favored Mr. Osborn's argument, but did not like the resolution he offered, which in his opinion went too far. However, he would like to see Wisconsin and Michigan manufacturers go ahead and formulate new rules for the inspection of northern hardwoods. He said it was a question in his mind whether the northern manufacturers should join with the southern manufacturers or not.

Upon being put to a vote, Mr. Osborn's amendment was lost by a vote of 10 to 7, which did not, however, represent a full vote, but the chair declared the motion lost, and the original resolution introduced by Mr. Goodman was carried unanimously.

On motion of George H. Chapman, the secretary was instructed to take a vote by mail on the inspection question, which should be put up to the membership in such a way that they may indicate their attitude on a change in the rules. Carried unanimously.

FINANCING THE COMMITTEE.

C. H. Worcester said that the bureau of grades would need some help in its work of formulating new rules, and made a motion that the sum of $3,000 be put at the disposal of the bureau of grades by the board of directors in order to finance the former in the preparation of the new rules.

BUREAU OF STATISTICS AND ACCOUNTS.

J. W. Kaye, chairman of the bureau of statistics and accounts, was unable to be present, but sent a brief report of activities of his committee since the annual meeting. Some necessary changes in forms proposed by the secretary have had the approval of the committee. The weekly bulletin has been changed and the members have had a chance to become accustomed to the new method of preparing the reports. If this meets with the approval of the association, the secretary should be instructed to continue as during the last quarter.

Upon the request of the bureau, Secretary Swan has had compiled tables of wages paid by the members and this information has been placed before the membership.

COMMITTEE ON TRANSPORTATION.

A. L. Osborn, chairman of the bureau of transportation and legislation, presented the report covering the past year. He stated that the traffic manager and secretary had rendered efficient aid to his committee and the work had developed rapidly. Mr. Osborn could not conceive what would have been done during the past year if the association had not had a traffic manager, as many perplexing problems have been handled so much more efficiently and easily than they could have been under the old way, and the wisdom of those who framed the new constitution and by-laws is very apparent.

The eastern rate book has been rechecked during the year at a cost of $305, and 198 copies have been sold for $219.60, leaving a small deficit, but it is hoped to sell enough more books to make good the account.

He referred to I. & S. docket, I. C. C. 694, wherein the Chicago & Northwestern and the Chicago, Milwaukee & St. Paul roads had sought to cancel joint rates on their lines to points southwest. The advances were to be effective August 15, 1915, but the committee protested and the commission suspended the tariffs. A hearing was held at Oshkosh October 20, and the commission decided favorably to the association and directed that present rates be maintained. The decision gives a much wider market to all mills having but one of the trunk line carriers at their plant.

He also referred to I. & S. docket 675, involving a proposed advance by carriers in lumber rates from northern lake ports to Chicago and Chicago lake points. The advance was suspended and the case came up for hearing at Minneapolis November 10. The commission sustained the carriers in this instance.

Another case referred to was brought by various mercantile and manufacturers' associations before the Wisconsin railroad commission and J. N. Tittemore was employed to present the case on the part of the complainant. This decision has not yet been rendered.

He also referred to the attempt made to advance rates on box lumber into Wausau, which involved a cancellation of rates on lumber for manufacture and reshipment from points in Wisconsin published by the Chicago, Milwaukee & St. Paul road, the same having the approval of the commission. The Wisconsin railroad commission ordered the withdrawal of the advance and this proposed change now stands in the same position as the balance of the forest products tariffs in Wisconsin.

He also referred to the Cadillac case, which involved the question of the discrimination and reasonableness of rates from Cadillac and Jennings, Michigan, as compared with bay shore and other Wisconsin points and points in the upper peninsula of Michigan. The Wisconsin association appeared as interveners for the purpose of justifying present rates obtaining from this territory. Two hearings were held, one March 17 and one July 18 at Grand Rapids, Mich. The committee feels that present rates from this territory are justified and that the decision will not make any material change from present conditions.

Chairman Osborn said that there was some chance of getting the product of the Wisconsin association mills into northwestern Iowa as against southern woods, which would involve a reduction of from 2 cents to 4 cents a hundred pounds. However, he was not sanguine about accomplishing this.

The committee has recently had notice of a possible advance between Ashland and Superior and lower Lake Michigan ports. Application has been made to increase the tariff from 11 cents to 12 cents a hundred pounds to Manitowoc and Milwaukee. This comes about, he said, by reason of the present rate permitting the shipment of lumber to Central Freight Association territory that originates on the coast, through Superior and Ashland, via Manitowoc, cheaper than same can move via Chicago.

Adjournment for luncheon.

FRIDAY AFTERNOON SESSION.

At the opening of the afternoon session, M. J. Quinlan, chairman of the special committee known as the sales managers' committee, recited some duplication of work on the part of his committee and that of the committee of which Mr. Robson is chairman. Mr. Quinlan's committee made the following recommendations:

1—That the sales managers' committee continue its monthly meetings and assemble all statistical and other facts, which in its judgment have a bearing on the market for hemlock and hardwoods; that they put these facts in as concise form as possible and prepare a report on hemlock and hardwoods which, in their judgment, gives a clear picture of the market.

2—That the chairman of the several sub-committees of the bureau of grades meet with the sales managers' committee and participate in its deliberations.

3—In view of our constitutional organization, charging the bureau of grades with the responsibility for the market reports, it is recommended that all reports relating to market conditions be approved by the chairman of the bureau of grades before publication or distribution to our members.

4—That these co-operative reports shall be issued at least once a month.

On motion of Mr. Osborn the recommendations above submitted were adopted and ordered carried into effect. There was considerable discussion, however, regarding the sales managers' report, which was participated in by W. J. Kessler, W. B. Clubine, C. H. Worcester, A. L. Osborn, M. J. Quinlan, George H. Chapman and Robert B. Goodman.

Mr. Robson suggested that the name of the sales managers' committee was hardly appropriate and suggested that some other name be found for it.

WORK OR THE SALES MANAGERS' COMMITTEE.

G. C. Robson, chairman of the sales managers' committee, read the following report:

"The sales managers' committee appointed at the special meeting in December, has held seven formal meetings, either at Milwaukee or Oshkosh.

"The members of this committee have been more than faithful in attendance and the interest in this work has increased at each meeting.

"The first undertaking of this committee was to undertake the accumulation of figures of the amount of stock on hand at intervals of every thirty or sixty days and the committee believes the reports they have issued have been valuable and desires to thank the members of the association for their promptness and thoroughness in giving us these figures.

"The accumulation of these figures has undoubtedly been one of the features that has helped to hold the market conditions of hemlock at a fairly even basis so far this year, for they have shown the amount of stock on hand, both green and dry, the items that were long and short and comparisons that have been very valuable to the manufacturers and their sales managers. Your committee has attempted monthly to get together the broadest range of figures on market conditions on hemlock that could be obtained and has carefully considered the same and has given out statements to you of the market conditions at the time of each meeting as found by comparison of a large number of actual sales. We have also constantly given consideration to the conditions of competitive woods; and while the weakness in the market condition in some of these woods has had some slight effect on the market condition in hemlock, the broken condition of the dry hemlock stock has been in such shape that it has not affected 'Old Faithful' to any extent.

"The members of this committee represent a very large volume of the hemlock produced among the association membership, and will run up well towards the 50 percent mark in this regard.

"At one of our meetings, held at Secretary Swan's office at Oshkosh, a portion of one day was devoted to a talk by Mr. Swan and Mr. Simmons on the technical points of wood, not only of our manufacture, but that of competitive woods and they gave us outlines of the strength, tests and other features along these lines and this was more than instructive to the members of this committee and as a result of this work, Chairman Halpin and Mr. Swan are now working out plans for a two or three days' meeting to be held in the near future, which all sales managers and salesmen will be invited to attend and if possible, this will probably be held at one of the mill points in order to allow Mr. Swan and Mr. Simmons to demonstrate more fully the points that they will bring out. The members of the sales managers' committee believe that much good can be accomplished by familiarizing the sales departments with this feature of the product they sell and the committee desires to ask your hearty co-operation in working out the plans for this meeting.

"That the sales managers are taking a decided interest in the work of this committee and are giving a great deal of consideration to their reports, is indicated by the fact that at the last meeting several sales managers, not members of the committee, asked to be allowed to attend and

Digitized by Google

for this reason it was decided to invite all sales managers to attend the sales managers' meetings in the future.

"Chairman Halpin has several ideas that he is working out concerning the future work of the committee in order to make its work broader and more valuable to the sales managers at large. The sales managers' committee believes the work it has done has been very valuable during the past few months and as our work goes on, we hope, by having the attendance of many other sales managers, to increase the usefulness and become more valuable to you through the work that we will be able to accomplish.

"We particularly ask that you allow your sales managers to attend these meetings and whenever possible will be very glad to have the manufacturers themselves attend. To indicate to you the interest shown by the members of this committee, I might say at every meeting that has been held we have started early in the forenoon and our work has extended late into the afternoon and frequently into evening sessions.

"We hope our work will merit the continued co-operation of the officers and members of the association and particularly urge that when we ask for statistics for stock on hand or other information, that you give it to us promptly and as thoroughly as possible, as this lightens our work considerably and enables us to give you much more detailed information."

L. L. Barth, vice-president of the Edward Hines Lumber Co., Chicago, addressed the convention briefly regarding matters connected with the retail trade in Chicago and elsewhere. He stated that yellow pine was selling in Chicago at from 50 cents to $1 higher than a week previous. He knew of a large manufacturer of yellow pine who had offered his company a block of 6-inch No. 2, and on the next day had raised his price $1.

THE BIRCH PROMOTION CAMPAIGN.

C. H. Worcester, chairman of the special committee on birch promotion, discussed a proposition for the members to pay 25 cents a thousand feet on all the birch manufactured and shipped for five years. He spoke of the necessity of creating a better market for No. 1 and No. 2 birch and said that the spread between firsts and seconds and No. 1 common, which is now $20, is too large. Mr. Worcester read some very interesting extracts from a typewritten book on birch prepared by Secretary Swan's office. He said that an assessment of 25 cents a thousand on the 100,000,000 feet of birch production would yield a fund of $25,000. However, he did not believe it safe to figure on more than 70,000,000 feet being subject to the assessment, which would yield $17,500. He believed that it would be good policy to employ a thoroughly well posted and intelligent man, who would give his entire thought and time to birch promotion. The moneys derived from this assessment would all be spent through the association office at Oshkosh.

He said that red gum was the particular competitor of birch, and more so than any other wood he knew of. The manufacturers of gum are doing very effective work. They receive a report of every building to be erected in the United States and the secretary at once sends to the prospective builder and the architect a book telling all about gum. He did not know what the birch people would do in this direction, but he said it was intended to extend the use of birch to every part of the United States.

In conclusion, Mr. Worcester presented a paper which he had prepared for the subscriptions of the members and before the meeting had adjourned a number of them had appended their signatures.

PREVIOUS ACTIVITIES IN BIRCH PROMOTION.

Secretary Swan was requested by Mr. Worcester to explain what had already been done in the way of birch promotion. The secretary stated that the work began two or three years ago in the way of general advertising, and this advertising now brought about 400 inquiries a month, running at times up to 600 or 700 inquiries a month. had been developed through these inquiries that in using birch nearly all the architects had specified mahogany stain, and it has been the endeavor of the bureau to get them to use some of the other stains. The bureau had co-operated heartily with the stain manufacturers in the way of geting up exhibits and had also co-operated with the veneer manufacturers. A slogan had been adopted "Beautiful Birch" and this will henceforth be printed upon every advertisement or piece of literature sent out. Mr. Swan was pleased to state that the replies to the advertising had been coming in from every part of the United States and many came from abroad.

Some Excerpts From the Statements of Various Prominent Manufacturers at the Midsummer Meeting, "Northern Hemlock and Hardwood Manufacturers' Association"

President J. T. Phillips in his opening address said:—"The members of our association went to the National association meeting in Chicago with the idea that the proposed changes in the inspection rules were not what they wanted, but after conferring with other manufacturers throughout the country, they became nearly unanimous in favor of the proposed changes. The matter had been taken up and discussed at a joint meeting with the Michigan hardwood manufacturers and they became convinced that the proposed changes were along the lines needed in inspection rules. It is planned to have a joint meeting of hardwood manufacturers in Chicago the last of October to consider hardwood rules." Continuing Mr. Phillips said there had been no member of his association present at a conference in Chicago, July 11.

George H. Chapman of the Northwestern Lumber Co., Stanley, Wis., chairman of the bureau of grades of the association, said:—"I will not spend the time to work out a new system of hardwood grading rules unless convinced that the members of the association are following behind me and that it will be made a successful system of rules. I do not know where the membership of the association would stand in such a discussion."

Continuing, Mr. Chapman said in regard to the Chicago meeting:—"We did not know what we wanted and I do not know that we do yet. At the conference in Chicago on July 11 most of those present preferred a middle-of-the-road policy. If Wisconsin and Michigan would get together concerning northern woods and southern manufacturers decide on southern woods a compromise could be arranged and then we could go to the National Lumber Manufacturers' Association and secure its endorsement of the proposed changes. It would then be in order to go to the National Hardwood Lumber Association and present those changes in the nature of an ultimatum, not asking them to adopt the rules, but stating that they had already been adopted and concurred in by the National Lumber Manufacturers' Association. We could then request that the by-laws of the National Lumber Manufacturers' Association be so changed that the manufacturers could control the grading rules committee."

A. L. Osborn offered the following resolution:—"Resolved that it is the sense of this association that the writing of rules for the grading of hardwood lumber and the interpretation of the same should and must be in the hands of the manufacturers of hardwood logs."—which was carried unanimously.

R. B. Goodman, continuing in the same line as Mr. Osborn, reported the following resolution:—"Resolved that the bureau of grades of this association be instructed to confer with the bureau of grades of the Michigan association and with representatives of the southern manufacturers of hardwoods who met in Chicago, July 11, for the purpose of preparing a complete set of grading rules on all hardwoods produced in the United States; and when they have completed these rules, that they report to this association for further action."

Mr. Osborn offered as a motion of substitution to Mr. Goodman's resolution the following:—"That the bureau of grades be requested to do all possible to bring about, at as early a date as possible, an organization of hardwood manufacturers throughout the United States, to adopt rules for grading hardwood lumber and provide an inspection department to interpret same."

Then came the finest debate that has ever occurred in Wisconsin when lumbermen got together, which is all covered in our very full account of the meeting on other pages.

After full discussion Mr. Osborn's amendment was lost by a vote of 10 to 7 and Mr. Goodman's original motion was carried unanimously.

A fund of $3,000 was put at the disposal of the bureau of grades by the board of directors in order to finance the preparation of the new rules.

In discussing the question of what the manufacturers ought to do concerning hardwood inspection, Mr. Osborn said:—"Through the commanding ability of the secretary of the National Hardwood Lumber Association, through the wonderful personality of Mr. Fish, his tact, his diplomacy and his work, there has been built up the splendid organization which the National has today—'we have let George do it'—we have let Mr. Fish and his associates attend to our business; do we want to continue to let them transact our business or do it ourselves? At Chicago we were practically kicked out of the meeting and there is no more hope of getting anything in the way of proper inspection rules out of the National association than there is of making the Lord and Master of the universe out of his Satanic Majesty."

MR. STERLING ON TRADE EXTENSION.

E. A. Sterling, manager of the trade extension department of the National Lumber Manufacturers' Association, delivered a very interesting discourse on the work of his department. He distributed a number of the new publications issued by the trade extension department and told of some of the things that had been done in the promotion of lumber. For instance, the department had switched a proposed concrete building to mill construction. He spoke particularly of the farm literature that had been prepared and the articles written, which had been given space in many of the papers throughout the country. He told about the work done in preparing exhibits in various cities, in preventing city authorities from discriminating against the use of lumber and shingles in their building codes; of the moving picture shows and many other things that are being done on behalf of lumber.

R. B. Goodman said that he would recommend that the appropriation for the trade extension department of the National Lumber Manufacturers' Association be made $4,000 the coming year instead of $2,000, as at present.

MR. HOLT ON INTER-INSURANCE.

W. A. Holt, of Oconto, said that a large amount of business transacted by the various inter-insurance organizations had resulted in a great deal of competition for business on the part of the various attorneys. He said that some of the methods pursued were quite reprehensible and would be liable to endanger the standing of some of these companies if continued. He said that the rate charged for this insurance cuts no particular figure if everybody is charged the same rate. He favored a consolidation of all of these exchanges into one central bureau, but of course the attorneys for these exchanges would object to that. He suggested that the subscribers to these inter-insurance organizations should get together and look into the manner in which they are conducted. The organizations belong to the lumbermen and the latter should not permit them to be mismanaged.

MARKET CONDITIONS.

George H. Chapman, chairman of the bureau of grades, said that he had no committee report to offer, but would give his own ideas regarding the market. He believed that the No. 2 and 3 grades of hardwoods would show improvement during the balance of this year. He deplored the fact that the manufacturers did not have nerve enough to hang on to their No. 3 birch, the market for which now is about $2 below what it should be. He believed there was a good foundation for the expectation that business in northern hardwoods would improve this year and next year.

The box makers are using lots of low grade lumber and are now running about thirty days behind on their orders. Some of them are stopping the receiving of their lumber, because they haven't the men to unload the cars. The situation in hardwoods generally, Mr. Chapman said, was very satisfactory. In his opinion firsts and seconds birch has not yet reached a good price. (Mr. Worcester interrupted to say that he had not intended to convey the thought that birch had reached anything like a high price, and he believed that it would go still higher, probably to $50). Mr. Chapman stated that the farmers would soon be through with their work in the fields and the crops were so good that they would probably desire to build something. The hemlock situation, he thought, is very fair and at the present time there is considerable hemlock being shipped green from the saw.

Mr. Chapman read a letter from Charles A. Goodman, of Marinette, chairman of the birch, basswood and elm sub-committee, who stated that he had heard from his fellow members of the sub-committee and he felt like suggesting as values on birch, the prices of $42, $22, $14 and $11 for various grades F. O. B. mill. One of his fellow members of the committee said that it was a shame, in his opinion, for manufacturers to take less than $25 for 4-4 No. 1 common birch. One of the members of the committee had suggested $43, $24, $15 and $12 on various grades.

As for basswood the prices going were believed to be about $37, $27, $18 and $14.50.

On soft elm, the figures generally quoted are $36, $26, $17 and $14. One member referred to a sale of 4-4 No. 1 common red birch at $28 delivered in Ohio, which would be only $20 at the mill. This was regarded as an unnecessarily low price. In Mr. Goodman's opinion it would be advisable to hold stock rather than sell it at the going prices.

M. J. Fox, chairman of the committee on maple, oak and ash, stated that he had written his associates on the sub-committee, Messrs. McLurg and Thompson, but they had nothing in particular to offer in the way of information. He said that the general opinion seemed to be that log run maple on a Wausau basis or F. O. B. mill was worth about $35, $23 and $15. Mr. Fox stated that he greatly regretted to see the low prices which some of the members are taking for their No. 3 hardwoods. This stock cost the manufacturers $13 a thousand to produce and some of them are taking as low as $6 to $8, although his concern had not sold any below $9.50. Brown ash, Mr. Fox said, is pretty well sold up.

Regarding labor conditions, Mr. Fox said that they were very hard at this time, men being scarce and many of the mills being greatly hampered. He estimated the production of lumber to be about 65 percent of normal, with the consumption not quite normal. He thought that the members ought to be allowed to do something in the way of restricting production, although possibly this would land them in jail.

HEMLOCK CONDITIONS.

George C. Robson, of Merrill, reported on behalf of hemlock conditions. He showed the yellow pine barometer for several weeks past and the way in which the conditions governing that market are accurately reflected. With reference to the barometer last issued, he said it was no wonder that there should be an advance in prices in yellow pine. From the best information hemlock is selling generally at $2 off the list, there being very few who quote any higher discounts.

Regarding the prospects for fall trade, Mr. Robson pronounced them excellent. Reports received from the retail trade were very favorable. In his opinion yellow pine would shortly score another dollar advance and would very likely be on a $6.50 basis by September 1. Mr. Robson referred to the general scarcity of labor. He spoke of the several mills in the Wisconsin valley that were running on reduced time or not at all. In his opinion not over two-thirds of the mills are running what they would like to run. He did not believe that enough hemlock could be produced between now and November 1 to take care of the regular trade. As far as his company is concerned, he could get all the orders he wanted at $2 off the list.

W. B. Clubine, of Park Falls, stated that he had just received word from Virginia, Minn., that the Virginia & Rainy Lake Co. is shy 150 men in the woods and 100 at the mill plant, and it shipping in greatly reduced volume in consequence.

He had recently also received word of a sale by his company of birch in considerable quantity. The grade was firsts and seconds and sold F. O. B. mill at the following prices: Six-quarter, $46; 5/4, $45; 8/4, $47; 4/4, $42; and No. 1 common 6/4 at $28. These were considered very favorable quotations.

HEMLOCK PROMOTION CAMPAIGN.

R. B. Goodman reported on behalf of the hemlock promotion campaign as chairman of the executive committee. He said that the committee had at its disposal for the year funds to the amount of $30,000. It is advertising in 170 local newspapers for the benefit of the retail dealers in 170 towns, and the retailers are showing their interest by contributing about $1,000 to this sort of advertising. R. E. Simmons, the new publicity manager, had lately been visiting architects and large consumers with the object of getting them to use hemlock instead of other wood. There is also considerable scientific work being done on behalf of hemlock at the Forest Products Laboratory at Madison, in the way of getting stresses and other important facts about strength and adaptation of this wood. They are also getting up blue prints giving details of farm outbuildings. The retailers throughout the northern territory are appreciating this work and have appointed an advisory committee to assist the hemlock men in their campaign. In Mr. Goodman's opinion the lumbermen are getting $2 a thousand more than they would otherwise get for hemlock and at an expense of 7½ cents per thousand feet. The committee knows that it is getting results.

Percy Hawkins, of the Crosby-Chicago Advertising Agency, spoke of the work that is being done in the way of advertising by his agency. He said that the campaign is still young. It will be found, as time goes on, and hemlock begins to stand more and more on its own legs, the fluctuations of the market will be less and less. He referred to a recent report in the LUMBER WORLD REVIEW from a cypress sawmill man, who, when asked about curtailment said: "We are properly advertised; don't have to curtail." Mr. Hawkins exhibited plans which he said his agency was getting out for the use of retailers on 27 different buildings, with specifications for each. The bills for the material for these buildings, will will be put in the hands only of the local retailer. Adjourned.

MICHIGAN MANUFACTURERS AT DETROIT

Tenth Annual Session Proves Decidedly Interesting—No Immediate Action on Grading Rules—Will Take Referendum on Question—W. Carey Hull, of Traverse City, Elected President.

At the Hotel Statler, Detroit, on Wednesday, July 26, the members of the Michigan Hardwood Manufacturers' Association gathered to celebrate the tenth anniversary of their organization. It was one of the hottest days of a hot week and there was little ambition shown to transact any important business outside of the regular routine One of the most important features of the meeting was the discussion with regard to changes in the grading rules. Chairman William L. Saunders of the grading rules committee, had been unexpectedly summoned to the Pacific coast and could not attend, but his ideas were expressed by his associates, Henry Ballou and Charles R. Abbott, and were concretely displayed by a series of resolutions and motions by which the grading rules committee were made acquainted with the wishes of those members of the association who were present.

The election of officers resulted in the promotion to the presidency of W. C. Hull, of Traverse City, Mich., an old member of the association actively interested in the work during the entire existence of the organization, for several years chairman of the market conditions committee and an altogether worthy successor to Charles T. Mitchell, of Cadillac, and the others who had discharged always with credit the important responsibilities of this office.

The tenth annual session was called to order by President Mitchell shortly after 10 o'clock A. M. Secretary Knox read the minutes of the last meeting held at Detroit April 21.

THE SECRETARY'S REPORT.

Secretary J. C. Knox, of Cadillac, read the annual report in which he reviewed the history of the association and embodied much interesting information for his membership.

He stated that the association was organized at Ottawa Beach, Mich., July 13, 1906, and of the charter membership only twenty-five remained, some of whom were taken away by death, naming among them H. A. Batchelor, Fred A. Diggins, William W. Mitchell, Edward Fitzgerald, D. M. Kneeland, J. E. Defebaugh and H. H. Gibson.

Secretary Knox reviewed the production of the various woods indigenous to Michigan from its white pine days to the present, stating that it still leads all states in the production of maple and beech. The stock report shows a much better condition than in July last year, although the report this year is short three members.

New members received during the year were the Hunter & Love Lumber Co., of Newberry; the South Shore Cedar Co., of Dollarville; Brewster Loud of Bay City and AuSable, and W. H. Murner, of Raber. Those members who have cut out during the year are the Cartier-Holland Lumber Co., the Dennis Salt & Lumber Co., the Peninsula Bark & Lumber Co., the Smith & Hull Co., and the Arcadia Lumber Co.

Regarding the financial condition of the association, the secretary stated that the special assessment on hemlock in 1915 netted the association $1,576.85. The assessment on hardwoods for the year ended October 1, 1915, netted $5,475.88. The forest fire assessment of 3½ cents an acre netted $5,252.74. It was found necessary last year to make a special assessment on hemlock in order

Digitized by Google

to raise the necessary funds for the added expenditures, mostly due to special work carried on through the National Lumber Manufacturers' Association. He called the attention of the members to the fact that the regular assessment on hardwoods shipped, of 2 cents a thousand feet, will not care for the expense of the association this year, based on last year's expenditure.

Secretary Knox referred to the grading rules situation, stating that the time seemed opportune for united action on the part of the manufacturers of hardwood lumber.

Relative to the recent hearing of the Interstate Commerce Commission regarding reclassification of lumber product, Secretary Knox stated that the Michigan association was represented at the hearing by Judge W. A. Wimbish, of Atlanta, Ga., and that Charles R. Abbott, of the Cummer-Diggins Co., Cadillac, and the secretary were the witnesses appearing before the commission on behalf of the Michigan manufacturers. He stated that it was the general impression among railroad representatives and shippers that no radical changes from the present classification of lumber and other forest products would be made, but that it seems likely that the classification would be made more uniform throughout the country.

TREASURER'S ANNUAL REPORT.

Henry Ballou, of Cadillac, treasurer of the association, submitted his annual report. It showed receipts during the year of $4,543.03 and disbursements of $2,288.60, leaving a cash balance on hand July 12 of $2,254.43.

In the forest fire protective fund there were receipts of $3,602.36 and this, including a balance on hand last year, made the total to account for $6,385.11. The expenses during the year were $2,983.16, leaving a balance on hand July 12 of $3,401.95.

FIRE WARDEN'S REPORT.

The report of Chief Fire Warden J. B. Morford was read by the secretary. He stated that the association had been fortunate thus far this year in having suffered from but few fires, the total of record being but fifty-two. Of these twenty-three were caused by locomotive sparks and the others from a dozen different causes. Through the watchfulness of the fire wardens, no serious damage had resulted from any of these fires. Mr. Morford, however, exhorted the members to exercise great care during the dangerous season now approaching. Many fires were reported as burning, but none of serious menace.

REPORT OF MARKET CONDITIONS COMMITTEE.

W. C. Hull, chairman of the market conditions committee, submitted the following report:

"July and August have always recorded a slight lull in lumber sales. So far as can be ascertained, all the hardwood lumber using industries are active and enjoying a prosperous business, but are mostly consuming stocks purchased late in 1915 or early in 1916 and will no doubt find it necessary to replenish within the next sixty days. We should not expect right at this time to be doing the rushing business we were doing the past three months.

"A careful study of the secretary's stock reports will show you there is no cause whatever for alarm. Stocks are below normal and on account of the scarcity of labor, particularly in the woods and also at the mills, overproduction is impossible.

"We desire to trespass this time with only a few figures as follows:

"Hardwoods: Estimated production for 1915, 360,000,000 feet; actual production for 1915, 354,000,000 feet; estimated production for 1916 (made Jan. 1, 1916), 440,000,000 feet; revised estimated production for 1916 (made April 1, 1916), 421,000,000 feet.

"No doubt the actual production for 1916 will fall below this latter estimate, for many manufacturers report a decrease in production on account of labor as high as 25 percent during April, May and June, and as high as 50 percent at the present time.

"Despite this increase in production over last year, we have on hand unsold only 109,000,000 feet, as against 172,000,000 feet a year ago, which is ample evidence, if it is thought any is needed, to convince anyone that we have been enjoying an unusually prosperous condition. Of this 109,000,000 feet, 50,000,000 feet are No. 2 common and better and 59,000,000 feet No. 3 common.

"The stock list shows all high grade hardwoods well sold up and many items oversold. Grades used for flooring are also pretty well exhausted on both rail and water.

"An inspection of reports of actual sales show they follow prices recommended at our last meeting very closely.

"A slight weakness is shown in prices of No. 3 common, particularly on water shipments, and your committee has searched for the cause and have been obliged to attribute it to weak spines on the part of the manufacturers. Fifty-nine million feet on hand unsold at this time of the year is not too much.

"Railroads are particularly active in placing long time contracts for ties in all sections of the country and for all the different varieties of wood. Box factories have been using more of it than usual and there is no indication that No. 3 common will be in over-supply at the close of navigation. The Chicago market, in particular, has held off long enough to secure some concessions on No. 3 common to which they were not entitled, based on the laws of supply and demand, and the same firmness on our part would have caused all these culls to have moved at prices last recommended. So "our hats off to them," but let us see to it another year that they do the "lid-lifting" in order that they may have a more proper and abiding respect for us.

"We are pleased to note that nothing has been put over on the rail shippers on this highly necessary item of No. 3 common but that prices have been ruling firm.

"Hemlock:—We have only 71,000,000 feet of hemlock unsold as against 133,000,000 feet a year ago, but the market condition of this item cannot be considered as entirely satisfactory. Some four weeks ago an overproduction appeared in yellow pine and there was a break in the price of yellow pine piece stuff which naturally reacted against our hemlock in certain markets. This matter of yellow pine overproduction was speedily corrected, however, and prices have regained almost all they had lost. Nevertheless, we are feeling it on the hemlock and it is a question if we have not been paying too much attention to the fact that our hemlock stocks are light and not enough to the inroads yellow pine is making in our trade. In other words, are we not holding our hemlock prices a trifle too high in certain markets. Your committee has never indicated any prices on hemlock except for water shipment and in April recommended $13 for cull and $17 for merchantable 10 to 16 foot lengths over rail or vessel when sold to wholesalers and correspondingly higher prices when sold by rail to retailers. Developments since April indicate that this price was too high and our recommendation at this meeting is $1 per thousand feet less. Only a few sales were made at this top price and this revised price more nearly represents the true market condition of this wood at the present time.

"To sum up, we think all signs indicate that market conditions have been highly satisfactory since our last meeting, are at the present time, and we can see no prospects ahead why they should not continue."

PRESIDENT W. CAREY HULL, OF TRAVERSE CITY, MICH.

REPORT OF GRADING RULES COMMITTEE.

In the absence of Chairman W. L. Saunders, the report of the grading rules committee was submitted by Henry Ballou, of Cadillac. In this report the committee recited the conference at Chicago held July 11, at which were present, at the invitation of R. H. Downman, president of the National Lumber Manufacturers' Association, the following lumbermen: J. T. Phillips, Green Bay, Wis.; W. L. Saunders, Cadillac, Mich.; George H. Chapman, Stanley, Wis.; Henry Ballou, Cadillac, Mich.; Edward Hines, Chicago; B. B. Burns, Charleston, W. Va.; W. E. DeLaney, Lexington, Ky.; Charles L. Harrison, Cape Girardeau, Mo.; Charles A. Bigelow, Bay City, Mich.; C. H. Worcester, Chicago; R. M. Carrier, Sardis, Miss.; F. R. Gadd, Chicago; J. W. McClure, Memphis, Tenn.; J. M. Pritchard, Memphis, Tenn.; W. H. Weller, Cincinnati, Ohio; R. B. Goodman, Goodman, Wis.

There were also present other prominent lumbermen.

This conference was productive of a resolution passed on motion of Edward Hines, which was to the effect that northern and southern hardwood manufacturers should endeavor to unite in the movement for uniformity in grading rules. Since that time Mr. Saunders had been endeavoring to secure opinions from the members of the Michigan association as to the steps that ought to be taken by this association. All of those who attended the conference, said Mr. Ballou, seemed to think that the time had arrived when manufacturers should make their own grading rules. Mr. Ballou further said that the grading rules committee had no recommendation to make on this subject.

Mr. Von Platen expressed the opinion that the Michigan association should continue its affiliation with the National Hardwood Lumber Association long enough to give them another chance to make the necessary changes in the rules. If a referendum vote were taken of the Michigan association it would require a two-thirds majority to change the rules and the by-laws should be changed so that it would require a majority vote of those attending the meeting. Mr. Von Platen stated that in his opinion the wholesalers of lumber are disposed to look at this inspection rules matter in a fair and unbiased manner. He stated that he thought that if the wholesaler did not approve of the changes in the rules proposed by the manufacturers then there must be something radically wrong with those rules.

D. H. Day said that in his opinion the matter of taking any action at this meeting should be weighed very carefully. He said that the attendance at this meeting was not large for various reasons and he would suggest that the matter be deferred to the fall meeting when there will be a larger attendance. Otherwise some action might be taken that the majority of the Michigan manufacturers might not favor. Mr. Day said that he had been a member of the National Hardwood Lumber Association for many years and he honestly believed that the manufacturers could get more favorable legislation by working in harmony with the National than otherwise. Relative to the last meeting of the National, Mr. Day said that if the association ever expected to accomplish anything in changing the rules the members could not expect to do it with only ten or fifteen members present at the annual meeting. He urged the members to work more harmoniously and present a more solid front, as otherwise they could not get what they might want.

President Mitchell stated that he "didn't think we should cuss the National association for not doing something that we were unable to attend to ourselves." He said at the conferences held between the Wisconsin and Michigan manufacturers there were not over twenty of both associations present. He thought it would be a mistake to endeavor to have two associations and a big expense to hardwood manufacturers to maintain them. He thought it might be several years before the legislation desired could be accomplished.

Charles R. Abbott, of Cadillac, stated that he felt that what Mr. Saunders desired chiefly would be an expression of an opinion of the members. He suggested that the secretary be instructed to communicate with all the members outlining the situation regarding grading rules and asking them what they would advise the grading rules committee to do in the matter. This suggestion was put in form of a motion and the secretary was so instructed.

Mr. Von Platen asked for an informal expression of the members as to whether or not they would be in favor of the adoption of a select rule, the board having a first and second face on one side and No. 1 common on the other, the width to be left to the committee. After some discussion a rising vote was taken and the members expressed themselves as being in favor of such a rule unanimously.

Mr. Von Platen then asked an expression from the members as to a new grade of board having a No. 1 or No. 2 common face, the other face showing a high grade No. 3. This board, Mr. Von Platen said, was a flooring grade and was quite generally used and he would like to have it made a regular

Digitized by Google

grade. There was considerable discussion on this proposition participated in by Z. H. Nelson, D. H. Day, Lloyd McGregor, W. C. Hull, J. E. Orr, N. M. Langdon and Mr. Von Platen.

Mr. Langdon seemed to voice the sentiment of the members when he said that if the association go before the National association asking for a change in the grading rules it should go in a solid body. He believed in leaving these matters to the judgment of the grading rules committee. Mr. Langdon embodied his ideas in a motion "that it is the sense of this meeting that we divide the grades in hardwood lumber more than they are at present and so recommend to the grading rules committee."

This motion was carried unanimously.

W. E. Brownlee offered another suggestion for the grading rules committee as follows: "Resolved, That it is the sense of this meeting that the present grade of No. 2 common in maple, basswood and elm be changed." This resolution was also unanimously adopted.

Mr. Day suggested that in view of the work before the grading rules committee he thought that it should hold a meeting prior to the next regular meeting.

ELECTION OF OFFICERS.

Prior to the selection of the committee on nominations, President Mitchell took occasion to thank all of the members for their hearty support during the last two years. He said it would be in order to nominate two additional directors to fill the place of the late W. W. Mitchell, his father, and R. J. Clark of Sault Ste. Marie, who had resigned. Also he had received a letter from F. L. Michelson, second vice-president stating that he would be unable to accept any office the coming year.

The committee appointed on nominations was as follows: G. Von Platen, Grand Rapids; John C. Ross, Bay City; D. H. Day, Glen Haven, Bruce Green, Cadillac; Z. H. Nelson, Grand Rapids.

When the committee had retired W. E. Brownlee, of Detroit, invited the members of the association to visit the rooms of the lumber board of trade in the Penobscot building, with the hope of the Detroit lumbermen to install a complete exhibit of Michigan woods and their products.

The election resulted as follows:

President, W. C. Hull, Traverse City, Mich.

Vice-president, T. W. Hanson, Grayling, Mich.

Second vice-president, Oscar L. Larson, Manistee.

Treasurer, Henry Ballou, Cadillac.

Directors, E. G. Carey, Harbor Springs, L. M. Richardson, Raco.

The other directors were re-elected.

President Hull was conducted to the chair and thanked the members very cordially for their expression of confidence in electing him as president. He stated that the Michigan association had been wonderfully successful and that its success was due in large measure to the feeling of confidence shown by the members in one another. He pledged his best efforts in continuing the good work.

The executive committee appointed was as follows: W. L. Saunders, Cadillac; J. C. Ross, Bay City; G. Von Platen, Grand Rapids.

On motion of D. H. Day, who always hands out the goods at the right time, a rising vote of thanks was tendered to Retiring President Charles T. Mitchell, for his splendid devotion to the association during the last two years. This was greeted with applause and the meeting adjourned.

NORTHERN PINE MANUFACTURERS MEET

Increased Production and Heavily Increased Shipments—Will Have Pine Exhibits at State Fairs—Proposed Investigation of Terms of Sale—Vote to Join World's Salesmanship Congress.

Minneapolis, Minn., August 8—The Northern Pine Manufacturers' Association held its eleventh semi-annual meeting here today. Sessions were held at the Hotel Radisson and were well attended.

President T. S. Whitten called the meeting to order in the Empire room of the hotel.

Treasurer R. W. Wetmore was out of the city, but the financial standing was stated by F. W. Gratz, the auditor, to show a balance of $5,654.20 on January 25th, and augmented by receipts of $9,488.89, with disbursements of $11,599.77, left a present balance of $3,543.32.

SECRETARY CHILDS SEMI-ANNUAL REPORT.

Secretary H. S. Childs read his report, which in part, follows:

"From the monthly reports of production and shipments submitted by our members for the months of January to June, 1916, both inclusive, there has been an increase in production of 54,402,447 feet, or 23.9 percent, over the corresponding period of 1915, and an increase in shipments of 121,458,026 feet, or 49.1 percent, for the same period of time.

"Owing to the decrease in membership fewer inspections are needed and our inspection force had been reduced to two inspectors.

"Market conditions have improved considerably since a year ago, although prices have not advanced in proportion to the increase of the volume of business.

"At the request of the trade extension department of the National association, this association, under direction of the bureau of grades, furnished the trade extension department with a small stock of lumber to place on exhibition at the Insurance Exchange, to be shown as the Northern Pine Manufacturers Association's part of the exhibit of the National association at Chicago. The National association is planning to make exhibits of lumber at state fairs the coming fall. These exhibits will be similar to those usually shown by lumber manufacturers and associations and it is expected they will be shown at the state fairs of Minnesota, Michigan, Wisconsin, Illinois, Iowa, and probably other states. Each affiliated association will furnish an exhibit and literature to accompany it and the National association will make an impartial exhibit of all the different lots and distribute the literature.

"It is reported that some of the associations in competition with northern pine will have independent exhibits of their own besides the joint exhibits connected with the National association at these state fairs. Under these conditions it may be advisable for this association to show a pine exhibit separate from the National, especially here in our own home and territory."

A. J. Taylor, chairman of the railroad committee, reported that the rate book should be revised and reissued. The new book will include the Illinois rates, the whole to be issued in a single volumn. A motion to issue the new rate book was adopted.

SECRETARY R. S. KELLOGG TALKS.

R. S. Kellogg, of Chicago, secretary of the National Lumber Manufacturers' Association, gave a talk on what the association is doing. Most important among its activities, he said, is the freight classification case. He predicted that this will prove an epoch-making case for the lumber industry. He declared it to be the first time that all branches of the industry have been united on a traffic question. "I feel confident," said Mr. Kellogg, "that there will be no reclassification that will be seriously detrimental to the lumber interests." He congratulated the Northern Pine Manufacturers' Association on the fine exhibits offered by L. S. Case. He said that arguments may be expected in December and a decision during next year.

Referring to the insurance exchange, Mr. Kellogg said it has grown steadily if not in a spectacular manner, to 181 plants insured for $5,300,000. The loss ratio was 23 percent last year, and this year so far has been 17 percent, counting in two bad fires. The expense ratio was 30 percent last year and this year will be less, decreasing as the amount insured grows.

Mr. Kellogg congratulated the White Pine Bureau on its splendid work, which, he said, is a valuable service to all lumber manufacturers, leading to a campaign for the better use of lumber. The trade extension department of the National association, he said, is devoting much time to getting information and gathering literature for the lumber business. Its bulletin on heavy timber construction has been well received, and special editions were printed, not only for various lumber associations but one for the National Fire Prevention Association, which appreciates the kind of information thus put out on proper construction.

Mr. Kellogg urged the lumbermen to co-operate with the lumber news service installed by the association, to disseminate real news about the industry which daily papers have been found glad to print. The weekly bulletin of lumber news is being used all or in part, he said, by many papers.

R. M. Weyerhaeuser asked when the fire inspectors are going to get around in this territory. Mr. Kellogg said they are supposed to make the rounds every three months.

President Whitten extended the association's thanks to Mr. Kellogg for his address. "This is the first meeting I have attended," said Mr. Whitten, "where we haven't had the slogan, 'What's the matter with the lumbermen?' Things are certainly getting better with the lumbermen."

THE WHITE PINE BUREAU.

George F. Lindsay made an oral report for the White Pine Bureau. He said the association should feel proud of the drawings received in the architects' competition, which have attracted much attention at the Architects' League exhibition in New York, and are taking up an entire number of the Architect's Review. He said that the bureau has rented a fine exhibit, prepared by the Cleveland Board of Lumber Dealers, to use in the Minnesota State Fair with the option of purchase. The much desired white pine toy house also has been found to be a clever thing, as it will build ten houses out of the same set of blocks, by use of blue prints. Co-operation with the retail dealers has been attained, he said, to an extent not thought possible. Now 150 to 200 papers are carrying advertisements up to two-thirds of a page, advertising white pine and paid for by retail dealers. At the suggestion of Mr. Perkins, a Chicago architect, he said, an invitation has been given to the American Institute of Architects to spend a day at the Virginia and Cloquet mills and see how lumber is made, at the time of the convention in Minneapolis in December. He believed this invitation would be accepted.

Mr. Lindsay said that the motion picture enterprise is progressing, but has been delayed by the desire to perfect the idea and weave a story into the pictures. D. A. Hollis, son of Secretary W. G. Hollis of the Northwestern Lumbermen's Association, added to the information, stating that good pictures of logging and saw mill operations have been obtained already.

MR. HINES DISCUSSES THE SALESMANSHIP CONGRESS.

Edward Hines presented the matter of the World's Salesmanship Congress at Detroit, and its monthly Service Magazine, urging every lumberman to subscribe to one copy of it for each salesman. The loss by incompetent salesmanship, he urged, is tremendous. On Mr. Hines' motion, the association voted to take a $100 membership in the congress.

TO INVESTIGATE TRADE DISCOUNTS.

Mr. Hines also brought up the question of trade discounts, saying that certain concerns, especially in the south, are demoralizing things by offering new acceptance terms on the basis of 2 percent in 15 days, and then taking notes for two to six months at 4 percent. The association, Mr. Hines said, should take the lead in calling a halt on this stretching of terms already unfavorable to the manufacturer, who pays cash for nearly everything. Discounts have been doubled already per thousand, he pointed out, by the rise in lumber prices.

On Mr. Hines' motion, it was voted to name a committee to confer with similar committees of other associations, to reach an agreement and make a recommendation to the trade for uniform terms. "Personally," said Mr. Hines, "I prefer 1 percent in 30 days, 60 days net."

TO CONFER ON FOREIGN MARKETS.

L. S. Case read a letter from Dr. E. E. Pratt, chief of the Bureau of Foreign and Domestic Commerce, inviting the association to be represented at a coming conference in Washington on present and probable European markets. On motion of

Digitized by Google

Mr. Hines it was voted to send representatives.

Mr. Hollis and Mr. Kellogg contributed some information about the parasite which is attacking Minnesota pine trees, according to State Forester W. T. Cox. On motion of Mr. Case, the secretary was directed to ask Forester Cox for suggestions as to how lumbermen may co-operate with him in suppressing the pest.

MARKET CONDITIONS.

There was a brief discussion of market conditions, led by Edward Hines, who said that with labor 15 percent higher and supplies averaging more than 33 percent higher, lumber should bring better prices. It developed that No. 5 boards are practically out of the market, and that stocks generally are either light or normal.

The National association exhibit at the Minnesota fair was brought up by L. S. Case, who said that the Twin City retailers have agreed to supply two men each day to help W. H. Bell, in charge of the exhibit, but that four men will be needed. On his motion the association voted to assign two inspectors continuously to the exhibit during the fair week.

Mr. Hines moved that the secretary be empowered to collect and install an exhibit showing northern pine samples in all grades.

After passing a vote of thanks to the Hotel Radisson, the meeting adjourned.

THE WORKMEN'S COMPENSATION SYSTEM OF KENTUCKY.

Louisville, Ky., August 8.—The workmen's compensation system, which has just gone into effect in Kentucky, has a number of interesting phases from the standpoint of lumber operators. The system is entirely optional with both employer and workman, and definite acceptance of the act is required. The employer notifies the state board that he will operate under it, while the workman signs an agreement with the employer covering his end of the proposition. If the employer refuses to accept, he loses his common law defenses, and hence could hardly prevent the collection of damages by suit. On the other hand, if the employe declines to accept, after the employer has embraced the act, the latter's defenses are restored to him, so that he can defend a suit just as heretofore.

There are various methods of covering liability under the compensation law available, the employer being permitted to carry his own risk or to insure in a stock or mutual company. Most of the lumbermen are taking stock company insurance, though Sherman & Ellis, of Chicago, who operate the Illinois Indemnity Exchange, are trying to form a reciprocal with good prospects for success. A few of the big eastern Kentucky lumber operators are applying to the state board for permission to carry their own risks. In this event they will be required to give bond.

The merit rating system is to be used, and a plant which is well protected from accident will get a lower rate than has been charged under employer's liability. This is a feature of the situation which has been a pleasant surprise to many of the manufacturers.

THE GOVERNMENT AUGUST CROP REPORT.

The government crop report for August 1, was made public Tuesday afternoon, August 8, and while expert grain men had anticipated a heavy falling off in the crop estimates from the July report, the decrease was somewhat more than had been anticipated. As compared from the July 1 estimate, winter wheat shows a loss of 34,000,000 bushels, while spring wheat shows a loss of 71,000,000 bushels, making a total loss from July 1, in all wheat of 105,000,000 bushels. Corn shows a reduction of 89,000,000 bushels and oats a reduction of 43,000,000 bushels from the July report.

The average yield of winter wheat per acre this year is 13.8 bushels as compared with a ten year average yield of 15.9 bushels per acre. Board of trade men say that since the crop report was made up August 1, there has been further deterioration in corn, but that recent rains have checked the loss. The figures are as follows:

	Yield per acre.		Total production in bushels.				
		1915	1916			Farm value.	
	1916.	final.	August	July	1915.	1916.	1915.
Crops.	Bu.	Bu.	forecast.	forecast.	final.	Cents.	Cents.
Winter wheat	13.8	16.2	455,000,000	489,000,000	655,000,000	.....	.....
Spring wheat	11.2	18.3	199,000,000	270,000,000	357,000,000	.....	.....
All wheat	12.9	16.9	654,000,000	759,000,000	1,012,000,000	107.1	106.5
Corn	25.6	28.2	2,777,000,000	2,866,000,000	3,055,000,000	79.4	78.9
Oats	31.4	37.8	1,274,000,000	1,317,000,000	1,540,000,000	40.1	45.4

THE RITTENHOUSE & EMBREE CO. FIRE.

The Rittenhouse & Embree Co., of Thirty-fifth street and Racine avenue, this city, sustained a fire loss of about $100,000 in the destruction of its old flooring plant on the east side of Racine avenue on Monday, July 31. The fire broke out at the south end of the plant and spread rapidly under the strong wind and destroyed practically all of the company's property excepting the planing mill on the east side of the street. By hard work the firemen succeeded in keeping the flames away from the large lumber yard and the office on the west side of the street. There were six hardwood flooring storage sheds filled with oak and maple flooring and these, with their contents, were entirely destroyed.

One of the unfortunate features of the fire was the death of Joseph Buzkowski, who was employed in the harness room of the factory plant and was unable to get out, so swiftly did the flames spread.

At one time it looked as if the yard and office would surely go and the heat generated by the fire was so intense that all of the employees of the company left the office excepting Miss Elizabeth McFarland, the bill clerk, and who was private secretary to the late M. F. Rittenhouse. Miss McFarland happened to be at the telephone switchboard during the absence of the operator and kept at her post for emergency calls until compelled to retreat. She showed great courage in sticking to her post. The loss, estimated at $100,000, was well covered by insurance. The company owns a large yard [illegible] Belmont avenue, on the north side, and [illegible] on Sixty-third street, and has large lumber resources upon which to draw for its regular trade until it can restock its yard, so that its lumber delivery contracts will not be seriously interfered with.

SOUTHERN SAWMILL LABOR SCARCE.

Louisville, Ky., August 7.—Labor conditions in the south are the subject of considerable comment at present, as it appears that the demand for workmen on the part of manufacturers in the north and east, who have had war business to take care of, has resulted in their drawing on other sections for help. Big wages have been offered, and as a result it is said that men have left the southern districts where they have been working in the sawmills, by the trainload. This has made it more or less difficult to keep mill crews full, and has resulted in a sharp curtailment of production.

This is doubtless a healthy condition, from the general trade standpoint, but has been inconvenient in individual cases. The intense heat, which has been reported from all over the country recently, has made it difficult to operate at full capacity, and as storms in the south have been frequent, logging has been interfered with. In most respects, therefore, production has been interfered with, making for a strong market this fall, in view of the exceptional demand.

DIERKS LUMBER & COAL CO. LOSE EIGHT DRY KILNS BY FIRE.

Bismark, Okla., Aug. 1.—Fire completely destroyed eight dry kilns at plant of Choctaw Lumber Co., Bismark, July 20.

This plant is owned by Dierks Lumber & Coal Co., Kansas City, Mo. Mr. Herbert Dierks, manager of the manufacturing department, reached Bismark soon after the fire and placed order with L. Moore Dry Kiln Co., Jacksonville, Florida, for iron equipment complete for eight rooms to replace burned kilns. Construction work has been started and will be rushed with all possible despatch. They expect to have several new kilns in operation by the middle of August.

OUR TRAVELING MEN.

The "Buzz," published by Simonds Manufacturing, "about ourselves" in its issue of July 22, publishes a poem inspired by the World's Salesmanship Congress, which expresses thoughts worthy of consideration and meditation.

We reproduce it for our readers:

By Simonds Saws.

The work our traveling men must do,
May never have appealed to you.
One hundredth of our population
Are chosen for this occupation.
Chosen? By what tests and why?
By guess, and by the will to try;
Thrown in the stream to swim or die.

This traveling force a million strong
Speeds the nation's trade along;
Making the towns and getting away,
Traveling by night and working by day.
Do these men appreciate
Their power to make the laws of state,
Or hotel prices regulate?

A million men of intellect,
Going from mill to store,
Could help elect, create respect,
Change thought the country o'er.
They should arrange to meet "en bloc";
Construct a platform like a rock;
One that would withstand a shock.

These hurrying men on orders bent
May strive for human betterment.
They have the secret in possession,
Of how to raise their own profession.
Well organized, they can declare
What president shall take the chair,
When salesmen plan to put him there.

Salesmen excel among mankind
As students of the human mind.
They read the soul's depth through the eye,
Divine the truth, detect the lie.
They read the sense of look and tone,
Of every little smile or frown,
And take the orders for their renown.

Moulders of mind and circumstance,
Salesmanship is more than chance;
To know themselves, their business, too,
Calling for manhood through and through,
Getting together to understand
The nation's needs, the great demand,
Which now appears on every hand.

America must lead the world,
Not with arms and flags unfurled,
But in arts that peace has made,
Finance, manufacture, trade.
Prosperity will come to all
When traveling men shall hear the call
And band together to fight or fall.

DEATH OF PATY FORD.

Members of the Chicago lumber trade and of the hardwood trade of the south learned with regret of the death of Paty Ford, president of the Ward Lumber Co., 1018 Chamber of Commerce building, this city, who died July 25th of heart failure. Mr. Ford was a native of Lebanon, Tenn., where he was born February 20, 1874. He became connected with the Ward Lumber Co., under the late Charles A. Ward at its plant at Whiting, Mo., in June, 1898, his first occupation being as bookkeeper. He came to Chicago in 1900 and upon the death of Mr. Ward in 1906, he became president and general manager of the company. He had been in good health until a week before his death.

The Latest News of the Lumber World

RUSSE & BURGESS TO BUILD NEW MILL.

Memphis, Tenn., August 8.—Russe & Burgess have purchased 7,000 acres of timberlands on Honey Island, in Holmes county, Miss., and will take early steps for the development of the timber on this property, consisting principally of oak and gum. A new band mill with capacity of 50,000 feet will be established either at Tchula or Belzoni, Miss. The exact location has not been decided upon but present indications are that the mill will be established at the latter as it has been impossible so far to secure a site and other essentials on favorable terms at the former. It will be necessary for the new owners of this property to build a railroad some 12 to 15 miles in length to facilitate the development of the timber on the property in question. The timber will all be converted into lumber at the new mill to be installed. Russe & Burgess, Inc., operate a hardwood mill in North Memphis and they also run a mill at Isola, Miss. The purchase of the timber and the installation of the new mill, however, will not interfere in any way whatever with operations at the other two points. This timber will be developed for export purposes. It is possible for the company in handling this lumber to ship it down the Yazoo river to the Mississippi and thence to New Orleans. It is understood that the firm proposes making use of water transportation, particularly if there should be a decided shortage of cars or if railroad rates should be so high at any time as to make this course desirable.

FURNITURE AND AUTOMOBILE INDUSTRIES MAKE HEAVY DEMAND.

Louisville, Ky., August 8.—The furniture and automobile industries are furnishing strong support for the hardwood business, according to local reports, both of these lines calling for big stocks of lumber at present. Their demands are making the midsummer busier than usual, and are resulting in better than average shipments being recorded.

The July shows of the furniture manufacturers turned out exceptionally well, it is reported, and attendance records were broken at Grand Rapids and elsewhere. The dealers came to the shows prepared to buy, and when they found that furniture was going to be somewhat scarce, in view of the handicaps of short labor forces under which many of the manufacturers have been laboring, they placed orders in unusually large volume, with repeat orders for delivery about October 1. The dealers apparently were not deterred by the increased prices asked for furniture, which have been ascribed by the manufacturers to increased material costs, lumber being about the only item which has not shown a huge advance.

The automobile trade is rushing, and while ash is one of the leading woods affected, elm and gum are now being worked into automobile construction, and some large orders are being placed for these woods. The result is that the market on all of these items, especially thick stock, is strong.

UNIQUE AMONG WOODWORKING PLANTS.

The plant of Walter C. Mansfield, at Menominee, Mich., is unique among woodworking plants throughout the country, in that it manufactures basswood lumber into mill work of various kinds, either of regular or special design and also handles basswood lumber at wholesale, in other words making an exclusive specialty of basswood and its products. The items which the plant manufactures are so diversified as to defy specific enumeration, but in a general way they may be classified as mouldings of every description, drawer slides and partitions, rubber stamp backing and a thousand and one types of special work which might be needed for novelties. The plant is thoroughly equipped with machinery of all kinds for turning out these various items.

Mr. Mansfield's long experience in this line of business and his free rein in the development of the trade along these lines have conspired to make it a really individual undertaking and accordingly he recently purchased their Menominee plant from Sanford & Treadway, its original owners and is now operating it under his own control. The other business of Sanford & Treadway, with headquarters at New Haven, Conn., of course, continues on the same large scale as before.

Walter Carrington Mansfield was born over two score years ago in New Haven, Conn., coming from an old New England family which dates

WALTER C. MANSFIELD, OF MENOMINEE, MICH.

back to the New Haven colonists of 1635. After completing his studies at school and college, his father, who was a newspaper publisher, desired him to go into that business, but he preferred lumber and secured a position with the Halstead & Harmount Co., which concern operated a retail and wholesale yard and also manufactured sash and doors at New Haven. After five years' experience with that concern, he accepted a position with Sanford & Treadway and came to Menominee March 1, 1898, as that firm's buying representative. Four years later he started the plant which he recently purchased and the business has grown steadily and heavily. It fills a peculiar niche of its own, there being few, if any, establishments in the country of similar character. Mr Mansfield reports that he is well supplied with orders and says that his business prospects are good. He caters largely to the retail and manufacturing trade, shipping mill work and lumber, basswood exclusively, in carload lots.

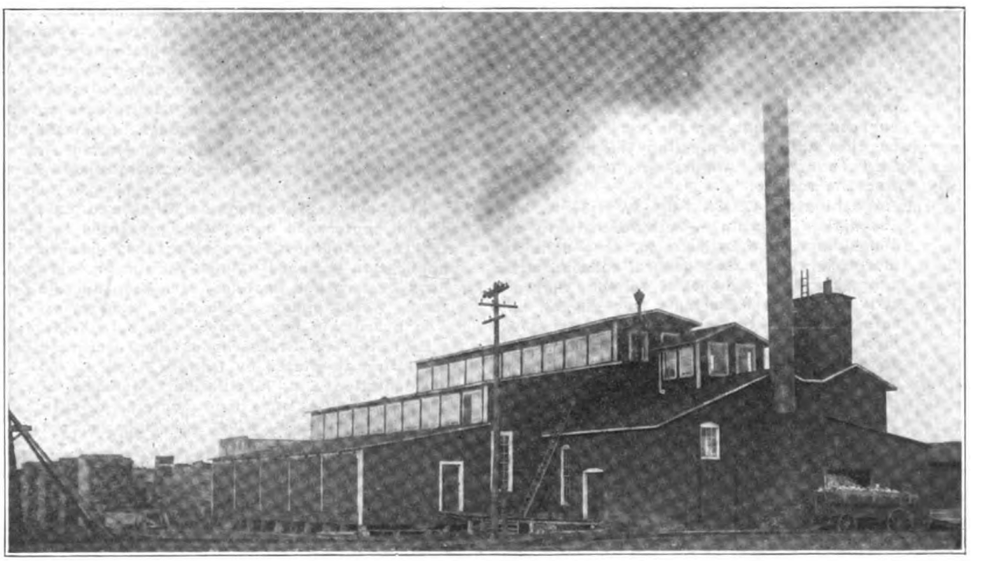
MONTANA LARCH AND PINE SHIPMENTS.

Kalispell, Mont., July 31.—Shipments of lumber for the month of June, 1916, as reported by members of the Montana Larch & Pine Manufacturers' Association, were 18,796,553 ft., as compared with 11,219,502 ft. for the corresponding month of 1915, an increase of 7,577,051 ft., or 67.5 percent. Shipments for the first six months of 1916 aggregate 93,784,440 ft., as compared with 52,788,642 ft. for the first six months of 1915, an increase of 40,995,807 ft., or 77.6 percent.

The distribution for the first six months of this year show substantial increases in the states of North Dakota, Minnesota, Iowa, Nebraska, Montana and Wyoming. The members report a stock on hand, July 1, 1916, of 95,438,000 ft., as compared with 100,000,000 ft. on hand July 1, 1915.

IMPORTANT TO POST SHIPPERS.

Minneapolis, Minn., July 22.—Fence posts are lumber so far as freight rates apply, according to a decision handed down by Judge O. B. Lewis of the second Minnesota district court, in a test case just decided. During the years between 1906 and 1913, Minnesota railroads refused to accept the lumber rates enacted by the state legislature. The state rates were upheld by the supreme court and roads have made rebates to lumbermen. It remained for the Northern White Cedar Association to get behind a test case brought by the M. J. Bell Lumber Co., Minneapolis, to have the court decide that posts are lumber. If the post men are as successful in the supreme court, when the roads appeal the case, there will be considerable sums of money due post shippers on lines in Minnesota, for all during the controversy over the state lumber rates the roads charged higher rates for posts than the law allowed.



PLANT OF WALTER C. MANSFIELD, AT MENOMINEE, MICH., RECENTLY PURCHASED FROM SANFORD & TREADWAY, OF NEW HAVEN, CONN. MR. MANSFIELD HANDLES EXCLUSIVELY BASSWOOD LUMBER AND MILLWORK AND HAS BUILT UP AN EXCELLENT BUSINESS DURING HIS FOURTEEN YEARS OF CAPABLE MANAGEMENT.

CAR BUILDING CONTRACTS.

Some recent big lumber contracts have been let and others are in prospect, especially in the car building industry. These contracts, however, have not as yet caused any improvement in the price situation. The United States Steel Corporation has distributed contracts for 448 freight cars for the Carnegie Steel Co., among several companies, this calling for 2,000,000 feet of yellow pine. The Mt. Vernon Car & Manufacturing Co. has contracts for cars requiring 7,500,000 feet of pine, the orders being for 1,409 box and 200 auto cars for the Cincinnati, New Orleans & Texas Pacific railway. The American Car & Foundry Co. has orders for 695 box and 100 auto cars for the Alabama Great Southern railway, calling for 3,500,000 feet of timber. The Lehigh Valley road is said to be placing contracts for 1,500 box cars, the Minneapolis & St. Louis for 500 to 1,000 box cars and the Illinois Cen[illegible] 300 box cars. The Western Pacific road is said to have submitted specifications for 1,000 fruit cars and will probably use fir in their construction.

Railroad extensions call for some big deliveries of cross-ties and other railroad lumber. The Great Northern is to build a thirty-six mile extension from Wildrose, N. D., to Grenora, calling for 100,000 ties. A Santa Fe subsidiary will need 185,000 ties for a sixty-five mile line from Lubbock, Tex., to Seminole.

The Union Pacific will take 2,500,000 feet of fir lumber for reinforcing doors and linings of box cars for the anticipated shipments of grain.

Paving contracts also call for some big block contracts. York, Pa., has decided to lay 66,140 square yards with 2,400,000 feet of lumber, in the form of blocks. Kansas City is to lay 39,227 yards of block pavement. Fort Worth will have about 30,000 feet. Troy, Ala., plans to lay 17,000 yards of pavement, which may be done in blocks.

NEW CREOSOTING VENTURE IN THE NORTHWEST.

Tacoma, Wash., August 3.—Geoffrey Winslow, for the past four years manager of the creosoting department of the St. Paul & Tacoma Lumber Co., of Tacoma, has resigned his position and plans to enter the creosoting business on his own account. In company with Talmadge Hamilton, of Tacoma, Mr. Winslow has organized a new company, known as the Washington Creosoting Co., which is capitalized at $25,000 and will construct and operate a creosoting plant at Everett, Wash.

Negotiations for the new plant are still under way but Mr. Winslow has no doubt of success. The company will open a branch office in Tacoma and will endeavor to secure a share of the local business.

THE LATEST AND MOST AUTHENTIC NEWS CONCERNING THE "RAILWAY WAGE" CONTROVERSY

If all American citizens, before they went to bed on the night of August 9, were convinced from the various dispatches printed in the evening papers of that date that the railway wage controversy between the various brotherhoods of railway trainmen and the railways of the United States had been finally submitted to arbitration, they had a fine soporific to make them rest easy, but they did not have the facts. Even the associated press did not state the facts.

THE ASSOCIATED PRESS IDEA.

The Associated Press made this statement from New York, about 2 o'clock on August 9: "The threatened strike of 400,000 railway employees of the United States was averted today when the railroad brotherhoods accepted an offer of the United States Board of Mediation and Conciliation to arbitrate their differences with the railroads."

It was a great step forward, looking in the direction of arbitration, as later dispatches in this connection will relate, for it showed that conciliation is still an American characteristic, for any student of arbitration as applied to the differences of wages-workers remembers that in connection with the general principle of compulsory arbitration as enforced by New Zealand, Australia and Canada, that EVEN Samuel Gompers, in his specific declaration of opposition to the principle of compulsory arbitration in the United States, made a statement in a nationally known and quoted speech that compulsory arbitration in the United States was unnecessary for the reason that there was "more conciliation on the part of employers and employees in the United States than anywhere else in the world."

We would like to believe that there is enough of this spirit to leaven the loaf, and help the railroad men and the railroad employees to see light and to finally arbitrate this question. That is what the "United States Board of Mediation and Conciliation" has been called in to do—simply to persuade these two bodies to submit their grievances to arbitration.

A WASHINGTON VIEWPOINT.

Believing that some real information might come out of Washington, we queried our correspondent for the very latest news on the subject, requesting telegram to be filed near noon August 9. The following was the result:

Washington, D. C., Aug. 9, 11:34 A. M.—(Special Telegram)—Administration officials interviewed by your correspondent this morning relative to a general railroad strike express rather emphatic opinion that the strike would be averted. One official, who refused to be quoted, said that it is his idea that the railroads have brought this condition to pass with the idea that they will ask for higher freight rates in the immediate future. A White House official told your correspondent that the government "hoped" that the strike would be averted. He refused to discuss the situation at any length.

On the other hand, Harry A. Wheeler, of Chicago, chairman of the railroad committee of the Chamber of Commerce of the United States, after what he considers a thorough investigation of the situation, has given it as his opinion that a strike cannot possible be averted. Government mediation officials all left Washington for New York last night.

(Signed) L. M. Lamm.

A NEW YORK REPORT.

Thinking that New York might have something to offer we appealed to our New York correspondent and received the following:

New York City, Aug. 9, 3:17 P. M.—(Special Telegram).—The possibility of a general railroad strike is still a matter of conjecture. The managers, after long discussion, met the men today with a refusal of their demands, and expressed a willingness to submit the matter to arbitration before the United States Board of Mediation and Conciliation. Whether or not the men will agree to this is not known. At this writing, they have expressed disappointment with the outcome of past arbitration awards and there is sure to develop strong opposition to the proposition to arbitrate the present controversy. The managers have not presented anything like a definite proposition to the men and the latter are firm in their demands for a shorter day.

(Signed) J. M. Farrell.

THE VERY LATEST NEWS ON THE QUESTION.

Our own Chicago facilities for gathering facts in relation to this affair have seemed to unearth more direct information than could be gained in either Washington or New York. In this connection we have to offer—through the courtesy of official sources in Chicago—the last word from the New York conference committee to the railroad heads of the country in the shape of the following telegram:

New York, Aug. 9, 1915.—Via Chicago.—The services of the United States Board of Mediation and Conciliation for the purpose of bringing about an amicable settlement of the wage controversy was invoked by the National Committee of Railways today after officers of four brotherhoods had refused to join roads in making the request. Members of the board, W. L. Chambers, Martin A. Knapp and G. W. W. Hanger, are already in the city.

At opening of conference, Chairman Lee, of the conference committee, presented letter to brotherhoods proposing they join in application to board. When each of brotherhood officers had declined, Mr. Lee said the roads would make application themselves. The board will now confer with both sides.

LATER—The brotherhoods have accepted mediation as offered by United States Board of Mediation and Conciliation. Members of the board will at once begin conferences with the two parties in effort to bring about a settlement.

The letter of the conference committee to the Board of Mediation and Conciliation is as follows:

"The National Conference Committee of Railways again have given most careful consideration to matters in controversy between us and to all that has been said in our various conferences, which began June 1. We have also carefully considered the serious situation presented by result of the strike vote of employees and grave responsibility means to avoid the public injury which must inevitably result should you decide to exercise the power which the strike vote has placed in your hands. After such consideration, it is our judgment that proposals which the men have supported by their vote involve such extraordinary changes in operating methods and such radical revisions in established bases of compensation as to make it apparent that there is little probability of our being able to harmonize our differences of opinion unless this result can be brought about through the Federal Board of Mediation and Conciliation which was created to assist the parties in just such circumstances as now confront us.

"The National Conference Committee of Railways is as sincerely anxious as your committee can be to reach some amicable adjustment of the matters involved in the present controversy, but we are convinced that in the end we shall have to invoke the friendly offices of the Federal Board of Mediation.

"The unbroken experience of the past ten years sustains us in this view.

"During that period, in practically no large concerted movement has a conference committee of managers and a committee of your representatives ever been able to reach a final and complete adjustment of matters of controversy between them until after they had invoked the provisions of the federal mediation law.

"It seems to us that all the considerations that have existed in former controversies to prevent a settlement being reached by direct negotiations are present in an accentuated form in present case. It is not open to question that whatever we can do by direct negotiations we can also do just as quickly and as effectively through mediation, and experience has demonstrated that a common ground could be reached through mediators in cases where parties have been wholly unable to reach such common ground through direct negotiations.

"Accordingly, we propose that you join with us in an application to the United States Board of Mediation and Conciliation and invoke its services for the purpose of bringing about an amicable adjustment of the controversy."

WHAT ALL THIS SPELLS.

All this spells simply this: That the federal board has the task before it of getting the two parties to submit to the THEORY of an arbitration. If they succeed in that THEN the arbitration—in FACT—will follow.

OBITUARY

SUDDEN DEATH OF GEORGE K. SMITH.

St. Louis, Mo., August 8—George Kimball Smith, a leading figure in the yellow pine lumber industry was killed in a fall from a ninth-story window of the Boatmen's Bank building in this city, about 8:30 today. Mr. Smith was for many years secretary of the National Lumber Manufacturers' Association and also the Yellow Pine Manufacturers' Association, until the latter association was dissolved by its members two or three years ago, after the Missouri Supreme Court's anti-trust decision in the lumber cases. As secretary of the association he was one of the best known lumbermen in the United States and was known to almost every prominent lumberman in the country. Virtually all his life had been spent as an executive of lumber manufacturers' associations. Mr. Smith was also one of the best known members of the Hoo-Hoo order in the country.

Mr. Smith was born in Rosemond, Ill., and was the son of Brainard and Nancy Smith. He was educated in the public schools and entered the lumber business in 1886. In 1885 he was married in Kansas City to Lora A. Allen, who survives him. There are no children.

As an agent for lumber manufacturers, Mr. Smith had an office on the ninth floor of the Boatmen's Bank building and it is presumed he fell from the window of the toilet room on that floor,

THE LATE GEO. K. SMITH, OF ST. LOUIS.

as his body was picked up on the roof of a one-story annex directly below the line of toilet room windows on each floor of the building.

Mr. Smith's relatives and friends knew that for ten days he had been suffering from the heat, and that in the last three days he had fainting spells as a result. He went to his office for a few hours Monday morning and returned home, complaining of dizziness. He told his wife Tuesday morning that he did not feel like going to the office, but would go down for a brief time to keep appointments with customers. He left his home about 7:30 and rode to the city with a neighbor. Some of his friends believe that he possibly had gone to a window for fresh air and became dizzy or suffered a fainting spell.

The windows of the room from which he fell are of the same dimensions on all floors. The sill is 23 inches from the floor. The aperture, with the lower sash raised, is 36 inches wide by 30 inches high. A register under the window makes it inconvenient for a person to sit on the sill.

Mr. Smith's office was locked when friends went there after finding the body. His coat and hat were in his office. Had he fallen from the window of his office, his body would have dropped only two stories, to the roof of a seven-story building adjoining.

Mr. Smith's home near Clayton, St. Louis county, which was finished about two years ago, has been the subject of considerable favorable comment in architectural journals, because of the originality in plans which made it commodious and comfortable.

After leaving the Yellow Pine Manufacturers' Association, Mr. Smith took a vacation for several months, and then became associated with the Sherman-Bennett Co., a Chicago wholesale lumber firm, located in the Fisher building. His health failed and he went to Colorado for six months. On his return to St. Louis he became engaged in the lumber commission business.

He was contemplating forming a connection with another well-known lumberman at the time of his death, and had had several conferences with that end in view.

DEATH OF JOHN MILLEN.

Lumbermen, especially of the older generation, were grieved to learn of the death of John Millen, for many years prominently identified with lumber operations and railroad management, who passed away at his residence, 618 Vermillion Road, Duluth, Minn., on Thursday, July 28, as the result of a severe attack of heart trouble suffered the preceding day.

Mr. Millen was distinctively a self-made man, having risen from the ranks, and the attainment of his high position in the business world was the result of constant and unremitting effort. He was born March 12, 1849, in Lambton County, Ontario, and was the son of John and Sarah Pauley Millen. His grandfather was a soldier in the Revolutionary war and his father served in the American army in the war of 1812. While Mr. Millen was a young boy, the family removed to St. Clair, Mich., and there the young man completed his common school education. When fifteen years of age, he got a job in the logging camps operated by F. & S. Moore, of Detroit, Mich., with whom he remained for three years. He then was connected with General Russell A. Alger in the AuSable River district and for six years he was employed as a scaler and worked on the booms there. He was later made foreman of the lumber camps for the firm of Moore & Alger and then was given general charge of the lumber business of R. A. Alger & Co.

At the time of his death, Mr. Millen was the vice-president and general manager of the great manufacturing firm of Alger, Smith & Co. Upon the death of General Alger in 1907, he was made president of the Alger-Sullivan Lumber Co., of Century, Fla., and was president and general manager of the Manistique Lumbering Co., and president and general manager of the Duluth & Northern Minnesota railroad.

Mr. Millen was married twice, his first wife being Nellie Allison, who died many years ago. In June, 1902, he was united in marriage with Mrs. Luella J. Fiske, of New York, who survives him. Probably no more fitting tribute to Mr. Millen could be given than that which was accorded him by the Duluth News-Tribune, which in its issue of July 27th made a highly commendatory editorial mention of his life and character from which we quote as follows:

"One by one those pioneers who made this state and this northwest country great with their own inherent greatness, strong with their native strength, who have tamed its wildernesses and wrung wealth from its rugged resources, are passing from the scene of their struggles and successes.

"John Millen was but a name to most of our residents, yet this city had no more loyal citizen, no wiser adviser, no more generous promotor of its interests. He was personally unknown to the many because it was not in him to obtrude himself anywhere. It was not because he was unsocial, for no man more enjoyed his friends nor was more democratic in his friendships.

"Big of frame, massive in physical proportions, of powerful body, with a face that matched, he was the picture of quiet, but alert, power. His force of will and keenness of mind were evident in his face, where they mingled with an equally evident kindliness, genuine sense of humor and breadth of understanding.

"All his life he had worked. His was the gospel of work. He never got too much. He never shirked the overload. He worked with his hands and his brain. His work always expressed his mental activity, whether as a boy in a lumber mill, a young man on the log boom, with the lumber jacks in the woods, or as manager of a great timber industry and head of a railroad."

JOHN McLAREN.

Another of the pioneer lumbermen of Chicago passed away Wednesday, July 26, in the person of John McLaren, at his residence, 751 Gordon Terrace, this city.

Mr. McLaren was born at Edinburg, Scotland, September 11, 1836, and removed with his parents to this country in 1852. He became identified with the lumber trade of Chicago over fifty-one years ago. He had been through the Civil war, enlisting in Dubuque, Ia., in 1861 as a private and being mustered out in December, 1864, as the adjutant of his regiment. Early in 1865 he entered the wholesale lumber office of John Mason Loomis & Co. as bookkeeper and in 1870 he became a partner in the firm, which continued until 1885. He was vice-president of the Pere Marquette Lumber Co. and succeeded Col. Loomis as its president, in which position he continued until the dissolution of the concern in 1910.

Mr. McLaren had many interests in lumber and banking circles. He was vice-president of the A. R. Beck Lumber Co., of South Chicago, was an organizer and director of the Milwaukee Avenue State Bank, was interested in the Industrial Bank at Twentieth Street and Blue Island Avenue, was president of the Hide & Leather National Bank, which, in 1897, merged with the Union National Bank and which in turn in 1900 was merged with the First National Bank. At that time Mr. McLaren retired from active work in connection with his banking interests and has not been particularly active since in any business.

The deceased had always taken a very deep interest in public affairs and served in various capacities for which his experience and inclination had fitted him. He was president of the Chicago Relief & Aid Society for two years, was a member of the board of education for six years and part of the time its president. The John McLaren School at York and Lafiin Streets was named in his honor. He was a trustee for the fund which resulted in the construction of Lewis Institute here, one of the noted educational institutions of the country and remained a trustee of the school. He was a trustee of the Mary Thompson hospital since 1894. He was vice-commander of the Military Order of the Loyal Legion and a member of the Grand Army of the Republic and Society of the Army of the Tennessee. He was prominent in Masonic circles, attaining the highest offices in each of the orders and was honored by the Supreme Council of the Scottish Rite with the thirty-third degree. He was a member of the Union League Club and served as its treasurer and trustee for several years and was also a member of the Illinois and Bankers' clubs.

Mr. McLaren is survived by his widow, who was Miss Harriet A. Studley, of Chicago, and by three children, two daughters, Mrs. James Simpson and Mrs. Philip B. Osborne and a son, John Loomis McLaren. Deceased was highly regarded among the lumbermen and business men of Chicago. He was the soul of honor and lived a useful and well rounded out life.

W. B. FERGUSON.

William B. Ferguson, 52 years old and a lumberman well known throughout the state, died at his residence, 808 Battery street, Little Rock, Ark., about 1 o'clock on Friday, July 28, 1916. He had been ill only a few days.

About thirty-two years ago Mr. Ferguson came to Arkansas from his native home in Detroit, Mich., to engage in the lumber business. For several years he has been residing with his family in Little Rock, and has been connected with the lumber industry of this state in varied capacities. For some time he traveled for a Memphis lumber concern, but has devoted his time principally for several years to a saw mill company, owned by himself and and his brother, C. E. Ferguson, and known as the Ferguson Lumber Co. He is survided by his brother, his wife and two daughters, Misses Rowena and Mary Louise. Funeral services were hold from the family residence on Sunday, July 30, with Rev. Forney Hutchinson, pastor of the First Methodist Episcopal Church, South, of Little Rock, officiating. Interment was made at Mount Holly cemetery.

FRED J. JEFFRIS.

Fred J. Jeffris, president of the Manchester Saw Mills, at Manchester, Ala., and a member of the Chicago wholesale lumber firm of D. K. Jeffris & Co., Pullman building, died July 21, at his residence, 3150 Sheridan Road, this city. Mr. Jeffris was a native of Janesville, Wis., and was 40 years of age. After attending Beloit College, from which he graduated in 1898, he became identified with the lumber business in Janesville and ten years ago came to Chicago, where he was actively associated with his brother in the wholesale lumber business. He had been out of health for the last two years, but spent several months in Arizona recently and was greatly benefited. The funeral services were held at Janesville, Wis., on Sunday, July 23.

Lumber World Review, Washington Bureau, 208 District National Bank Building

L. M. LAMM, Staff Correspondent

LUMBER REPORT NEARING COMPLETION.

Washington, D. C., Aug. 5.—The work of the joint investigation into the lumber industry by the Federal Trade Commission and the Forest Service is rapidly coming to a close, according to an authoritative statement made by an official of the trade commission to your correspondent this week.

A number of conferences have been held between officials of the two bodies going over the very complete work of the Forest Service and the data that has been obtained by the trade commission. It is expected that the final conferences will be held next week. Various of the lumbermen interested in the investigation have been "sounded" and it seems to be practically a unanimous opinion that about the first of September would be a good time to have a final hearing in the matter.

Up to this date no final arrangements have been made, but should all of the lumbermen decide to come to Washington at the same time an open hearing will be granted, according to information obtained during the past week. On the other hand, the lumbermen may come separately, in which case they will have private conferences with the commissioners.

Joseph N. Teal, representing the west coast interests; John C. Boyle, representing the southern interests; R. S. Kellogg, of the National association; Robert H. Downman, and others who have taken an active interest in the investigation are expected here about September 1 to go over finally with the commissioners the report to be made.

LUMBERMEN TO STUDY EUROPEAN MARKETS.

Washington, D. C., Aug. 8.—Several expert lumbermen are to be sent to Europe in the very near future to study the possibilities of European nations as markets for American lumber at the conclusion of the war. Definite arrangements are just now shaping themselves, your correspondent is informed, to this end.

This work will be carried on, it is understood, by the Bureau of Foreign and Domestic Commerce, and at present it is thought that at least three or four men will take part in the work. The experts will go into France, Germany, Belgium, England, Russia, and the Balkans. It will be a part of their work, first, to ascertain as nearly as possible what the market chances will be; second, to find out what kinds of timber will be best suited for the various conditions; third, what kind of competition American exporters will have to go up against; fourth, what credits will have to be allowed, and, in short, everything that will help American export lumbermen to be prepared to furnish timber at the conclusion of the great European conflict.

Dr. E. E. Pratt, chief of the Bureau of Foreign and Domestic Commerce, is taking a great interest in this proposed investigation. He has invited Federal Trade Commissioner Will H. Parry, and Mr. Greely, assistant forester, to co-operate with him in this work.

Your correspondent is given to understand that letters have been sent out to the leading export associations and export lumbermen asking them to meet with this board of three men and discuss the situation before the experts leave for Europe. At present, it is said, August 21 is the date decided upon and the conference will more than likely be held in Chicago.

The Federal Trade Commission, it is understood, has decided to send copies of the Forest Service report on the lumber industry to lumber associations throughout the country asking them to go over the report fully and to meet with Commissioner Parry on August 21 at the same time that the lumber export investigation is to be discussed.

Commissioner Parry has been authorized by the other commissioners to make a special investigation into the hardwood situation. He will do this and it is expected that hearings will be held at Cincinnati, Memphis, Chicago, and a few other places. The investigation was asked for by the Hardwood club, of Memphis, and the Southern Hardwood Traffic Association. This investigation will not be undertaken until later in the fall and will have no connection with the general lumber study of the commission.

A NATIONAL TRADEMARK PROPOSED.

Washington, D. C., Aug. 7.—Representative Kitchin, chairman of the ways and means committee of the house and father of the National Trade-Mark bill, has reported the bill from committee since out last issue. The only amendment made was the striking out of an appropriation of $25,000 to carry on the work. In the report to the house the committee says:

"The committee on ways and means, to whom was referred the bill (H. R. 16873) to authorize the adoption of a national trade-mark for the manufacturers of the United States, particularly for export purposes, and to authorize the secretary of commerce to license manufacturers to use the same, and for other purposes, having had the same under consideration, report it back to the house."

After striking out the appropriation the report continues:

"And as so amended the committee recommend that the bill do pass. The purpose of this measure is to help advertise American manufacturers in the foreign markets and at the same time assist in preventing the sale of foreign merchandise with the representation that it is made in the United States.

"The proposed bill authorizes the secretary of commerce to select, with the approval of the president, a trade-mark suitable to be affixed to any merchandise manufactured in the United States, and directs that the commissioner of patents shall register said trade-mark in the United States patent office.

"Under the provisions of section 4 of the bill, any manufacturer in the United States may obtain a license to use the trade-mark authorized by this bill upon application for the same to the secretary of commerce, and the payment of a fee not to exceed $5 per year.

"Section 5 of the bill provides:

" 'That the secretary of commerce may suspend temporarily, pending a hearing, or revoke, after opportunity for hearing has been afforded to the licensee concerned, any license issued to any manufacturer under this act for any violation of or failure to comply with any provision of this act or of the rules or regulations made hereunder. The secretary of commerce is authorized to publish the names and addresses of persons licensed under this act and lists of all licenses terminated and causes therefor.'

"It is thought that this provision will be amply sufficient to prevent any fraudulent use of the trade-mark."

INTERSTATE COMMERCE COMMISSION NEWS

While all of the commissioners are "staying on the job" during these summer months, something not heretofore done, no hearings are to be held at all during the month of August. Owing to the great press of work the commission is way behind, the work having accumulated faster than could be handled with the present force.

INTERSTATE COMMERCE COMMISSION DECISIONS.

Decisions are being handed down thick and fast these days. No less than ten or twelve have been handed down in lumber cases alone since our last issue.

One of the most interesting and important is the commission's decision in I & S Docket No. II, the famous old tap line case relative to milling logs in transit on tap lines. In their syllabus in this case the commissioners say:

"1. Request that trunk line carriers generally be required to establish milling-in-transit arrangements on logs in connection with tap lines in the lumber blanket rate territory in the southwest denied.

"2. The establishment by a trunk line of transit arrangements on logs hauled by it to mills located upon its own lines in the blanket territory would subject to undue prejudice and disadvantage the mills on the tap lines with which it connects and has joint rates, unless the trunk line offered them a similar and equal arrangement; the undue prejudice and disadvantage under such circumstances to mills in the same territory that get their logs in over unincorporated logging roads or by teams over tram roads, or by similar means, also pointed out."

In closing the opinion, Commissioner Harlan, who wrote it, says:

"The case has been presented by the parties in interest in a general way and no instances of alleged undue prejudice arising out of the practices of any individual trunk line have been called to our attention with sufficient definiteness to warrant a finding on a specific case. If any such instances exist or occur, they may be specifically presented. The petition will be dismissed, and it will be so ordered."

INTERSTATE COMMERCE COMMISSION SUSPENSION ORDERS.

The commissioners have suspended until November 29 the operation of certain tariffs. The suspended schedules name increased rates on lumber and other forest products, carloads from points in the state of Maine and from points in Canada to various destinations in New England and eastern New York. The present rate from Van Buren, Fort Kent, and other points of origin in Maine, taking the same rates to Harlem river, New York, is 18 cents per 100 pounds. The proposed rate is 21½ cents. Rates to other destinations are likewise increased from ½ to 3½ cents per 100 pounds.

INTERSTATE COMMERCE COMMISSION MISCELLANEOUS

The commissioners have allowed application No. 10739, of A. D. Hall, agent, relative to lumber rates to southern territory. Regarding rates on lumber from points in Illinois, Indiana, Iowa and other states to stations on the line of the Nashville, Chattanooga & St. Louis, the commissioners have authorized carriers, parties to Hall's tariffs, to publish the following note in their tariffs:

"Class rates governed by southern classification, published in this tariff or supplements, will not apply on lumber and articles taking same rates, carload, in the absence of specific commodity rates or lettered class rates, in exception to southern classification."

NATIONAL FOREST RESERVATION COMMISSION TO BE CONTINUED.

Washington, D. C., Aug. 7.—The agricultural appropriation bill has been passed by both houses of congress and on Friday of last week the house took a separate vote on an appropriation to continue the work of the National Forest Reservation Commission under the Weeks law.

The bill was passed allowing an appropriation of $1,000,000 for this year and $2,000,000 for next year for the purchasing of forest lands on the watersheds of navigable streams.

There was much opposition to this conservation bill earlier in the present session of congress. As a matter of fact, the house voted the measure out of the appropriation bill. It was replaced by the senate, later going to conference, where it was decided to let the house vote separately on that appropriation. As before stated, it was passed without much opposition last week. This will give the commission a "new lease on life" and allow it to continue its work in purchasing these forest areas on the eastern coast.

Personal News Notes

N. Gregertsen, of the Gregertsen Bros. Co., wholesalers of cypress lumber, with headquarters in the McCormick building, this city, is spending a summer vacation at Minocqua, Wis.

G. W. Allport has resigned his position with the Dermott Land and Lumber Co. to devote his time to his personal interests at Geridge, Arkansas. The Chicago sales office of the Dermott Land and Lumber Co., 1559 Railway Exchange building, will be in charge of Messrs. H. C. Lindahl and Percy Bass, who have been associated with the company for some years.

R. R. Caffee, assistant professor of forestry at Pennsylvania State College for the last five years and well known to lumbermen throughout the country has given up his work at the college and taken a position as forest engineer with Wheeler & Dusenbury, the well known white pine people of Endeavor, Pa.

Nelson A. Gladding, vice-president and general sales manager of E. C. Atkins & Co., Indianapolis, Ind., was in Chicago last week on his way to a general survey of the company's various branches on the Pacific coast. Mr. Gladding will be absent about a month.

J. D. Staple, secretary and sales manager of the Northwestern Cooperage & Lumber Co., Gladstone, Mich., left Chicago last Tuesday evening for his northern headquarters after a several weeks' stay in Chicago, accompanied by his family and making headquarters at the Plaza Hotel on the North Shore. Mr. Staple was somewhat indisposed when he arrived here, but his visit resulted in a well earned rest and much physical benefit.

Everett A. Thornton, of the E. A. Thornton Lumber Co., Lumber Exchange, this city, has been spending some time lately at Lake Superior points, especially at Marquette, Mich., where the company has important interests. Mr. Thornton also intended to visit some of the Canadian mills during his absence.

C. H. Barnaby, the way-up lumber manufacturer of Greencastle, Ind., was in Chicago last week accompanied by members of his family and a party of friends from his home town and all were on their way to Alaska, where they expected to spend several weeks in seeing the sights and in recuperation.

E. H. Daley, of the E. H. Daley Lumber Co., a well known wholesale concern with offices at 949 Broadway, N. Y., was in Chicago last week on his return from a northern trip. Mr. Daley makes an annual pilgrimage to the northern Wisconsin and northern Michigan mills and happened in Milwaukee at the time of the midsummer meeting of the Northern Hemlock & Hardwood Manufacturers' Association. He was accompanied by his friend, A. E. Murphy, also a well known eastern lumberman.

James D. Lacey, of the James D. Lacey Timber Co., this city, has been in attendance at the annual regatta of the New York Yacht Club this week and was accompanied by Mrs. Lacey and their daughter, Mrs. Victor Thrane. During the regatta the party entertained Mr. and Mrs. W. F. Hofstra, of New York, Mr. Hofstra being a widely known lumberman of that market. The party spent considerable time on Mr. Lacey's steam yacht and visited several points along Long Island Sound and the New England coast.

Among the southern visitors in Chicago last week were J. H. Foresman, vice-president of the Long-Bell Lumber Co., of Kansas City, and family; and J. E. Marrs, manager of the Minnetonka Lumber Co., of Oklahoma City, Okla., and his family. The party left on the steamer "Minnesota" for Charlevoix, Mich., where they will remain several weeks for a summer rest.

T. W. Gunnersen, sole proprietor of G. Gunnersen & Co., 40 William St., Melbourne, Australia, announces that on the first of July he took into partnership William George Nosworthy, and that the business would be continued under the name of "Gunnersen Proprietary, Ltd.", and that he looks forward to a continuance of the pleasant business relations which have existed between his country and his many friends in America.

Ernest H. Dalbey, known for many years to the lumber trade in the Mississippi valley, was in Chicago last week on a visit and is the same representative of optimism that he has always been. Mr. Dalbey for the last few years has been making his home at Great Falls, Mont., which, it seems from his statement, is as thoroughly in the center of the universe as Proctor Knott placed Duluth aforetime. Mr. Dalbey is secretary of the Northern Flax Fibre Co., of Great Falls, and wants it known that his chief ambition in connection with the lumber trade is to have the Concatenated Order of Hoo-Hoo hold an annual meeting in his city within the next two or three years.

J. C. Murray, general freight and passenger agent of the Missouri & North Arkansas Railroad, has announced the appointment of M. L. Schultz, for some time connected with the road, as commercial agent for the company at Chicago, with headquarters at 533 Marquette building. Mr. Schultz is well known among the members of the lumber trade in the southwestern territory.

D. S. Hutchison, of the Nashville Hardwood Flooring Co., Nashville, Tenn., has been in Chicago territory during the last several weeks and left for the south Wednesday of this week. Mr. Hutchinson reports that he had some good success in placing oak flooring orders and expects to return to this market shortly.

James E. Stark, president of James E. Stark & Co., Inc., Memphis, Tenn., has been in the city several days, accompanied by his family and is making headquarters at the Edgewater Beach Hotel on the North Shore. Mr. Stark reported Memphis business conditions in fair shape and said that the hardwood demand with his concern was fairly good. The firm of James E. Stark & Co., for a long time operated as a co-partnership, has been incorporated in order to meet the requirements of its expanding business and the style henceforth will be James E. Stark & Co., Inc. The officers of the corporation are James E. Stark, president; M. C. Raymond, vice-president; J. E. Walsh, treasurer and E. A. Okerbloom, secretary.

O. P. Hurd, for many years engaged in the hardwood lumber business at Cairo, Ill., but in the last two years located at Cincinnati, Ohio, in charge of the hardwood lumber business of Bennett & Witte, has purchased the interest of Mrs. W. A. Bennett in the concern and now is sole owner of the business. He will continue operations under the same style as heretofore, perpetuating the old name of Bennett & Witte. Mr. Hurd is a brother of John S. Hurd, of the Otis building, this city, and is well known in the hardwood trade of the Chicago territory.

Fred B. McMullen, of the McMullen-Powell Lumber Co., Lumber Exchange, this city, has been in Augustana hospital here for the past two weeks, having undergone an operation for stomach trouble. Mr. McMullen at latest accounts was getting along as well as could be expected and hopes to be back at his office by September 1. His many friends in the hardwood lumber industry of Chicago and the country will be gratified to know of his convalescence.

Louis A. Smith, for some years connected with the hardwood lumber trade of Chicago and who was manager for several years of the Dermott Land & Lumber Co., at Dermott, Ark., and who left that concern in 1914 because of ill health, was in Chicago this week and told the LUMBER WORLD REVIEW that he had fully recovered from his indisposition. Mr. Smith has been located during this interval on a farm which he owns near Dowagiac, Mich., and thinks that the outdoor life has been of great benefit to him. He is contemplating a renewal of his allegiance to the hardwood lumber industry when he finds a suitable opportunity.

Frank F. Fish, secretary of the National Hardwood Lumber Association, McCormick building, this city, returned the first of last week from a trip to Boston, Mass., and other eastern centers. Primarily his trip had in view a conference with the association's new president, John M. Woods, of East Somerville, Mass. Mr. Fish stated that he had a splendid visit with President Woods and that the affairs of the association were thoroughly gone over and policies were outlined, which will redound greatly to the benefit of the association's activities. Secretary Fish stated that he was most delightfuly entertained by President Woods in many ways and especially at the Corinthian Yacht Club at Marblehead, Mass., of which Mr. Woods is one of the members.

Everett, Wash.—Bryan Lake Shingle Co.; $2,000 capital. R. H. Groger, A. B. Bracna and C. M. Drake.

Los Angeles, Cal—Woodhead Lumber Co.; $20,000 capital. Emma B. Woodhead, David Woodhead and Lloyd Wright.

Butte, Mont.—Silver Bow Mill & Lumber Co.; $25,000 capital. B. F. Smith, E. D. Elderkin and W. H. Shattuck.

Grottoes, Va.—Virginia-Maryland Lumber Co.; $25,000 capital. D. E. Ham, president; S. E. Foster, secretary and treasurer.

Seattle, Wash.—The Washington Creosoting Co.; $25,000 capital. Geoffrey Winslow and Talmadge Hamilton.

Wausau, Wis.—The Yawkey-Bissell Lumber Co.; $350,000 capital. Walter Alexander, W. H. Bissell, C. C. Yawkey and Will W. Gamble.

West Bend, Ia.—Hayne & Severson have put in a lumber yard at this place.

Pittsburgh, Pa.—J. P. Harley & Co., to manufacture and deal in boxes, baskets, crates, hampers, cartons and barrels. J. C. Bean, J. P. Harley, August Kiefer and B. C. Mitchell.

Webster [illegible] W. Va.—The Rahway Lumber Co. C. H. Holden, of Parkersburg, W. Va., president.

Pittsburgh, Pa.—The Lafayette Lumber Co.; $30,000 capital. J. D. Caplan, J. Howard Palmer and others.

New Mills

Blaine, Wash.—Vinup & Holmes will build a shingle mill here.

Maple Falls, Wash.—The Silver Lake Manufacturing Co. has started operating a new sawmill which will have a daily output of 100,000 feet.

White Lake, Wis.—The Yawkey-Bissell Lumber Co., of Wausau, will erect a plant here.

Moss Point, Miss.—The White Veneer & Manufacturing Co. will build plant to manufacture box shooks to have a capacity of 20,000 feet box shooks daily.

Dyer, Tenn.—The Dyer Fruit Box Manufacturing Co. will rebuild plant recently burned.

Tampa, Fla.—The Bates-Hudnall-Jetton Co. will erect a planing mill.

Bernice, La.—The Bernice Lumber Co. will rebuild planing mill recently burned.

Amory, Miss.—The Amory Lumber Co. will build a planing mill with daily capacity of 40,000 feet.

Belzoni, Miss.—The Belzoni Hardwood Lumber Co. will erect a band saw mill.

Toxaway, N. C.—Jerome Moltz, of Williamsport, Pa., is reported to have purchased several thousand acres of timber land and will build a band mill.

Jacksboro, Tenn.—Lee Faulkner, of Jellico, will build a saw mill near here.

Elmina, Tex.—The Walker County Lumber Co. will build a saw mill.

Ennis, Tex.—A new saw mill is being installed on the Trinity river, east of Ennis, by J. F. O'Neill, of Texarkana.

Woodville, Miss.—The Allison Lumber Co. is preparing to erect a mill near here.

Lenox, Ky.—The Lenox Saw Mill Co. is erecting a mill here.

Business Changes

Bristol, Tenn.—The Cortrim Lumber Co., organized by Geo. M. Speigle and others, has purchased the Peter-McCain Lumber Co. properties, including band mill, planing mill, etc.

South Bend, Ind,—The Ziegler-Huff Lumber Co. has been reorganized under the name of the South Bend Lumber Co. The officers are G. W. Ziegler, president; J. I. Pavey, secretary and treasurer; J. W. Paxton and F. E. McDonald. Capital $30,000.

Atchison, Kan.—The Carlisle-Pennell Lumber Co. will be incorporated under the laws of Washington, the Kansas charter will be surrendered and the Atchison office closed. It will continue to be a $2,500,000 corporation.

Klamath Falls, Ore.—J. F. Bode, of Missoula, Mont., will take over the management of the plant formerly operated by Savidge Bros.

Kalamazoo, Mich.—The name of the Van Bochove & Sons Manufacturing Co. is changed to the Van Bochove Lumber Co.

Houston, Tex.—The Robinson Sash & Door Co. will increase its capital from $5,000 to $10,000.

Mount Carmel, Ill.—T. B. Wright, jr., has sold out to the W. M. Simpson Lumber Co., of Terre Haute, Ind.

Palestine, Ill.—J. M. Cawood & Son have sold out to the Palestine Lumber Co.

Clinton, Okla.—The L. B. Grant Lumber Co. has sold out to the Hiawatha Lumber Co.

Decatur, Ark.—The Decatur Lumber Co. has sold out to the J. P. Roush Lumber Co.

Emington, Ill.—Alexander Brown has sold out to L. M. Bayne Lumber Co., of Ottawa.

Ollie, Ia.—Stahl & Bottger have sold out to W. H. France.

Paducah, Ky.—The Sherrill-King Mill & Lumber Co. is now known as the King Mill & Lumber Co.

Menominee, Mich.—The plant of Sanford & Treadway here has been purchased by Walter C. Mansfield.

Baltimore, Md.—L. F. Driver & Co., of Thomasville, Ga., have opened an office at 1031 Munsey Building, Baltimore.

Rudyard, Mont.—The Rudyard Lumber Co. has sold out to Hoelf & Rolf.

Emerson, Nebr.—Jensen & Zapp have been succeeded by the Emerson Planing Mill.

Monrovia, Cal—The Boyd Lumber Co. is now known as the Bortells Lumber Co.

Selbyville, Del.—The Delaware Lumber Co. has sold out to the Selbyville Manufacturing Co.

Savannah, Ga.—The Hilton Dodge Sales Co. has changed its name to the Savannah River Sales Co.

Chicago, Ill.—The Cottage Grove Manufacturing Co. has increased its capital to $35,000.

Louisville, Ky.—The J. F. Hillerich & Son Co. is now the Hillerich & Bradsby Co.

St. Joseph, Mo.—The Mitchell Avenue Lumber & Coal Co. has sold out to the Hutchison Lumber & Coal Co.

Rogersville, Tenn.—Lyons & Walker are now known as the Lyn-Wal Lumber Co.

Tracey City, Tenn.—The W. F. Bradley Lumber Co. has moved to Brewton, Ala.

Houston, Tex.—The Pennington-Foster Lumber Co. is now the Thos. Pennington Lumber Co.

Spokane, Wash.—The E. T. Chapin Co. has established an office in Chicago under the supervision of Glenn A. Potter.

Memphis, Tenn.—James E. Stark & Co. (Inc.) have succeeded the copartnership of James E. Stark & Co.

Cincinnati, O.—O. P. Hurd has purchased the interest held by Mrs. Bennett in the hardwood business of Bennett & Witte. Will be continued under the same name and policy.

Lansing, Mich.—The Capital City Lumber Co. has increasbd its capital from $25,000 to $30,000.

New Meadows, Idaho.—James Loe has succeeded to the lumber business of Loe Bros.

Chula, Mo.—E. L. and S. P. Kirkbride have recently purchased the lumber yard from Dickman & Taylor.

Fires

Galesburg, Ill.—Damage estimated at from $5,000 to $7,000 was caused recently by fire at the yard of the Hinchliff Lumber Co.

Fulton Chain, N. Y.—The lumber mill and yards of the Brown's Tract Lumber Co. burned; loss estimated at $75,000.

Glenwood, Fla.—Bond Lumber Co.'s saw mill, dry kiln and 110,000 feet lumber burned; loss $100,000.

Brighton, Ill.—Fire destroyed the offices and yards of the Farmers' Lumber Co.; loss estimated at $7,000.

Newport, Ky.—Fire in a planing mill owned by Fred Miller, totally destroyed brick structure and adjoining lumber yards.

Mill City, Ore.——The saw mill and shingle mill of the Potter Lumber Co. burned; loss $4,000; insurance $2,000.

Carlisle, Wash.—Copalis Lumber Co.'s dry kilns burned; loss $10,000.

Jersey City, N. J.—The sash and blind factory and lumber yards of the Barnes Manufacturing Co. burned; loss $30,000.

Chicago, Ill.—Fire in the lumber yard and planing mill plant of the Rittenhouse & Embree Co. caused a loss of $100,000. Insured.

Baker, Mont.—The Midland Coal & Lumber Co. is reported to have sustained a fire loss of $10,000.

Mellen, Wis.—The shingle and tie mill of the Mellen Cedar Co. burned; loss estimated at $10,000; will be rebuilt as soon as possible.

News Miscellany of the Lumber World

Southwestern News

Little Rock, Ark., Aug. 5.—H. V. Adams has sold the retail lumber yard at Decatur, Arkansas, known as the Decatur Lumber Co., to

LITTLE ROCK, ARK.

J. P. Roush of Gentry. Mr. Roush also recently bought the Gentry Lumber Co.'s yard at Gentry, Arkansas.

The stave mill at Melburne, Arkansas, belonging to the Chess & Wymond Co., of Louisville, Kentucky, will soon resume operations, after being closed down for some time.

W. R. Cady & Sons have completed their new cooperage plant at Rogers, Arkansas. It is modern throughout.

A hardwood saw mill is being erected on the Cotton Belt railroad, about three miles west of Kingsland, Arkansas, by G. W. Sallee.

It is reported that the new plant of the McLean-Arkansas Lumber Co., which is being erected in the eastern part of Argenta, just across the Arkansas river from Little Rock, will be completed and ready for occupancy by September 1. This is about thirty days sooner than it was originally thought the work could be done, but the construction has moved forward with the greatest expedition. The office building, which is a five room frame building, is now complete, and the other work is going forward rapidly. The plant, when completed, will be one of the most up to date plants of the kind in Arkansas.

* * *

Kansas City, Mo., Aug. 6.—From all over the territory tributary to this market come reports of building operations on the increase. This is true locally as well as in the surrounding country. Although the estimated value of buildings for which permits were issued during July, 1916, according to figures just available at the office of the Kansas City superintendent of buildings, fell short of last July's totals by 22 percent, it was not enough to overbalance the figures for the first seven months of the year as a whole. The decrease was entirely due to the building strike, now happily settled.

KANSAS CITY, MO.

South Atlantic News

Jacksonville, Fla., Aug. 6.—The Carpenter O'Brien Co. has arranged for the opening of a sales office in Boston. This office is to handle all sales in New England territory. The company will make deliveries to Boston by water direct from the mill.

JACKSONVILLE, FLA.

The N. B. Borden Lumber Co. has been incorporated at Fernandina to engage in manufacturing and handling lumber.

A proposition has been made to the board of port commissioners for another shipbuilding plant on a leased portion of the property of the city at the municipal docks. The new company has contracts to build two schooners and expects to be able to build six vessels at a time.

* * *

Thomasville, Ga., Aug. 5.—Orders for rush shipments of lumber for railroad use to the flood sections of North and South Carolina continue to come in, and the firms belonging to Thomasville's lumber colony have been doing extensive hustling to get them filled. These orders are chiefly for timbers for repairing bridges and trestles, washed away or damaged by the high waters.

THOMASVILLE, GA.

Fine prices are offered, stringers bringing from $35 to $40 a thousand feet and other timbers in proportion. Crossties for the same work are also commanding fine prices. Many carloads are being shipped from here and nearby stations in the county and adjoining ones, wherever a carload of lumber can be found.

Central Southern News

Memphis, Tenn., Aug. 1.—The Gayoso Lumber Co. has bought a tract of more than 1,000 acres of hardwood timber near Philipp, Miss., containing more than 25,000,000 feet of hardwoods, principally oak and gum. This firm operates a large band mill in New South Memphis, and the timber on this property will be brought to Memphis, where it will be converted into lumber. It will be necessary to build a railroad several miles in length to facilitate the development of this timber, and this will be done with comparatively little delay. The Gayoso Lumber Co. has, during the past two or three years, been a conspicuous buyer of timber lands in Mississippi, as well as of hardwood logs in the open market.

MEMPHIS, TENN.

A. N. Thompson & Co., with headquarters at Memphis, have announced plans for the removal of their hardwood mill from Yazoo City to Patosi on the Silver City branch of the Yazoo & Mississippi Valley line of the Illinois Central. It will require several weeks to remove this mill and set it up in its new location. The company has recently acquired several thousand acres of hardwood timber lands in the section tributary to Patosi and the change in the location of the mill.

The Baker Lumber Co., with offices at Memphis, has announced, through F. E. Gary, a reduction of the capital stock to the nominal sum of $1,000 and the sale of its band mill at Turrell, Ark., to the Lyon Co., near Jacksonville, Fla. The organization will be kept intact, but the company has cut out all of its timber in the territory tributary to Turrell.

* * *

Laurel, Miss., Aug. 5.—The new manufacturing plant of the Finkbine Lumber Co., located midway between Laurel and Jackson on the Gulf and Ship Island railroad, began operations August 1. The company has sufficient timber to insure a run of fifteen or twenty years.

LAUREL, MISS.

The town of D'Lo, which has sprung up adjacent to the new industry, is described as the "wonder city of Mississippi." Less than a year ago the place consisted of a country store, a small frame depot and a water tank. Today it is a model town of perhaps 1,500 inhabitants, with graveled streets, fifteen or twenty brick store buildings, a modern hospital, a magnificent club building and numerous handsome bungalow homes. It boasts of a weekly newspaper and two picture shows, and the foundation is being laid for a handsome and commodious school building. Two church congregations have been organized and will erect buildings at an early date.

Middle States News

Buffalo, N. Y., Aug. 8.—Buffalo has been unfortunate in having two lumber fires during the past month, one of them destroying $150,000 worth of lumber at the yard of the Atlantic Lumber Co., on July 22, and the other causing a loss of $20,000 to the City Lumber Co., whose yard adjoins. The former company does a large wholesale business on Seneca street and a number of other large yards are in the same vicinity. These all escaped, except the City Lumber Co., whose property was destroyed by sparks from the other blaze. At the Atlantic company's fire the lumber burned was all of high grade, mostly mahogany, cherry and walnut. The big shed containing this stock was totally destroyed. Several million feet of lumber was untouched, so that Manager K. L. Ab-

BUFFALO, N. Y.

Knowing

vs.

Guessing

Every lumberman knows, of course, that even laboratory care would not make it possible to measure every board foot in a tract of standing trees. Even a LACEY REPORT is, in the strict sense, an estimate.

It is perfectly true, however, that the more elaborate the care and the greater the proportion of actual measurement, the nearer to the actual facts an estimate becomes. The skill and experience of the expert timber cruiser are most necessary, but no amount of skill and experience can take the place of science, care and double checking.

LACEY REPORTS are a compound of the proper proportions of experience, skill and science and will give you the nearest possible approach to actual knowledge of the quantity, quality and distribution of timber in the tract you think of buying or selling.

Lacey & Co.'s International Files are at your service with the stumpage figures of many tracts now in our hands for sale all over the timbered world. You will do well to consult us concerning any transaction involving standing trees.

Send for our Booklet, "Pointers."

bott is able to continue business without interruption.

The city has a plan to repair the wood-block pavement recently laid on Chapin Parkway, which proved unsatisfactory to property-owners, and it is thought that if an agreement can be reached with the latter the expense of putting the pavement in shape will not be great. An expert recommended to the council that all the wood blocks be relaid in a mortar bed and that a bituminous filler be used.

Inland Empire News

KALISPELL, MONT.

Kalispell, Mont., Aug. 6.—With the approach of harvest, the mill men of western Montana are experiencing some difficulty in securing competent help for their lumbering operations. It is generally conceded that there will be a scarcity of labor a little later on that will seriously affect the operations of the lumber industry.

B. J. Boorman, president and general manager of the Boorman Lumber Co., Fortine, Montana, has been in the district from Great Falls for the past two weeks, looking after his manufacturing interests. Mr. Boorman states that crop conditions in eastern Montana are excellent, and that unless something unforeseen happens, a bumper crop will be harvested.

W. R. Ballord, manager of the Somers Lumber Co., of Somers, transacted business in Kalispell this week. He stated that their saw mill was running on a day and night shift, and that he had sufficient logs in their storage pond with which to operate as long as the season will permit.

The Kalispell Lumber Co. has begun operations at Essex, Montana, where it recently constructed a new saw and planing mill.

* * *

LIBBY, MONT.

Libby, Mont., Aug. 5.—The Libby Lumber Co., Libby, Montana, is operating its saw mill on a day and night shift, and is turning out approximately 260,000 feet per day, of 20 hours. The company has a well balanced stock on hand, consisting of about 30,000,000 feet, most of which is in splendid shipping condition.

The Eureka Lumber Co., Eureka, Montana, has completed its log drive on the Fortine and Graves Creeks, and has succeeded in getting enough logs with which to operate on a day and night shift late this season. The company has enjoyed a splendid business during the entire year, and is now working its shipping department to a full capacity on time and a quarter.

* * *

SPOKANE, WASH.

Spokane, Wash., Aug. 1.—The first seven months of 1916 brought quickened business in all lines to Spokane and the surrounding country. Building permits in Spokane increased more than 100 percent over the same month a year ago. That July was not an exceptional month regarding building activity is indicated by the city's figures for the first seven months of this year, which show that nearly twice as many permits were issued as during a like period last year.

Since the first of the year, when prohibition went into effect, the transactions through the Spokane banks have run up a grand total of $323,094,770, contrasted with $275,383,856 during the first seven months of 1915.

Frank J. Davies, manager of the Rutledge Timber Co., owner of a large new sawmill at Coeur d'Alene, Ida., thirty miles east of Spokane, is in Chicago recovering from a partial operation performed a week ago by the Mayo brothers in Rochester, Minn.

The Inland Empire Paper Co. will have its sawmill at Bonners Ferry, Ida., ready for sawing this week. The company also will commence construction of flume.

Ohio Valley News

CINCINNATI, OHIO

Cincinnati, O., Aug. 8.—One of the biggest lumber mergers of the season was consummated here last week when announcement was made of the amalgamation of the big hardwood lumber firms of Bennett & Witte, of Cincinnati and O. P. Hurd & Co., of Cairo, Illinois. Mr. Hurd, who has been a partner in Bennett & Witte for about a year and a half, recently acquired complete control of the company through the purchase of the interests of Mrs. Bennett. The merged firm will be conducted as Bennett & Witte, with headquarters in Cincinnati, Ohio. They will continue to operate the big Cairo plant.

According to reports read at the annual convention of the Ohio Builders Supply Association, held last week at Cedar Point, Ohio, the demand this year for material used in building work, largely including lumber, was the greatest in years. Not only are factories and factory additions going up in unusualy large numbers throughout Ohio, but dwellings as well and the latter, for the most part, are of the better class, necessitating high grade interior finish. The supply men are well satisfied with the present business conditions, but they would like to have a lien law that would afford more protection; and will probably make a demand accordingly when the next legislature of Ohio convenes.

Building Commissioner Rendig's report for July shows a falling off in the number of permits and the total cost of construction as compared with July a year ago. The first seven months of the year, however, show a slight increase over 1915 in the number of permits, although the total cost is less.

Local mahogany importers and furniture circles were greatly interested in the announcement from New Orleans that a new company has been organized to engage in the lumber carrying business between New Orleans and Colon, Panama. Six vessels already have been purchased or chartered under the name of the San Ramon Steamship line.

Gulf Coast News

GULFPORT, MISS.

Gulfport, Miss., Aug. 1.—Deeds involving the transfer of a site valued at $40,000 and donated by the citizens of Gulfport has been delivered to the attorneys of the Edward Hines Lumber Co. It is stated that with the approval of the legal department of the Hines company of these deeds, work on the site of the mill and preliminary work as to yards of the big plant will be put in operation.

Investigation is being made of titles of additional land for the establishment of a paper mill and box factory, which plants will also be operated by the Hines company in conjunction with the waste material from the sawmills of the concern. The plants are to be built together.

* * *

BEAUMONT, TEX.

Beaumont, Tex., Aug. 7.—That Beaumont is being recognized as a deep water port is indicated by the vast volume of tonnage already being handled through this port. Railroads entering this city for several months have been handling on an average of 900 cars a month, equaling about 36,000 tons, or thirty cars a day, averaging forty tons to the car, or 1,200 tons every twenty-four hours.

Regardless of the shortage of cars there has been a heavy movement of lumber through Beaumont the past month. One concern alone shipped 600 carloads of yard stocks to this city for export and another firm hauled 150 carloads to Beaumont and loaded it aboard ship for shipment to Mexico. All of these shipments were attracted to Beaumont by the waterway.

During the month of August one shipment of 1,500,000 feet of yard stocks will be shipped from Beaumont by J. C. Morris & Co., of New Orleans, and a large cargo of timber will be shipped to some foreign country by the Standard Export Lumber Co. The dates of the arrival of these vessels will be made public later. The coastwise shipment to be made by Morris & Co. will be the first made from Port Beaumont since the waterway was opened.

The steamship Keechi with the barge Ankla in tow, carrying about 400,000 feet of lumber, sailed Saturday for Tampico. She will return as soon as possible and will tow two barges loaded with lumber Co. The dates of the arrival of these about 700,000 feet. This will be the first cargo carried to Cuba by this company.

Northern States News

MARINETTE, WIS.

Marinette, Wis., Aug. 7.—At both Marinette and Menominee the lumbermen are operating under a serious handicap, mainly owing to the scarcity of labor. There has been a prolonged strike at many of the lumber plants as well as at the machinery plants in both cities. For a time

Digitized by Google

nearly every industrial plant in the two cities was shut down.

The J. W. Wells Lumber Co. and the Spies-Thompson Lumber Co. plants at Menominee have recently started, however. The Sawyer-Goodman plant, at Marinette, was shut down only three days and is running full.

Manager Charles A. Goodman, of the Sawyer-Goodman Co., says that he could do a lot more business if he had more stock on hand, but unfortunately his assortments are broken and he is not especially attracted by current prices on many items and is disposed to hold his lumber for better prices. Charles F. Rea, sales manager of the company, is at a sanitarium in Michigan. Mr. Rea was taken ill suddenly while returning from the recent meeting of the National Hardwood Lumber Association in Chicago and has since been under the care of a physician. His friends are hoping for his early restoration to health.

The settlement made by the J. W. Wells Lumber Co. with its employees stipulated "open shop" and notices posted about the plant state that the company makes no distinction between union and nonunion men in its handling of the labor problem.

M. J. Quinlan, manager of the Menominee Bay Shore Lumber Co., at Soperton, Wis., is intending to make an eastern trip, comprising Montreal and other Canadian and New England cities. His daughter, Miss Edmire Quinlan, has recently been visiting friends in Marinette and Menominee and is expecting to accompany her father on his eastern tour.

* * *

OSHKOSH, WIS.

Oshkosh, Wis., Aug. 7.—The extremely hot weather has affected manufacturing and trade conditions in this market to some extent, but the sash and door industries, generally speaking, are well provided with orders and are running on a satisfactory basis of output.

E. S. Richmond, of the Morgan company, has been recently on an extended automobile trip, accompanied by his family. Their destination was Whitewater, Wis.

O. T. Swan, secretary of the Northern Hemlock & Hardwood Manufacturers' Association, this city, is spending a little time in the west on a vacation. Mr. Swan left town early last week accompanied by his wife and daughter, going west with them as far as Omaha, whence they proceeded on to Colorado Springs and Clifton, Colo., for an extended visit. Mr. Swan returned by way of Iowa points, and is now visiting his boyhood home at Atlantic, Iowa.

M. O'Brien, of this city, who is now looking after the sales in this territory for the Sawyer-Goodman Co., of Marinette, attended the Cort theatre in Chicago as the guest of Manager Herrmann, an old friend of his, at the initial presentation last Saturday evening of the new farce, "Fair and Warmer," which is creating a great hit wherever it is produced.

Advices regarding the effects of the big storm last week on the crops in this territory are rather conflicting. Many fields of oats were blown down, but it is not believed that the crop was materially injured, as much had been already harvested.

* * *

ESCANABA, MICH.

Escanaba, Mich., Aug. 7.—Lumbermen in this territory complain of a considerable scarcity of men and operations are therefore greatly restricted. R. E. McLean, general manager of the I. Stephenson Co., states that the plant is considerably handicapped, especially in the woods operations, as many of his employees have gone into the harvest fields and others have found employment in the mines and other gainful occupations which are booming as the result of the war. Owing to this cause he was forced to shut down the plant two or three days last week for lack of logs. He has a fair assortment of lumber on hand and the maple flooring factory is running full.

Henry M. Stack, secretary and manager of the Stack Lumber Co. at Masonville, has made some fair sales lately and says that he is in easy shape as regards orders and shipments. The company has about 14,000,000 feet of lumber on the yard, a part of which is sold, but its plant is running on regular time and with a full complement of men. Mr. Stack has on hand a good supply of balsam lath, which he is desirous of moving and on which he will make favorable quotations.

The Northwestern Cooperage & Lumber Co., Gladstone, is running in good shape and finds a ready market for its maple flooring as well as its cooperage and other lumber products. It reports an insistent demand for clear maple flooring. J. D. Staple, secretary and manager of the company, is at present on a vacation and intends to return next week.

The Von Platen Lumber Co., at Iron Mountain, is running on full time, although Manager M. J. Fox says that it is somewhat difficult to keep a full crew in the woods and at the mills. In Mr. Fox's opinion the general shortage of labor throughout the north is going to help the lumber market very materially before winter. He thinks that manufacturers are making a great mistake in selling their No. 3 common at anything like present prices, as there will undoubtedly be a shortage in the season's output of lumber and No. 3 is sure to move out rapidly. Box makers are already sending out feelers on the price and location of desirable stocks.

The Escanaba National Bank, of which J. K. Stack, of the Stack Lumber Co., is president, is erecting an unusually handsome bank structure a block west of the present location. It is to be of light stone and will be a highly ornamental addition to Escanaba's business section.

Pacific Coast News

SAN FRANCISCO, CAL.

San Francisco, Cal., Aug. 5.—The Standard Lumber Co. has purchased a tract of pine timber near Sonora, Cal., paying $34,500 for 480 acres. The Hicks-Hauptmann Lumber Co. of San Francisco has sold four of its lumber carrying steamers to the Fair-Moran Steamship Co. for $350,000.

The Burns Lumber Co. is making a cut of 60,000 feet a day at its plant at Castella, Cal., and a railroad is being constructed into the woods. The box factory will not be opened until a later date.

The Arbiodela company of Porterville, Cal., has decided to commence the cutting of eucalyptus on its property near Pixley.

The sawmill of O. F. Phippen & Sons, near Forest, Cal., is being remodeled and will be placed in operation shortly.

The Quincy Lumber Co. is making a heavy cut of lumber this year at its plant at Quincy, Cal., under the management of W. Y. Stoddard. The plant is being operated on a twelve-hour schedule and it is planned to keep this up for at least six months.

* * *

TACOMA, WASH.

Tacoma, Wash., Aug. 5.—Building permits in Tacoma for July showed a gain of 166 percent over the figures for July, 1915. There were 112 permits issued during the month calling for an expenditure of $81,936. Last July there were eighty-eight permits issued calling for the expenditure of only $31,161. The 1916 permits have exceeded those of 1915 in every one of the first seven months of the year.

Work on the new improvements at the plant of the St. Paul & Tacoma Lumber Co. is progressing rapidly. The big new boiler house is almost completed and the feed house, which will supply steam for the plant of the Carstens Packing Co., one of Tacoma's large industries, is also nearly finished. This last improvement is one designed to put to commercial use the waste from the mill and is one of the most important projects of its kind ever undertaken in the Pacific northwest.

The old East Tacoma mill, situated on Commencement bay, directly opposite the city, has been sold again to Frank A. Leach and F. H. Skewis, who plan the organization of a new lumber company.

* * *

SEATTLE, WASH.

Seattle, Wash., Aug. 5.—L. S. McIntyre has been appointed traffic manager of the West Coast Lumbermen's association to take the place of F. G. Donaldson, who recently resigned. Mr. McIntyre for the last three years has been chief clerk to Frank D. Burroughs, general freight agent of the Chicago, Milwaukee & St. Paul railroad. He has been in the service of the Milwaukee line for seven years, since leaving a clerical position with the Gulf & Ship Island Railway Co. The traffic department of the association recently was removed to Seattle from Portland.

The largest silo ever constructed is being manufactured by the Union Lumber Co. at Union Mills, Wash. The silo will be 80 feet high and 50 feet in diameter, and will be shipped to a Texas farm.

The Weyerheauser Lumber Co., of Everett, and the Three Lakes Lumber Co., of Three Lakes, will furnish 1,000,000 feet of 2x6 wood pipe staves for the construction of Everett's new water system.

BAUGHMAN'S BUYER AND SELLER

Is Now Ready

The first edition of Baughman's Buyer and Seller was copyrighted in 1886. Since then the book has been improved with each edition until now we have the twelfth edition, which is far superior to any of the books previously out.

This book, bound in flexible water-grained leather, can be mailed to your address for $2.50.

LUMBER WORLD REVIEW

608 S. Dearborn St., Chicago, Ill.

Digitized by Google

The Current Trend of the Lumber Market

General Market Review

Conditions generally have improved. The lumber industry has displayed a more settled condition during the last three weeks and the movement is more regular, even if it has not increased greatly in volume. This was brought about largely through a general curtailment of production in all sections of the country, led by the yellow pine manufacturers. At the same time orders have shown a pronounced gain and this has imparted a feeling of substantial confidence in the general market.

There is a much better tone in many of the consuming industries, especially in the wooden box industry, the furniture manufacturing industry, the retail trade and the interior finish trade. The scarcity of labor at the mills of Wisconsin, Michigan and Minnesota has resulted in an enforced curtailment of output, amounting in many localities to as much as 50 percent, although the average is probably nearer 25 percent.

One feature that is now receiving considerable attention at the hands of the mill men is a probable scarcity of lumber for late fall and winter trade, and especially the prospect for a greatly increased consumption of No. 3 grades. No. 2 and better grades are none too plentiful at the moment, while No. 3 comprises, in both Michigan and Wisconsin, fully one-half of the entire hardwood stock on hand unsold. It is reported that the box makers are making inquiry for stocks and that the prices now quoted them are evidently above their ideas, as they have not as yet purchased heavily. However, there have been some deals recently effected of a few hundred thousand feet and it is naturally expected that the box manufacturers will realize the seriousness of the situation and close contracts for needed material soon.

A few disagreeable features are to be faced, some of which may prove to be more serious than now foreshadowed. There is, for instance, a probable scarcity of freight cars and the prospect of a general railroad strike—which, happily, is not imminent—the damage caused to the western crops, the general unrest prevailing in labor circles, the excitement of the presidential campaign—which invariably halts business—and a few other things of greater or lesser importance. The fact is that so many things have occurred to impair trade confidence that little attention is paid to happenings now which in ordinary times would have produced a smash. In view of this, it may fairly be considered that demand will continue in good volume and that there will be the usual revival of business along toward fall.

NORTHERN AND WESTERN PINE.

There is no serious or decided change in the demand for soft pine in any locality. The product of the northern mills is being materially curtailed this season and millmen are not worrying as to any excess of supply over the demand this fall. Factory stock is in fair demand and the trade is buying steadily at prices that may be regarded as reasonable. There is a larger demand for low grade northern pine than any of the other grades and manufacturers are well satisfied as to an improved business in this line in the fall. In the west there is a considerable curtailment in manufacturing and orders are in good volume, being considerably ahead of the ability to ship. Stocks are in poor assortment and prices are in line with previous quotations.

SOUTHERN PINE.

According to the latest information at hand, the yellow pine market is in a materially improved condition. At the same time there has been some lull because of excessively hot weather and the hearts of the retail lumbermen in the western territory have been kept in a flutter by alternate encouraging and depressing reports of the crops. At latest reports, however, the corn crop, generally speaking, was in splendid shape, but several of the crops will not be as [illegible] as was indicated by the report a month ago, though there will still be an adequate supply of both corn and wheat, while the oats crop is one of the largest in recent years. All these things doubtless exercise more or less influence on the southern pine situation. The scarcity of cars and the possibility of a railroad strike can hardly be considered reassuring factors.

Orders show a wonderful increase and the market has already responded by an advance of from 50 cents to $1 on several staple items, while there are some who predict a $5 better price in September. Railroad buying is not heavy, but shows considerable improvement.

NORTHERN AND SOUTHERN HARDWOODS.

Hardwood men are in a state of mind, so to speak. Their stocks are not heavy and they are anticipating a considerable movement this fall. One of the chief features of the situation, in both north and south, is the heavy predominance of low grades in stock as compared with upper grades. As far as can be learned, this is a common feature in both localities and in consequence there is a good demand for firsts and seconds and a better demand than has been seen heretofore for No. 1 and No. 2 common. Holders are more and more inclined to hold their No. 3 for better prices. They had felt somewhat discouraged for a time because of the heavy proportion of No. 3 in their stock reports, but owing to a considerable reduction of product, this is not likely to prove a troublesome factor much longer. Recently box makers have made inquiry and there seems to be a general improvement in that industry, so that the future of low grades seems to be well protected. The furniture lumbers are perking up because of the good showing made at the several expositions in Chicago, Grand Rapids and elsewhere, and the consensus of opinion is that sales will be much more active in this direction shortly.

Among northern woods there is pronounced scarcity of flooring stock in maple, several large concerns reporting that they have nothing whatever to offer. One manufacturer states that in looking over his stock sheets last week he found that he had only four carloads of lumber that he regarded as marketable product. Others reported stocks of hardwoods materially depleted.

The southern woods, particularly oak and gum, are held at good figures. There has been, in fact, but little oak of good quality to offer and this is quietly absorbed. Red gum is selling better relatively than almost any other wood and is especially in good position considering the general state of the market and the indisposition to buy during the torrid season. The furniture and automobile manufacturers are buying more heavily and the box men are taking hold of the low grades. There is, in fact, a pretty fair movement of red gum in all grades and into many channels of business. A fair demand exists for quartered white oak, in which stocks are low. Probably $82 is a fair quotation for firsts and seconds in Chicago territory and $55 for No. 1 common.

Birch is the leader in the northern field and stocks are in active request. The latest quotations on birch, as indicated at the recent meeting of manufacturers at Milwaukee, are $42 for firsts and seconds, $22 for No. 1 common, $14 for No. 2 common and $11 for No. 3 common. There is quite a disposition, however, to hold out for $24 to $25 for No. 1 common, and prices on that grade are likely to show an advance. Soft elm is held at about $36, $25, $17 and $14, on the same grades quoted above.

CYPRESS.

Dealers and mill representatives in this territory report a very satisfactory inquiry for cypress, but say that the demand is hardly more than nominal, owing to the excessively hot weather and the uncertainty in regard to the crops. However, there seems to be a very general idea that the crops will turn out at least around an average volume, in which event good retail trade is always to be looked for. Lately the demand in cypress has been mostly for mixed cars and this naturally for retail disposition. Factories are buying some, but not heavily just now. There is some complaint already felt as to the car supply, but serious troubles have not yet been experienced at the cypress mills, generally speaking.

HEMLOCK.

There is a strong sentiment visible in hemlock circles, and while Chicago demand is only moderate, that from country yards is really much better than had been expected. The recent hardening of the yellow pine market had generated a corresponding feeling among the hemlock manufacturers and distributers and it is felt that both of these competitive woods will score a considerable gain in price before the present tendency is checked. Prominent lumbermen asserted recently that had it not been for the systematic advertising of hemlock already done, the price today would be $2 lower than it is. Stocks in the north, according to recent reports, are barely more than half of what they were at this time last year.

SHINGLES AND LATH

A definite improvement is seen in the demand for red cedar shingles, and while prices have not yet responded materially, there is a much better feeling and some strengthening of values. It is reported that barely 60 percent of the shingle producing capacity is in operation and that cedar logs are scarce and are firmer in price. One of the reasons given for the falling off in production is the scarcity of labor. The latest prices reported by local wholesalers are $3.11 for clears and $2.65 for stars. There is a fair demand for northern white cedars and these are quoted at previous figures. Lath are in continued good request and there is a pronounced scarcity of No. 1 hemlock or No. 1 mixed at most northern points.

Middle States Markets

NEW YORK, N. Y.

We have received this report from the metropolitan district: "While the market for the month of July was unsatisfactory because of rainy weather and unsettled labor questions, it improved toward the end of the month and August has opened with more favorable conditions. Prices are still unsatisfactory but inquiries and orders are very encouraging and indicate normal business throughout the fall months. Much heavy construction timber and lumber will be in demand.

"Hardwoods are moving well, and prices are firm. Birch, oak, thick maple and ash are in the lead. Yellow pine is firmer in price than two weeks ago and is moving better.

"Western woods are in fair demand."

* * *

PHILADELPHIA, PA.

A lumberman sends the following report of market conditions in Philadelphia: "The lumber market is lively and building active, and lumbermen generally encouraged to expect an excellent fall trade.

"The retail yards are buying well and the railroads and industrial plants are buying more heavily than in several months.

"Hardwoods are in good demand and prices are somewhat stronger. Plain and quartered oak in red and white lead in demand, and ash, maple, bass, birch and gum strengthening in demand.

"White pine, hemlock and spruce are active and selling at good prices, and cypress has been unusually good.

"Yellow pine and North Carolina pine are still unsatisfactory in price but dealers in both woods report an upward tendency."

* * *

BUFFALO, N. Y.

A correspondent well posted on lumber conditions sends the following: "The lumber trade is showing little change in volume from a month ago. Things are going along about normally in the building line in this city and woodworking industries are busily employed, so far as the scarcity of labor will permit. As a rule the wholesalers are now adding to their stocks in an-

Digitized by Google

ticipation of early improvement in business and a good fall trade is looked forward to.

"The report from yellow pine dealers is that conditions are more favorable on account of the curtailment at the mills. It is said that stocks in the south have been much reduced, so that the mills are now asking about 50 cents to $1 more for stock than a few weeks ago. It is difficult to get much advance in this section, because the quantity of stock moving just now is small. Retailers are not doing much in country districts, as the farmers are now quite busy with their regular work. The crops have turned out better than was counted on at one time, so the future looks brighter for retail lumbermen.

"A fair amount of hemlock is moving and business is being taken at about the same prices as a month ago. Assortments in local yards are better now than for some time, as lake receipts have been on a fair scale.

"White pine has been about holding its own. In the building grades not much is being done, but pattern stock is in better inquiry than a year ago and prices hold firm.

"In the hardwood trade conditions are not much changed from a month ago. Yards are not putting out much stock, though trade is about seasonable. The high-priced woods, like mahogany and walnut, are stiff in price. Oak, maple and ash are the best sellers at most yards at present."

Central Southern Markets

We have received the following report of trade conditions in Memphis: "The demand is already appreciably better than during the past few weeks and a further expansion is confidently expected. More inquiries are being received than for quite a while and more business is resulting.

MEMPHIS, TENN.

"The call is increasing for oak in both the higher and lower grades and prices are rather more favorable.

"Plain and quartered red and white oak in the higher grades have been showing a fair movement for the past few weeks, but the common grades have been extremely slow.

"There is a very satisfactory demand for gum in both the higher and lower grades. Red gum is particularly wanted, while sap gum is eagerly purchased, especially in thick stock."

* * *

A manufacturer of Mississippi writes us as follows: "From a statistical standpoint, the market situation is very promising. Shipments are going out much faster than lumber is being produced, causing a reduction in stocks at the mill which, of course, has a tendency to stiffen prices somewhat.

ARBO, MISS.

"We feel that we are just entering on a period of market activity, and that the spring "farm" demand in the north, which did not materialize, will this fall be greater than ordinary. As we see the immediate future, the market conditions will be continually better from now on; especially if the Mexican situation clears up.

"We understand large quantities of low grade stock are moving into the southwest for governmental consumption in the way of housing the troops along the border, and this should further react to better the market, we believe, and the market should continue to improve, rather than decline. This improvement is already evident in both prices and demand."

Southwestern Markets

A correspondent sends this report of the Kansas City market: "The good trade in yellow pine continues here. Prices have strengthened fully 50 cents in the last ten days throughout the yellow pine list. Many manufacturers refuse to make the concessions which started the buying movement two weeks ago, and find that they get the business in as large quantities as they can handle at the later and higher quotations.

KANSAS CITY, MO.

"While most of the business is coming from the larger line yard concerns, small operators are again sending in scattering orders and a general buying movement seems to be starting. Local wholesalers are getting their order files about as full as they want them, which accounts for the stiffening in the price. While the railroads have been buying fairly liberally in some cases that department of the business is still far from rushing. A good sized government order is among the larger purchases of yellow pine reported here. A Kansas City firm is said to be sharing this order with a New Orleans concern, and the material is to be used in the Panama Canal Zone.

"West coast goods are selling only moderately well in this market but prices are firm. The hardwood trade is seasonable. Cypress is in good demand at firm prices."

* * *

A well known lumberman of St. Louis has this to say of the market: "Considerable business is being done during the last ten days, the demand coming chiefly from the country yards though the railroads and car factories are placing some orders. Prices have advanced 50 cents to $1 a thousand, with prospects of further increase within a short time.

ST. LOUIS, MO.

"The hardwood trade is brisker than it was two weeks ago and prices remain firm. Oak is in good demand, with gum a good second. The demand for car timber is better, and the outlook for the fall trade is fairly good."

* * *

A well known lumberman of Texas writes us as follows: "Regarding the lumber market, while there is certainly nothing to boast about at the present time, general conditions are very good indeed and we see nothing to stand in the way of a satisfactory movement of lumber the balance of the year at somewhat better prices than we are now obtaining.

REMLIG, TEX.

"The general curtailment that is now being effected has already improved the condition and, of course, this improvement will become more marked as the mill stocks are reduced, and this in itself is bound to be the greatest element of strength in the market.

"The most serious feature with us just at the present time is lack of cars in which to ship our stock, and we believe that we are facing the most serious car shortage we have had for many years. For the month of July we received only about 66 2/3 per cent of cars needed, and the outlook for the present month is even more gloomy. The car shortage should, of course, strengthen the price situation, as it is folly for the mills to take on a heavy order file and not be able to make shipment; but on the other hand a continued car shortage would have the effect of offsetting the curtailment that is now being made by making a correspondent curtailment in the shipments."

New England Market

A lumberman of Boston writes of conditions in the New England lumber market as follows: "The movement of lumber in Boston and vicinity has been seriously interfered with by the labor troubles at the finish mills but this may be counted only delay in business, notwithstanding which hardwoods are in active movement with prices firm. The yellow pine market is somewhat handicapped by the New Haven road's embargo so far as yard stock is concerned, but the demand for dimension is good. Prices have stiffened within the last ten days.

BOSTON, MASS.

"Western woods are in light demand and shingles are steady."

Inland Empire Markets

This report of favorable conditions comes to us from Montana: "So far this year, the mills of this district have enjoyed a splendid business, and all are very optimistic as to the outlook for the remainder of the year. At this time the mills are well supplied with orders and are operating their shipping departments to full capacity. Many are operating on time and a quarter in order to take care of the business being offered. On the whole, prices are quite satisfactory, and indications are that there will be material advances on all items in the near future.

KALISPELL, MONT.

Stocks on hand are about normal, but well balanced as to lengths, widths, and grades, and in good shipping condition. Reports indicate that crop conditions throughout the territory, into which the lumber of this district is marketed, are in fine condition, and if harvested will stimulate an excep-

tionally strong demand for lumber during the fall months."

* * *

An Oregon lumberman writes us as follows of general conditions: "Lumber is a little weaker than it was two weeks ago, but we are receiving a number of orders the last ten days at a fair price and so feel encouraged.

ENTERPRISE, ORE.

"Prospects are brighter for a good fall trade, and lumbermen seem more cheerful."

South Atlantic Markets

A well posted lumber authority at Norfolk, Va., says: "Conditions are so mixed and the situation generally is so unusual that it is difficult to arrive at any definite conclusion as to what the future holds in store for the lumber business. In spite of the heavy diminution in the output of lumber, statistics from various producing centers continue to show that production exceeds orders. The voluntary reduction of output in many sections of the country has been greatly augmented by a forced shut down on account of floods. Meantime in the consuming centers, especially in the north, building operations have been interfered with by strikes, the scarcity of labor and high wages, so that lumber is moving slowly from the yards and new stocks are not in demand. Some of the manufacturers interviewed recently have spoken optimistically of the future and have stated that they note a slight improvement in the situation. Others have noted no change, either for the better or worse, but hope for better conditions."

NORFOLK, VA.

* * *

A manufacturer in South Carolina writes us as follows: "On account of the fearful storm in our territory recently, together with the unprecedented and continuous rainfall for the past thirty days, lumber production has been practically at a stand-still. The same conditions, I understand, have largely prevailed in the gulf states, as far west as Texas, which has curtailed production more than 50 percent, and as a consequence we have experienced some improvement in the volume of business for the past ten days, but none in price.

SUMTER, S. C.

"The market on pine dimension sizes, both long leaf and short leaf, is weak, with probabilities that it will continue so until after the presidential campaign. We are hoping for a record-breaking trade next spring but the conditions from now until then are difficult to size up intelligently or accurately."

* * *

A manufacturer of yellow pine in Florida writes us as follows: "The yellow pine market has been very dull for past three or four months; there has been very little demand for the lower grades, and prices have fallen below the cost of production.

MALONE, FLA.

"However, the south, which always takes a large quantity of low grades during the late summer and fall has begun to buy, and prices on the common grades are already beginning to feel the effects of this demand and of the heavy curtailment in production. Few people other than the mill people themselves realize the extent of this curtailment during the month of July, a part of which has been voluntary, and a larger part caused by the floods and storms, many of the mills being shut down entirely from two to four weeks, and practically none of the mills east of the Mississippi running anything like full time.

"This will certainly have a beneficial effect on prices, and the next thirty days should show a decided improvement."

Pacific Coast Markets

A lumberman of California writes of the lumber market as follows: "The month opens with bright prospects for the lumber business. Now that the longshoremen's strike is over and other labor troubles settled, building has been resumed and the movement of lumber is normal. The number of building permits granted the last two weeks insure a heavy local demand for lumber for the next two months.

SAN FRANCISCO, CAL.

"Receipts of lumber by sea of redwood and fir were the heaviest in many months. Freight rates continue firm and there is an increased demand for schooners for lumber carrying.

"The increase in ship building on the Pacific coast assures a steady demand for wood for vessel structure.

"From all mills in the manufacturing districts come reports of renewed activity."

* * *

Conditions in the Tacoma market are described as follows: "A sudden spurt in orders during the first week in August has revived the hopes of local lumbermen in a return of firm prices, though conditions during the latter part of July were far from satisfactory.

TACOMA, WASH.

"The market during July remained very soft, in spite of the heavy curtailment and the co-operation of the Gray's harbor mills which cut down production considerably. However, early in August the railroads came into the market with orders for car material, the Union Pacific and Burlington roads being the leaders. The Great Northern is also in the market for a large quantity of timbers.

"The demand from the middle west is not as good as was expected, but there is considerable lumber moving from Tacoma to the Dakotas and other farming states. The cargo trade has also improved since the shipping men succeeded in getting their boats loaded, in spite of the longshoremen's strike. Taking the situation as a whole it looks brighter at the present time than it has since early last spring. There have been no changes of importance in the price list.

"Shingles have shown some weakness, though prices have not declined materially, the quotations being $1.50 to $1.55."

* * *

We have received this report from Seattle: "Although production at the mills of the Pacific northwest still is greater than the volume of orders arriving there is a firmer tone to the market. Manufacturers as a rule are expecting a good fall trade, in fact some report that buying for fall already has started. The bulk of the business moving now is of orders wanted for immediate use by the yards of the middle west. This condition is taken to indicate that stocks in retailers' hands are light and considerably broken.

SEATTLE, WASH.

"The price cutting that was indulged in by some mills a few weeks ago is declared to have stopped and quotations are now held on a firmer basis. There is a fair volume of new business coming in, but it is still below normal. Stocks at the mills are in better shape than they have been for many months. It is comparatively easy to get almost any kind of stock needed on short notice.

"The cargo trade shows little change. The balance of unshipped orders for the domestic trade has reached 52,368,498 feet and for the export trade 46,765,676 feet. Tonnage rates and labor troubles are preventing to a large extent the movement of lumber by water. Shipments for the week ending July 29 totaled only 7,689,417 feet.

"The majority of the logging camps of the Pacific northwest are closed, but it is expected that this month will see many of them resuming operations. There is said to be no surplus in the water and with expected increase in buying this fall it is felt there will be a good demand for logs.

"Red cedar shingles are slightly firmer owing to an increase in the demand. It is not felt, however, that this is sufficient to advance the price of clears. The increase in demand has been largely for extra stars which by some brokers have been advanced 5 cents, making them $1.55 and clears $1.90."

Ohio Valley Markets

A correspondent well posted in trade conditions in Cincinnati: "The hardwood situation in this section probably shows more strength and good color than the other woods and in comparison the amount of business is good, although the demand is not increasing any at present and at the best is only fair. Prices are holding up firm against adverse pressure, prospects for the big season of building after September 1, causing the dealers to maintain a stiff upper lip. Little price cutting is reported and what is going on in this respect has little or no direct bearing on the general market.

CINCINNATI, OHIO

The large attendance at the furniture exposi-

Digitized by Google

tions has quickened the pulse of the manufacturer and in consequence the demand for the various grades of oak and gum is somewhat improved. Likewise, the furniture concerns are consuming good quantities of walnut at present. The call from this quarter and from the automobile manufacturers probably keeps up the best of all.

"Common white oak in the No. 1 and 2 grades has gained considerably within the past three or four weeks, while there have been few instances of any slumps in the hardwood list. Gum is moving in good volume for this season of the year and commanding nice prices. Birch stocks are getting low, while the demand is increasing, consequently the price list may be expected to rise soon.

"Maple is moving nicely, especially in flooring grades and prices are being maintained rigidly. Poplar and ash have not been moving very satisfactorily of late, their principal call coming from the automobile concerns.

"Cypress is moving pretty freely in factory channels, with prospects of a big building boom soon holding up prices.

"Shingles and lath are scarce, movement is in reduced quantities but prices are not slumping.

"There has been some improvement in yellow pine. Line yards are buying more freely."

* * *

LOUISVILLE, KY.

A correspondent sends us the following satisfactory review of conditions in Louisville: "Business is exceptionally good for this season of the year, and there is every indication that fall trade will be active. Consumption is ahead of normal in many lines, and inasmuch as lumber production has been seriously curtailed on account of bad weather conditions, labor shortage, etc., the technical position of the market is strong, so that higher prices may logically be forecast.

"Practically every item on the hardwood list is good, walnut, ash, and gum being perhaps the most active movers. Chestnut is also selling well at present, as the lower grades are in good demand for gluing up purposes. Oak is not as active as it should be, though there has been a fair call for plain oak. Quartered stock, however, has been rather draggy, though fortunately prices have been well maintained, and stocks are not unduly large. Those who are making quartered oak in quantity are in a position to hold it, and hence the market is not being demoralized by cut prices.

"Generally speaking, conditions are satisfactory, and hardwood operators believe the remainder of the year will be prosperous."

* * *

EVANSVILLE, IND.

A man well informed on the hardwood lumber situation in Evansville and southern Indiana writes as follows: "The hardwood lumber manufacturers in this section report there has been little or no change in market and trade conditions during the past three or four weeks and no marked change is looked for during the month of August. Things are moving along quietly and manufacturers say that while they are getting some orders and inquiries, there is not much life to the trade. The manufacturers report that they have been able to hold the prices up pretty well and they say they are looking for no radical changes in prices during the balance of the season. There is still a good demand for quartered white oak. Plain oak is not in such good demand. Walnut remains at a standstill. Gum is moving freely, owing to the fact that furniture factories in Evansville, Tell City, Ind., Jasper, Ind., Henderson, Ky., and other cities in this section have been in the market for a good deal of gum. Most of the wood consuming factories in Evansville are operating on full time and have been most of the summer.

"Poplar is in slow demand while ash and hickory are reported fair. River mills report that they continue to get many inquiries for quartered sycamore.

"Veneer manufacturers report a good steady trade with practically all the large veneer plants here being run on full time. Building operations are fairly active and contractors and architects report that prospects are exceedingly bright for August and September. Planing mills have been doing a nice business all summer and the sash and door trade has also been much better this summer than it was during last season. The country yard trade has been the best in many years, according to reports that continue to come in. The situation is very good at this time and both wholesalers and retailers are of the opinion that trade will pick up in September."

Gulf Coast Markets

NEW ORLEANS, LA.

Conditions in the lumber market of New Orleans are described as follows: "Further stiffening of prices indicates a steadily improving conditions in the yellow pine market. Although the past week's production figures are slightly in excess of those the week before, curtailment is still the rule on a wide scale, and is expected to continue to be so until mill men are convinced that all danger is past of an excess output such as has caused so much trouble in the past.

"Orders and inquiry are both on a scale such as was thought scarcely possible a month or six weeks ago. Early week mails have brought in a flood of inquiries from all parts of the east and middle west. This is taken to indicate that yard men are stocking up in anticipation of the unusually early beginning of fall building operations, already in evidence. Building permits in the cities continue to show a healthy increase.

"Little change has been noted in the cypress market during the past week. Demand is fair in all lines, and more yard stock is being bought than usual at this time of the year. Factories are busy in all sections of the country. The buying territory, which was recently confined largely to a few states in New England and the middle west, is now active over a much wider area. Tupelo inquiry is very good, and sales are fair. Ash is receiving a good call.

"Expectations that a serious car shortage will develop with the advent of the crop moving season are believed to have had something to do with the stir noted in the local hardwood market during the past week. There is just a trace of fall activity to be noted in the market, which for some weeks has been experiencing the usual summer dullness, with many of the prominent operators and dealers away on their vacations. Manufacturers are beginning to stock up for an unusually heavy fall run of business that is expected.

"Prices are holding up very well, considering the fact that there has been so little doing as a whole during the summer."

* * *

BEAUMONT, TEX.

From Beaumont comes this report of activity in the lumber business: "If present indications are true, lumber buying in August will be very heavy and prices will be considerably better than they have been in six months, is the opinion of Beaumont lumber dealers.

"July proved a fairly good month, although sales have been light up to a week ago. During the past week many inquiries were circulated by retail yards and a number of good orders were placed. Mills are still cutting down their production and for several days manufacturers have shown a tendency to be reluctant about filling orders, the opinion prevailing that prices will strengthen by the middle of August. In several instances it was noted retailers who ordered two, three or four carloads of lumber, had to be content with half that amount.

"The local retail lumber yards are doing a big business, more than they have ever done at this period of the year, this being attributed to the great amount of building under way in this city."

Northern States Markets

MINNEAPOLIS, MINN.

We have received this report of the Minneapolis market: "Inquiry for white pine has steadily been growing among country yard dealers. This indicates that they are preparing for heavy demands from farmers as soon as the crops are harvested.

"City building operations never before were so big. The city call for yard stocks keeps up.

"Prices have remained at a high level, and additional advances are expected. Most of the pine mills look forward to a fall trade equally as good as was the spring business. All manufacturers are urging that orders be placed in time to avoid a possible car shortage.

"The railroads are expected to make heavy demands for cedar ties when their rail laying crews get to work. Prices have not exhibited much firmness. Country yards are coming into the market for posts and prices may be expected to stiffen rather than decline."

"S. O. S."

In this connection, the above does not mean trouble. On the contrary it means avoidance of trouble. It means: SEND ORDERS SOUTH, for Yellow Pine to

Positions

PARTNER WANTED.

A young man of experience and ability with capital and satisfactory references can obtain an interest in a well-established retail lumber and fuel business of thirty-five years' standing in Appleton, Wis.

This yard is located in the heart of the city, is one of the best organized in the state for handling lumber and fuel at a minimum expense.

Young blood is wanted to expand the business.

References: The First National Bank or any other bank in Appleton.

MILLER LUMBER CO., Appleton, Wis.

WANTED.

Good all-around box mill man. Write, with references. BOX B, St. Maries, Idaho.

SALES MANAGER.

Experienced (over twenty years) sales manager would like to correspond with concern with a view to position as sales manager. Has handled southern pine, white pine, cypress and Pacific coast woods. About 40, married, and will go to any section. Address "MO," care LUMBER WORLD REVIEW.

WANTED—POSITION AS SALES MANAGER.

A qualified sales manager, with yellow pine manufacturing experience, a clean record, with results, ample endorsements from former employers and well and favorably known to the lumber fraternity and has recently completed a special investigation in certain wood industries for the government with a view to trade extension, is now at liberty and desires to re-embark in the selling of yellow pine.

I do not claim the ability to set the world afire, but I can deliver the goods, as I have done heretofore.

Manufacturers know that the dependable man is not to be found every day.

If you are interested in my proposition, please address J. R., care LUMBER WORLD REVIEW.

WANTED—SALES MANAGER.

With moderate capital for new screen door factory in Michigan. Experience in sales department necessary. Position will be open in August, 1916. Correspondence invited. Address "T. M." care LUMBER WORLD REVIEW, 1740 Transportation Building, Chicago, Ill.

THE WOOD PRESERVING INDUSTRY.

An interesting advance sheet of the current quarterly number of Wood Preserving, of which Charles C. Schnatterbeck, secretary of the American Wood Preservers Association, is editor, gives the details of an investigation made recently by the Baltimore & Ohio railroad on the economic use of cross ties. For convenience the ties were divided into five classes.

Included under the heading of Class A were the following woods: White oak, burr oak, chestnut or rock oak, cherry, mulberry, black walnut, locust (except honey locust).

Class B: Chestnut.

Class C, the following woods: Red oak, black oak, scarlet oak, Spanish oak, pin oak, shingle or laurel oak, honey locust, beech, hard or sugar maple.

Class D, the following woods: Silver, soft or white maple; red, soft or swamp maple; red or river birch, sweet or black birch, white elm, rock elm and red elm.

Class E, short leaf pine, loblolly pine and sap longleaf pine.

The ties made from the woods named in Classes A [illegible] are used without preservative treatment, while in the other classes the ties are treated. The number of treated ties required on the Baltimore & Ohio railroad annually is 1,121,000 and on the Baltimore & Ohio Southwestern 313,000, a total of 1,434,000. At the Green Springs plant of the system there were treated in 1915, 1,099,538 cross ties. The average cost of treated ties of the first grade in Class C in track is $1.412; of Classes D and E, first grade, $1.37, and second grade $1.112. The estimated life of treated ties in Class C varies from 11 to 15 years for the first grade in main and branch tracks and from 12 to 16 years for grade 2 in other than main tracks. The life of ties in Classes D and E varies from 9 to 13 years for the first grade in main and branch line tracks and from 10 to 15 years for the second grade in other than main tracks. Untreated ties, tie-plated, last about from 7 to 12 years and not tie-plated from 4 to 10 years.

FOREST FIRE PREVENTION ANTEDATES THE REVOLUTION.

Albuquerque, N. M., Aug. 2.—Apropos of the coming danger season for forest fires, District Forester Redington has called attention to a very interesting booklet issued by Cornell University on pre-revolutionary forestry in America. Contrary to the general impression that American forestry is of very recent growth, it is pointed out that such first principles as the prevention of forest fires developed with the first American settlements. Only six years after the Pilgrims landed at Plymouth Rock the colony passed a law aimed to prevent the exhaustion of the local timber supply, and soon after a forest fire law was enacted, prohibiting the setting of forest fires, or even the burning of private lands, except during certain seasons. Similar laws were enacted by the Massachusetts Bay Colony, the New Haven Settlements, the Providence Plantations, Pennsylvania and others at about the same or even earlier dates.

Some of the penalties prescribed were very curious. The law of North Carolina compelled the offender to pay a fine of 25 pounds, or, lacking this, "to receive on his bare back thirty-nine lashes, well laid on." Burning of the woods, the law declared, is "destructive to cattle and hogs, extremely prejudicial to soil, and oftentimes of fatal consequences to planters and farmers by destroying their fences and improvements." Thus again do we learn, says the district forester, that there is at least a modicum of truth in the old saying: "There is nothing new under the sun."

RESOLUTION INTRODUCED IN SENATE TO INVESTIGATE WAGE CONDITIONS.

Washington, D. C., July 6.—A joint resolution has recently been introduced in the senate by Senator Newlands, of Nevada "to investigate wage conditions on railroads." The resolution which was referred to the Committee on Interstate Commerce reads as follows:

"Resolved, That the Interstate Commerce Commission be, and it is hereby, directed immediately to investigate and to report to the congress as soon as practicable the minimum, maximum, and average wage paid, with hours of service, to each class of railroad employees in the United States, and, so for as they are comparable, the minimum, maximum, and average wage, with hours of service, paid in other industries where similar skill and risk are involved, the relation of wages to railroad revenues, the question of whether railroad revenues based on existing rates for transportation will admit of equally favorable terms to all classes of railroad employees, and any other matter in this connection that the commission may deem relevant."

POMERENE BILL OF LADING PASSED IN SENATE.

Washington, D. C., July 5.—Judge Adamson, chairman of the House Committee on Interstate and Foreign Commerce, has recently reported to the house the Pomerene Bill of Lading bill, with amendments. The bill has already passed the senate. Judge Adamson says in his report in part:

"Our committee has given long and patient attention to the consideration of the bill. It appeared to be a banking bill entirely and not designed to promote nor facilitate transportation, but appeared to be designed to improve banking facilities [illegible] be readily available to shippers cash returns on their shipments. The practice has been long in vogue, but some ten or twelve years ago some irregularities and frauds occurred, which rendered doubtful and uncertain the discounting of drafts attached to bills of lading, so that the National Bankers Association inaugurated a movement to secure this legislation."

LUMBER MARKETS OF THE WEST AND NORTH COASTS OF SOUTH AMERICA.

Washington, D. C., July 26.—Exporting members of the trade will probably be much interested in a bulletin that has just been issued by the Bureau of Foreign and Domestic Commerce, Department of Commerce, on "Lumber Markets of the West and North Coasts of South America." The report was made by Roger E. Simmons.

Among the topics discussed are the domestic lumber resources and industry, the lumber imports and their distribution, the species, dimensions, costs, prices, uses, etc., of imported lumber, business conditions, and suggestions for expanding American trade. Speaking of exports from the United States the letter of submittal says:

"The Douglas fir that constitutes almost the entire amount of United States lumber shipments to Chile and Peru seems to be generally satisfactory in dimensions, measurements, and grading, so that the west coast lumber trade has been conspicuously free from the claims and controversies that have characterized the trade in American pine on the east coast. Therefore Chile and Peru, though a smaller market than Argentina, Uruguay, and Brazil, possess the valuable asset of confidence in United States products and cordiality toward American exporters.

"Ecuador is unique in using practically no imported lumber; but it would offer a promising field if the barriers of a high tariff and certain local statutes could be removed. Practically all the lumber imported by Columbia and Venezuela comes from the United States, but the amounts are small —2,000,000 board feet annually for Colombia, and 3,500,000 feet for Venezuela. The limited use of wood in both countries (the total consumption is only 13,000,000 feet in Colombia and 8,000,000 feet in Venezuela), in comparison with cement and other materials, points to the need of a lumber advertising campaign, through which these markets might be greatly extended."

MAHOGANY SITUATION AFFECTING THE GUM AND WALNUT MARKETS.

Louisville, Ky., Aug. 1.—The mahogany situation contains a number of interesting features at present, and inasmuch as it is affecting the domestic hardwood trade, it is worth consideration.

Leading mahogany concerns report that the supply of logs and lumber available is very small, and prices are being advanced continually, in view of the difficulty of getting additional supplies. With unsettled conditions prevailing in Mexico, it is hard to bring mahogany logs from that district to this country, while as far as African mahogany is concerned, the movement is negligible.

These conditions have had a good effect on the demand for woods like American walnut and quartered oak, which are the natural substitutes for mahogany, and in fact houses like the C. C. Mengel & Bro. Co., of Louisville, which is known as a big mahogany concern, are now featuring walnut. The Mengel company is running its mill principally on walnut at present, and is also marketing large quantities of sliced walnut veneers. There is a strong demand for figured gum lumber and veneers at present, but this is not believed to have resulted from the mahogany situation.

50 H-P G.-E. Motor Driving Trimmer and Transmission Booth-Kelly Lumber Co., Springfield, Ore.

Electric Power Reduces Mill Costs

If you would build a lighter mill building, but one story in height, consider electric power from G-E apparatus.

For a low upkeep and more continuous operation due to lessened vibration and definite limit to the power which can be applied to each machine use G-E apparatus.

Reduced fire hazard follows the separation of lath mill, picking table and hog house from saw mill which is possible with electric power.

To use much less power due to greatly lessened friction losses drive each machine with a G-E motor.

Let us refer you to satisfied users. Send for bulletin No. 4962, today.

General Electric Company

General Offices: Schenectady, N. Y.

District Offices in:

Boston, Mass. — New York, N. Y.
Philadelphia, Pa. — Atlanta, Ga.
Cincinnati, Ohio — Chicago, Ill.
Denver, Colo. — San Francisco, Cal.
St. Louis, Mo.
Sales Offices in All Large Cities 6293

The great economies of G-E motor drive are not confined to logging operations, but are evident throughout the mill. The following list shows a few of the many lumber mills with G-E installations:

A New Book

LOGGING

The Principles and General Methods of Operation in the United States

By Ralph Clement Bryant, F.E., M.A., Manufacturers' Association Professor of Lumbering, Yale University.

8vo, xviii 590 pages, 133 figures.

Cloth, $3.50 Net

The information which is contained in this book can be applied by the lumberman in his daily work.

The chief facilities and methods for the movement of timber from the stump to the manufacturing plant, especially logging railroads, are discussed at length.

Greatest emphasis has been laid on features about which there is not much written material available.

SCRIBNER'S LOG BOOK

Over 1,500,000 of these books have been sold. It has had a larger sale than any book of its kind. It has a log scale, lumber tables and an abundance of other useful information. Price prepaid 25 cents.

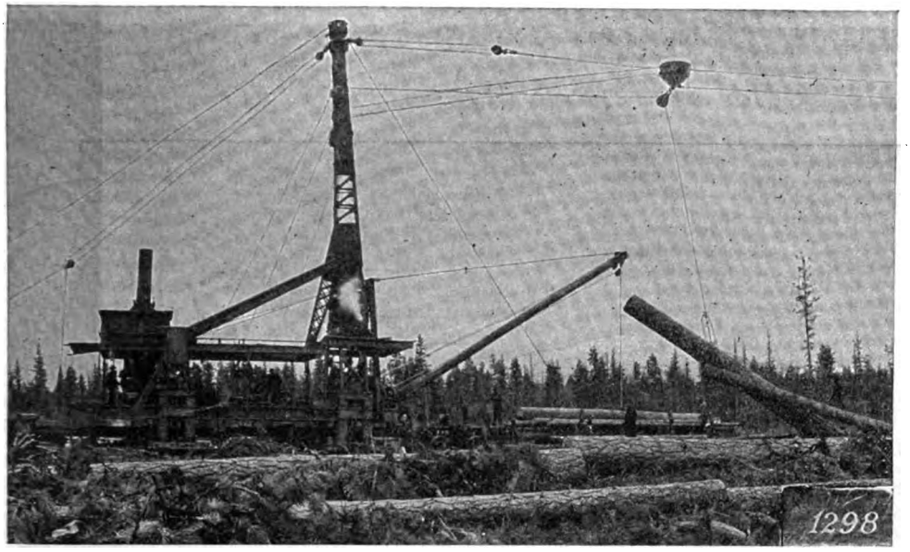
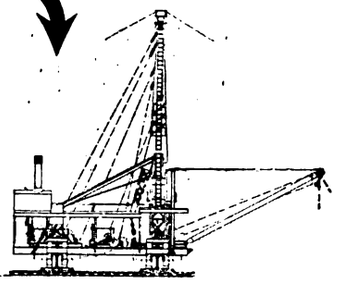
LIDGERWOOD SKIDDERS





The above drawing represents the new Lidgerwood Cableway Skidder with Swinging Loading Boom which is being built for the Shevlin-Hixon Lumber Company, Bend, Ore. This machine will be larger, but of the same type as tney are using at Bend, Ore., shown herewith.

Three Exclusive Advantages OF THE LIDGERWOOD Cableway Skidders

Multiple Skidding Lines. Save time hooking on logs. While one load is coming in, the next load is being hooked on. Skidder runs continuously. Mechanical Slack Puller. Engine pays out slack in skidding line, saves men's time hauling slack and permits side lining to a greater distance than any other machine.

Two speed interlocking device gives power to haul in loaded carriage, and high speed outhaul.

Covers more ground at each setting than any other machine.

That these are practical advantages and not mere selling points is proven by the fact that the Shevlin interests have just ordered their thirteenth Lidgerwood Cableway Skidder.

LIDGERWOOD MFG. CO., 96 Liberty St., NEW YORK, N.Y.

63-65 Columbia St., Seattle — New Orleans: Woodward Wight & Co., Ltd.

FAST SAWING

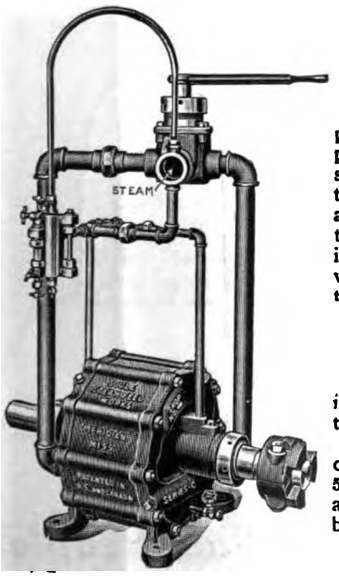
That's the thing that counts in the month's profits. The faster lumber is cut the sooner the order is filled, and the more orders can be filled.

Then there's the prompt shipment—a pleased customer, "the best asset!"

A SOULÉ STEAM FEED will enable you to do this, double up your output.

It has for others, and the increase paid for the machine right now.

See what others say about it. Catalog free.



Soulé Steam Feed Works
Meridian, Miss.

"This has increased the capacity of our mill fully thirty per cent, with no excessive steam consumption. We found the machine exceedingly simple and easy to install, and we feel that we made one of the best investments in machinery that we ever made when we bought this Feed from you."
Horwood Lumber Co.
St. Johns, Nfld.

"Your Steam Feed No. 2 was installed at this plant in the latter part of December, 1908.
"Since we installed this feed our mill cut has increased about 50% and the difference in the amount of steam required has been un-noticeable."
Bartow Lumber Co.
Cartersville, Ga.

WM. E. HILL CO.

KALAMAZOO MICHIGAN

The Twelfth Edition of

Baughman's Buyer and Seller

Is Now Ready—Something Every Lumberman Should Have It Prevents Mistakes

The first edition of Baughman's Buyer and Seller was copyrighted in 1886. Since then the book has been improved with each edition until now we have the twelfth edition, which is far superior to any of the books previously gotten out.

It is a book for everybody who handles lumber, from the stump to the finished building; gives accurately the number of feet in any number of pieces, from 1x1 to 30x30 inches and up to 50 feet long, with cable for size indexed. It also has several pages of cost tables, giving hundreds of different prices, not only on lumber, but on other articles; gives the number of feet of flooring, siding, ceiling, shiplap, number of lath or shingles for any sized building; weights of grain; weights of all kinds of lumber; length of rafters and rafter patterns; postal and interest tables; log scales, cipher messages; terms and abbreviations; estimated freight and capacity of freight cars; rules for carpenters, plasterers, paperhangers and bricklayers. Answers all knotty questions that come up every day, saving time and money.

This book, bound in flexible water-grained leather, can be mailed to your address for $2.50; bound in black seal grain leather, for $3.00; in blue morocco, gilt edges, for $4.00

CO-OPERATION NOT COMPETITION IS THE LIFE OF TRADE

Lumber World Review

THE LUMBER REVIEW FOUNDED 1897

CONSOLIDATED JANUARY 1912

THE LUMBER WORLD FOUNDED 1905

Volume XXXI Number 4

CHICAGO, AUGUST 25, 1916

Single Copies Fifteen Cents Two Dollars a Year

RECEIVED APR. '34 LIBRARY

THOSE lumbermen who have been studying trade conditions during the past six months have learned that either the consumption of lumber was below normal, or the production of lumber was above normal. This condition has been so patent that producers have been reducing their production in order to bring it to a parity with the demand.

But during all this period have you heard anyone worrying over the CYPRESS situation? Have you heard of any curtailment, slump in prices or decrease in sales? The fact of the matter is that CYPRESS saw-mills have been running on full time and, despite the normal production, the stock on hand at the Association mills was more than forty-six million feet less on July 1 than on January 1. In addition to this, prices on July 1 were somewhat higher than on January 1. Can any other lumber tell a similar story?

There are only two ways of handling a situation such as has prevailed, one being to reduce the production and the other being to increase the sales. The latter cannot be done spasmodically; a definite plan must be prepared and followed for a term of years. Many of you laughed when the announcement was made several years ago of what thereafter would be the CYPRESS policy. You believed it was a dream which would never come true. But the CYPRESS manufacturers have continuously and persistently followed their plan, and they have widened their market to such an extent that the ups and downs of other woods have had no effect upon CYPRESS.

You know by this time that the people want CYPRESS and will have it. Furthermore, they want it to such an extent that the retail sales are constantly growing, despite conditions prevailing with other woods. CYPRESS is the safest lumber to put in stock today as the market is already established and there are no fears of radical changes in prices.

Isn't there a big lesson for you in all this, Mr. Retailer?

(*Continued on pages 8 and 9*)

Digitized by Google

You've wondered why your business doesn't get ahead. Why your profits don't increase. Why you can't get a firm hold on the patronage of the lumber users of your community. You've blamed everything and everybody when the real drawback is yourself.

Your business is standing still because you still are willing to accept the faulty service and quality of back-number lumber manufacturing concerns—because you have not prepared yourself to give your customers the kind of service and quality suited to their individual requirements.

If you really want to brace up your business, to give it new impetus, to make it a prosperous, worth-while business, the way is open to you.

For years we have been co-operating with lumber dealers throughout America by giving them the kind of yellow pine lumber quality and service that assures them a firm hold upon the patronage of lumber users. You, too, can enjoy the same advantages that other dealers are enjoying. By dealing with us you can do away with off-grades, delayed shipments and other annoyances with which you have had to contend in the past.

MR. LUMBER DEALER: YOUR BUSINESS REQUIRES PREPARED-NESS

It costs you no more in the beginning and it's cheaper in the end.

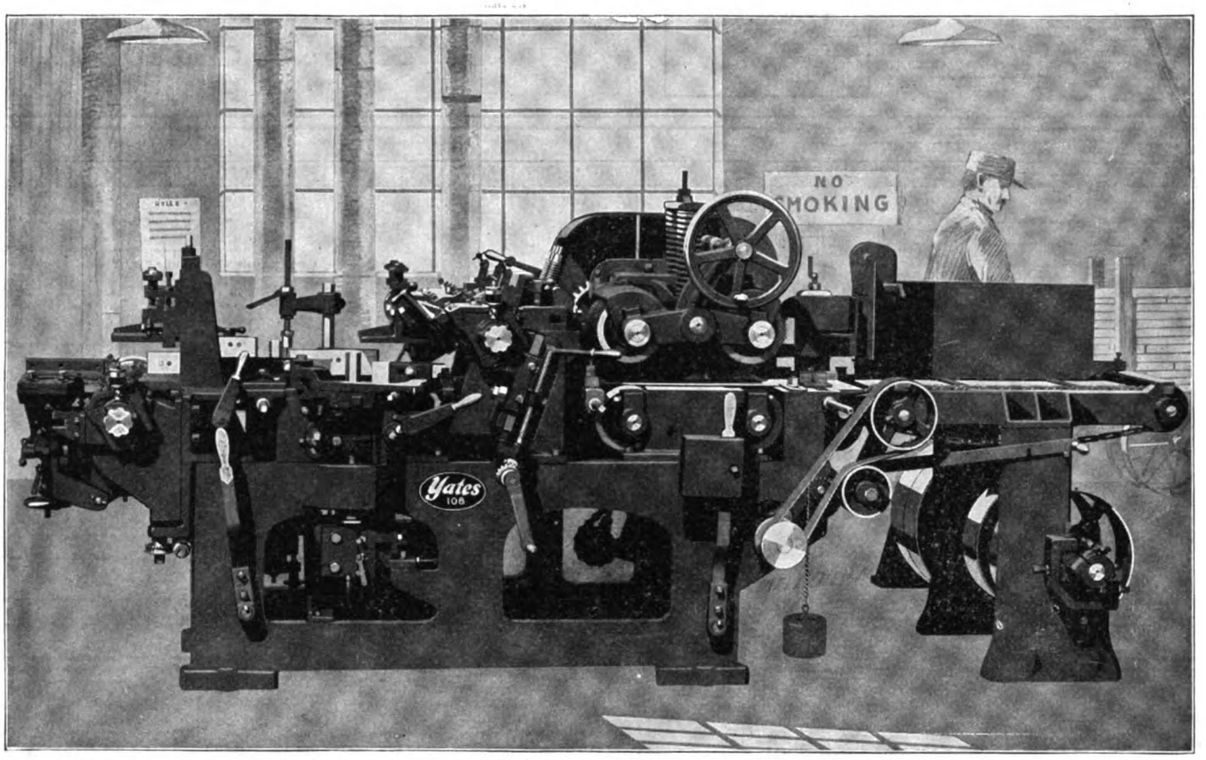
No Need to Worry
About Holding Labor



A Yates Number 108 Moulder will prevent it. It's a prod that hastens the gait of your production without increasing your pay roll. Its easy adjustments and steady performance solve the migrating labor problem because it makes the workman contented with his job.

Yates - formerly BERLIN **No. 108 Moulder**

is the machine that has prodded production in more than One Thousand Two Hundred plants in America and Canada. Its quick set-ups save production time—its fast feeds multiply output. Four to six times old sticker output is easily possible. Its grinding and jointing devices make best work easy to get and increase profits by bettering grades—often 40 to 60 per cent. When provided with hopper feed it "eats up" short stock as fast as one man can supply it. So strongly built that you can "speed 'er up" with safety to meet rush orders. Gives such universal satisfaction everywhere that it has been called "The Everpresent Moulder."

Detailed information free, without obligation. Ask for Circular 108.

He Who Looks Before He Leaps

The little sermon printed on the front page of this Review should furnish a text for many deep thoughts. It tells a true story in that, despite normal production of CYPRESS-OK the sales have been considerably heavier than the production, prices have advanced to a noticeable extent and the whole situation with CYPRESS-OK is so strong as to bring it into marked contrast with other woods.

Those of you who have been reading this advertising may have regarded it as egotistical when we told you about "the CYPRESS-OK methods," but have you ever known a bunch of people who so persistently adhered to those methods that they made good? It has been our ambition to place CYPRESS-OK in a class where it would not follow the trend of other woods, and we have been successful.

And now for the lesson which it all teaches:

There is right now a car shortage which is not appreciated by those of you in the consuming territory. Empties are secured with the greatest difficulty and the mills are not securing nearly so many as they need. This condition, beginning so early in the year, means trouble during the fall. In addition to this, the demand for CYPRESS-OK to-day is heavier than during the past few months, meaning a still further reduction in stocks on hand. In other words, sales are in excess of production, with a further tendency toward price advancement, and at the worth-while mills the new grading rules have been thoroughly established.

Doesn't this mean that those who will need CYPRESS-OK during the next few months would better get in the swim while the water still is fine? We dislike the complaint at delayed shipments just as much as do you, and we feel that it is only fair to all of us that we give you this warning and that we justify our position by a frank statement of existing conditions.

You are safe in buying CYPRESS-OK and it is our advice that you buy it early.

Be One of Those Who Are Helping To

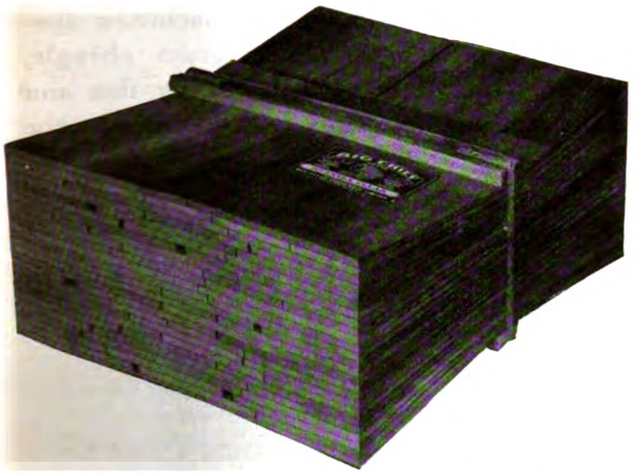
BIG CHIEF

THE BEST SHINGLES IN THE WORLD

When you order BIG CHIEF brand British Columbia Red Cedar Shingles, you will receive shingles not equaled in quality by any other brand of shingles manufactured anywhere.

BIG CHIEF brand Shingles are DRIED—NOT COOKED—and are otherwise prepared so that when finished, they are as nearly perfect as experience, skill and equipment can make them.



Note the packing and uniform thickness

BIG CHIEF
BRAND
BRITISH COLUMBIA RED CEDAR SHINGLES

SPECIFICATIONS: 16 inches long; 5 butts measure 2 inches and each bundle measures full 10 inches in thickness when dry, and they are 100 per cent vertical grain, 100 per cent clear, 100 per cent heart and 100 per cent covering efficiency. Contain positively no sap; random widths, but no shingle less than 3 inches wide. Smoothly sawn, squarely jointed, and otherwise perfectly manufactured.

Straight cars always enroute to Minnesota Transfer and available for diversion to points taking through rate from there. Mill shipments to any point can be made on 24 hours notice.

EARLY EVERY NEW HOME that is erected in your community means a substantial bill of lumber for some dealer. Do YOU get your due share of the orders? If you do not is it not your own fault?

There are a number of woods that answer certain purposes as structural lumber. In many respects and for particular uses they are practically on a par, except in the matter of price, and there are many people who base their purchases on price considerations only. Sometimes, therefore, price determines which wood shall be used, and which dealer shall have the order.

North Carolina Pine

"The Wood Universal"

This splendid wood meets every requirement as a building lumber, except in the very rare cases where extreme strength is necessary.

For home construction purposes it has no superior. It is strong, stiff and durable; works easily, does not splinter, is unusually beautiful in grain, and readily absorbs stains and paints.

Price is also a feature which makes NORTH CAROLINA PINE attractive. No other equally good lumber on the market sells for less money—therefore no other lumber shows you a better profit.

The North Carolina Pine Association, Norfolk, Va., has for your use some Dealer's Service Literature, which they will be glad to send upon receipt of your request, but—if you wish to get prices or place an order, just write to the mills named below:—

Anderson Lumber Corporation, Marion, S. C.
Fosburgh Lumber Co., Norfolk, Va.
Greenleaf Johnson Lumber Co., Norfolk, Va.
Montgomery Lumber Co., Suffolk, Va.

SATIN-LIKE INTERIOR TRIM

ARKANSAS SOFT PINE ·TRADE MARK·

SOFT WORKABLE COMMON LUMBER

Not Only White Enamel

But

Stained and Varnished Finishes

as well

Can Be Successfully Carried Out On

Arkansas Soft Pine

Being a practically non-resinous wood in the finish grades, it is not necessary to shellac the raw surface, but instead the chosen stain of whatever color is applied *first,* insuring a perfectly uniform absorption. Shellacs and varnishes are then applied and rubbed down.

We urgently recommend machine sanding as against hand work on the bench. All finish should be so worked wherever possible. This treatment in combination with the above method of final application insures a beautiful satin-like surface to the completed work.

Arkansas Soft Pine is properly suitable for woodwork in fine residences, apartments, churches and offices. It is being *nationally advertised.* It is identified by a registered trade mark. Its manufacturers *stand behind it.*

What better selling arguments could you put to your trade Mr. Dealer? Better let us quote on your next car.

All stock bearing the Arkansas Soft Pine Trade Mark is manufactured and sold exclusively by the following companies:

Crossett Lumber Co	*Crossett, Ark.*
Eagle Lumber Co	*Eagle Mills, Ark.*
Edgar Lumber Co	*Wesson, Ark.*
Freeman-Smith Lumber Co	*Millville, Ark.*
Fordyce Lumber Co	*Fordyce, Ark.*
Gates Lumber Co	*Wilmar, Ark.*

"You furnished the Pole and We got the Fish"

That's the way the first dealer who used the local newspaper advertising which we furnish free, summed up the results of his spring campaign. Read these two extracts from his letters to us. They tell the story.

"My competitors on either side are tearing themselves to pieces in a vain endeavor to head off the tide of patronage which has turned to this yard for the old reliable WHITE PINE."

"It is with a great deal of pleasure that we can advise you WE HAVE RECEIVED POSITIVE AND ACTUAL RESULTS from this campaign. We have enjoyed a very nice trade on our WHITE PINE and just yesterday we were still more gratified by selling a party in ****, a point where there is no yard and which is eleven miles west of here, a bill totaling $1,200. This man knew what he wanted and sent a carpenter who, when he looked over the stock and saw how we were hooked up, did not take long after his return to conclude the deal. Certainly in this campaign the expenditure has been justified and we wish to share our pleasure and good feelings over the outcome with you. *You furnished the pole and we got the fish.*"

We have plenty more "poles" and there are plenty of "fish" in your territory. Write today and ask us about our advertising helps for dealers. They get the business.

If your WHITE PINE stock is low any of the following members of the White Pine Bureau will give your order careful and immediate attention.

GIRDLING THE EARTH WITH HOUSES

THE STORY OF VOLUME:

The volume of lumber produced in the mills of this company each year is sufficient to build a good-sized house every mile round the earth.

Stop and think what it means to buy **quality lumber** from a company that can so standardize its quality as to keep up a demand for a quantity it must manufacture, sufficient to build one good-sized house every mile round the earth.

Think what it means to have an annual demand for **quality lumber** in such an aggregate as to form a train shipment of twenty-four thousand three hundred and sixty-six cars, each car billed to a lumber buyer or on an export order.

Imagine a train of cars one hundred and eighty-four miles long. That represents the annual output of the Long-Bell Lumber Company's mills.

The largest yellow pine milling capacity under the control of a single organization is the Long-Bell Lumber Company, with capacity for manufacturing over one and a half million feet of lumber per day.

With three hundred working days the capacity shows an output of over four hundred and fifty million feet per annum.

This enormous production of **quality lumber** is possible to be manufactured by one organization only because of the company's efficient management.

It is only possible to manufacture **quality lumber** representing over one and a half million feet per day because of the demand by dealers and consumers in this and foreign countries which is increasing in volume every year.

There is a reason why the Long-Bell Lumber Company manufactures an increased quantity every year and is able to sell its daily output of one and a half million feet.

THAT REASON IS QUALITY

The standardization of lumber began with the Long-Bell Lumber Company a great many years ago.

A **quality standard** was established which made a reputation while it built up the volume and this standard of quality has been guarded with care by the mill managers who are jealous of the splendid reputation thus attained.

But more than all this the record made by the Long-Bell mills for PROMPT SHIPMENT has caused dealers, all over the world, to repeat and continue to repeat their hurry-up orders once they have had a taste of this **quality lumber** and these quick delivery shipments.

Think of a record established by one lumber organization which shows an average time of eight and a half days from the arrival of orders at the mills until the cars were loaded, on the entire 1915 year's production.

It is YOU, Mr. Dealer, who gets the benefits of this **quality lumber** and these record shipments.

It is you, Mr. Lumber Dealer, who makes it possible for these mills to produce **quality lumber** and get it out for you on record time. The Long-Bell Lumber Company is mindful at all times of your needs, your requirements, and your customers' demands.

A large lumber mill organization can increase its business only by the most refined attention to the minutest detail of the finished product.

A leader of quality and volume can only maintain its supremacy by its attention to these details, and so careful and so watchful are the mill managers and their foremen in their constant scrutiny of every step of the progress of lumber manufacturing from the log to the car door that you may be assured your cars of lumber at all times will bear YOUR most careful scrutiny.

There is a salesman in your territory, authorized to quote you the lowest prices we are making on Long and Short Leaf Yellow Pine, Forked Leaf Brand Oak Flooring, Oak lumber, Straight or Mixed car lots, etc.

An inquiry by postal, wire or letter brings a quotation or salesman to you when you want one.

IN THE EARLY DAYS

lumber was a word used to describe things that were useless or of little value. The Lombards were the money lenders of the middle ages. A Lombard-room was a room used by pawn brokers to store their pledges consisting of household goods and things of cumbersome or bulky nature. Later such space was termed "lumber room." Lumber, therefore, represented in those days nothing of consequence.

NOW

we know lumber as timber sawn into the form of beams, joists, boards, planks, and especially that which is smaller than heavy timber. The word brings to mind boards of even running thickness and width, clear, straight, strong, durable, with grain or figure, according to species, that will harmonize with any setting. Lumber now occupies a place in civilization that makes it indispensable to mankind, keeping step with every progressive move in manufacture. Ours is the lumber of the modern kind.

We know that we know lumber as it is now known.

We want you to know that we not only know lumber but know how to make it.

One little order will prove we can make good.

The great waited for, assured, and for a year, impending, general strike on the American railways has not YET happened and at least three weeks have gone by since the most serious minded, far-seeing voluntary organization of American business men, the Chamber of Commerce of the United States, through the chairman of its railroad committee, announced that such a happening was "inevitable."

From the vantage point of our "Wide East Windows" we can see with half an eye, two-thirds shut, quite enough opinions on this subject to fill up a dozen trade newspapers of this size with powerfully written arguments on all sides of this question, each argument usually having its opposite ready and anxious to eat up the other argument just as soon as it is produced.

We have never offered an opinion on this subject except a protest against the statement that a strike was "inevitable." There the matter rests, with the hope that at least one section of the world's civilization may remain sane long enough to avert that which would be—as we look at it in anticipation—one of the greatest calamities of modern times.

All this preface leads up to one little piece of information which we have never yet seen in print, and which concerns every American citizen.

Through all this stress and strain and discussion at Washington the railroads of America have been quietly finding out the name and the qualifications of every unattached and otherwise engaged American citizen of suitable age who can run an engine or man a train, and if the American public could even have an inkling of the result of that investigation they might see with E. P. Ripley that were the strike to occur the trains AGAIN would run, all the calamity howlers to the contrary notwithstanding. That, too, we will have our readers understand, is not just a statement born of a hope, delivered by an avowed optimist, but a concrete piece of legitimate news.

It would astonish the American public to know how many finished train men and locomotive engineers there ARE in the United States who have graduated out of that kind of work, but who stand ready to go competently back into it again, if it be necessary.

A thirty days' total shut down of American railways would put an end to the publishing business just about as effectively and quickly as a mad elephant could crush a red ant with his big toe, but would it not be folly for a healthy man to contemplate a finished crisis of this sort while there is yet a chance left for another solution of the problem?

At all events we have no advice to give concerning this alleged impending breaking up of society and certainly not any suggestion to offer the president in Washington, and feel very much about helping the president with ADVICE as did William Lightfoot Visscher's negro preacher who, while he believed sincerely in prayer, advised his congregation against troubling the Lord with their personal affairs in his poem, "Sorry for the Lord," the last verse, of which we quote herewith:

I'm gittin' sorry fur you, Lawd,
Indeed an' trufe, I am;
De niggah wants so monst'ous much,
Cep' Gilead an' de ba'am.
Dey prays fur ev'rything dey needs,
Dat work would bring 'em all,
An' wants de fruit of all de 'arth,
Jis' like befo' de fall.

* * *

Come stately steppin', oh, good Lawd,
'Pon yo' lily-white steed,
An' smash dem sassy niggahs down,
An' bruise de sarpint's seed.
Dey howls at you de livelong night
An' robs you of yo' sleep,
'Kase dey's too lazy fur to sow
An' got no crap to reap.

Federal Trade Commission's Work Sincere!

OUR radical democracy may cry out upon Bureaucracy and invent witticisms about Government Commissions and their alleged tyrannies —BUT—there is more SANITY and more for good in that direction than there is in the so-called representative government procedure which we have miscalled democracy during the last hundred years!

How is a government to act with WISDOM, but without knowledge? Has not the lumber trade suffered more than any other in the land on account of being misunderstood?

If the RANK and FILE of the American lumber trade could be made TO LISTEN and could be made TO UNDERSTAND and could KNOW how much good could COME from an intelligent support of the Federal Trade Commission and other Government Bureaus, it would very much encourage the small but earnest life-saving crew of lumbermen who are now trying to put the industry on its feet!

The most charitable conclusion to reach concerning the general apathy which pervades 95 percent of the people who manufacture and sell lumber in regard to what the Federal Trade Commission and the Bureau of Foreign and Domestic Commerce, and the Forest Service are endeavoring to work out for the lumber interests—is that this great 95 percent majority has never been TOLD ABOUT IT.

Either the lumber trade newspapers THEMSELVES have never been rightly furnished an opportunity to learn what is going on so that they MAY tell it vividly and with understanding or else, for some reason which can be laid at their own doors, the lumber press generally has ceased to be credited with the necessary healthy influence that would make their work useful!

The Federal Trade Commission and the Forest Service and the Department of Foreign and Domestic Commerce all participated in a conference with practically all of the lumber manufacturing associations in the United States, in Chicago on Monday of this week which we maintain was the most notable endeavor of our government to assist business that has occured in this country since the founding of the Republic, and yet we doubt if the informing of the rank and file of the lumber trade as to the character of this conference has really been considered a matter worth while—from the lumber association viewpoint. The association memberships will hear about it in time, but we are wondering how the 95 percent of apathetics who do not belong to associations will ever know about this event.

The 95 percent will certainly gain no information concerning this happening from the remarkable statements that have been given out to the daily press, as for instance, this piece of information, which appeared in the "Chicago Herald" on Tuesday morning, August 22, concerning the possibility of the use of lumber abroad:

"BELGIUM—Forests entirely destroyed. The nation so wrecked physically and financially that it will have to be entirely rebuilt and this rebuilding will have to be financed by the major powers."

And then THIS illuminating paragraph:

"ENGLAND—Its forests, as well as those of Scotland, denuded, the supply of lumber already exhausted, and imported lumber needed for all future building, until new forests grow to take the place of the timber cut to use for war purposes."

Really, was there ever anything quite so funny as those two paragraphs of information? Nothing, probably, unless it may be six OTHER paragraphs of like character about OTHER countries printed in the same story. Since when, let us ask, have the forests of England, "as well as those of Scotland," or the "forests entirely destroyed" in Belgium cut any figure in the European supply of lumber?

Nothing but a closer intimacy between the lumber press and the trade that it would LIKE to represent; and a propaganda of what is really going on in this country in a Governmental way will ever carry conviction to the "unsympathetic 95 percent" of the lumber trade or ever bring about that spirit of co-operation between the business of making and selling lumber and the Government Bureaus which is necessary for success.

Where Does Lumber Come In?

THESE figures which we are going to produce may be challenged but we doubt it.

They come from a source not considered entirely nutritious by so-called big business; but as lumber is "Big Business," so-called, we want to make a little quotation, and then ask a question, but we will make the quotation in paraphrase.

IT IS SAID THAT GREAT BRITAIN BORROWS AND SPENDS TEN BILLION DOLLARS A YEAR IN THESE WAR TIMES AND NEVER EXPECTS TO REPAY THE LOAN. THAT THE INTEREST ON HER TOTAL BORROWING MAY BE ROUGHLY SET DOWN AT ABOUT EIGHT HUNDRED MILLION DOLLARS. THAT THIS HUGE SUM MENTIONED IS NOT SO LARGE BY TWO HUNDRED MILIONS AS THE INCREASED TAXES IN THIS COUNTRY. AND THE PEOPLE WHO SELL THINGS HAVE LEVIED ON SUGAR, MEAT, FLOUR, COFFEE, MILK, BUTTER, VEGETABLES, RENTS, COAL, GASOLINE AND OTHER NECESSARIES OF LIFE DURING THIS YEAR OF OUR LORD 1916. IN 1904 GASOLINE SOLD TO CONSUMERS AT 16 CENTS A GALLON. THIS YEAR UNIVERSALLY AT 20 CENTS AND IN SOME INSTANCES AS HIGH AS 26 CENTS. THAT SUGAR WAS 5 CENTS, 6 MILLS, PER POUND WHOLESALE IN 1915 AND NOW IS 7 CENTS WHOLESALE. THAT THUS THE SUGAR PEOPLE HAVE LAID A WAR TAX OF $120,762,106 ON THE AMERICAN PEOPLE IN THE PAST YEAR. THAT THE WHOLESALE PRICE OF MEAT HAS INCREASED 25 PERCENT. THAT THE INCREASED COST OF MILK LAY A WAR TAX OF $320,000,000 ON MILK, BUTTER AND CHEESE.

Now, gentle, self-effacing, patient LUMBER PRODUCER, where do you come in? You are cutting your trees that will never grow again; you are doing this absolutely without profit as can be demonstrated by the evidence of 10,000 honest men and what is expected of you is that you will take some cognizance of the facts as they stand and rectify the error of your ways of business.

The Chicago Daily News on Arbitration.

NO party in politics, no alleged trust, no section of the people owns or would endeavor to control the utterances of "The Daily News" of Chicago. This paper, on August 23, prints an editorial on "Rejecting Arbitration," in which it quoted the utterances of L. S. Coffin who represented the Brotherhood of Railroad Trainmen, "at a congress of industrial conciliation and arbitration held in Chicago, Nov. 13 and 14, 1894," in which Mr. Coffin said:

"All I want is some method by which these men can bring their grievances to a competent authority, or arbitration or conciliation commission, and have them settled, instead of being left to the tender mercies of those that have power over them. And let us act together as equal men and brother men and citizens of the grandest nation of the earth and settle these difficulties in this beautiful way."

And, says "The Daily News," continuing:

"Now the spokesmen for these same brotherhoods reject arbitration and demand that they be given very large concessions with respect to wages in the shape of a basic eight hour day under penalty of a general strike tying up the nation's transportation lines."

The "Daily News" refers then to the settlement that was made July 15, 1913, by President Wilson, signing the Newlands law, creating a board of mediation and conciliation which straightened out the difficulties then threatened "by 80,000 members of the Railroad Brotherhoods employed on 45 important eastern railroads;" and then says, concerning the result of THAT arbitration:

"Because the resulting award was not all that they desired the brotherhoods in the present controversy demand important wage advances before they will discuss arbitration of their other demands.

"In their extraordinary and unreasonable attitude the railroad brotherhoods have the ardent support of the president of the United States. The situation constitutes a challenge to the manhood of all Americans. Yet surrender of the arbitration principle in the face of threats of force is urged upon the railroad managers by President Wilson. Is it cowardice or politics?"

An Immediate Necessity for Curtailing Lumber Production

Opinions Concerning "Running Conditions" and "Lumber Stocks" from Many States

Part IV.

By BOLLING ARTHUR JOHNSON

The general curtailment in the way of reducing the hours and especially in reducing the night run of saw mills actually began about July 1, and has continued intermittently and otherwise since that date.

We have tried the best we know to interest the entire lumber manufacturing fraternity of the United States in this movement, but the "entire lumber fraternity of the United States" does not differ materially as to the attitude of the minds of the men who make up the craft from that of men in any OTHER line of business, and we are YET some millions of miles from that point in the road of progress when the GOLDEN RULE will become the maxim of ALL PEOPLES.

There are some folks yet left, who are deliberately "doing each other" as opposed to the admonition of the Master that it is far better and more like wholesome living, to "Do as you would that others do unto you."

It was considered rather a travesty on the trend of public opinion when "The Lumber Press Club News" printed above its title the slogan "Conspiracy and Combination are the Life of Trade"; but of course no business person would EVER admit that he thought such a thing was true in this country, regarding "conspiracy and combination." Admission aside, however, it was a pretty well understood standard in SOME business lives LESS than sixteen years ago.

A great number of lumbermen will admit PRIVATELY that "Co-operation and not Competition is the Life of Trade"—who would not admit it PUBLICLY.

We would not attribute a sinister motive to any man who would not co-operate enough to enter into the curtailment spirit, because you never can tell just what may govern the action of any lumber producer until you find out just how many bonds he has registered against his business, just the amounts and due dates of his bills payable, and just what are the items of his bills receivable and the chances of his ever being able to COLLECT those items.

REVIEW OF YELLOW PINE LUMBER MANUFACTURING CONDITIONS SINCE JULY 7.

When Barometer No. 55 was issued, the hands of the clock seemed to stand permanently on 12 noon—with hell at play. Shipments had squatted down to 59 degrees; orders languished at 60 degrees, and production stood up bold and arrogant at 67 degrees. The increase in orders as compared with the last previous report, No. 54, was 48 per cent. Production was 33.89 per cent below normal, and orders were below normal production 37.61 per cent.

On July 14 the mercury had risen in the yellow pine barometer showing orders at 84½ degrees, production taking the dust at a little less than 77 degrees, and shipments crawled up to the off hind wheel of orders to the extent of standing at 83½ degrees—still below normal. The increase in orders had been 37 percent over previous report No. 55; actual production below normal was 22.55 percent; shipments below normal 17.30 percent; orders below normal 16.03 percent.

The report of July 21 showed in a barometric way that orders had stepped on the pedal and had shot up to 110—or 10 degrees above normal—and production and shipments were rolling along exactly together within conversation distance side by side at 80 degrees, or 20 degrees below normal. The increase in orders as compared with the last report stood at 8.91 per cent; actual production below normal 20.63 per cent; shipments below normal production, 20.54 per cent.

Friday, July 28, was the coming of the great day. It looked like somebody had set a "nigger" on the safety valve. Orders stood at 140 degrees and a trifle over, and production had only crept up five points, standing at 85 degrees, and shipments had surged so far ahead as 98 degrees—two degrees below normal. Right there we prayed that SOMEBODY would be enterprising enough to add another tube to the barometer not for orders to boil over into, but a tube representing a line of information on dry stock, for we are of the old fogies who believe that the actual availability of the stock has all to do with the supplying of it, and that, too, is consistent with our general attitude on "supply and demand" in lumber governing its value that practically everything is already in supply at a yellow pine saw mill operation because the lumber does not have to be in the yard to be sold, but is too often sold while it is yet in the tree in the forest.

The dry lumber element, however, is a very SUBSTANTIAL factor in all OTHER lines of the lumber trade, for in those sections where the trees come down with the winter snows and the manufacturer has to adhere to the principle of "making such lumber as the logs will produce" and as in the Pacific coast territory where the lumber manufacturer has to depend upon the logs actually in SIGHT in the WATER, and usually has but little to say about the logs until they ARE in the water and in SIGHT.

Who will it be who will invent a barometer with four stems to it?

Then, on August 4, the phenomenal thing occurred which nobody could explain—at least we have not YET found a statistician smart enough to tell us how it happened—yellow pine orders went off from 145 to 113. Orders even THEN were 13 degrees above normal, and the whir of the wheels of production were out of ear-shot of both the order column and the shipment column—shipments standing at 105 degrees and production standing at 85 degrees. The orders only showed an increase of 1.92 percent and shipments only exceeded normal production 4.92 per cent; but actual production was below normal 15.04 per cent. The report of Friday, August 11, showed orders to be rising—coming back—standing then at 115 degrees with shipments having crept up to 105 degrees and production still in the "also rans" at 88.

Just now, today, August 24, there comes to hand the Southern Pine Association Barometer No. 61, for week ending Friday, August 18—and marvelous to relate, it shows us something we did not believe possible. Production is still away around behind the bend, back of both shipments and orders, standing as it does at 90 degrees.

Orders as compared with the week ending August 11 have fallen off 1 degree, according to the barometer, and shipments have fallen off a half degree, standing at 104½ degrees.

Production has come up about 1½ degrees in the week represented—and is gaining a little—but LITTLE is TOO much, and it positively must not go HIGHER than 90 degrees.

Our delight at finding that it had only crawled up to 90 degrees is on account of the fact that we felt it was about time for some insurgent to put on all the power, release all the brakes, and cut loose. That, however, has not been done, and adds one more argument in favor of the gradually increasing belief that yellow pine production is not a wholly depraved thing but is really susceptible to reformation.

CURTAILMENT ON THE PACIFIC COAST AND ELSEWHERE.

There does not seem to be any incentive in the lumber localities elsewhere than in the southern United States for the curtailment of the product.

Orders are what all OTHER localities OUTSIDE of the southern pine district seem to lack. Production has not arrived at normal in any lumber locality in the United States outside of the southern pine territory; and in most localities of which we have any knowledge, shipments have most of the time run ahead of anything else.

We are going to hazard the statement—and "to hazard" does not necessarily indicate that there is any doubt about the TRUTH of the statement that THE ADVERTISING AND SELLING METHODS OF THE SOUTHERN PINE OPERATORS HAVE WON THEM THEIR ORDERS.

Yellow pine lumber is today—next to cypress—the best advertised lumber in the world; and next, of course, comes white pine.

We think this is the conclusion that any high class advertising counsellor in the United States would reach if the whole facts of the promotion of the business of the various lines were laid properly before people who know how to figure out such things and who speak with authority.

It is impossible to enter into any comparative discussion concerning the curtailment question in any other line outside of yellow pine, except in the case of cypress.

A dozen or more of the leading cypress manufacturers of the United States state their condition in an advertisement on the front cover of this issue of the LUMBER WORLD REVIEW.

The cypress people have not curtailed; they are selling their lumber for more money than they got six months ago and they have several million less feet of lumber on hand than they HAD SIX MONTHS AGO.

So ending this lesson at this first opportunity to end it, let us be real fair and honest about this whole thing and admit that it is not all a matter of curtailment, but that the selling end has a lot to do with it, and that ADVERTISING—if it is successful—is SELLING—and selling

Digitized by Google

—if it is successful—must and does contemplate ADVERTISING in all of its features.

In a little weak way, and in very small type, so that the suggestion will not be considered a rudeness, and just before we furnish the tabulated statement of curtailment by states, let us write and print the much worn and sometimes followed piece of advice— "It Pays to Advertise."

ALABAMA.

Black Warrior Lbr. Co.	Knoxwood	No curtailment.
Choctaw Lumber Co.	Silas	New plant. Shut down ten days in July. No stock on hand. Will run.
Davis, M. L.	Oak Grove	Curtailing 22½ percent.
Horseshoe Lbr. Co.	River Falls	Closed 1 to 4 weeks account storms.
Jackson Lumber Co.	Lockhart	Monthly capacity 6,000,000; now shut down.
Kaul Lumber Co.	Birmingham	Capacity monthly 4,582,034; cutting 3,020,153 feet.
King Lumber Co.	Prentice	55 hours a week.
Lathrop Lumber Co.	Birmingham	Running five days a week.
Manchester Lumber Co.	Manchester	Running on short time.
McGowin-Foshee Lumber Co.	Folco	Weekly capacity 300,000; cutting 250,000 feet.
Mitchell, W. G., Lbr. Co.	Shortleaf	No curtailment.
Scotch Lumber Co.	Fulton	Running five days a week.
Smith, W. T., Lumber Co.	Chapman	Both mills running 66 hours.
Talahatta Lbr. Co.	Halsall	Idle.
Vinegar Bend Lbr. Co.	Vinegar Bend	One half of normal production.

ARKANSAS.

Arkansas Short Leaf Lumber Co.	Pine Bluff	Running 4 days a week.
Arkansas Land & Lumber Co.	Malvern	Shut down June 30.
Arkansas Lumber Co.	Warren	Daily capacity 140,000; cutting 100,000 feet.
Bradley Lumber Co.	Warren	Running 3 to 5 days a week.
Campbell, H. A.	Mt. Idah	10,000 feet daily capacity. Ran only 3 or 4 days in June.
A. L. Clark Lumber Co.	Glenwood	Running three-quarters time.
Crossett Lumber Co.	Crossett	Running 4 days a week.
Eagle Lumber Co.	Eagle Mills	Monthly capacity 3,000,000; cutting 1,835,000.
Edgar Lumber Co.	Wesson	60 hours a week.
Farrel, William, Lbr. Co.	Hensley	Running 5 days a week.
Fordyce Lumber Co.	Fordyce	Running 4 days a week.
Freeman-Smith Lumber Co.	Millville	50 hours a week.
Gates Lumber Co.	Wilmar	Running 5 days a week.
Ozan-Graysonia Lumber Co.	Prescott	5 days a week.
Reed Bros. Lbr. Co.	Buckner	Running 40 hours.
Union Saw Mill Co.	Huttig	Monthly capacity 6,000,000; cutting 4,600,000
Wisconsin & Arkansas Lumber Co.	Malvern	60 hours a week.

FLORIDA.

Alabama & Florida Lumber Co.	Noma	Running 85 percent.
Alger-Sullivan Lumber Co.	Century	Shut down 30 days.
Bay Point Mill Co.	Pinewood	Monthly capacity 1,050,000; now idle, start Aug. 15.
Florida Land Co.	Montbrook	Closed down.
Florala Sawmill Co.	Paxton	Running three-quarters time.
Graves Bros. Co.	Hosford	Shut down for over a a year in last two, so now running full time, 10 hours daily.
E. L. Marbury Lumber Co.	Malone	Monthly capacity 825,000; cutting 479,000
Martel Lumber Co.	Martel	Running 44 hours.
Weaver-Loughridge Lumber Co.	Boyd	No curtailment.
West Yellow Pine Co.	Madison	Running 50 hours.

GEORGIA.

Augusta Lumber Co.	Augusta	Have closed down all mills and become "remillers."
Dunlevie Lumber Co.	Allenhurst	Double band mill with resaw, running continuously 11 hours per day.
King Lumber & Oil Co.	Unadilla	Had been running 5½ days, 9 hours each; now shut down, from 4 saws in January to 2 saws in July.
Stuart Lbr. Co.	Savannah	Not operating.
Southern Pine Co.	Brinson	Closed account high water. Idle for several weeks longer.
Thompson, John R.	Quitman	Running 10 hours a day, 5 days per week.

LOUISIANA.

Anacoco Lumber Co.	Guy	Monthly capacity 1,332,559; cutting 1,135,705.
Alexandria Lumber Co., Ltd.	Pineville	Running 5 days a week.
Anacoco Lumber Co.	Grabow	Running 5 days a week.
Big Pine Lumber Co.	Colfax	Closed down.
Bowie Lumber Co.	Bowie	Running 6 days; 11 hours each. Being cypress, no curtailment necessary.
Bolinger, H. A., Lumber Co.	Shreveport	Running 4 days a week.
Bolinger, S. H., & Co.	Reeves	Running 5 days a week.
Brown Lumber Co.	Shamrock	Running 5 days a week.
Bentley, J. A., Lumber Co.	Zimmerman	Running 5 days a week.
Bryceland Lumber Co., Ltd.	Bryceland	Were running 6 days a week, 11 hours; now 18 days a month, 11 hours.
Brooks-Scanlon Lumber Co.	Kentwood	Running 5 days a week.
Bowman-Hicks Lumber Co.	Oakdale	Running 5 days a week.
Caddo-Rapides Lumber Co.	Alexandria	Running 5 days a week.
Crowell & Spencer	Long Leaf	Running 5 days a week.
Calcasieu Long Leaf Lumber Co.	Lake Charles	Running 4 days a week.
Central Coal & Coke Co.	Neame	Running 4 days a week.
Central Coal & Coke Co.	Carson	Running 4 days a week.
Cady, W. M., Lumber Co.	McNary	Running 5 days a week.
Elton Lumber Co.	Elton	Will shut down 30 days.
Elton Lumber Co.	Hutchinson	Closed down.
Enterprise Lumber Co.	Alexandria	Running 5 days a week.
Enterprize Lbr. Co.	Zimmerman	Running 5 days a week.
Forest Lumber Co.	Oakdale	Running 4 days a week.
Frost-Johnson Lumber Co.	Campti	Running 4 days a week.
Frost-Johnson Lumber Co.	Mansfield	Running 4 days a week.
Frost-Johnson Lumber Co.	Montrose	Running 4 days a week.
Genesee Lbr. Co.	Genesee	Running one-quarter normal capacity.
Germain & Boyd Co.	Atlanta	Running 5 days a week. May reduce to 4 days if conditions do not improve.
Great Southern Lumber Co.	Bogalusa	Running 5 days a week.

Digitized by Google

Gulf Lumber Co.	Fullerton	Running 5 days a week.
Houlton Lumber Co.	Houltonville	Idle.
Hudson River Lumber Co.	DeRidder	Running 4 days a week.
Hule-Hodge Lumber Co.	Hodge	1 mill closed down.
Hurricane Creek Lumber Co.	Lake Charles	Running 5 days.
Iatt Lumber Co.	Colfax	Closed July 1.
Industrial Lumber Co.	Oakdale	Monthly capacity 1,500,000; cutting 750,000 feet.
Industrial Lumber Co.	Elizabeth	Running 5 days a week.
Industrial Lumber Co.	Calcasieu	Running 5 days a week.
Johnson, W. F., Lumber Co.	Campti	Running 5 days a week.
Krause & Managan	Westlake	Monthly capacity 1,500,000; now cutting 1,100,000.
King-Ryder Lumber Co.	Bon Ami	Running 4 days a week.
Lee Lumber Co.	Tioga	Running 5 days per week, 10 hours a day. Were running 6 days a week.
Louisiana Longleaf Lumber Co.	Victoria	Running 40 hours.
Louisiana Longleaf Lumber Co.	Fisher	Running 40 hours.
Louisiana Saw Mill Co.	Glenmora	Monthly capacity 2,800,000; cutting 2,250,000.
Louisiana Central Lumber Co.	Standard	Running 4 days a week.
Louisiana Central Lumber Co.	Clarks	Running 4 days a week.
Lock-Moore Lumber Co.	Westlake	Running 5 days a week.
Longville Lumber Co.	Longville	Monthly 7,100,946; now 5,158,136 monthly.
Louisiana Long Leaf Lumber Co.	Fisher	Mill not running.
Long Pine Lumber Co.	Alexandria	Running 4 days a week.
Ludington Lumber Co.	Ludington	Running 4 days a week.
Lyon Lumber Co.	Garyville	Running approximately 20 days a month, 11 hours a day.
Lyons Lumber Co.	Kernan	Running 6 days.
Meridian Lumber Co.	Meridian	Running 5 days a week.
McNary Lumber Co.	McNary	Running 5 days a week.
Newell Lumber Co., Ltd.	Eunice	Running 5 days a week.
Natalbany Lumber Co.	Hammond	Running 5 days a week.
Pawnee Land & Lumber Co.	Pawnee	Running 5 days a week.
Poitevant & Favre Lumber Co.	Mandeville	Running 4 days a week.
Powell Lumber Co.	Edna	Running 4 days a week.
Peavy-Byrnes Lumber Co.	Kinder	Monthly capacity 3,000,000; cutting 2,000,000.
Pickering Lumber Co.	Pickering	Running 4 days a week.
Pickering Lumber Co.	Barham	Running 4 days a week.
Rapides Lumber Co.	Woodworth	Running 4 days a week.
Ragley, W. G., Lumber Co.	Ragley	Monthly capacity 2,807,093; cutting 1,932,275.
Sabine Lumber Co.	Zwolle	Running 5 days a week.
Sabine Lumber Co.	Colfax	Monthly capacity 4,000,000; cutting 3,250,000.
Salmen Brick & Lbr. Co.	Slidell	Cutting 50%-60% normal.
Sanford, F. L.	Zona	Running 4 days a week; 11 hours.
Schwing Lumber & Shingle Co.	Plaquemine	Cutting cypress; no curtailment necessary.
Southern Lumber Co.	Myrtis	Idle; mill burned.
Springfield Lumber Co.	Springfield	Idle.
W. G. Strange Lumber Co.	Newlin	Running 40 hours.
Tremont Lumber Co.	Winfield	Monthly capacity 6,765,441; cutting 4,750,000.
Weaver Bros.	Weaver Spur	Running 5 days a week.
Weaver Bros.	Boyce	Running 5 days a week.
Weaver Bros.	Couchwood	Running 5 days a week.
Weaver-Hearne Lumber Co.	Couchwood	Running 50 hours.
F. B. Williams Cypress Co.	Patterson	Cutting cypress; no curtailment necessary. Properly advertised.
Williams Bros.	Oberlin	Running 5 days a week; 10 hours.
Wyatt Lumber Co.	Gandy	Running 60 hours.
Urania Lumber Co.	Urania	Running 5 days a week.
Victoria Lumber Co.	Victoria	Running 4 days a week.

MICHIGAN.

Kneeland-Bigelow Co.	Bay City	Running six days per week; no curtailment compared with January.
Louis Sands Salt & Lbr. Co.	Manistee	Were running six days a week, 20 hours in January; now running six days, 10 hours.
Williams Bros. Co.	Cadillac	Were running six days per week; 10 hours a day; now 22¾ days, 10 hours.
Wisconsin Land & Lumber Co.	Hermansville	Running 25 days; 10 hours; short crew.

MINNESOTA.

Minnesota is a "short horse, soon curried":

J. Neils Lumber Co.	Cass Lake	Running 26 days; 520 hours. One-half stock on hand now had in January.

MISSISSIPPI.

Here is the revised Mississippi list:

Bienville Lumber Co.	Forest	June cut 2,208,300; cut July 1,876,800.
Batson-McGehee Co.	Millard	Never did run night and day. Were making 50,000 daily. Now shut down for 30 days
Bay Springs Lumber Co.	Bay Springs	Normal Product 635,000 per month; running 4 days per week; curtailing 135,000 feet per week.
Bentley & Emery	Richton	Normal product 3,000,000 per month; not curtailing.
Bentley & Emery	Richton	Running 60 hours.
Brookhaven Lumber & Manufacturing Co.	Hattiesburg	3 days 1 mill; other mill idle.
J. Bounds	Moss Point	Idle.
Buckwalter Lumber Co.	Union	Normal monthly 1,600,000; now cutting 1,340,000.
Central Lumber Co.	Brookhaven	40 to 50 hours a week.
Central Lumber Co.	Bogue Chitto	40 to 50 hours a week.
Champion Lumber Co.	Kiln	Idle.
Cybur Lumber Co.	Picayune	Monthly capacity 3,600,000; cutting 2,400,000.
Crosby Bros. Co. Stillwell-Crosby Co.	Canton	Mills closed down. Was producing 3,600,000; normal product 4,800,000.
Cotton State Lumber Co.	Meehan Junction	Running full time day only; 125,000 feet per day. Was down 11 months in 1915.
Cotton States Lumber Co.	Meehan Junct.	Running 5 days.
DuBois, John E.	Lake	Normal monthly 2,000,000; cutting 1,000,000.
Eastman, Gardiner Co.	Laurel	Normal monthly 5,800,000; cutting 5,000,000.
Enochs Lumber Co.	Fernwood	Shut down through June.
Finkbine Lumber Co.	Wiggins	Shut down June 24 for 3 weeks, 105,000 feet per day, normal.

Digitized by Google

Finkbine Lumber Co.	Wiggins	Closed.
Futvoye-Paterson Co.	Shuqualak	Running 60 hours.
Gilchrist-Fordney Lumber Co.	Laurel	Running 60 hours.
Griffin, J. M.	Blodgett	Normal product 1,500,000 feet per month; shut down for 30 days June 15.
Gray, C. L., Lumber Co.	Meridian	Will curtail.
Hall & Legan Lumber	Morton	Running two-thirds.
Hemphill Lumber Co.	Rhodes	Running 10 hours, 26 days per month. Will likely not curtail until all night running is stopped.
Hinton Bros. Lumber Co.	Lumberton	Monthly 2,500,000; cutting 2,200,000.
Homochitto Lumber Co.	Bude	Have been curtailing 165,000, per week for several weeks.
Jordan River Lumber Co.	Kiln	Running 10 hours a day; no night run.
Lumber Mineral Co.	Arbo	Idle; mill burned.
Marathon Lumber Co.	Laurel	Normal monthly 3,600,000; now cutting 2,900,000.
Moore-Haggerty Lumber Co.	Hattiesburg	Monthly normal 2,800,000; now cutting 1,350,300.
Major-Sowers Lumber Co.	Epley	Curtailing 1 day a week.
Mississippi Lumber Co.	Quitman	Curtailing 1 day a week.
Native Lumber Co.	Howison	Running 60 hours.
Newman, J. J., Lumber Co.	Sumrall Hattiesburg	Reduction July over May 12.8 percent.
Richton Lumber Co.	Richton	Curtailing 1 day and 1 night each week; cutting 140,000 to 170,000 each 10 hours. Contemplating 4 days a week.
Rosa Lumber Co.	Picayune	Curtailing 1 day and 1 night, 100,000 feet a week.
Schryver Lumber Co.	Louisville	Running 2 saws, 5 days, and 1 saw, 4 days a week.
Ship Island Lumber Co.	Sanford	Monthly capacity 1,250,000; now cutting 800,000.
Sumter Lumber Co.	Electric Mills	No curtailment; normal product 4,000,000 a month.
Tallahatchie Lumber Co.	Philipp	Hardwoods; running 10 hours; 26 days per month.
Vinegar Bend Lumber Co.	Vinegar Bend	Curtailing 1 day a week, 100,000 feet a week.
Wausau-Southern Lumber Co.	Laurel	Normal monthly 6,163,000; now cutting 3,920,000.
Weston, H., Lumber Co.	Logtown	Running 60 hours a week.
White, J. J., Lumber Co.	Columbia	Losing 15% of time account of bad luck.

OREGON.

Brown Lumber Co.	Cottage Grove	Ran 73 hours in January; 280 hours in June.
Carlton Consolidated Lumber Co.	Carlton	Not making any lumber; made none in January.
Falls City Lumber Co.	Portland	Closed down since July, 1915.

TEXAS.

Alexander Gilmer Lumber Co.	Remlig	Running 5 days.
Angelina County Lumber Co.	Keltys	Monthly 2,484,000; cutting 1,600,000.
Beaumont Saw Mill Co.	Beaumont	Running 5 days a week.
Blount-Decker Lumber Co.	Alton	Running two-thirds capacity.
Central Coal & Coke Co.	Conroe	Running 4 days a week.
Carter, W. T., & Bro.	Camden	Running 5 days a week.
Carter-Kelley Lumber Co.	Manning	Running 4 days a week.
Clark & Boice Lumber Co.	Jefferson	One-fourth normal stock. Just began cutting since mill burned down last March.
Frost-Johnson Lumber Co.	Nacogdoches	Running 4 days a week.
Fidelity Lumber Co.	Doucette	Running 4 days a week.
Keith Lumber Co.	Houston	Running 5 days a week.
Kirby Lumber Co.	Houston	No night runs; 3 of the 13 mills idle; balance running but 5 days a week.
Livingston Lumber Co.	Buck	Running 55 hours.
Lutcher & Moore Lumber Co.	Orange	All mills running 5 days.
Lufkin Land & Lumber Co.	Lufkin	Running 4 days a week.
Myer, R. A., Lumber Co.	Honey Island	Running 5 days a week.
Miller-Link Lumber Co.	Orange	Running 5 days a week.
Pickering Lumber Co.	Haslam	Running 4 days a week.
Palmetto Lumber Co.	Beaumont	Running 2 weeks a month.
Rice, J. S. & W. M.	Houston	Running 2 weeks a month.
Southern Pine Co.	Diboll	Running 5 days a week.
Sabine Lumber Co.	Houston	2 mills; running 5 days a week.
Saner-Whiteman Lbr. Co.	Caro	No curtailment.
Temple Lumber Co.	Pineland	Running 95 hours.
Texas Long Leaf Lumber Co.	New Willard	Running 50 hours.
Trinity Co. Lumber Co.	Groveton	Monthly 3,500,000; cutting 2,300,000.
Thompson Bros.	New Willard	Running 5 days a week.
Thompson Bros.	Trinity	Running 5 days a week.
West Lumber Co.	Houston	3 mills; running 5 days a week.

WASHINGTON.

Northwest Lumber Co.	Seattle	Shut down since October, 1913.
Port Blakely Mill Co.	Port Blakely	Apparently have not been running this year.
Seattle Lumber Co.	Seattle	Shut down since June, 1913.
Walsh Lumber Co.	Rock Cut	Apparently have not been running this year.
Weyerhaeuser Lumber Co.	Everett	Monthly capacity 18,000,000; now cutting 15,000,000.
St. Paul & Tacoma Lbr. Co.	Tacoma	Mill capacity reduced over 50 percent.

VIRGINIA.

Montgomery Lumber Co.	Suffolk, Va.	Full time during June; now curtailing 30 percent.

A Monograph on "Price Maintenance"

Being a Paper Read Before 1500 General Salesmanagers at the World's Salesmanship Congress, July 9-13, 1916

By GEO. E. WATSON

It may have been the idea of your committee on program that a given subject could best be handled by one in a line of business which is notoriously deficient, on the theory that such a person, knowing the weaknesses of his trade, has given his very earnest thought to the most apparent of these weaknesses, and, is, therefore, prepared to help you, even though he cannot solve his own problems. At least, it is only by this rather false line of reasoning that I can convince myself that you have used other than poor judgment in selecting a lumberman to talk upon the subject of "Price Maintenance."

A comprehensive discussion of price maintenance would touch upon every subject before this congress, and would run from the average attitude of the American people, through cost accounting, to decisions of the supreme court. I can, therefore, only hope, in the twenty minutes allotted to me, to very largely generalize and to make statements without attempting to prove many of them.

PRICE MAINTENANCE AN ECONOMIC PROBLEM.

This subject alone is worthy of an entire session of such a congress as this, and there could be hundreds of addresses upon its various phases. It is the most stupendous economic problem of the day and one which cannot possibly be solved until our people have a better understanding of the essentials of community prosperity. We know that proper price maintenance would benefit the people, but the people, through ignorance, do not believe this. With our form of government most laws are made to suit the desires of the people. In too many cases they are worded solely with reference to their effect upon the "vote at home." Therefore it is education at home that is needed before we can hope to be relieved from the legal strictures which the business of the country has outgrown.

As a people, we Americans seem to be constitutionally opposed to the profits of the other fellow. We are bargain hunters and we gloat over the conditions which force someone to sell to us at a price below the cost of production. We smile at business failures and have not reached that point in our development where we are willing to accept with finality the thoroughly proven fact that the community is most prosperous when every man in it is making a fair profit. Probably there is no man here who does not know of more than one establishment whose highest priced man is the buyer, whereas anyone will do as a salesman. It has been claimed that, as a people, we are better buyers than salesmen, and I am not prepared to dispute this statement.

As stated, the attitude of the people very largely exerts a controlling influence upon the laws which are passed for our guidance, the protection of the people being the object of these laws. At the same time, such laws do not protect the people if they are so drawn that they prevent profits, as profits alone can bring prosperity and corresponding benefits to the entire people. Neither are such laws entirely beneficial unless they are more helpful to the people during a business crisis than when everyone is prosperous.

GEORGE E. WATSON

THE LEGAL ASPECTS OF THE QUESTION.

I am not altogether prepared to state that the business laws of the United States are harmful, except that no one fully understands these laws and, therefore, because of this lack of understanding, they have a deterring influence upon business expansion. Laws passed more than twenty-five years ago are not yet fully interpreted, and it is my belief that these laws, if drawn with the present day comprehension of business conditions, would be radically different. This is not a plea for price maintenance by agreement, to the end that abnormal profits may accrue, but business certainly needs a better understanding than it now has of what the laws mean. The formation of the Federal Trade Commission is, in a measure, a recognition of this, and I can state from actual knowledge that the business of the country is receiving a closer and more beneficial study at the hands of this commission than our government has ever before granted.

It is generally believed—or feared—that the Sherman Anti-trust Act covers export as well as domestic trade, and the first big undertaking of the Federal Trade Commission has been an investigation of export conditions in an effort to learn just how the best interests of the public can be served. It is agreed that export trade is desirable, and it is also agreed that other governments than ours are more helpful to their exporters, which aid brings about competitive conditions which few individual manufacturers in America can successfully meet. The close of the European war will create a situation which will still further complicate our export trade, and it is the belief of our exporters that they should at least be privileged to meet foreign competion on an even basis. Here is plainly a case where laws drawn twenty-five years ago may have suited the situation then prevailing, but our business expansion has been such that more comprehensive laws are now needed.

As an indication that the Federal Trade Commission has arrived at this conclusion, permit me to quote from a communication issued by that commission on May 4, 1916, as follows:

Under the authority of this organic act, the Federal Trade Commission has completed a comprehensive investigation of competitive conditions affecting Americans in international trade. The commissions finds:

(1) That other nations enjoy a marked advantage in foreign trade, more superior facilities and more effective organizations.

(2) That doubt and fear as to legal restrictions prevent Americans from developing equally effective organizations for overseas business and that the foreign trade of our manufacturers and producers, particularly small concerns, suffers in consequence.

The commission appreciates the importance of fostering foreign trade and realizes the urgent need of enabling our citizens to meet foreigners on equal terms in international commerce. It, therefore, recommends immediate clarification of the law to permit co-operation among Americans for export trade.

Further, the commission has said:

The commission does not believe that congress intended by the anti-trust laws to prevent Americans from entering into export trade for the purpose of competing successfully with foreigners where such co-operation does not restrict trade within the United States and where no attempt is made to hinder Americans from securing their due share of the trade. It is not reasonable to suppose that congress meant to restrict development of our foreign commerce by forbidding the use, in export trade, of methods of organization which do not operate to the prejudice of the American public, are lawful in the countries where the trade is to be carried on, and are necessary if Americans are to meet competitors on equal terms.

PROBLEM VARIES WITH NATURE OF BUSINESS.

And this is true in a number of fields, as there are certain lines of domestic trade operating under conditions which are not paralleled by other lines of trade. This very fact makes it impossible for one short law, written twenty-five years ago and which we do not yet understand, to cover all phases of business in such a great commercial country as ours. It also makes it difficult for me, in handling this address, to delve down into individual price problems for one trade when these problems are absolutely simple in another. What I might say with reference to drugs, insurance or real estate would not apply to cotton mills, or farmers' selling unions.

BUSINESS WHICH DEPENDS UPON NATURAL RESOURCES.

To my mind, some of the greatest selling problems have to do with those branches of business which deal with the natural resources of the country, especially where these natural resources are produced and consumed in very large volume. In some of these trades there are conditions which are so radically different from those prevailing in other trades that economists are constantly using them to prove

Digitized by Google

their points. As an example, let us take coal.

The laws of the country, which are made for all of the people with the idea that our best interests are served by the keenest of competition, regardless of whatever conditions may prevail, are in this business causing a waste which may not be realized in this generation but which will cause posterity to curse us for having such a poor understanding of economics. Competition, which is regarded as the life of trade, sets the price of coal and the producer whose operating costs are not on the lowest possible basis cannot meet this competition and must shut down his pumps and allow his mine to go to destruction. A vein of coal which is not more than three or four feet thick cannot be profitably mined under present competition, with the result that lower and thicker veins are mined, preventing for all time the securing of millions of tons of valuable coal which are on the upper levels and which will cave in if touched at a later date.

Can any of you claim that the general law governing business competition serves the best interests of the people, so far as coal mining is concerned?

PECULIAR PROBLEMS OF THE LUMBER INDUSTRY.

Another business of a somewhat similar nature is lumber, and in this there is a record in the office of the United States Forest Service of more than thirty thousand saw mills, all of which are in operation during good times, and the majority of which must operate, no matter what may be business conditions. It is the business of these saw mills to convert trees into material for the use of our people—trees which it has taken generations to grow and which cannot be readily replaced. With all of these saw mills in operation, merely with a daylight run, there is a production of lumber about equal to the demands of the people dur- prosperous times, but it is possible for a jority of these mills to run at night and it a conservative statement that at least eighty rcent could be added to the production, bring- about a condition which, according to the laws of supply and demand, would soon reduce prices to a point considerably below the actual cost of production, and the bad feature is that this very thing happens whenever there is business improvement. Here again is a situation where a natural resource is being produced and marketed and where the existing laws do not fairly or comprehensively cover the case.

In time, should the present available supply of timber be so nearly exhausted that those remaining in the business can control the situation, the natural laws of supply and demand can be governed, but must we wait until this heritage of the people is exhausted before we realize the absolute wastefulness of what we are now compelled to do? Are we to wait and learn these things through sad experience, or shall we accept the results and methods of the older European countries?

Many saw mills can shut down during dull times, but a large majority cannot. Aside from this, there are woods which are sawed but are not in a marketable condition for almost a year. They may be produced during the best of times, but they must be marketed, whether times are dull or prosperous.

DIFFICULTY OF REGULATING THE SUPPLY.

With a business such as this, the very number of producers makes it impossible to regulate the supply, even were these laws of such a nature as to permit. Would not the interests of the people be served for all time if there were enforced regulation on a fair basis? Here again I am not making a plea for government regulation, but I am merely submitting the thought. You, as producers and salesmen, have an abhorrence of business regulation, but I am not so sure but that it will ultimately become the one thing that can be tolerated in certain lines of trade, although others may not need it.

These cases are cited to indicate that the question of price maintenance is of a much more puzzling nature than is imagined by owners of rival grocery stores in a small village, but it is my belief that the European situation, and the struggle for business supremacy which will follow the war, will force government recognition of many of the business problems of the country.

PRICE MAINTENANCE AFFECTS ALL INTERESTS.

From the point of view of a manufacturer or wholesaler, price maintenance is merely a question of selling all of the stock produced at a price showing a reasonable profit above the cost of producing and selling. This is not only desirable, but it is the only basis upon which anyone can continue in business. From the point of view of the retail dealer, so far as purchases are concerned, it is also essential, as continuous fluctuations or unreasonable differences in prices named by rival manufacturers of the same quality of material are demoralizing. The average retail dealer is more anxious to feel satisfied that his business competitor is buying no more cheaply than the price named to him than he is to figure out any other problem. If he knows that he and his competitor are on the same buying basis he will, as a rule, carry a larger stock and devote more time and attention to the selling end of his business than to the buying. He then, at all times, knows how to figure and he feels safe. No retail dealer who is a thinker is pleased with a declining market, as price maintenance of the product he buys is the one thing which will keep him busily at work getting the most out of his business.

It is useless to dwell very long upon the advantages of price maintenance, as all of us are agreed upon this. We are also agreed that profits constitute the greatest of all business essentials. The American people, however, are not agreed that you and I can get together and figure out our costs and then decide upon what would be a fair price for us to charge for our product. That, in their minds, would not be competition, although it certainly would be, so far as quality of product and service is concerned, and there would continue to be competition in both quality and service.

In his most illuminating work, "The New Competition," Arthur Jerome Eddy has, in sev-

Herewith We Submit an Opinion on Mr. Watson's Paper from One Well Qualified to Judge of Such Ideas as Mr. Watson Advances

We have received an opinion on Mr. Watson's paper from a man who has given it deep study, and which certainly belongs right here in the heart of that article where it will attract as much attention as the article itself and be as thoroughly read. Our correspondent after having read Mr. Watson's paper, wrote us as follows:

"Mr. Watson's address shows careful study on his part of several economic problems now confronting this country.

"I have long been of the opinion the extreme fluctuations in prices are an evidence of a false rather than a fair and free competition and that in the long run the public must, in one way or another, pay dearly for the cycles of unduly low prices.

"Whether resale price maintenance is a cure all, or even a partial remedy, for the evils of price cutting is a subject on which I have not been able to reach a definite conclusion and would, therefore, hesitate to express an opinion. I agree, however, with Justice Holmes that in the long run the public cannot profit 'by permitting knaves to cut reasonable prices for mere ulterior purposes of their own, and thus impair, if not destroy, the production and sale of the articles which it is assumed to be desirable the people should be able to get.'

"Trade should not mean a contest in which one of the parties gets the better of the other or injure a competitor or competitive conditions. Good morals and a sound public policy would seem to favor the square deal to all, the selling of goods at a fair price, which price should include a reasonable profit to the producer and to such agencies as will best distribute his product, and that price when made should be one upon which the producer and the seller are willing to stand or fall and which is open to all alike.

"Such a square policy in selling would seem to warrant a greater degree of protection to the vendor than is now given him by law.

"I have never agreed with those who preach that cheapness of price, regardless of the effect of such cheapness upon industry, is either desirable or of benefit to the consumer. All consumers should be, and a majority of them are, also producers. If production cannot receive fair prices then the purchasing power of the consumer is depleted with the result that the low prices react against those who are supposed to benefit therefrom. As stated by Mr. Watson, the American people seem to be constitutionally opposed to the 'profits of the other fellow.' In my opinion this is due to the fact that every man considers his interest as a consumer paramount to his interest as a producer, or, that he considers his position as a consumer without relation to his situation as a producer. He wants to buy cheaply and to get bargains for himself not thinking that if he gets the things he wants at less than they are worth that he must sell his labor or the product of his labor to some other bargain hunter at less than value. Whether this situation, which is based upon an essential element of human selfishness, can be remedied by legislation is a question worthy of consideration by the ablest and most thoughtful men in the country. Such discussions as that of Mr. Watson are helpful in making men give to the subject the thought that should precede legislative action."

A Monograph on "Price Maintenance"

Being a Paper Read Before 1500 General Salesmanagers at the World's Salesmanship Congress, July 9-13, 1916

By GEO. E. WATSON

It may have been the idea of your committee on program that a given subject could best be handled by one in a line of business which is notoriously deficient, on the theory that such a person, knowing the weaknesses of his trade, has given his very earnest thought to the most apparent of these weaknesses, and, is, therefore, prepared to help you, even though he cannot solve his own problems. At least, it is only by this rather false line of reasoning that I can convince myself that you have used other than poor judgment in selecting a lumberman to talk upon the subject of "Price Maintenance."

A comprehensive discussion of price maintenance would touch upon every subject before this congress, and would run from the average attitude of the American people, through cost accounting, to decisions of the supreme court. I can, therefore, only hope, in the twenty minutes allotted to me, to very largely generalize and to make statements without attempting to prove many of them.

PRICE MAINTENANCE AN ECONOMIC PROBLEM.

This subject alone is worthy of an entire session of such a congress as this, and there could be hundreds of addresses upon its various phases. It is the most stupendous economic problem of the day and one which cannot possibly be solved until our people have a better understanding of the essentials of community prosperity. We know that proper price maintenance would benefit the people, but the people, through ignorance, do not believe this. With our form of government most laws are made to suit the desires of the people. In too many cases they are worded solely with reference to their effect upon the "vote at home." Therefore it is education at home that is needed before we can hope to be relieved from the legal strictures which the business of the country has outgrown.

As a people, we Americans seem to be constitutionally opposed to the profits of the other fellow. We are bargain hunters and we gloat over the conditions which force someone to sell to us at a price below the cost of production. We smile at business failures and have not reached that point in our development where we are willing to accept with finality the thoroughly proven fact that the community is most prosperous when every man in it is making a fair profit. Probably there is no man here who does not know of more than one establishment whose highest priced man is the buyer, whereas anyone will do as a salesman. It has been claimed that, as a people, we are better buyers than salesmen, and I am not prepared to dispute this statement.

As stated, the attitude of the people very largely exerts a controlling influence upon the laws which are passed for our guidance, the protection of the people being the object of these laws. At the same time, such laws do not protect the people if they are so drawn that they prevent profits, as profits alone can bring prosperity and corresponding benefits to the entire people. Neither are such laws entirely beneficial unless they are more helpful to the people during a business crisis than when everyone is prosperous.

GEORGE E. WATSON

THE LEGAL ASPECTS OF THE QUESTION.

I am not altogether prepared to state that the business laws of the United States are harmful, except that no one fully understands these laws and, therefore, because of this lack of understanding, they have a deterring influence upon business expansion. Laws passed more than twenty-five years ago are not yet fully interpreted, and it is my belief that these laws, if drawn with the present day comprehension of business conditions, would be radically different. This is not a plea for price maintenance by agreement, to the end that abnormal profits may accrue, but business certainly needs a better understanding than it now has of what the laws mean. The formation of the Federal Trade Commission is, in a measure, a recognition of this, and I can state from actual knowledge that the business of the country is receiving a closer and more beneficial study at the hands of this commission than our government has ever before granted.

It is generally believed—or feared—that the Sherman Anti-trust Act covers export as well as domestic trade, and the first big undertaking of the Federal Trade Commission has been an investigation of export conditions in an effort to learn just how the best interests of the public can be served. It is agreed that export trade is desirable, and it is also agreed that other governments than ours are more helpful to their exporters, which aid brings about competitive conditions which few individual manufacturers in America can successfully meet. The close of the European war will create a situation which will still further complicate our export trade, and it is the belief of our exporters that they should at least be privileged to meet foreign competion on an even basis. Here is plainly a case where laws drawn twenty-five years ago may have suited the situation then prevailing, but our business expansion has been such that more comprehensive laws are now needed.

As an indication that the Federal Trade Commission has arrived at this conclusion, permit me to quote from a communication issued by that commission on May 4, 1916, as follows:

Under the authority of this organic act, the Federal Trade Commission has completed a comprehensive investigation of competitive conditions affecting Americans in international trade. The commissions finds:

(1) That other nations enjoy a marked advantage in foreign trade, more superior facilities and more effective organizations.

(2) That doubt and fear as to legal restrictions prevent Americans from developing equally effective organizations for overseas business and that the foreign trade of our manufacturers and producers, particularly small concerns, suffers in consequence.

The commission appreciates the importance of fostering foreign trade and realizes the urgent need of enabling our citizens to meet foreigners on equal terms in international commerce. It, therefore, recommends immediate clarification of the law to permit co-operation among Americans for export trade.

Further, the commission has said:

The commission does not believe that congress intended by the anti-trust laws to prevent Americans from entering into export trade for the purpose of competing successfully with foreigners where such co-operation does not restrict trade within the United States and where no attempt is made to hinder Americans from securing their due share of the trade. It is not reasonable to suppose that congress meant to restrict development of our foreign commerce by forbidding the use, in export trade, of methods of organization which do not operate to the prejudice of the American public, are lawful in the countries where the trade is to be carried on, and are necessary if Americans are to meet competitors on equal terms.

PROBLEM VARIES WITH NATURE OF BUSINESS.

And this is true in a number of fields, as there are certain lines of domestic trade operating under conditions which are not paralleled by other lines of trade. This very fact makes it impossible for one short law, written twenty-five years ago and which we do not yet understand, to cover all phases of business in such a great commercial country as ours. It also makes it difficult for me, in handling this address, to delve down into individual price problems for one trade when these problems are absolutely simple in another. What I might say with reference to drugs, insurance or real estate would not apply to cotton mills, or farmers' selling unions.

BUSINESS WHICH DEPENDS UPON NATURAL RESOURCES.

To my mind, some of the greatest selling problems have to do with those branches of business which deal with the natural resources of the country, especially where these natural resources are produced and consumed in very large volume. In some of these trades there are conditions which are so radically different from those prevailing in other trades that economists are constantly using them to prove

Digitized by Google

their points. As an example, let us take coal.

The laws of the country, which are made for all of the people with the idea that our best interests are served by the keenest of competition, regardless of whatever conditions may prevail, are in this business causing a waste which may not be realized in this generation but which will cause posterity to curse us for having such a poor understanding of economics. Competition, which is regarded as the life of trade, sets the price of coal and the producer whose operating costs are not on the lowest possible basis cannot meet this competition and must shut down his pumps and allow his mine to go to destruction. A vein of coal which is not more than three or four feet thick cannot be profitably mined under present competition, with the result that lower and thicker veins are mined, preventing for all time the securing of millions of tons of valuable coal which are on the upper levels and which will cave in if touched at a later date.

Can any of you claim that the general law governing business competition serves the best interests of the people, so far as coal mining is concerned?

PECULIAR PROBLEMS OF THE LUMBER INDUSTRY.

Another business of a somewhat similar nature is lumber, and in this there is a record in the office of the United States Forest Service of more than thirty thousand saw mills, all of which are in operation during good times, and the majority of which must operate, no matter what may be business conditions. It is the business of these saw mills to convert trees into material for the use of our people—trees which it has taken generations to grow and which cannot be readily replaced. With all of these saw mills in operation, merely with a daylight run, there is a production of lumber about equal to the demands of the people during prosperous times, but it is possible for a majority of these mills to run at night and it is a conservative statement that at least eighty percent could be added to the production, bringing about a condition which, according to the laws of supply and demand, would soon reduce prices to a point considerably below the actual cost of production, and the bad feature is that this very thing happens whenever there is business improvement. Here again is a situation where a natural resource is being produced and marketed and where the existing laws do not fairly or comprehensively cover the case.

In time, should the present available supply of timber be so nearly exhausted that those remaining in the business can control the situation, the natural laws of supply and demand can be governed, but must we wait until this heritage of the people is exhausted before we realize the absolute wastefulness of what we are now compelled to do? Are we to wait and learn these things through sad experience, or shall we accept the results and methods of the older European countries?

Many saw mills can shut down during dull times, but a large majority cannot. Aside from this, there are woods which are sawed but are not in a marketable condition for almost a year. They may be produced during the best of times, but they must be marketed, whether times are dull or prosperous.

DIFFICULTY OF REGULATING THE SUPPLY.

With a business such as this, the very number of producers makes it impossible to regulate the supply, even were these laws of such a nature as to permit. Would not the interests of the people be served for all time if there were enforced regulation on a fair basis? Here again I am not making a plea for government regulation, but I am merely submitting the thought. You, as producers and salesmen, have an abhorrence of business regulation, but I am not so sure but that it will ultimately become the one thing that can be tolerated in certain lines of trade, although others may not need it.

These cases are cited to indicate that the question of price maintenance is of a much more puzzling nature than is imagined by owners of rival grocery stores in a small village, but it is my belief that the European situation, and the struggle for business supremacy which will follow the war, will force government recognition of many of the business problems of the country.

PRICE MAINTENANCE AFFECTS ALL INTERESTS.

From the point of view of a manufacturer or wholesaler, price maintenance is merely a question of selling all of the stock produced at a price showing a reasonable profit above the cost of producing and selling. This is not only desirable, but it is the only basis upon which anyone can continue in business. From the point of view of the retail dealer, so far as purchases are concerned, it is also essential, as continuous fluctuations or unreasonable differences in prices named by rival manufacturers of the same quality of material are demoralizing. The average retail dealer is more anxious to feel satisfied that his business competitor is buying no more cheaply than the price named to him than he is to figure out any other problem. If he knows that he and his competitor are on the same buying basis he will, as a rule, carry a larger stock and devote more time and attention to the selling end of his business than to the buying. He then, at all times, knows how to figure and he feels safe. No retail dealer who is a thinker is pleased with a declining market, as price maintenance of the product he buys is the one thing which will keep him busily at work getting the most out of his business.

It is useless to dwell very long upon the advantages of price maintenance, as all of us are agreed upon this. We are also agreed that profits constitute the greatest of all business essentials. The American people, however, are not agreed that you and I can get together and figure out our costs and then decide upon what would be a fair price for us to charge for our product. That, in their minds, would not be competition, although it certainly would be, so far as quality of product and service is concerned, and there would continue to be competition in both quality and service.

In his most illuminating work, "The New Competition," Arthur Jerome Eddy has, in sev-

Herewith We Submit an Opinion on Mr. Watson's Paper from One Well Qualified to Judge of Such Ideas as Mr. Watson Advances

We have received an opinion on Mr. Watson's paper from a man who has given it deep study, and which certainly belongs right here in the heart of that article where it will attract as much attention as the article itself and be as thoroughly read. Our correspondent after having read Mr. Watson's paper, wrote us as follows:

"Mr. Watson's address shows careful study on his part of several economic problems now confronting this country.

"I have long been of the opinion the extreme fluctuations in prices are an evidence of a false rather than a fair and free competition and that in the long run the public must, in one way or another, pay dearly for the cycles of unduly low prices.

"Whether resale price maintenance is a cure all, or even a partial remedy, for the evils of price cutting is a subject on which I have not been able to reach a definite conclusion and would, therefore, hesitate to express an opinion. I agree, however, with Justice Holmes that in the long run the public cannot profit 'by permitting knaves to cut reasonable prices for mere ulterior purposes of their own, and thus impair, if not destroy, the production and sale of the articles which it is assumed to be desirable the people should be able to get.'

"Trade should not mean a contest in which one of the parties gets the better of the other or injure a competitor or competitive conditions. Good morals and a sound public policy would seem to favor the square deal to all, the selling of goods at a fair price, which price should include a reasonable profit to the producer and to such agencies as will best distribute his product, and that price when made should be one upon which the producer and the seller are willing to stand or fall and which is open to all alike.

"Such a square policy in selling would seem to warrant a greater degree of protection to the vendor than is now given him by law.

"I have never agreed with those who preach that cheapness of price, regardless of the effect of such cheapness upon industry, is either desirable or of benefit to the consumer. All consumers should be, and a majority of them are, also producers. If production cannot receive fair prices then the purchasing power of the consumer is depleted with the result that the low prices react against those who are supposed to benefit therefrom. As stated by Mr. Watson, the American people seem to be constitutionally opposed to the 'profits of the other fellow.' In my opinion this is due to the fact that every man considers his interest as a consumer paramount to his interest as a producer, or, that he considers his position as a consumer without relation to his situation as a producer. He wants to buy cheaply and to get bargains for himself not thinking that if he gets the things he wants at less than they are worth that he must sell his labor or the product of his labor to some other bargain hunter at less than value. Whether this situation, which is based upon an essential element of human selfishness, can be remedied by legislation is a question worthy of consideration by the ablest and most thoughtful men in the country. Such discussions as that of Mr. Watson are helpful in making men give to the subject the thought that should precede legislative action."

eral hundred printed pages, very comprehensively covered the legal aspects of competition and has drawn close lines between that which is fair and that which is unfair. One of his arguments is that much of the unfair competition is a result of lack of information, and for this reason he is strongly in favor of those trade organizations which report regularly to all members the actual prices on sales already made. He claims that this system will, to a very large extent, eliminate the ignorant and unfair competition and bring things to a basis of making those in a given line of trade know the prevailing prices of their products.

PRICE MAINTENANCE AND THE TRADE-MARK.

An individual manufacturer of a trade-marked article, which article is, by advertising, made familiar to all of the people, can name a price and maintain that price. There is only one manufacturer of "Holeproof" hosiery, and only one manufacturer of Ford motor cars, although many other makes of socks or automobiles are on the market. Price maintenance with such commodities as these offers no such problems as with a material like yellow pine lumber.

Imagine, if you can, what would be the condition of your business if you had five or six thousand other manufacturers turning out the same product, marketing it in the same way, under the same trade name to the same line of customers, with the added threat of the possible doubling of the production at any moment. Can any of you devise, under such conditions, a sure and safe system of price maintenance?

HOW TO INDIVIDUALIZE PRODUCTS OF THE FOREST.

In other words, individualizing a product, which perhaps cannot be done with everything, is the first big step toward price maintenance. But how can this be done with the yellow pine lumber I have just mentioned, when there is the competition of Douglas fir, hemlock and other woods, with more thousands of saw mills jumping into the arena of competition? I recently noted an effort to individualize the product of a certain coal mine, and the possible customers were invited to look for the label on the lump. Furthermore, I saw some of the coal and each lump was labeled. Such a propaganda, however, was only possible with localized sales bringing the trade-mark and an advertising campaign to bear upon the situation.

I cannot too strongly advocate the use of both the trade-mark and advertising as a means toward individualizing a product and bringing about price maintenance. The trade-mark is the guarantee which makes the price, and the advertising is the means of making the people look for the trade-mark and later determine for themselves whether the goods live up to what is claimed for them. It is undoubtedly true that advertising has done more than any other one thing to help make big business and to help stabilize prices.

But there must first be individualism of the product advertised, and this is not easy in all cases. As I have mentioned in these remarks, coal and lumber as extreme cases, and as I have also cited one of the efforts toward individualizing on the part of a certain producer of coal, let me also add that some of the varieties of lumber are moving in just this direction at the present time. Cypress, for instance, by continued advertising, has made the people appreciate its merits for certain uses, with the result that, by creating a steady demand, it has maintained a more even range of prices than has been possible with other woods, and it is now preparing to take the further step of trade-marking each board. How closely this can be followed by other woods is something of a question, but it is certain that heavy structural material, with known strength and durability, can be trade-marked and that this will be one of the greatest steps toward price maintenance.

PRICE MAINTENANCE AND GENERAL PROSPERITY.

There are so many angles to the question of price maintenance that I can touch upon very few of them. The methods and effects of farmers' and laborers' unions, and the legal aspects of such unions, constitute a phase of the general subject having a very interesting bearing upon the whole question. Then there is the Stevens bill, price maintenance by retail dealers, unfair bargains at prices below the cost of production and innumerable other things which could properly be discussed under my subject, but there is merely time to give you one big thought.

The prosperity of all of the people is based upon reasonable price maintenance by those in the business of manufacturing or selling goods. You, as salesmen, should realize that your territory is restricted at just the moment any man, or group of men, begin to do business at a loss. I may have devoted too much time to lumber as being one of the peculiar and unusual lines of business, but it and coal, and other lines in which millions of people are employed, can be classed among the essential businesses of the country, with an immense buying power when they are prosperous, and it has been my idea to indicate that each line of business has a sales maintenance problem of its own, which fact is perhaps not fully understood or appreciated by the people nor by those who make the laws governing the people.

Each of you is not only a salesman, but a buyer to within a reasonable degree of your earning power. You sell to each other and you are certainly interested in knowing that the man from whom you buy is doing a profitable business, as otherwise he is not a man who can afford to buy from you.

TRIANGULAR INVESTIGATION BY FOREST SERVICE, FEDERAL TRADE COMMISSION AND BUREAU OF FOREIGN AND DOMESTIC COMMERCE HAS ACTUALLY BEEN FINISHED.

Announcement was made from Washington, D. C., August 21 that the "study" that has been going on for the last two years by the bureaus mentioned above has really been finished and that we are to know the result in a very short time.

The official announcement, however, tells its message and is as follows:

"The series of joint conferences between the Forest Service and the Federal Trade Commission relative to the publication by the Forest Service of the summary report on its study of the lumber industry during the past two years has been concluded. It is anticipated that this report will be published by the first of November and that it will be followed by additional reports discussing in detail the conditions of timber ownership, lumber manufacture, and distribution in the various regions of the country.

"In its study the Forest Service has had the hearty co-operation of the lumber industry. The data obtained are now being checked prior to the publication of the summary report. Although its special investigation of conditions in the ownership of timber and in the manufacture and distribution of lumber has been practically completed, the Forest Service will continue to co-operate with the Bureau of Foreign & Domestic Commerce and with the Federal Trade Commission in their further study of the lumber industry.

"In addition to co-operating with the Forest Service in this series of studies and with the Bureau of Foreign and Domestic Commerce in its plans for promotion of lumber exports, the Federal Trade Commission has in preparation a separate report on the cause of present conditions in the lumber industry with recommendations on federal policy with respect thereto. During the past year the commission has held hearings concerning conditions in timber ownership and in the manufacture and distribution of lumber. It is planned that it shall later hold a final conference with the lumbermen of the country. A public announcement will be made of the date of this conference. Upon the completion of the present study of the industry by the Forest Service, the Bureau of Foreign & Domestic Commerce and the Federal Trade Commission, and after the final conference with the lumbermen, the commission expects to issue its report referred to above."

We wish every lumberman in America had some just appreciation as to what all this announcement means but it is really and truly doubtful if as many as a thousand lumbermen know and appreciate this work. THERE IS A REASON. We wonder who will have the courage to print that reason and then will have publicity ability enough to see that the lumber interests get a copy of the announcement, and then see that the lumber manufacturers READ the announcement?

RAILROAD VALUATION AND RATES.

"Railroad Valuation and Rates," written by Mark Wymond and published by Wymond & Clark, Rand-McNally building, Chicago, is a carefully prepared and up-to-date presentation and discussion of the pressing questions in this country of the proper control and regulation of interstate transportation corporations.

The book is divided into chapters thus: Historical, Promotion, Construction-Reconstruction, Capitalization, Valuation, Rates, and Rate Regulation.

It would be absurd to suppose that the author could have disposed of all possible questions in these complicated subjects, but he has grouped his ideas and those of many authorities in such a way that if a reader cannot agree with him in all his conclusions he still will be glad to consider those conclusions.

ROAD MAPS AND TOUR BOOK OF NORTH CAROLINA.

We have just received a copy of Road Maps and Tour Book, published by the North Carolina Good Roads Association, beautifully gotten up in convenient size for the traveler and bound in red leather.

The book contains 75 maps each covering 25 miles, showing the roads in detail, each being illustrated with scenes along the road. Descriptive matter is included as to bridges, condition of roads, descriptions of all sections of the state and other information arranged for ready reference.

The large delegations to the Southern Forestry Congress which convenes at Ashville July 11-15, will find this new travel guide valuable in their trips over the state, as will many other visitors and tourists.

Structural Timber Data for Architects, Engineers and Builders

By

BOLLING ARTHUR JOHNSON

Every architect, engineer, builder, or concern about to invest capital in a commercial building will be interested in a bulletin on "Heavy Timber Mill Construction Buildings" recently written by C. E. Paul, consulting engineer, and published by the National Lumber Manufacturers' Association, Chicago.

This bulletin is intended as an aid to the busy designer and the prospective builder. A glance at the outside front cover shows the gist of the contents—"What Mill Construction Is, Where Mill Construction Should Be Used, How Mill Construction Buildings Should Be Built, Mill Construction From an Insurance View-Point, Comparative Costs of Industrial Buildings, and Data for Design of Mill Construction Buildings." An inspection of the contents finds the work divided into nine chapters covering sixty-six pages of the standard 6-inch by 9-inch size together with an appendix containing formulas, tables and data for design relating to structural timber. A very complete index provides easy reference to the many details contained in the subject matter.

WOOD WHERE WOOD IS BEST.

Although this engineering bulletin is published by an association having primarily the interests of the lumber industry at heart, the reader will find that it is founded, framed and roofed along broad gauge lines entirely in keeping with the type of timber construction which it describes. The sentiment, "Wood Where Wood Is Best," is apparent in all parts of the publication. If another building material will give better service in a given location or for a given purpose only has the use of this other material been frankly advised but also full directions for its use to the best advantage have been given.

The various chapters of the bulletin treat of the following subjects: Mill Construction Defined; Exterior Walls, Fire Walls and Enclosures; Floors; Posts or Columns; Roofs; Fire Protection; Cost of Mill Construction Buildings; Standard Mill Construction; Quality and Kind of Timber Used.

GENERAL METHOD OF TREATMENT.

The first chapter is devoted to a concise description of the type of structure referred to as of heavy timber mill construction. This chapter is intended to serve as a means of clearing up the many mistaken ideas in regard to the term "mill construction" as commonly used by builders, and to correct the abuse of the name as it is often applied. The following extract is an illustration of the general method in which the subject matter is presented:

"The marked success of early heavy timber structures of the mill construction type led to the popular use of this form of construction in practically all kinds of large buildings. As its use developed, new problems arose which made necessary a departure from the original designs. This variation to suit the case in hand finally resulted in three general classes of framing, each commonly referred to by builders as mill construction. These classes have certain basic points in common, such as heavy timber, brick, stone, or concrete walls; stairways and elevators enclosed in fireproof shafts or towers; floors with no openings or with all openings protected by fireproof covers; each floor or room isolated by means of automatic fireproof doors or fire walls; windows protected by shutters or by the use of wire glass; sprinkler equipment, etc.

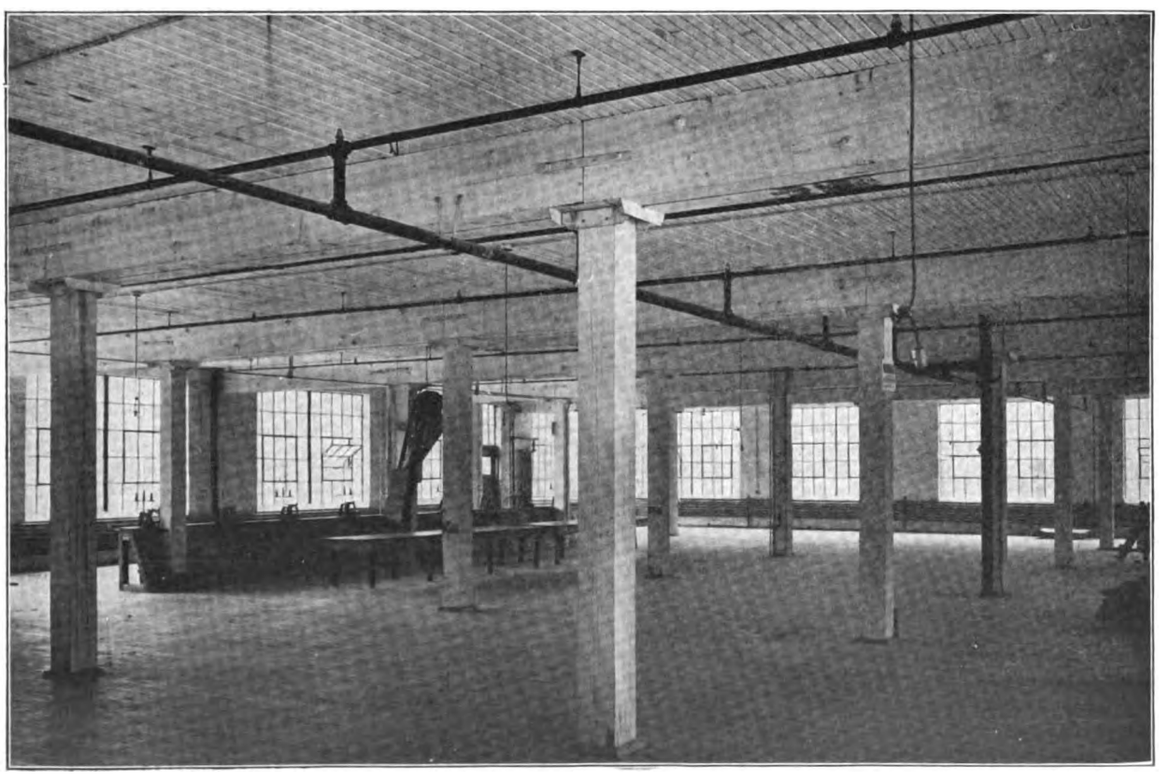
"These three general types of framing may be classed as follows:

1. Floors of heavy plank laid flat upon large girders which are spaced from 8 to 11 feet on centers. These girders are supported by wood posts or columns spaced from 16 to 25 feet apart. This type is often referred to as 'Standard Mill Construction.'

2. Floors of heavy plank laid on edge and supported by girders which are spaced from 12 to 18 feet on centers. These girders are supported by wood posts or columns spaced 16 feet or over apart, depending upon the design of the structure. This type is called 'Mill Construction with Laminated Floors.'

3. Floors of heavy plank laid flat upon large beams which are spaced from 4 to 10 feet on centers and supported by girders spaced as far apart as the loading will allow. These girders are carried by wood posts or columns located as far apart as consistent with the general design of the building. A spacing of from 20 to 25 feet is not uncommon for columns in this class of framing where the loading is not excessive. This type is more generally known as 'Semi-Mill Construction.'

"Each of these types is provided with a



INTERIOR OF MODERN TIMBER MILL CONSTRUCTION BUILDING WITH LAMINATED FLOORS THE "CENTRAL BAG MANUFACTURING COMPANY" OF CHICAGO.

Digitized by Google

lighter top-floor to take the wear and give a finished surface."

A clear distinction is made between the terms "mill construction" and "slow burning construction," with sections from the 1915 Revised Building Ordinance of the City of Chicago to illustrate this point. Reference to the classes of buildings which may be built of timber to an advantage is given. Construction details in regard to foundations, exterior walls, fire and party walls, maximum floor areas, stairways and elevator enclosures are treated briefly but to the point in each case.

CONSTRUCTION OF FLOORS AND ROOFS.

A feature of the bulletin is the compilation of reliable information in regard to the construction of floors and roofs, together with such important details as the thickness of timber floors and roofs, sizes of girders, beams and posts or columns. Construction details showing the methods of supporting these carrying members are to be found and are based upon general practice as followed in various parts of the country. Methods which have been chosen as standards are explained and illustrated. The average engineer or architect does not realize the scarcity of reliable information of this kind relating to timber construction until he has occasion to search for it.

STANDARD STRUCTURE RECOGNIZED BY INSURANCE AUTHORITIES.

It is a noticeable fact in reading this bulletin that the type of structure treated is founded upon practice as recognized and recommended by fire insurance companies and fire underwriters. Suggestions from these insurance authorities are used throughout the work and prove the fallacy of the arguments often advanced in regard to high insurance rates on properly designed timber structures. The chapter on "Standard Mill Construction" is an example of the attitude of insurance companies toward this class of buildings.

The section on comparative costs of industrial buildings will interest the prospective builder since it affects his pocket-book very materially. Expressions from various authorities are quoted and are drawn from different parts of the country. Relative costs of different materials are discussed and comparative insurance rates given. An extract from the chapter on Costs is as follows:

COMPARATIVE COST OF MILL CONSTRUCTION.

"One of the important advantages of mill construction is the relatively lower cost when compared with other types of building. This feature has been recognized from the early days of this type of construction. With the advance in the cost of building materials as a whole, the relative difference between timber, steel and concrete has changed slightly in favor of concrete but the advantage as a whole is still on the side of mill construction. The old custom of using girders 45 feet in length and spanning three bays of a building has passed, but the same strength is now obtained by using shorter lengths of larger material of a high bending strength. Large timbers of great strength in proportion to weight are obtainable in all markets, and there is an ample supply of all sizes and grades in several different species.

"Mill construction buildings vary in cost with the locality in which they are built. The cost per cubic foot will vary from 5c to 12c, with an average of about 8c. These costs are without the consideration of plumbing, heating, elevators or other equipment. Such extras will increase the cost per cubic foot by 1c or 2c. The corresponding cost per square foot of floor area of building is from 50c to $1.50, with an average cost of about 90c. In order to obtain these reasonable costs, standard lengths and sizes of timber should be used, or else an extra amount will have to be charged for specials. The cost of such buildings may be kept to a minimum by careful decision in choosing length of spans and areas of floors. Each girder and floor plank should be used to its full capacity, as determined by the load rating of that floor. Areas of floors should be such that fire walls will not be needed between the different parts of a floor, thus keeping down the cost for protection of openings between rooms. A careful choosing of the sizes of bays will aid in the design of the sprinkler piping by making one or two lines of sprinklers do the work where more piping might be needed in case the spans were chosen without attention to this detail."

BASED UPON LATEST TESTS AND INVESTIGATIONS.

The sections devoted to the quality and kind of timber to be used, formulas for design, tables of weights of merchandise, weights of timber and roofing materials; working unit stresses or timber, and tables for design of floors, beams, and columns will be of service to all designers of timber structures. This information is the result of careful study and compilation. In many instances it is new and based upon the latest tests and investigations.

It is evident that the fundamental principle was to make this bulletin readable as well as instructive. Its scope is such that the designer of the eastern states may compare his methods with those followed in the west. The industries of one locality may demand a type of structure varying slightly in details of design from that needed in another while the main principles may be the same in each case. This broad view is exemplified throughout the work.

This bulletin is neatly printed and well illustrated. Its contents and appearance are such that it will be kept as a reference book rather than serving as an additional demonstration of the geometrical proposition that the shortest distance between the desk top and and the waste basket is a straight line. There is a complimentary copy waiting for you if you care to have it.

Yellow Pine Shingle Specifications

The Southern Pine Association has just issued in small pamphlet form specifications for yellow pine shingles, and for laying a shingle roof, which reads as follows:

SPECIFICATIONS FOR YELLOW PINE SHINGLES.

Size.

All shingle shall be not less than 5/16 inch thick at butt, when dry, tapered to 1/16 inch at thin end, 4 inches wide, and 18 inches long, except to variations hereinafter specified.

Select Grade.

Shall be all heart, practically free from defects, and well manufactured, allowing a variation of 1/2 inch in length and 1/4 inch in width.

No. 1 Grade.

Shall be all heart, free from unsound knots, but will admit sound, tight knots not exceeding 2 inches in diameter, if not located within 6 inches of butt end; will admit clipped ends in not to exceed 10 percent of the shingles, and allow a variation of 1/2 inch in length and 1/4 inch in width.

Prime Grade.

May be all sap, practically free from defects and well manufactured, allowing a variation of 1/2 inch in length and 1/4 inch in width. Sap stain shall not be considered a defect in this grade.

No. 2 Grade.

May be all sap, will admit sound, tight knots, not exceeding 2 inches in diameter, IF NOT LOCATED WITHIN 6 INCHES OF BUTT END; firm red heart; sap stain; pitch, pitch pockets that do not show through; wane, or absence of wood, not exceeding 1/2 inch in width, that does not extend within 6 inches of butt end; will admit a variation not exceeding 1 inch in length and 1/2 inch in width, clipped ends in not to exceed 20 percent of the shingles, and slight defects in manufacture.

Note: The count of shingles is based on 4,000 lineal inches in width to 1,000 shingles.

SPECIFICATIONS FOR LAYING A SHINGLE ROOF.

Good Shingles.

The first essential is GOOD SHINGLES, not over 5 inches wide, nor less than 5/16 inch thick, when dry. For rafters used sized 2x4s or 2x6s, spaced on not over 2-foot centers, spiked solid and braced as load requires. For roof boards or sheathing use good material, (S1S strips, 1x4 inch or random widths to not more than 8 inches) spaced not more than 2 inches apart, and nailed solid with 8d nails.

Preparation of Shingles.

If they are to be stained use dry shingles, dipping each one in the stain not less than 8 inches from butt. Shingles that are not to be stained should be wet thoroughly before laying. If additional fire-resistant quality is wanted, dip in good quality of mineral paint, or use such other approved fire-resistant treatment as may be available.

Shingle Nails.

Solid copper, solid zinc or hot-dipped zinc coated nails preferred. Where these are not available use old-fashioned cut nails.

Size of Nail.

For shingles 5/16 inch or over in thickness, 4d.

Laying the Shingles.

Start at eaves and lay first course 2-ply, giving first course 2 inch projection over crown-mold and 1 inch projection at gables. Throw out all defective shingles. On one-third or more pitch lay 16 inch shingles 4 1/2 inches to the weather, on less than one-third pitch lay 16 inch shingles 4 inches to the weather. On one-third or more pitch lay 18 inch shingles 5 inches to the weather; on less than one-third pitch lay 18 inch shingles 4 1/2 inches to the weather. Use a straight edge to make sure courses are laid straight. Break all joints at least 1 1/4 inches, seeing that no break comes directly over another on any three consecutive courses, thereby covering all nails. Nail shingles 6 inches from butt (for 4 1/2 inch lap) and 1/2 inch from sides, and put only two nails in each shingle, staggering these nails not less than 2 inches. Lay shingles so that water will run with the grain, and do not drive nail heads into shingles. Lay wet shingles with edges close together. Leave 1/4 inch space between dry shingles. Use 14 inch galvanized iron not less than 26-gauge or best quality old-style tin, heavily coated, for valleys; copper or galvanized iron for ridge roll. Use galvanized or heavily coated tin flashing around chimneys. If tin is used it should be painted two coats, one as soon as roof is completed and the second coat within two weeks. Galvanized metal should be painted two coats but should be given thirty days for oxidation before painting. No patent dryer or turpentine should be used. Finish hips by laying a course of even width narrow shingles on both sides of hip over regular courses.

THE FORESTRY KAIMIN.

The "Forestry Kaimin" is the mysterious name of a magazine published by the forest school of the State University of Montana at Missoula. It is published annually and the second issue, that of 1916, is at hand. It is a magazine of 130 pages and has a good staff of editors under Harold Lansing, a member of the senior class, as editor in chief, members of the faculty serve on the staff.

Doors, Sash and General Millwork Review

Current Conditions of the Country's Market

By LUCIUS E. FULLER

The layman—and he is truly a layman of the highest degree, who attempts to prognosticate for the sash, door and mill-work business, if he be not actually in the business—would think that all of the threatened national cataclysms in this country would affect this branch of commercial endeavor.

With the car shortage impending, which Editor Dunn of the "Railway Age Gazette" considers is going to be the most stupendous in the country; the uncertainty as to whether there will or will not be a railway strike, and the known short condition of stocks of sash and doors in the hands of the retail trade, it would seem should accelerate and even stupenduously increase the buying.

The fact is, however, that this branch of the trade seems to be moving along in the same old way, which causes one to wonder if the public mind has not almost ceased to be affected by such things because of the fact that the public has so long felt that the world has just about been going to blow up, but still continues to revolve. The entire world has not been normal since the first day of August, 1914, and the peaceful inhabitants thereof it seems have just about concluded that business must go on any way and no attention need be paid to any event which is not right in the midst of its occurence.

Some Personal Opinions.

Except in a few things we have concluded to allow the sash, door and mill work people to write their own report of the situation, using the name of no individual, firm or corporation in connection therewith.

An Omaha concern says:

"The sash and door market presents no new or startling features at this time. Factories are all fairly busy on special work and prospects are good for the remainder of the year. It looks to us as if there is business enough in sight to keep the factories reasonably busy at remunerative prices. The supply of window glass is reported light, indicating a possible advance in glazed goods. The demand for hardwood doors is good, but pine doors are not in sufficient demand to indicate an advance at this time."

An Ohio river sash and door house takes the prize for an epigrammatic market report by writing:

"The demand at present is very satisfactory to us, and prices, also."

A very fine general review of the subject comes from the Mississippi river district as follows:

"As a general rule, we do not believe that manufacturers of sash, doors, and blinds have participated to any large extent as yet in the prosperity which most other lines are experiencing. Business in the big cities has been pretty good, particularly in manufacturing centers, and it is the increase in building in these points which is responsible for the general belief that the country is experiencing a building boom. As a matter of fact, our opinion is that business is no better than normal in the smaller towns; prices, of course, are higher than they were a year ago, due to advances in the cost of both labor and raw material—glass in particular having advanced enormously in the last year—but there has been little if any real increase in the actual amount of goods handled. The higher invoice prices make the sales look larger, that is about all. The outlook for business is rather spotted. Taking the country we serve as a whole, crops will not be as heavy as they were last year, but the increase in price will give the farmer at least the same buying power that he had last year, perhaps a little more. I think a great many people believe that building materials are high and perhaps this accounts for the evident reluctance on the part of small communities to build. Of course, everything in our line is selling at a higher price than it did at this time last year, but the advance in selling price hasn't been as great as the advance in cost. This condition, however, has had a tendency to stabilize prices. We are looking forward to a normal business during the balance of the busy season, but we believe there will probably be less speculative buying during the winter than is usually the case. This is always true, however, when prices appear to be high."

An Ohio sash and door house says:

"The sash and door business in our locality is only fairly good, with emphasis on the 'fairly.' On account of the backward spring the small towns did but little business, and the small town trade has been very slow all the year—and it is at present. The cities in our locality have been doing fairly well all year. Just at the present time, however, there is an inclination to slow up a little. We find by some inquiry that this is due now to the uncertainty regarding the outcome of the possible railroad strike, and then also the excessive hot weather that we have been having has had its influence upon business. Taking everything into consideration business has been much better than we could expect, or did anticipate. The trade so far this year has been largely special work—stock goods having moved very slowly all year. As for the future—with the railroad strike proposition out of the way we are confident of a very heavy fall business. Crop conditions in our locality are very good, indeed, and we feel that the small towns must come along this fall with a heavy volume of business. Prices are being well maintained on our present selling costs, which are altogether too low owing to the heavy advances made by the window glass people and the sash and door manufacturers—and we are confident that within the next very few weeks prices will rule higher than at present."

A Chicago sash and door house says:

"Orders only fair. Inquiries heavy. Estimates heavy. Outlook good. Merchandise not too plentiful. Factory output cut down by help shortage and hot weather. Glass scarce and firm. Going up."

Another Chicago house, with clean vision says:

"The demand for stock sizes is somewhat limited but the demand for special work is fairly good. We presume that trade has been somewhat affected by the extremely hot weather we have had during the past few weeks and from the number of special bills that we are figuring it appears that fall trade should be fairly satisfactory. As a general rule their prices are being fairly well maintained. The stock in the glass market is unchanged. The demand is good and prices high. From present indications it looks as if new glass will not be made before November. The stocks in the hands of the manufacturers are very badly broken and in some cases a premium is being paid for certain sizes. It looks very much as if we would have to ask a higher price for glazed sash."

A Minneapolis sash and door house says:

"Up to the present time, we have had considerable more business than we did a year ago. At this time, however, orders are coming in very slowly, but we anticipate considerable improvement in the situation within a short time. In our judgment, the sash and door business should see no material reduction in price during the latter part of this year."

Eastern Door Trade.

No particular activity is shown in the sash and door demand at eastern distributing points. One of the leading authorities of the trade says that his eastern business is rather spotty, but that on the whole he is getting some inquiries for special work and is doing a not altogether unsatisfactory business. The millwork demand, however, is not active at the moment and while there are good prospects ahead, in view of the large building operations contemplated, nothing much beyond a normal movement can be looked for. Buffalo is having a better season from a sash and door standpoint than some of the other cities, the local trade being on the mend. Distributers in Baltimore, however, say that they do not see much encouragment in the present situation and that prices are not all that could be desired.

Concerning the Glass Market.

The "Glassworker" writes an epitomized market which fits the condition, and in which that publication seems to give some advice in its heading—"Brakes on, at present." It says:

"The window glass market remains featureless, and is undergoing the annual midsummer lanquid period. There is some buying, for some stocks are already getting very holey. As a rule, however, jobbers are very slow in replenishing at this time.

"This putting on of the brakes is not due, as might be thought, to any real expectation of lower prices in the fall, but on account of a timidity engendered by the proverbial unsettled state of the country in a presidential election year.

"There is every reason to look for better than brisk business in the fall and early winter months. Building permits show a strong increase, and contracts for big operations have been closed.

"Whether prices will go any higher is uncertain, but it is safe to look for another very profitable year in the window glass industry."

General News of Associations and Clubs

SOUTHERN MILLWORK ASSOCIATION MEETING.

Jacksonville, Fla., Aug. 15.—The two day's meeting of the Southern Sash, Door and Millwork Manufacturers' Association, held at the Isle of Palms was well attended and enthusiastic and much good work was accomplished. Co-operation was the keynote of the meeting throughout.

A discussion of trade conditions in the territory of the association was entered into heartily by the members and the consensus of opinion was that the outlook is satisfactory, and the time ripe for aggressive association work.

President Baxter made a spirited address in which he urged closer co-operation of the members in the interest of business.

Secretary Harmon was instructed to take steps to incorporate the association; and, a committee of three was appointed by President Baxter to formulate a uniform cost keeping system to be adopted by the association members; the installation of an employment bureau was authorized and the employment of an expert to assist by counsel and investigation in the establishment of the new activities of the association was taken under consideration.

A. G. T. Moore, assistant secretary of the Southern Pine Association, spoke on "Benefits to Be Derived from Organization," outlining the work of the Southern Pine Association, and the results secured, and suggested methods of co-operation between that association and the sash and door manufacturers. Secretary Pritchard, of the Gum Lumber Manufacturers' Association, recommended a more general use of gum by interior trim manufacturers. Assistant Secretary William Petrie, of the Southern Cypress Manufacturers' Association, described the strides that the sale of cypress has made as a result of publicity. A resolution was then adopted providing for the more extensive use of gum, cypress and southern yellow pine by the association.

A discussion on salesmanship followed an address by R. H. Wessels, of the Pittsburgh Plate Glass Co., on the subject. The secretary of the association read a paper by Edward N. Hurley, chairman of the Federal Trade Commission, dealing with some of the present day business problems.

CALL TO FOREST INQUIRY CONFERENCE.

Lumbermen and Foresters:

The two big meetings of the year for western lumbermen and timber owners are the Pacific Logging Congress and the "Forest Industry Conference" on protective and industrial questions under the auspices of the Western Forestry & Conservative Association.

These meetings will be held jointly this year, so as to require but one trip, in Portland, October 24-27. The first day will be devoted to forest fire prevention, the second to current matters of vital importance to the entire lumber industry, and the third and fourth days to logging in particular.

Peculiar interest attaches to this conference because it has been chosen by representatives of both government and industry, national as well as western, as the occasion for threshing out a number of gravely important points. The Department of Commerce will present a prediction of trade conditions after the war and outline the terms on which government and lumbermen should cooperate to meet them. The results of the study of the lumber business by the Federal Trade Commission and Forest Service will be discussed by both sides. Great interest also awaits the report of a nation-wide committee on the correlation of associations connected with forest industry. Other important discussions will be of stumpage futures, salvage in cut-over land, timber insurance, legislation, and fire prevention methods.

Besides the usual large attendance from Montana, Idaho, Washington, Oregon, California and British Columbia, also federal, state and railroad representatives, we expect a delegation of prominent eastern and southern manufacturers, representing the National association and their own districts in the broader discussions. Plan now to be on hand yourself October 24.

Very sincerely yours,
Western Forestry and Conservation Assn.
Portland, Ore., Aug. 10, 1916.

September 2—Southern California Retail Lumber Dealers' Association, San Diego, Cal. Annual meeting.

September 9-10—Concatenated Order of Hoo-Hoo, Memphis, Tenn. Annual meeting.

October 24-25—Western Forestry & Conservation Association, Portland, Ore. Annual forestry industrial conference.

October 25-26 27—Southern Logging Congress, New Orleans, La. Annual meeting.

October 26-27—Pacific Logging Congress, Portland, Ore. Annual meeting.

VENEER AND PANEL TRADE GOOD.

Louisville, Ky., Aug. 23.—The veneer and panel trade in the Louisville district, including New Albany, Ind., just across the river, is in particularly good condition, the manufacturers being busier than for several years. The large increase in business among the furniture factories is given as the principal reason for the exceptional activity which is now noted.

The veneer mills have been doing especially well on quartered oak, which for a time was dull, resulting in considerable accumulations of stock. The demand has been sufficient not only to clean these up, but to keep the saws going at capacity in order to take care of the demand. This condition is being commented on because it is in sharp contrast with the state of affairs in the lumber trade, quartered oak lumber, especially in the upper grades, having slowed up materially, and the demand showing comparatively little life. On the other hand, many of the sawmill people are disposing of all the quartered oak flitches they can make to the veneer manufacturers.

The panel plants are finding the demand for built-up stock so good that they are having all they can do to take care of it. In fact, the furniture manufacturers are behind on orders, having had little goods in stock at the time of the mid-year shows, and they are pressing for early deliveries of tops and panels, on account of the necessity for getting goods into the hands of the dealers for the fall trade.

Program for Hoo-Hoo Annual

Memphis Tenn., Aug. 18.—J. D. Allen, jr., vice-gerent for the western district of Tennesee, has issued the following program for the Hoo-Hoo annual to be held at the Hotel Chisca, September 9-12.

FIRST DAY: SATURDAY, SEPT. 9.

9:09 a. m.—Opening session, Chisca hotel. Invocation. Address of welcome by Hon. T. C. Ashcroft, Mayor. Response by Mr. Julius Seidel, Snark of the Universe, St. Louis. Address of welcome by Mr. R. L. Jordan, president B. M. C. Address of welcome by S. M. Nickey, president Lumbermen's club. Response to prominent member of Hoo-Hoo (to be selected.) Snark's annual address. Appointment of committees. Report of secretary-treasurer.

3:09 p. m.—Leave Chisca hotel for visit to Overton park and Memphis Zoological gardens, the largest zoo in the south.

8:09 p. m.—An entertainment will be provided for the visiting ladies.

8:09 p. m.—Concatenation and entertainment of Hoo-Hoo, Chisca hotel.

SECOND DAY: SUNDAY, SEPT. 10.

A cordial and urgent inviation is extended to all Hoo-Hoo and ladies to attend the services of the various churches in Memphis at 11 a. m. and 8 p. m.

4:09 p. m.—Automobile ride through Memphis parks and Parkway system and portion of residence section.

THIRD DAY: MONDAY, SEPT. 11.

9:09 a. m.—Business session.

10:39 a. m.—Special lecture by Dr. Stanley L. Krebs on the "Composite" or the Secret and Law of Loyalty. Co-operation and Solidarity in an Organization of Trade Members.

2:09 p. m.—Open discussion for good of Order. Business session. General discussion for the good of the Order. Reports of committees.

4:09 p. m.—Complimentary boat ride, Steamer "Majestic," tendered by Lumbermens' club to Hoo-Hoo and ladies.

FOURTH DAY: TUESDAY, SEPT. 12.

9:09 a. m.—Business session. Reports of committees and general discussion.

10:39 a. m.—Lecture by Dr. Stanley L. Krebs, "The Secret and Pull and Suggestion in Lumber Advertising, Salesmanship and Business Building."

1:09 p. m.—Luncheon for ladies, Country club.

2:09 p. m.—Business session, election of officers, selection of city for 1917 annual.

Mr. Allen stated, in giving out the foregoing, that it was not quite complete for the reason that there are some features which can not be incorporated as yet. He and other members of the executive board are working on other features of the programme and these will be made public later.

In speaking of the program, Mr. Allen said that one of the brilliant features will be the lectures of Dr. Krebs, which will be open to the public and which are expected to be most entertaining.

In addition to the finance, entertainment and other committees, Mr. Allen has announced the following committee to be known as the "Concatenation Committee" which is expected to assist in securing as many candidates as possible for the annual concatenation and which is expected to assist the various other committees in every possible manner: K. A. Smith, chairman; Max Sondheimer, J. W. Dickson, C. C. Reed, R. A. Taylor, R. E. Bright, J. M. Clements, G. W. Fooshe and M. W. Waynesburg.

Mr. Allen, in giving out the program and the personnel of the concatenation committee, asked the correspondent of the Lumber World Review to extend a special invitation to every member of the order to be present at this annual and to bring their ladies with them. The various committees have done a great deal of work already and, while they have still much more to do, enough has been accomplished to insure a good time for every one present. Memphis has a reputation for entertaining second to no city in the country and, as the lumbermen and allied interests have been hosts to some very large gatherings, it is anticipated that no difficulty whatever will be encountered in looking after the personal comfort and pleasure of every Hoo-Hoo who makes the pilgrimage to this city.

WESTERN PINE MANUFACTURERS MEET

Remarkable Semi-Annual Meeting at Bend, Ore., Coupled With the Attendance of the New California Association

Bend, Ore., the wonder city of the Pacific coast, was host to the pine manufacturers of the west August 9 and 10.

Bend is unique. Picturesquely situated on the upper reaches of the marvelous Deschutes river, whose water power is estimated at that of a million unharnessed horses, and which, although draining the eastern slopes of the Cascade mountains has a flood stage of only 10 inches above that of low water, it is today the most attractive and at the same time the most rapidly growing city of the coast. Its prosperity is not measured by profits from the manufacture of munitions for waring nations, but by the manufacture of a product of peace.

When the Creator fashioned the world, so runs the Bend legend, he first made the prairies, then he made wide water courses meandering through them, then he turned out the low foothills and next fashioned lofty mountains whose summits carry caps of eternal snow and from whose bases issue the living waters of life. He made fantastic peaks, high plateaus, dizzy precipices and unsurmountable crags. Then in a moment he blotted out the creation of his hands and with infinite patience he made the Deschutes country in Oregon where Bend now prospers, an incident, merely, in the inevitable redemption by man of the marvelous central Oregon empire.

BEND'S MODERN SAWMILL PLANTS.

But the LUMBER WORLD REVIEW has neither the space to allot, nor the inclination to continue, this creative history of Bend. Suffice it to say she is there high on the plateau nestling at the fringe of the largest body of pine known on the western hemisphere, which is now being cut at the modern mills of the Shevlin-Hixon Co.'s and the Brooks-Scanlon Lumber Co.'s plants, which express the last word in modern sawmill construction.

The completion and operation of these two mills this year mark an epoch in the sawmill industry of the west. They are the initial operations in a body of timber extending from the Columbia river to Klamath Falls, which comprises over twenty billion feet.

The west, particularly the pine manufacturers to California, Oregon, Washington and Idaho, have watched with considerable interest the opening of this section, and when Secretary Cooper of the Western Pine Manufacturers' Association of Spokane, called the semi-annual meeting of that association for Bend, August 9-10, lumbermen from the four states gathered as guests of the thriving city and enterprising lumber companies.

The two days were busy and entertaining ones, and they were also instructive.

INSPECTING THE NEW MILLS.

Lumbermen came fifty strong, occupying two extra Pullmans on the North Bank train, arriving in Bend at eight o'clock in the morning. Following breakfast at Hotel Wright and the Pilot Butte Inn waiting automobiles carried them to the mill of the Brooks-Scanlon Lumber Co., where J. P. Keyes, manager of the company, escorted them through the plant.

After an hour spent here they were turned over to T. A. McCann, manager of the Shevlin-Hixon Lumber Co., who conducted them personally through the mill and remanufacturing plants of that company. When a thorough inspection had been made of the sawmill, the sash and door factory, the box factory and the rest of the plant, they gathered at the mess house of the company to enjoy a lunch with appetites whetted by the tour of inspection and keen mountain air. Following the luncheon, waiting automobiles took them to the Emblem club where the meeting was held.

THE ASSOCIATION MEETING.

B. H. Hornby, president of the association and president of the Dover Lumber Co., Dover, Idaho, presided in his usual capable manner. Following the regular semi-monthly report of Secretary Cooper, which closed with a review of the work of the Trade [illegible] department of the National Lu[illegible]rers' association, it was decided to continue the appropriation of $5,000 annually for the association's share toward the maintenance of the work.

RELATIVE IMPORTANCE OF FOREIGN AND DOMESTIC TRADE.

The question of sending a delegate to meet with the Department of Commerce to provide the foreign trade was discussed. Geo. M. Cornwall, editor of "The Timberman," Portland, said that he recently called on H. R. MacMillan of Victoria, B. C., who throughout the world for the British Columbia government, reviewed briefly the work Mr. MacMillan had done in European and far eastern countries. It was Mr. MacMillan's opinion, Mr. Cornwall said, that brick and stone, which had been used extensively in Europe as building material, would continue to be in general use after the war.

Following a general discussion of the subject, in which it was the general opinion that the domestic trade was of greater importance to the pine manufacturers than the extension of foreign markets, it was decided to have representatior at the conference with the Department of Commerce.

RECLASSIFICATION OF LUMBER.

Secretary Cooper reviewed the hearing before the Interstate Commerce Commission held in Chicago recently, and a short discussion of the probable outcome of the hearing ensued. Mr. Cooper said:

"While it is too early to make anything but a guess as to the outcome of this hearing, it would seem from the showing that was made that there is little likelihood of any change in the classification of lumber itself. What the commission will do as regards the classifying of products manufactured from lumber, it is very difficult to say. My own impression is that nothing very radical will be done; that the commission will probably request the carriers to eliminate some of the discrepancies now existing between different districts and may even request the carriers to make a uniform lumber list applying all over the United States, as far as possible. How extensive it will make this lumber list, or whether it will even pass definitely on this feature, no one can say. That it will fix some line of demarcation between lumber and its products seems reasonably sure.

"Of course, what the west was chiefly interested in outside of lumber was the question of sash and doors, and it is precisely on this phase of the case that it is very foolish to hazard a guess. Taken as a whole and looking at the case from a broad standpoint I believe it will accomplish a great deal of good in that it has enlightened the commission upon the transportation problems of the lumber industry. I believe it was also pretty well brought out in the case that lumber is paying fully its share if not more than its share of transportation charges. The case also presented a rather novel spectacle of the western shippers working in harmony with the western carriers, and I think to some extent that in this way a foundation was laid for a better understanding between the lumber shippers and the carriers."

While discussing the freight situation, Secretary Cooper called the attention of some prospective changes in east-bound lumber freight rates which have not yet, however, been worked out.

QUESTION OF TRADE-MARKING.

The question of trade-marking lumber, which has been discussed frequently at the meetings of the association, was again presented. The methods employed by some southern associations in trade-marking their product by the use of a machine, the patents of which are held by the McDonough Manufacturing Co., Eau Claire, Wis., was an interesting topic. After a full discussion it was decided to adopt a trade-mark and the matter was referred to a committee.

ADVANTAGES AND DISADVANTAGES OF TRADE ACCEPTANCES.

Trade acceptances received a great deal of attention during the meeting. The advantages and disadvantages of the adoption of trade acceptances, which is a common method of transacting business in some other lines of business and in some foreign countries, were fully explained by A. W. Laird, of the Potlatch Lumber Co., who, prior to becoming a lumberman, was a banker and understands the question thoroughly. Mr. Laird said that companies adopting that method could not hope to secure the Federal Reserve Bank rate of interest, neither should they think that trade acceptances are anything else than a promise to pay. He pointed out, however, that they are ready collateral for companies desiring to negotiate loans when in need of money for operating purposes. Mr. Laird was listened to with intense interest for half an hour, being interrupted frequently by questions from the members.

Walter Lammers of the Adams River Lumber & Shingle Co., Chase, B. C., said trade acceptances were used in Canada successfully and explained the method employed.

E. H. Van Ostand, of the Craig Mountain Lumber Co., Winchester, Idaho, stated that he believes the advantages of the use of trade acceptances lie wholly with the seller and doubts that a purchaser can be induced to use them unless some special inducements be offered in the manner of discounts or interest.

Following talks by J. P. McGoldrick, of the McGoldrick Lumber Co., Spokane, and F. J. Humbird, of the Humbird Lumber Co., Sand Point, Idaho, a motion carried urging the use of trade acceptances but discouraging the giving of cash discounts in their connection.

A general discussion of trade conditions ensued which were far from pessimistic in nature. Stocks on hand showed less than a year ago and in most lines are short for spring trade. It was the general opinion that there would be a serious shortage in the spring if even a normal trade develops.

CALIFORNIA MANUFACTURERS INVITED TO JOIN THE ASSOCIATION.

Through Mr. Laird, following a discussion of grades and the possibilities of a closer co-operation between Inland Empire and California manufacturers in this connection, an invitation was extended the southern manufacturers to join the Western Pine Manufacturers' Association.

H. D. Mortenson, manager of the Pelican Bay Lumber Co., and president of the California Sugar and White Pine Manufacturers' Association, recently organized, in reply said that this subject had been under discussion by their association and they had decided that it is best at this time to strengthen the spirit of co-operation among lumber manufacturers of California before taking steps to affiliate with the association except on the matter of grades. They desired to get close on this phase of the industry and hoped the rest would soon follow. He would only be too glad, however, to carry back from this association the invitation to join hands in a greater co-operative organization for the welfare of the pine industry of the Pacific coast.

HOO-HOO CONCATENATION.

Busy Bend held its second Hoo-Hoo concatenation within a few weeks immediately following the meeting of the association. F. D. Becker, Vice-Gerent Snark of Eastern Oregon, is a live one, and had prepared a series of stunts and drilled a team in the intricacies of pussy-foot work, which was a winner. Thirteen kittens had their eyes blinking in the radiant light of Hoo-Hoo by 6:30, at which time the Commercial club served dinner at the Pilot Butte Inn. The piece de resistance at this dinner was a magnificent 12½-pound trout, caught by Clyde M. McKay, western representative of the Mueller Lumber Co., Davenport, Iowa, and an old resident of Bend, for the occasion. Mr. McKay, who is game warden at Bend, planted this trout in Lake Pauline four years ago. Following the dinner the Emblem club was the scene of a dance which continued until an early hour.

TRIPS TO LOGGING CAMPS.

Thursday morning automobiles took the delegates to the logging operations of the Brooks-Scanlon Lumber Co., where the high wheels and a MacGiffert loader are operated to advantage in the park-like timber of this region. Following this inspection they returned to the sawmill mess house where a lunch was awaiting them which, in quality and quantity, was fit for a king or a lumber jack. In the afternoon a visit was paid to the

Digitized by Google

logging operations of the Shevlin-Hixon Lumber Co., where Clyde four-line skidders and Lidgerwoods are in use.

UNIQUE ENTERTAINMENT.

The automobiles retired to Bend at 6 o'clock and the members gathered at the Emblem club to be entertained by that unique organization with its famous Bazoo band, an entertainment which was one constant round of hilarious song from start to finish, led by W. D. Cheney, an enterprising citizen and the creator of the Bazoo band and of the Emblem club, both of which have attained with Bend, its wonderful timber and its modern sawmills, a national reputation.

Toward the close of the song service, the toastmaster of the evening, Cashier Lara of the First National Bank, introduced C. S. Hudson, "his boss," who greeted the visitors in a gracious manner. Following Mr. Hudson, A. W. Laird, T. J. Humbird, B. H. Hornby, H. L. Soare, H. D. Mortenson and Geo. Stoddard, replied for the several states. Mr. Cheney spoke a few moments and the Bazoo band's touching finale closed the most delightful entertainment ever tendered any lumber manufacturers' association on the Pacific coast.

MONTANA DEALERS IN ANNUAL MEETING

Discuss Shingles and Shingle Roofs—Terms of Sales—Effect of Railroad Rates on Business—Several Addresses

Great Falls, Mont., Aug. 12.—The sixth annual convention of the Montana Retail Lumbermen's Association came to a close tonight. The convention was attended by nearly two hundred lumbermen and was unanimously acclaimed by far the most successful gathering the association has ever had. It was certainly an enthusiastic gathering that listened to the strong and interesting program prepared by the officers and entered heartily into the discussions.

OFFICERS ELECTED.

Great Falls was more than generously represented in the election of officers for the ensuing year. B. J. Boorman, president of the Boorman Lumber Co., being elected as president of the association: Harry M. Yaw, junior member of the firm of Sturm & Yaw and formerly identified with the Boorman Lumber Co., was the choice for the office of secretary-treasurer; and H. L. Call of the Goodridge-Call Lumber Co. was elected to the board of directors. M. Savage of Billings was elected vice-president and the following board of directors were chosen: Frank Russell, Billings; H. L. Call, Great Falls; Sam Langdoc, Standford; A. Ellis, Harlem; W. W. Dunks, Butte. Mr. Yaw was elected secretary-treasurer by the new directorate of the association which will also decide at a later date on the next convention city.

INTERESTING ADDRESSES.

Although disappointed by the absence of some speakers and visitors, kept away by more pressing business and or by the wreck on the Great Northern, the Montana Retail Lumber Dealers Association began its first convention in two years in a cheerful frame of mind. Conversation before the session opened and the talks during the meeting all reflected unusual prosperity in the lumber industry.

Mayor A. J. Fousek assured the visitors of their welcome to the city and touched on points of local prosperity that interested the lumbermen. There are more owners of homes in this city than in any other in the state, he said. Building is active with the lumber yards all prosperous and rushed to handle orders.

P. L. Palmer of Helena replied thanking the citizens of Great Falls, the local lumber dealers, the traveling lumber salesmen, the commercial club and all others who had helped with the convention.

Governor S. V. Stewart, who was to deliver the opening address, telegraphed yesterday afternoon that he would be kept away by unexpected official business. In his place, former Governor Edwin L. Norris of Great Falls spoke to the lumbermen.

THE CONSUMMER'S VIEWPOINT.

Mr. Norris explained his position as a substitute speaker with some apt stories and then settled into a discussion of the lumber industry from a consumer's viewpoint. His conclusion was, "When I consider all the factors that affect the retail lumber dealer and all the many hands a piece of lumber must pass through from the forest to the completed house, I don't wonder at the price of lumber—I am surprised that it is not higher."

In speaking of the importance of lumbering in Montana, he said that there are 18,000,000 acres of forest reserve in the state. This state remains one of the few in which the supply of timber has not decreased alarmingly.

THE PRESIDENT'S ANNUAL ADDRESS.

Governor Norris was followed by President Albert W. Gates who delivered his annual address.

After reviewing the history of the past two years which he stated had been devoid of special interest because of the depression of trade, he continued, saying in part:

"For a time the continuation of our existence as an association remained in doubt, but through the earnest efforts of our secretary and a few loyal members who realized the benefits of association with their competitors, or, in other words, had the 'get-together' spirit, the crisis was passed and we are now moving forward to a strong and efficient organization.

"We meet this year under exceptionally favorable conditions.

"The lumber business in Montana, while perhaps not just what we might wish, is on a prosperous and sound footing. The volume of business has increased and we are getting better prices for our goods. We are fairly free from disturbances of any nature and are looking forward to a good business with fair returns for the balance of the year. A spirit of optimism prevails which we believe is justified and it seems to us that our little Montana association is now assured of a strong and prosperous future:"

Following the president's report came the report of the secretary-treasurer of the association, George M. Porter, which included a financial statement and all the details of the association business since the last convention at Glacier Park in 1914.

SHINGLES AND SHINGLE ROOFS.

"Shingles and Shingle Roofs" was the subject of B. J. Boorman's address which was of great interest to the convention and showed accurate knowledge and careful preparation. He said in part:

"The theory that I sell my customer what he asks for is not always the best. Teach your customers to ask for the best of that which his dollars will buy the greatest value of the best quality, that will last for the greatest length of time and you have performed the service not only for yourself but to your customer. Were I to give a definition of evolution as applied to merchandise it would not be more goods for less money, not less goods for more money, but it would be better goods for the same money. That should be the aim of every dealer. The dealer that consistently pursues this theory will find that his opinion will be respected and his advice sought.

"Naturally, the first question that should present itself to the mind of the purchaser is the permanency of the article that he desires to purchase. How it is produced, the length of time required for the production and the proper use as well as the permanency of that particular article as well as the knowledge of who stands back of this article and whose guarantee is of the greater value."

He gave an interesting account of redwood and cedar shingles, and their value as roof coverings, and rallied his hearers to their support, saying in conclusion: "The lumber dealers should standardize their efforts on this subject to become leaders, to spread the gospel teaching one of the great fundamentals, that buildings, if properly constructed of proper materials, are real investments; the great opportunity is ours, and ours alone."

WORKING OF WORKMEN'S COMPENSATION LAW.

State Auditor William Keating of Helena who read a carefully prepared address on the Montana workmen's compensation act, as a representative of the Industrial Accident board.

He said in part:

"I am more than pleased to convey to you the gratifying information that the Montana workmen's compensation law is giving eminent satisfaction to both employers and employees, and is what can be logically termed a complete success in every respect

"There is no doubt but what the compensation law has come to stay in Montana. The people of this great state will fully endorse the wisdom and justice of legislation that deals fairly with the man who toils that humanity may enjoy the fruit of his labor."

EFFECTS OF RAILROAD RATES ON BUSINESS.

H. G. Miller of Kalispell addressed the convention on the subject "Effects of Railroad Rates on Business and Possible Effects of Disturbing Same." He was listened to with marked attention. In a general discussion of theory and practice of freight rates he pointed out a reversal in the last two decades of the control of rates, which now is largely in the hands of the public. Under this situation, he warned that the public must see to it that railroading continues to be profitable, with fair rates in effect.

TERMS OF SALE.

Guy W. Bulmer of Great Falls introduced a subject that proved to be the closest to the interests of the lumbermen of any topic before the convention. His paper was on "Terms of Sale."

The lumberman, he said, is usually the most generous with credit of any tradesman and the slowest to make his collection. He pointed out instances of profit losses that come upon the lumberman who has his books loaded before he knows it.

Following his address, he passed around copies of a credit form used by the Rogers-Templeton Lumber Co. and an open discussion was held on the subject. Mr. Bulmer had urged that the association take some steps to set uniform terms of sale. On his motion it was decided to have the president appoint a committee to formulate some uniform plan.

RETAILER TOWN AUTHORITY.

W. R. McKenna of Lewistown, speaking on "Salesmanship," told the lumbermen that they must set themselves up as the lumber authorities in their cities.

"The retailer must work with the contractor, not depend on him to bring in news of building. The retailer must know how to take a bill of lumber from a set of plans; how much lumber for a 10-horse stable and how much hay the barn will hold; how big a garage is needed for a certain make of automobile; he must know all about lumber and be able to tell his prospective customer all he wants to know about the building he plans."

Charles March, spokesman for the manufacturers, urged the lumbermen to put their chief interest into lumber and not try to compete with hardware stores and dealers in other side lines. So long as the retailer is a lumberman at heart, there will be profit in his business, he declared.

OTHER ADDRESSES OF INTEREST.

Harry L. Call of the Goodridge-Call Lumber Co. presented a paper on "Insurance" in which he carefully covered the fallacies which determine insurance premiums in Montana, making them absurdly high in comparison with North and South Dakota and Wisconsin.

After Mr. Call had read his address, a motion was made from the floor that a committee be appointed by the president at some later date which would see what might be done in the matter of adjusting the inequalities of insurance risks, in this state.

J. E. Lane of Lewistown, scheduled to speak on "Lumber Profits in Japan and Other Places," excused himself with the explanation that lumbering in Japan, where he has visited recently, is so unimportant an industry as to be below consideration.

The visiting lumbermen left for their homes with warm words of praise for Great Falls, her progressive lumbermen and their generous entertainment.

IN FUTURE WILL SELL ADDING MACHINES

George X. Wendling, for Thirty Years a Lumberman. Most of That Time in California, Changes His Vocation and Becomes Vice-President and General Sales Manager of the Dalton Adding Machine Co., of Cincinnati, O.

George X. Wendling has become vice-president and general sales manager of the Dalton Adding Machine Co., which has a great factory at Norwood, Cincinnati, O., which from the moment of Mr. Wendling's entrance therein, became as truly the center of the universe, as was the city of Duluth nestling by the "unsalted seas" to the stupenduous brain of Proctor Knot.

George X. Wendling has been striding up and down the face of the lumber earth for thirty years, in various capacities, all of which he has thoroughly filled in an interesting manner, and now he is going to make mechanical addition, multiplication, division, subtraction and the like as interesting a divertisement as sea-bathing in the hot summer days and as pleasant to the business man as is the toasting of marshmallows to the gay and young on a sandy beach.

Salesmanship and the creation of salesmen are not produced by formula even if the great Hugh Chalmers does think so. The art of the salesman is wrapped up in the ability of the man who has the thing to sell, to make you whom he wishes should purchase, consider that the purpose for the existence of and the use of the thing to be sold are for amusement and recreation, rather than for abject and stern necessity.

The very wonderful Dalton Adding Machine, which we may describe before we get through this restful introduction may probably be no better nor more wonderful since George X. Wendling became interested in it; but the lumber public will be compelled to think it is, because that public will be told a series of wonderful stories concerning it that will be interesting and helpful and entertaining, and any man with discrimination will stop to listen because it is Mr. Wendling who is speaking, and will remain to be convinced because the story will be worth while.

A FEW WORDS ABOUT WENDLING THE SALESMAN.

A very clever newspaper man epitomizing Mr. Wendling's characteristics recently said of him:

"He has a tremendous capacity for work which is well as he assigns himself a tremendous amount of work. There is no bromide in his make-up. He is original and ingenious. The time may come when the word 'Wendling' will appear in the lexicons and dictionaries, not as a proper noun but as a verb, and the infinitive 'to wendle' will epitomize and parallel Davey Crockett's advice to 'be sure you are right and then go ahead.'"

George Xavier Wendling was born in New York City, his family coming west to Keokuk, Iowa, in 1864. When he was 15 years old he went into the lumber business with C. W. Goodlander who, for several decades was one of the half dozen active heads in the establishment of the yellow pine industry in the middle west.

For twenty-eight years Mr. Wendling has been walking up all the steps from the ground floor to the top of the ladder, to the top of the flight in the box and lumber business in California, where he began in the lumber industry in 1888. He began in the box business and was probably better known through the Mississippi valley as a box manufacturer than as a lumberman, but he was ultimately both to a high degree.

Mr. Wendling's especial prominence was accentuated by the volunteer way in which he got back of and helped to make a success of a line of litigation in the interests of the box-making fraternity of the nation known as the "Pridham case."

Suit was started against a group of western railroads, which was at first a local issue, but became national. The California Pine Box & Lumber Co. at once became an intervenor in the contest. Mr. Wendling was at that time the head of the California Pine Box and Lumber Co. In the first years of his work in California he was in the retail lumber business and it was he who in 1897 organized and assumed the management of the California Pine Box Manufacturers' Agency, which was incorporated as the California Pine Box & Lumber Co. in 1903. This was an institution that marketed over 200,000,000 feet of lumber into box shooks and as Mr. Wendling was the head of that institution when the so-called "Pridham Case" was instituted, he was made a member of the national classification committee of the lumber and wood box interests of the United States, and naturally became a conspicuous factor in the hearing.

GEORGE X. WENDLING.

Although Mr. Wendling had divorced himself entirely from official connection with California lumber interests and had become vice president and general sales manager of the Dalton Adding Machine Co., when the necessity arose and the demand was uppermost for his services as a witness in the hearing before the Interstate Commerce Commission which recently closed its long and laborious sessions in Chicago after making much history for freight-rate making on lumber in this country, Mr. Wendling, at the insistence of his old associates in California gave much time to the cause and did valuable service both for the railway and lumber interests.

In April, 1903, Mr. Wendling reorganized the Weed Lumber Co. of Weed, California, which has an annual output of 75,000,000 feet of California White Pine, during an operating season of eight months from April to November, inclusive. This plant became, under his direction one of the best known lumbering institutions in the United States. In 1912 it introduced into the market white pine veneered doors. It now produces 2,000 doors daily and 3,500 windows, and the box division of the plant has a capacity of using 60,000,000 feet of lumber annually.

But really we started in to talk about the Dalton Adding Machine.

BRIEF STORY OF THE DALTON ADDING MACHINE.

The reader can gain but little conception of the appearance of the Dalton Adding Machine as a piece of office furniture by observing the black and white engraving printed herewith, but even herein he may learn that it is "the machine that does things" and then if he is curious he might ask the Dalton Adding Machine Co. that lives at Norwood, a suburb of Cincinnati, O., to send him their beautiful commercial special catalog, and especially to send him an illustrated folder in black and white and green and red, which mayhap will etch the Dalton into his brain quicker than even the catalog referred to.

THE DALTON ADDING MACHINE.

The Dalton adding machine was invented during the latter part of 1901 and the first model built during the spring and summer of 1902.

Not always under the name of the Dalton Adding Machine Co., but under another name that is of no importance now, the company grew up slowly as befits any institution that expects a long and prosperous life. As recently as 1903 the business which has now bloomed so fully was confined in a store room in Poplar Bluff, Missouri, which had about as much floor space as the ordinary freight car and contained a lathe, a milling machine, a shaper, a punch press and two drilling machines.

The first sales office was opened in St. Louis in the summer of 1907 by W. I. Currie who is now in charge of the Chicago office, the second office opened.

SOME "ADDING MACHINE" ADVICE.

Here are some Adding Machine characteristics which are deemed altogether worth while for an intending purchaser of a machine, and which are expected to apply to adding machines impersonally.

A man who invests several hundred dollars in an adding machine is entitled to a number of things which he should insist upon having. He should weigh each of these certain things and determine which are of value to him in his business, and then invest in the machine in which is embodied the greatest number of these special features and added values.

The machine he buys should be manufactured and sold by a good company in all that these words imply—a company that has earned the reputation of taking better care of its customers than its prospective customers and of giving more attention to its sold machines than the printed guarantee given with each machine contemplates.

The machine itself should, first of all, be preeminently for plain, straight adding and listing, which constitute so large a percentage of the work of every business office. No special feature or features, however clever, can possibly compensate or atone for deficiencies in its primary functions of adding and listing.

The machine must be able to demonstrate its efficiency by the standard of performance. A satisfactory showing in a five minute test is good. The final verdict, however, must be based upon the quantity of work representing continuous daily performance from one month's end to another.

The machine should yield a maximum of performance without imposing excessive nervous strain upon the operator. Continuous operation from morning till night should not cause undue fatigue.

The machine should be susceptible of constant daily use without risk of injury to the eyesight. To read the items to be added, is all that the eyes should be required to do.

Of course the machine must be mechanically accurate. It should also be operatively accurate, safeguarding, as far as possible, in its methods of operation, against human errors, such as striking the wrong key, etc.

The machine should be composed of the fewest possible number of parts, embody the best and soundest mechanical principles, and be so constructed and of such materials as to make it last a life time.

It should be so simple in construction as to reduce to a minimum the liability of getting out of repair, and the parts should be so accessible and the adjustments so easily made as to make it unnecessary to call in an expert in the event of a slight disorder.

The machine should be portable and so light, rapid, simple and easy of operation, that it may be used by every man, woman and child in the office, thus saving much valuable time.

It should be so versatile that a single machine is all that is required to handle the varied and complicated work of the most exacting business office.

Digitized by Google

and thus save the purchaser the necessity of buying separate and expensive machines in order satisfactorily to handle the various kinds of work in his office.

SOME "DALTON" CHARACTERISTICS.

All Dalton machines look very like the one which we picture herewith but there are many varieties, really adapted and adaptable to any line of business. You can get a Dalton with a traveling desk stand which makes it desirable to use when figures are to be added from large cumbersome books; you can get what is called a "Satellite" stand which makes an adjustable desk for low or high; and a stand for high desks alone. The Dalton comes also with a motor attached, and you can have a cross-tabulating carriage if you wish it.

Since the first adding and listing machine found its way into public use, men of genius have labored faithfully and earnestly in an effort to meet the crying needs of commerce by producing an adding and calculating machine that would not only be free from the objectionable features of machines of these earlier types, but contain improvements that would make them many times more versatile, thus increasing their field of usefulness, and at the same time lightening the burdens incident to modern accounting requirements.

The Dalton is not the product of any one mind nor is it the result of any one man's genius, but it is the evolution in cold steel of the combined efforts of a score or more of mechanical geniuses who have been studying accounting and accounting machine problems for many years.

Dalton inventors from the very beginning pursued their labors with the idea and confident hope of producing a simpler, faster, more versatile and more durable machine than any that had yet been built, and this idea has been the guiding and controlling force from the hour the first crude pencil sketch was made up to and including the present moment.

Dalton inventors have met the simplicity requirement by consigning to the waste heap seventy-one of the eighty-one numeral keys, as well as thousands of other useless parts which only served to encumber the earlier machines, thus producing a machine with only ten numeral keys, a minimum number of parts and so simple in construction as to be easy to manufacture, inexpensive to maintain and so simple of operation as to be operable by a child without previous experience.

The simple mechanism and the simplicity of the keyboard made it quite easy to meet the speed requirement. The ten numeral keys arranged in such a manner as to enable the operator to cover the entire keyboard with the fingers of a single hand, made touch method of operation not only easy, but natural, and speed such as was never before dreamed of was inevitable.

"DALTON" SAVING IN TIME.

We cannot close this little news story of Mr. Wendling's new enterprise, without calling attention to two notable examples of application of the "Dalton" idea to "speed" in the lumber office is as essential as speed in the yard or mill—only more so in that office labor costs more to start with and in most offices a whole lot more than it should at the finish. But whatever your objections may have been in the past toward mechanical aid, you can't afford now to overlook the "Dalton" adding, listing and calculating machine.

In actual practice it has demonstrated its efficiency in the lumber office not only on addition, but in the auditing of invoices requiring multiplication. For example, it took an ordinary operator on the Dalton but 67 seconds to audit the following invoice:

464 pcs.	1x8—16 No. 2 Com. Y. P. S2S	4949
763 pcs.	1x8—18 No. 2 Com. Y. P. S2S	9156
134 pcs.	1x8—20 No. 2 Com. Y. P. S2S	1786
206 pcs.	1x8—24 No. 2 Com. Y. P. S2S	3296
		19,187
19,187 ft. @ 14.45M		$227.25
Weight 2082 lbs. M 39947 lbs.		
Rate 14.25 cwt		$56.92
Total at destination		$334.17

Here is another example of a regular trial of the "Dalton" Adding Machine which is even more illuminating that the first mentioned.

B. & O. CAR No. 39876.

309 pcs.	2x 4—12	2,472 ft.
604 pcs.	2x 4—12	4,832 ft.
119 pcs.	2x 6—20	2,380 ft.
120 pcs.	2x12—16	3,840 ft.
		13,524 ft.
F. O. B. Mill at $23.25 M		$314.43
Frt. on 29,971 lbs. at 22½c cwt		67.43
Total		$381.36

By pencil, hand and mind (fast calculator) 6¾ minutes or ..... 405 seconds
By Dalton Adding Machine (The Slave) ..... 40 seconds
Time saved (an economy of about 90%) ..... 365 seconds

So endeth the Lesson No. One in regard to adding machines and we desire to suggest in closing that it will be a very interesting thing to do to watch the rise and progress of the Dalton Adding Machine in the lumber trade, since the advent of Geo. X. Wendling on the scene as an active agent of the selling of this adding time saver.

Car Shortage Gives Promise of Much Distress

The annual car shortage is again upon us and as a precautionary measure the Interstate Commerce Commission has just issued the following statement of interest to our readers:

"Reports are being received by the commission indicating that a 'car shortage' is again threatened, caused in part by the heavy movements of grain at this season of the year.

"The commission therefore takes this opportunity of again bringing to the attention of the carriers and shippers the necessity for close supervision of the methods of loading, unloading, and moving of cars so as to secure the fullest possible use of available equipment.

"Shippers should endeavor to secure the prompt and full loading of cars, and consignees their prompt unloading and release.

"The commission feels justified in urging upon shippers and consignees that they shall not use cars for storage purposes but shall endeavor to release them as promptly as possible and not avail themselves of the full limit of free time provided by the tariffs.

"Carriers should also make every endeavor to eliminate delays and expedite the movement of shipments. Cars should be promptly returned to the home line, company material promptly unloaded, and close supervision given to operations at terminals.

"Individual shippers and their associations and the carriers should co-operate in order that the delays and losses consequent to a shortage of cars may, so far as possible, be avoided."

WARNING FROM THE RAILROADS.

The country is threatened with the tightest railroad car shortage in its history, according to the word passed around in transportation circles yesterday following the publication of car statistics making a new low record for August 1.

The survey showed a bare 10,000 net surplus of cars above the country's needs as compared with the previous low figures of 27,836 cars on the same date in 1907, which is referred to as the record shortage year. In only three years during the last ten have the figures been under 100,000 on this date.

The Railway Age Gazette, a railroad publication, analyzing the car situation, has issued the following warning:

"The figures indicate clearly that unless there is some unexpected and radical change in commercial, industrial, and transportation conditions the railways and the shipping public will have to deal this fall and winter with one of the worst shortages of freight cars in the history of the United States."

The actual facts according to the car accountants statistics show a total surplus of cars, 47,908, a total shortage of 37,292 as against approximately a total surplus of 70,000 and a total shortage of 16,000 sixteen days previous. This is the meat of the whole matter and contains the net facts of the insight shortage.

THE "RED CYPRESS" COMPANY RAISES A STAYING HAND.

Frank N. Snell, general manager of the Louisiana Red Cypress Co. started out last Sunday on a trip to visit the salesmen of that company through Texas, Oklahoma, Kansas, Nebraska, Missouri, Iowa, Illinois and Wisconsin and will reach Chicago about September 1.

Before Mr. Snell left home he took time to write us the following letter on the car shortage situation, which is worth while:

"I noticed in your last issue an article about the coming car shortage, and think it was timely. We are beginning to feel it a little, and we are sending out with every notice a copy of the enclosed insert. We also send these out with our mail quotations, and several of the leading railroad lines have complimented us on this method of co-operation, stating if all the large shippers would do likewise it would no doubt be of material assistance in keeping the cars in the service."

We reproduce herewith Mr. Snell's unique circular.

NEW ORLEANS, LA. AUG. 3RD, 1916.

ALL CUSTOMERS.

HIGH RAILROAD OFFICIALS OF SEVERAL LINES THAT WE ARE LARGELY DEPENDENT UPON FOR EQUIPMENT HAVE JUST ADVISED US THAT THERE IS UNDOUBTEDLY GOING TO BE A SERIOUS CAR SHORTAGE THIS FALL WHICH WILL RETARD LUMBER SHIPMENTS; IN FACT, WE ARE ALREADY FEELING IT TO A SLIGHT EXTENT, AND WHEN THE GRAIN CROP BEGINS TO MOVE IN FULL VOLUME, AS IT WILL VERY SOON, AND LATER WHEN THE COTTON BEGINS TO MOVE IT WILL MAKE IT STILL MORE SEVERE.

THERE ARE TWO WAYS IN WHICH YOU CAN HELP:

1ST; BY ORDERING EARLY AND IN SUFFICIENT QUANTITY SO THAT CARS MAY BE LOADED TO FULL CAPACITY.

2ND; BY PROMPTLY UNLOADING CARS WHEN RECEIVED SO THEY WILL QUICKLY GET BACK INTO SERVICE.

CARS YOU UNLOAD MAY NOT REACH US FOR PROMPT FILLING OF YOUR NEXT ORDER, OR THAT OF SOME OTHER GOOD CUSTOMER, BUT THEY CAN BE QUICKLY USED BY SOMEBODY WHICH RELIEVES THE WHOLE GENERAL SITUATION.

WE WILL ALWAYS BE IN A POSITION TO SHIP CYPRESS AS PROMPTLY AS OTHERS, AND WE ASK YOUR COOPERATION IN THIS MATTER FOR THE GOOD OF ALL.

VERY TRULY YOURS,

LOUISIANA RED CYPRESS COMPANY

READY TO HANDLE THE FOREST FIRE HAZZARD IN MONTANA.

Kalispell, Mont., Aug. 5.—Weather conditions so far this year have been most favorable for the handling of the forest fire situation in northwestern Montana. The precipitation for the month of June, 1916, was 3.91 inches as compared with 2.09 inches for the month of June last year. At present, the forests are in splendid condition, and very little danger from fires is anticipated before the fifteenth or twentieth of this month.

The Northern Montana Forestry Association, a local fire association, working under a co-operative agreement with the state and federal governments, and controlling approximately 1,000,000 acres, have everything in readiness for the season's work. They will place their patrolmen in the fields August 7th, for the purpose of cleaning out trails and posting fire warning notices before it gets extremely dry.

The officials of the Blackfeet National Forest, with headquartetrs at this city, state that their trails, telephone lines, etc., are in splendid condition to handle the fire situation this year.

The Latest News of the Lumber World

INTERNATIONAL SHINGLE WEAVERS' UNION BEGAN NATIONAL ADVERTISING CAMPAIGN.

Seattle, Wash., Aug. 19.—Plans of the International Shingle Weavers' Union to create a special market for the red cedar shingles of the Pacific northwest through the use of its special label have assumed definite form. The international officers of the union and the Lester W. David Lumber Co. of Seattle have entered into a two-year contract under which a nation-wide campaign will be started to advertise and sell Washington shingles manufactured under union conditions. The David company agrees to become the selling agent of all mills that will agree to use the shingle weavers' label on their product and to conduct a systematic selling campaign, while the officers of the union agree to conduct an advertising campaign among the union carpenters of the country numbering almost a quarter of a million and among other members of organized labor. The signing of this contract is regarded by the officers of the union as epoch making in that never before has any extensive effort been made to build up the weavers' organization by appealing to the purchasing power of organized labor through the use of the union label. If the campaign proves as successful as it is expected to be, it is believed it will go a long way toward solving the problem of meeting the competition of British Columbia shingle mills now employing cheap Oriental labor and without the aid of a protective tariff.

J. G. Brown of Seattle, president of the international union, has been working on plans to meet this competition for years and at various national conventions of labor has urged the leaders in the building trades to discriminate between shingles produced by well paid American labor and coolie labor products of the Canadian mills. The stumbling block always encountered was that carpenters and other [illegible] the shingle weavers' case had no [illegible] ng the shingles made by union men, mill brands being little advertised or used and shingles made by Oriental labor selling for the same price as similar grades made by union workers.

According to the agreement the union will withdraw the use of the union label from any manufacturer should it be shown upon inspection that shingles and other cedar products manufactured by them bearing the label are more than 3 percent below the grades as shown by brands thereon according to the grading rules now in effect or that may thereafter be adopted by the West Coast Lumbermen's Association. It is also agreed that no shingle manufacturer who shall agree to conform to the conditions set forth in the agreement shall be denied the use of the union label.

The David company agrees to pay the full wholesale market price for the shingles, plus fifty percent of whatever premiums may be obtained as a result of the joint efforts of the company and the union.

A NOTABLE ACHIEVEMENT OF THE WHITE PINE BUREAU.

We have been pleased to say a word of appreciation upon the appearance of each number of the "White Pine Series of Architectural Monographs."

The seventh in the series has just appeared, and we accord it a hearty welcome, because of its excellence. In character it departs from the general style maintained in former numbers which gave interesting facts of historical and geographical tendencies in construction of wooden buildings in America; it is rather an exposition of the practicality, adaptability and artistic value of white pine in the building of a modern home.

Nothing could more fittingly emphasize the success of the White Pine Bureau's architectural monographs than the contents of this one, the seventh, for it presents the report of the jury of eminent architects on the drawings and plans submitted by the three hundred and sixty-six contestants for the prizes offered by the White Pine Bureau for the four best designs for a modern suburban house and garage to cost $10,000. The successful drawings and six others receiving honorable mention are given in the "Monograph" just received and which is attracting attention of lumbermen and architects.

SOUTHERN PINE ASSOCIATION CORRECTS ERROR REGARDING ITS ATTITUDE IN THE MATTER OF SHIPPING TRANSIT CARS.

It has come to the attention of the lumber manufacturers that certain wholesalers and others interested in encouraging the practice of shipping transit cars are attempting to raise $10,000 to oppose what they claim to be the Southern Pine Association's recommendations that a $25 reconsignment charge be made operative and that increased demurrage charges ranging from $2 to $5 be put into effect.

It is inconceivable how the report should have ever been circulated that the Southern Pine Association advocates increased demurrage charges. As a matter of fact, the association, represented by Assistant Secretary, A. G. T. Moore, who is a member of the Car Storage and Demurrage Committee of the National Industrial Traffic League, at a session in Chicago, July 14, 1916, of the League's Committee, and the Committee on Relations of Railway Operation to Legislation of The American Railway Association, most emphatically protested against the attempt on the part of the carriers to make permanent the temporarily increased demurrage charges which expired on June 15, and which had been applied as a measure to relieve the embargo which prior to that time had been very acute.

As to the Southern Pine Association's recommending a $25.00 charge, such a statement is incorrect. H. H. Snell, Chairman of the Reclassification Committee of the Southern Pine Assn. and other members of his Committee consisting of the following: F. G. Wisner, Laurel, Miss.; S. B. Bissell, Laurel, Miss.; W. T. Hancock, Houston, Tex.; Jno. A. Sargent, Kansas City, Mo.; A. Triesch mann, Crossett, Ark.; R. S. Davis, Kansas City, Mo., prepared and submitted at the hearing in I C. C. Docket No. 8131 answers to the interrogatories of the Interstate Commerce Commission dated June 20th, 1916, which outline the position of the Southern Pine Association in full, not only as pertains to transit cars but other important features of the case.

In view of the wide spread publicity with which the Southern Pine Association's position has been erroneously outlined, that part of the Reclassification Committee's answers appertaining to transit cars is quoted below in full.

While it is a fact that the manufacturers who realize the disasterous effects of transit cars on the lumber market would like to see a charge of $25, the Southern Pine Association did not recommend a charge in excess of $5 per car.

This information is made public so that those who subscribe to the fund of $10,000 to fight our attitude as erroneously and no doubt unintentionally outlined, will know just exactly to what they are subscribing.

The Reclassification Committee's recommendations regarding transit cars follow:

H. D. LANGILLE RETIRES FROM THE JAS. D. LACEY & CO. PARTNERSHIP.

H. D. Langille of Portland, Ore., who has been associated with Jas. D. Lacey & Co., the nationally and internationally known timber land institution of Chicago and New Orleans, as a special partner, in charge of the Portland office of that company since 1896 has left that company to engage in pursuits of his own, not just specifically known to the LUMBER WORLD REVIEW.

Mr. Langille has spent practically all of his life in intimate relations with the forests of the west. From 1900 to 1905 he was in the Forest Service, as special field assistant in the Geological Survey, forest inspector in the Department of the Interior and in charge of examinations of proposed forest reserves under the direction of the Bureau of Forestry.

H. D. LANGILLE ,OF PORTLAND, OREGON

During the winter term of 1904-1905 he took a special course in Forestry at Yale Forest School, resigned from the service the latter part of 1905 and became associated with Jas. D. Lacey & Co. the following year.

It is understood that Mr. Langille will devote his energies to forestry and sawmilling affairs as an Efficiency Engineer.

WINLOCK LOGGING COMPANY ACQUIRES O'CONNELL LUMBER CO.'S INTERESTS.

Seattle, Wash., August 19.—The west side holdings of the O'Connell Lumber Co. at Winlock, Wash., comprising close to 100,000,0000 feet of timber, mostly Douglas fir together with considerable logging equipment, has been sold to the Winlock Logging Co., a concern recently organized. The price paid is understood to be between $250,000 and $300,000. Included in the equipment sold is a logging railroad seven miles long, locomotives, machinery, cars and tools.

The O'Connell Lumber Co. at one time did a fairly large lumber business, but six years ago its mill burned and has never been rebuilt. The attention of the company since that time has been devoted to logging. Henry Turish of Duluth, Minn., Mrs. Gregory of Tacoma and some Wisconsin interests are the principal stockholders. The company still retains what is known as its east side holdings.

WOODEN SHINGLES BEST.

Birmingham, Ala., Aug. 2.—The wooden shingle again demonstrated its great superiority over other forms of rough covering in the recent heavy rain and windstorms in the southeastern cities.

In the vicinity of Birmingham and through the east and south the rainfall approached 12 inches in 60 hours, literally soaking all kinds of composition roofs so that the winds rolled them up. The wooden shingles were not loosened by the winds as were other types. Much of the property damage, which proves to be great, was caused by water destroying the contents of buildings, and in most cases the water entered because of defective roofing.

LAMB-FISH LUMBER COMPANY CUTTING ON BIG FOREIGN ORDER.

Charleston, Miss., Aug. 21.—The Lamb-Fish Lumber Co. has put its big mill at this point on double shift and it is now working at the rate of twenty hours per day. This step has been in contemplation for some time but was made effective only about the middle of this month.

While no definite details have ever been obtainable, it is understood that the Lamb-Fish Lumber Co. has a large contract for oak ties from the French government and that the necessity for manufacturing these rapidly is responsible for the decision of the management to put the mill in operation on such a big scale. These ties are being delivered every two months. The first shipment went out via Gulfport, Miss., but the others are due to be sent via New Orleans. Facilities have been made for barging these ties down the Sunflower and Mississippi rivers to New Orleans.

Freight rates are cheaper by this method and it is also pointed out that an entire rehandling charge is saved since the barges can be unloaded direct to the steamers in port for carrying these ties to their destination. The company has been very busy for quite a while getting out logs against such extensive operations and it has been quite successful in this direction.

NEW LUMBER PLANT AT TACOMA UNDER CONSTRUCTION.

Tacoma, Wash., Aug. 19.—Without any preliminary announcement and with all operations covered by a veil of secrecy, Ernest Dolge, a well known Tacoma lumberman, has begun the construction of a large lumber manufacturing plant on the Tacoma tide flats in the district which will be improved by the construction of the new Hylebos waterway for deep water traffic. Some time ago it was rumored that Mr. Dolge intended to construct a large plant and he partially confirmed the rumors but stated that its construction would not be begun for some time. During the past ten days work was begun on the new factory, which will be rushed to completion.

The settlement of the legal difficulties in the way of the waterway project and the actual commencement of work in the district by the port commission, are given as the reason for the immediate construction of the mill. Mr. Dolge has refused to make any further statement on the matter and has declined to give any details of the plans of the new structure.

The Hylebos waterway project will make available for dock property a large part of the Tacoma tideflats now useless. The channel of Hylebos creek will be dredged for a distance of a mile and a new waterway for deep water vessels constructed. In addition there will be constructed large dykes which will reclaim a large amount of tideland now under water a part of the time. Work on both of these projects has already begun and should be completed within a year.

ARCHITECTS WANT TO KNOW WHEN THE TRADE MARKING OF LUMBER IS REALLY GOING TO BEGIN.

Talking of architects or about architects—whichever way around you wish to put it—is not a specialty of the LUMBER WORLD REVIEW and we speak from experience, having tried it once on a time.

We do not know just what sort of ethics we are violating but we do want to register the opinion that the demand for structural timbers in the County of Cook, State of Illinois, is suffering from lack of orders on account of the fact that yellow pine manufacturers have not yet concluded whether or not or just how they should brand their lumber with a trade mark.

We are slow in business affairs as a republic as we are in the politics of the republic.

The architects should be patient, however, for we understand that the whole affair is coming to a speedy head and will probably be settled inside the next two weeks.

EDITOR.

THE FERGUSON HARDWOOD CO.'S NEW MILL.

Paducah, Ky., Aug. 15.—The Ferguson Hardwood Co. will completely modernize and re-equip the old Ferguson-Palmer mill. It will be operated as a single band mill, employing between 50 and 75 men.

Mr. Ferguson has but recently returned from Indiana where he effected the purchase of timber rights on a tract of virgin timber embracing 8,000 acres, located in Stewart county, Tennessee. This tract was the property of Michael D. Helfrich, of Evansville, Ind. The timber is virgin stock—consisting very largely of white oak of the forked leaf variety, and considerable large yellow poplar—and pronounced by experts to be the equal of any timber ever sawed in Paducah.

A logging railroad will transport the logs from this tract to the Cumberland river and they will come down in barges to Paducah. This tract of timber will furnish the supply of logs for the sawmill here at Paducah, and it is estimated that a period of ten years will be required to clear the tract. A large crew of woodsmen will be employed in the logging operations on this tract.

Mr. Ferguson was enthusiastic over the outlook for his company. He will make every effort to be ready for manufacturing lumber by the first of January. The trade of the Ferguson Hardwood Co. will be unlimited as to territory. Sales will be managed from the Paducah office. The quality of the lumber sawed will be strictly A No. 1, such lumber as is utilized principally for furniture and interior finish, factory trade, railroad material, dock timbers and boat building. They will be equipped to specialize in long white oak timbers up to 60 feet in length.

An Interesting Monthly Meeting of the West Coast Lumbermen's Assn.

As this issue of the LUMBER WORLD REVIEW closes its forms the West Coast Lumbermen's Association is having a great visit with E. B. Hazen and his associates at Bridal Veil, Ore.

We are indebted to our friend R. B. Allen, publicity expert for the West Coast Lumbermen's Association, for the following resume of what will occur at this meeting and what the visitors will see.

"Lumbermen of the North Pacific district attending the monthly meeting of the West Coast Lumbermen's Association which will be held at Bridal Veil, Oregon, on August 25 will have the unique opportunity of investigating a big modern lumber manufacturing operation run by water power, with a number of the machines directly connected, in such manner as to eliminate the use of belting and other transmission. The lumbermen will also see an immense lumber yard built on a hillside. This meeting is in accordance with the Association's recently announced plan of getting away from routine and encouraging practical demonstrations of important industrial problems.

"The announcement for the meeting requests the lumbermen to assemble at the Benson Hotel, Portland, Ore., on the morning of August 25, from which point, at 11:30 o'clock, they will take automobiles for Bridal Veil, a distance of about thirty-two miles over the famous Columbia Highway. At the plant of the Bridal Veil Lumbering Company luncheon will be served after which there will be an examination of the plant and a demonstration of its water power equipment.

"In connection with this demonstration there will be shown the work of two giant fire fighting monitors, each delivering forty-two tons of water per minute from a three-inch tip with a pressure of 418 pounds per square inch, sending a solid stream of water a distance of 500 feet.

"Among other extraordinary equipment at the Bridal Veil mill is:

"A water turbine thirty-six inches in diameter turning over 730 revolutions per minute with a stream one and one-half inches in diameter playing upon it and delivering 400 horse power.

"A baby turbine twelve inches in diameter with a stream the size of a lead pencil playing upon it and turning it over 2,250 revolutions per minute, generating twenty-five horse power.

"There are about ten to twelve of these water turbines operating in different parts of the plant, the two mentioned being the extremes—the largest and the smallest. Some of these wheels are direct connected.

"The quantity of water operating these turbines, generating in the aggregate nearly 2,000 horse power, is not large—only being 500 cubic feet per minute. The water is picked up out of Bridal Veil creek by damming the creek in a narrow gorge and is lead in a square box flume three feet wide and two feet deep a distance of 4,400 feet along the side of the mountain. There the water is spilled into a tank or forebay and is taken from this tank into a tube, which is 2,700 feet long and drops 900 feet in its length, which makes the head of the water 900 feet. The tube is buried and anchored with heavy concrete anchorages at intervals along its length. It is made of steel for 2,400 feet of this length and of wood 300 feet. At the lowest head the steel is only ten-gauge and the diameter of the pipe is twenty inches. At the bottom of the hill where it branches off to deliver water to the different tubes it is five-eighths inch thick and is double riveted longitudinally and circumferentially and caulked. The sections are put together with pressed steel flanges and copper corrugated gaskets and bolts.

"Following the inspection of the plant the regular monthly meeting of the Association will be held in the Bridal Veil amusement hall. At this meeting important manufacturing, marketing and Association problems will come up for discussion and final action. At the conclusion of the business session the lumbermen will take automobiles and proceed on the Columbia Highway east as far as Bonneville, Oregon, affording visiting mill men from other states an opportunity to view the wonderful scenery from Bridal Veil to Multnomah Falls."

IS IT POSSIBLE THAT THE YELLOW PINE LUMBER MANUFACTURERS HAVE AGAIN GONE TO RUNNING NIGHTS?

Just as we go to press we have heard very directly that some of the yellow pine lumber manufacturers—notably some of the larger, more monied and best known concerns—have concluded that they would turn loose and go to running nights again. We certainly hope that this is not true and we print this ONLY as a RUMOR.

We would like to have this rumor denied.

We would like to locate some man with the gariishness of this "black faced" type who would have the courage to write to us a letter that would disprove this rumor and nail it to the floor of that place that someone has said is continually "paved with good intentions."

After all that has been said on this subject and the hundreds of columns of matter that the lumber press—not only this paper but many others—has written on the subject and the thousands of dollars worth of good white paper we have all spoiled in endeavoring to write a little discretion into the yellow pine mind in regard to "curtailment," we do hope this rumor we have heard is a canard.

A GREAT FEDERAL BUREAU CONFERENCE

The Federal Trade Commission—Forest Service and Bureau of Foreign and Domestic Commerce Confer with Lumber Associations in Chicago August 21

The to be intensely interesting, but very little heralded, four-sided conference of the Bureau of Foreign & Domestic Commerce, the Federal Trade Commission, the Forest Service and the export lumber interests of the United States took place in room 606 Federal building, Chicago, at 10:30 a. m., Monday, August 21.

It was the most significant expression of the proposed helpfulness of the government of the United States that had ever been given the lumber trade.

Among those present were the Hon. W. H. Parry, Hon. J. E. Davies and Dr. Wilson Compton, of the Federal Trade Commission; Dr. Henry S. Graves, chief of the Forest Service; Dr. E. E. Pratt, chief of the Bureau of Foreign & Domestic Commerce; Ansel R. Clark, secretary of the Foreign Trade Bureau, Portland, Ore., Chamber of Commerce; and, representing the lumber interests and collateral lines, E. A. Selfridge, W. H. Weller, Frank F. Fish, L. S. Case, H. C. Hornby, Charles S. Keith, John E. Rhodes, J. A. MacIntosh; H. M. Rogers, Thorpe Babcock, George D. Burgess, John H. Winterbothamm, J. W. McClure, F. V. Dunham, Jack E. Brantley, Miles A. Goodyear, O. T. Swan, J. R. McIntosh, John M. Pritchard and R. S. Kellogg. The men representing lumber and the collateral lines are quite well enough known to omit their addresses in this brief summary of what was accomplished.

Hon. W. H. Parry was chairman of the meeting and said very frankly that he invited free discussion of the matter; that the various government bureaus had no fixed plan but that they had an idea to present with the hope that out of the conference a well developed plan might result.

Dr. E. E. Pratt, said that their plan grew out of suggestions made by lumbermen who visited Washington in the various investigations of the lumber situation. He referred to the fact that Franklin H. Smith and Roger E. Simmons had previously made painstaking investigations, the first in Australia and the far east and the latter in South America, concerning the lumber requirements of those countries and that it had been suggested there ought to be in Europe "a considerable market for American lumber, and it is to discuss the feasibility and the possibility of making investigations and to get all the facts with reference to the probable supply of lumber to those markets and the probable market for lumber in Europe, that is the object of the meeting."

Continuing Dr. Pratt referred to the fact that Scandanavian manufacturers are getting busy right now and have established a selling office in Paris and he supposed also in Berlin; that he does not believe American manufacturers associations have established representatives on the continent of Europe. He referred to the fact that the manufacturers of "substitutes" for lumber had been busy for some time. His department wished to make some sort of a study of the European situation. He had been in consultation with Mr. Parry, and Mr. Graves and that it was developed that his bureau is the only one which has the available funds for the purpose; he said the field divided itself into several well defined groups, naming them.

He thought the investigation might last two years and that it could best be done by seven men and that his bureau would be willing to pay the entire salary and expenses of one man and in addition would be willing to appoint specifically such other men as might be selected, all to be given the title of Trade Commissioner. He felt private individuals would meet insurmountable difficulties The salary and expenses of each man would be about $6,000 a year. The men should be able to speak the languages of the country to which they were assigned.

HENRY S. GRAVES TALKS.

Dr. Graves thought there were a good many general matters regarding the situation that "we don't know much about besides the special question which a particular trade organization or company would have to ascertain in connection with its own business."

He thought that the investigation would have more effect if lumbermen participated in it. His seven years' experience had taught him that "studies which we make don't have the same interest among the trades people of industry as where there is some form of co-operation." He thought if the lumbermen participated financially they would have a greater interest and "get more out of it." He thought the investigation should be along broad lines "rather than touching primarily upon trade opportunities for a particular reason," saying also that possible Siberian competition should be studied.

The Hon. Joseph E. Davies went into the question exhaustively, saying in part:

"The Federal Trade Commission desires to help in any way it can, consistent with its other work, and with the financial limitations that are imposed upon it in this work. When this plan was devised some two years ago of having the three departments concerned with lumber in a governmental way, co-operating together with a view of perhaps projecting more of the constructive side, we found, if we projected our efforts, the Federal Trade Commission and the Bureau of Forestry and the Bureau of Foreign & Domestic Commerce, that our work naturally divided itself into three general divisions." The Federal Trade Commission had been engaged in connection with the economic side." The commission, he said, had "found substantial constructive aid in a practical way from the lumbermen of the country," and he

DR. E. E. PRATT, CHIEF BUREAU FOREIGN AND DOMESTIC COMMERCE.

was satisfied "that so far as the trade commission is concerned he had reason to regard the men with whom they were associated in the lumber industry with confidence not only in their substantial integrity and honesty among themselves but also with relation to the attitude they hold towards the government itself and their relation to it."

He told much of the plans of other countries and how their governments had become interested and he thought that this proposed study "is entirely justifiable and proper" and that it was "a situation that we should look into for the benefit of our people" and he thought it would be "a fine thing for the lumber industry when this drive comes for the international commerce of the world if it will have had worked out this basis of fact and information which this enterprise contemplates."

THE GOVERNMENT WOULD DISTRIBUTE THE INFORMATION.

Mr. Parry said that the lumbermen would not have to wait for years "for the realization of the benefit." The inquiry was not for the purpose of collecting dry statistics and that the information would be distributed as it was collected and by the government at government expense.

Mr. Parry wanted to know first if the desirability of such an investigation is of such interest as to justify their participating in the expenses to the extent that Dr. Pratt suggested.

CHARLES S. KEITH SPEAKS.

Mr. Keith had discussed the question with the government heads and said he could answer for the southern pine interests and that he was sure "that we will make the necessary appropriation to bear our share."

He thought the matter ought to be handled through the auspices of the National Lumber Manufacturers' Association and that all lumbermen should be interested, "whether we are immediately participating in the advantages received in this investigation or not."

Foreign consumption would take the lumber "off our domestic market."

SECRETARY RHODES SPEAKS AT LENGTH.

Mr. Rhodes said that the Southern Pine Association had enjoyed the work of a representative in Europe since April, their representative securing many valuable reports "which will be condensed upon our representative's return and such portions of it as seems politic and proper to publish will be given to the lumber trade press." He said that their connection with the exposition in Paris had been a great success. Their representative found the possibility for demand in Europe "splendid." He said that "Italy had been stripped of its lumber supply and the stores of lumber in Spain had been exhausted," and that the demand for American ties "in France is simply beyond comparison."

He said "four companies of French capital had been organized for the building of knock-down houses of the most ordinary type of temporary structures, and it is simply impossible to get that material or to get the manufacturers in America sufficiently interested to go after it."

Mr. Rhodes' intimate details of the findings of their representative were intensely interesting, but were so truly the property of the Southern Pine Association that it would not be in good taste to refer to them herein.

IMPORTANT RUNNING DISCUSSION.

Following Mr. Rhodes' first talk Mr. Davies said: "It is well established that non-competing concerns may combine and the Webb bill is now pending and there is a very strong probability that it will be passed. That would relieve any possible doubt that might arise as to non-competing concerns in foreign trade."

Dr. Graves thought that the European countries were to have a tremendous problem of colonial development."

Mr. Rhodes said that the French were figuring on a community basis. That they would endeavor to concentrate as many people in one locality as possible and build community villages, and that the work would be done entirely by the French government and that the greater part of the sales would be to the government and the government engineers. He said further that London and Paris would have use for a great amount of wood block paving because they could not now get Baltic pine. King Alphonso has approved of wood block paving near his palace and that "practically all the city of Madrid would be paved with American wood."

Mr. Parry was sorry that President Downman of the National Lumber Manufacturers' Association could not be present, but said that he thought he was authorized to say that Mr. Downman was in hearty sympathy with this movement. C. L. Millard was to have been present and had taken a great deal of interest in the Webb bill and Mr Parry thought that the North Carolina pine people would enter the European market if the Webb bill should pass. He felt that he had a right to make that statement on Mr. Millard's authority. At this juncture Chairman Parry called for the expression of the other lumber association representatives present.

THORPE BABCOCK SPEAKS FOR THE WEST COAST.

Mr. Babcock wanted to profess ignorance of the export business personally. He said, of course, the west coast people were interested. He said that the most natural thing to do would be to stand up and say they were interested and would

Digitized by Google

support the movement believing they would be able to get the money, but there was the possibility of having that trade developed industrially into something that might not be entirely practicable. There might be another angle to the situation. That they were probably a year ahead of the southern pine people in taking the initiative; they had even gone so far as to form a company duly incorporated. When President Wilson made the statement before the Chamber of Commerce that he would like to be shown that the operations could be conducted without doing damage the West Coast people believed he wanted to be taken at his word. The department of justice thought they could proceed until it was found—if that should occur—"that an injustice was being done." Then the war came. Then—no ships—therefore no export business.

If they could get the ships they would be in the game. He thought the information would be of great value but said "I am frank to say that the most important thing is that the men be in a position to take care of some business; that they should have to face practical propositions for the selling of lumber," that he would he "heartily in favor of this plan but wished that it could be made more practical than the obtaining of this information, but we urge that if this does go through that with all respect to the departments—as much red tape be eliminated as possible—and that we get these reports before they are too old.

Mr. Parry again referred to the fact that "this investigation is not to collect statistics to put in the archives."

A gentleman present wanted to know if the west coast people would be willing to contribute their portion.

Mr. Babcock said that their export trade amounted to 800,000,000 feet annually.

Mr. Graves wanted to know if Mr. Babcock thought that with the export organization under way their agents could furnish the information necessary.

Mr. Babcock thought that "inasmuch as it was practically sure that ships could not be had even if the men took orders that it is very advisable that we get our organization and get this done in advance."

W. H. Weller wanted to know whether the government would give the names of individual buyers. Dr. Pratt said that was part of it.

A gentleman present said that it was "immaterial which branch of the industry does the exporting." In his organization only 20 percent did any exporting at all, but that he believed that what "is good for one is good for all." He suggested that expense should be based on the tonnage.

Mr. Keith wanted to know from Mr. Babcock if his people would be ready to pay their share of the expense.

Mr. Babcock said that when he "faced the proposition of doubling their dues in the National Lumber Manufacturers' Association he saw a great problem." The larger exporters would have to stand the expense.

Mr. Weller wanted to know "if the larger exporters would give their competitors ammunition to shoot them with." Then the assembly talked a little bit about what it would cost.

FROM VARIOUS ASSOCIATIONS.

E. A. Selfridge, president of the California Redwood Association, said they also have the machinery all ready for their export business but they stood ready and willing to contribute their share according to their output. Mr. Fish, secretary and treasurer of the National Hardwood Lumber Association, said that his association had a membership of 900 but he would not even attempt to estimate the number of them engaged in the export trade; that during his official connection with the association for twelve years they had formed a habit of looking to the National Lumber Exporters' Association on such matters. He was certain his organization would appreciate the fact "that it was not possible to get too much live information" and that he would be glad to put up to his membership any question proposed.

George D. Burgess, speaking for the National Exporters' Association, organized seventeen years ago, said that they had a representative who lived in England and traveled in Europe and as far as the general plan was outlined he thought his association would be in favor of it but, however, "if it is the purpose of the government to give information of names, etc., we will be very much opposed to it." He thought it was not within the province of the government to give information of that kind. Information as to probable demand he would

J. E. RHODES, NEW ORLEANS.

be in favor of. He then complimented Dr. Pratt's bureau on the information gathered in South American countries.

Mr. Weller said that he felt sure that his association would support any feasible plan that might be offered.

John M. Pritchard, secretary of the Gum Lumber Manufacturers' Association, felt that he would not be in a position to say anything binding of his association but from his own viewpoint he was very much interested. Before the European war gum was exported annually to the extent of 70,000,000 or 80,000,000 feet to practically all of the countries engaged in the war, with the exception of Scandinavia, Spain, Egypt and South Africa; the loss of that business has been deplorable. The association needed that export business, due to the fact that the hardwood lands of the south must be logged, and gum timber has to be cut as an incident of that logging or not at all. Hence with the export trade cut off there was a surplus of stocks or else the gum timber was left in the woods. He had not known the various organizations would be asked to participate in the expense. He did not believe it would be advisable to take as many men as suggested, but it is a matter that he would have to put up to the officials of the association.

John W. McClure showed wherein the Southern Hardwood Traffic Association was interested very keenly, but collaterally, and that as his association was made up of members of many other associations it would be impracticable to speak for its members in a financial sense. He urged the adoption of the Webb bill as a way out. He regretted

THORPE BABCOCK, OF SEATTLE.

he was not aware that finances would come up at this meeting, but he would recommend to his organization that it do its share.

He also called attention to the fact that the investigation to be of use to the hardwood people would have to be on different lines to an investigation in the interest of the soft woods.

John H. Winterbotham, of the Cooperage association, would bring the question up to his directors to see what they had to say about it and report.

FINAL SESSION AND CONCLUSIONS.

The party had luncheon at the Union League club and the session was finished in the Tower room of that club. O. T. Swan spoke for the Northern Hemlock & Hardwood Manufacturing Association, saying that his association was in favor of the plan.

It will be impossible in this review to bring out all of the features of the afternoon session.

L. S. Case, speaking for the Weyerhaeuser interests, believed that the lumbermen "should meet the government more than half way." That with $70,000 expense extending over a period of two years if everybody helped it would cost something like 75 cents a million feet. He said specifically: "I want to say that our influence will be directed as far as possible in the various districts in which we operate in a most hearty co-operation and financial support of this proposition to the extent that our influence goes, prorated among the different associations as nearly as can be based on production or export sales."

Continuing Mr. Case said there was no chance for the Northern Pine manufacturers to export very much lumber. He took exception to the attitude taken by the National Exporters' Association, for he believed that the information gathered by the different departments should be given wide publicity. He believed the information should be used for the common good.

Mr. Hornby endorsed the proposition.

Mr. Goodyear felt very vitally interested.

Mr. Gillett, of the Southern Pine Association, heartily agreed with everything that was said.

Mr. Charles S. Keith moved: "THAT WE APPROVE THE SUGGESTION AS OFFERED TO US BY THE THREE DEPARTMENTS OF THE GOVERNMENT AND THAT WE RECOMMEND TO THE PRESIDENT OF THE NATIONAL ASSOCIATION THAT A COMMITTEE BE APPOINTED BY HIM TO TAKE UP WITH THE THREE DEPARTMENTS AND WORK OUT A WORKING PLAN TO WHICH WE WILL PLEDGE HIM OUR MORAL AND FINANCIAL SUPPORT."

The motion was seconded by Mr. Case and carried unanimously.

In summing up the discussion of ways and means, Chairman Parry said that Mr. Downman "is authorized to appoint a committee of such size as he may see fit."

Dr. Pratt thought that the proposition had reached such a stage that those in interest could go right ahead and make their preparations and it was his idea to return to Washington and work out the details of a plan.

Dr. Pratt's most important expression during the conference concerned the qualifications of the men to be chosen and was the one big convincing thing that indicated that the government proposes to do this thing on practical lines.

Dr. Pratt considered that each Trade Commissioner should have three fundamental qualifications, first, a technical knowledge of the industry, both on the production and marketing side; secondly, the man should have a knowledge of the language of the country or countries to which he is sent; in the third place, the commissioner must have the reportorial ability to put down in black and white what they find.

John E. Rhodes, secretary of the Southern Pine Association, said that he had attended a great many conferences in his various capacities during fifteen years, but never a conference where the various associations had been called to meet representatives of three such important government departments. That it represented a different attitude of the government toward the lumber industry and that he was sure he voiced the sentiments of all present when he said that the appreciation of the lumbermen for the opportunity was the universal sentiment of those present. He was quite sure that the conference would mark history. (Loud applause.)

The Hon. Will H. Parry, who had acted as chairman throughout, believed in dismissing the company that the proposition would be worked out to the good of all.

Personal News Notes

A. Whisnant, for many years on the staff of George M. Cornwall's forceful publication, the "Timberman" of Portland, Ore., who contributed the story of the Bend, Ore., meeting to this issue of the LUMBER WORLD REVIEW, who is known to all the Pacific coast and Inland Empire lumbermen as "Whis," will be known to the LUMBER WORLD REVIEW as the Prose-Poet of Bend. Mr. Whisnant was really on his way to Chicago to visit the editor of this paper, but the wondrous beauty and possibilities of Bend, Ore., and the discovery that the new lumber city was the center of the world of progress cut short that trip. It ended at Bend. Mr. Whisnant purchased the weekly newspaper at Bend known as the "Bend Press." If the Prose-Poet of Bend fails to make the Deschutes river valley known among all men who read English then we shall suffer a keen disappointment, an emotion not aroused in the hearts of Mr. Whisnant's friends to this date when contemplating his acts of life.

Frank C. Dooley, of the F. C. Dooley Lumber Co., Memphis, Tenn., has been making Chicago a central point lately, while calling on his numerous customers in Wisconsin and Michigan as well as in the immediate territory. Mr. Dooley was accompanied on his northern visit by his wife.

President John M. Woods, of Boston, Mass., of the National Hardwood Lumber Association, who was in Chicago on Monday of this week calling on Secretary Frank F. Fish, while on a trip to Kansas City, Mo., has announced the appointment of Earl Palmer, of Paducah, Ky., as national councillor of the association of the Chamber of Commerce of the United States of America, and of Frederick S. Underhill, of Philadelphia; Gardner I. Jones, of Boston, and Secretary F. F. Fish, as delegates to the forthcoming annual meeting of that body to be held at Washington, D. C., in February, 1917.

Mr. C. M. McWilliams, an attorney of promise of Houston, Tex., is visiting friends in Chicago this week and renewed his acquaintance with the editor of the LUMBER WORLD REVIEW. Mr. McWilliams was for many years in the lumber business, was for seven years associated with the Southern Pine Lumber Co. at Texarkana, Ark., and for a time was in the wholesale business with Martin J. Ragley, now general manager of the W. G. Ragley Lumber Co., of Ragley, La. Mr. McWilliams is and always will be at heart a lumberman—and in mind also for that matter. The lumber business in the southwest is bettered by his association with it and we certainly would welcome him to former associations if he should ever conclude to return to the trade.

The thing which interests the lumber business collaterally—and collaterally is directly in this day and time—is the announcement of Frank E. Long, president of the Farmers' Review, of Chicago, that E. B. Moon has been added to the staff of that publication as director of the department of community development and trade betterment, who will continue the work of helping the retail merchants and farmers of Illinois build up better towns and communities. This is a work which the Farmers' Review has been carrying on for several years. Mr. Moon is a successful retail merchant and his counsel and research work will be very helpful We hope he will endeavor to teach the retail lumber trade something; that will test his ability in fine shape.

Mr. Hugh McVey, for the last three years advertising counselor for Successful Farming, of Des Moines, Ia., and who is very well and favorably known to the lumber trade of the United States and especially to the yellow pine manufacturers and the members of the Southern Pine Association, has recently left the position he occupied with Successful Farming and allied himself in a like capacity with Arthur Capper's papers. These publications are: The Missouri Valley Farmer, Farmers' Mail and Breeze, Nebraska Farm Journal, Missouri Ruralist, Oklahoma Farmer, The Topeka Daily Capital, The Household and Capper's Weekly. The lumbermen of the country have used these papers of Mr. Capper's to good effect, it is understood, and they will undoubtedly now feel more thoroughly in touch with the Capper papers than ever before since Mr. MvVey's affiliation.

HYMENEAL

MITCHELL-GLEASON.

Carles Tennant Mitchell, prominent Cadillac lumber manufacturer, son of the late William W. Mitchell, and Miss Mary Gleason, daughter of Mr. and Mrs. P. H. Gleason of Cadillac, were united in marriage at 8:00 o'clock Thursday evening, August 17, at St. Anne's rectory, Rev. F. M. Lefebvre performing the ceremony.

Mr. Mitchell is president at the Mitchell Bros. Co., Cadillac Chemical Co., Mitchell-Diggins Iron Co., and St. John Table Co., vice president of the Cobbs & Mitchell Co., and is also heavily interested in timber lands in the west.

Mrs. Mitchell was graduated from the local high school, later attended the Ferris Institute and the State Normal School at Ypsilanti, from which she was graduated, has been a teached in the public schools for several years and had been chosen principal of the McKinley school for the coming year.

They will be at home after the first of October at 205 East Cass Street, Cadillac, Michigan.

The congratulations and good wishes of a host of friends have been extended to the happy couple.

OBITUARY

JOHN HENRY.

The directors of the E. C. Mills Timber & Trading Co., of Vancouver, B. C., announce the death on Monday, July 17, 1916, of John Henry, who was one of the founders of that company and its president since its incorporation.

L. P. PARKER.

Loomis Putman Parker, president of the Chickasaw Hotel Co., operating the Gayoso, Chisca and Peabody hotels at Memphis, Tenn., died at the Hotel Gayoso, Memphis, on Tuesday, July 11th. Mr. Parker operated the Haliday House at Cairo for several years prior to his removal to Memphis and that house became famous throughout the west and south under his management. His success in building up the Memphis hotels has been no less conspicuous. Appropriate announcement cards were sent out by the directors of the Chickasaw Hotel Co. expressive of their sorrow in Mr. Parker's death.

DEATH BY ACCIDENT OF GEORGE T. LOCK.

New Orleans, La., Aug. 8.—George T. Lock, son of Captain George Lock, of Lake Charles, La., was instantly killed August 6 while going in his automobile from Houston, Tex., to Galveston, when the machine capsized and pinned Mr. Lock beneath it, crushing his skull. At the time of the accident Mr. Lock was going at a high rate of speed and in endeavoring to pass another automobile he drove too near the edge of the shell road and the car overturned.

Mr. Lock was a native of Lake Charles and became identified in his early youth with the Lock-Moore Lumber Co., which had been organized by his father and Colonel Charles H. Moore, of Galveston. In addition to his lumber activities, Mr. Lock was president of the Clooney Construction & Towing Co., operating the largest ship yard in the southwest, and was also president of the First National Bank of Lake Charles, to which position he succeeded when his father retired from business last winter. He was also president of the Lock-Moore Lumber Co., and was interested in many activities for the public good. Only recently he had arranged with the war department at Washington for the widening and deepening of the Kalamazoo-Sabine section of the Intercoastal canal at his own expense, subject to future reimbursement.

Accompanying Mr. Lock at the time of the accident was his brother-in-law, Olin Moss, who was painfully but not seriously injured.

HOME-COMING JUBILEE AT LUFKIN.

Lufkin, Tex., Aug. 10.—The Hoo-Hoo band has issued an invitation to all former residents of Lufkin and Angeline county, lumbermen and all, to lay aside all business and social cares and attend the great home-coming jubilee at Lufkin, September 7, 8 and 9.

The invitation will be widely accepted and the home-coming and reunion of the famous Hoo-Hoo band will be a joyful occasion.

Plans are being made for a concatenation as the concluding feature of the program.

CONCERNING FEDERAL TAXING OF TIMBER.

Washington, D. C., Aug. 21.—Countrywide interest is focused on the proposed revenue measure as it has been submitted to the senate by Chairman Simmons of the Senate Finance Committee. The changes are many and varied.

In Part II of the bill, section 12, of the corporation division a change has been made in the matter of exemptions that are to be considered in making returns on which to assess the income tax. As the bill was passed by the house the deductions which might be made by corporations, joint stock companies, or associations organized within the United States and engaged in the lumber industry were as follows:

"And in the case of timber a reasonable allowance for stumpage not in excess of the cost of, or capital actually invested in, the timber sold or removed during the year for which the return is made, but with respect to timber purchased prior to March 1, 1913, a reasonable allowance not in excess of the fair cash value of such timber on March 1, 1913." The amended clause reads as follows:

"(c) And in the case of timber a reasonable allowance for stumpage not in excess of the market value of the standing timber actually sawed and sold during the year for which such return and computation are made, under such rules and regulations as may be prescribed by the secretary of the treasury."

The same change has been made with reference to deductions which may be made in the case of corporations, etc., existing under the laws of any foreign country and engaged in the lumber business within the United States.

COMMISSION MAKING NO SPECIAL INQUIRY IN MILLING-IN-TRANSIT SITUATION.

Washington, D. C., Aug. 22.—Lumbermen in various parts of the country are communicating with the Federal Trade Commission relative to a statement made by H. H. Snell, of Birmingham, Ala., at the recent hearing on the general lumber investigation held in Chicago, to the effect that the Federal Trade Commission was gathering some data on the milling-in-transit situation.

Referring to this statement Commissioner Parry told your correspondent that Mr. Snell had evidently been misinformed, or else he had misunderstood some statement made, because the Federal Trade Commission, while interested in all kinds of lumber matters, has been paying no special attention to the milling-in-transit situation, realizing that this is without their jurisdiction.

Mr. Parry said that the commission is interested and watching this general lumber investigation of the Interstate Commerce Commission, and it is possible, he said, that the commission in making its report on the lumber industry may refer indirectly to this transit situation.

FEDERAL FARM LOAN BOARD ORGANIZED.

Washington, D. C., Aug. 21.—The newly organized Federal Farm Loan Board, which will have jurisdiction under the Rural Credits bill passed at this session of congress will hold its first hearing today in Augusta, Maine. It is the purpose of the board to hold hearings in the capitals of the different states so that banks may be established in the twelve districts into which the United States will be divided to carry on this work.

Members of the board just recently took the oath of office here in the office of the Secretary of the Treasury, chairman of the board, and immediately organized for the work of installing the new system of rural credits. Members of the board, in addition to the secretary are: George W. Norris, of Philadelphia; Herbert Quick, of Berkeley Springs, W. Va.; W. S. A. Smith, of Sioux City, Iowa; and Charles E. Lobdell, of Great Bend, Kans. Mr. Norris has been designated Farm Loan Commissioner for a period of one year. In this capacity Mr. Norris will be the active executive officer of the board, a position corresponding to that of the governor of the Federal Reserve Board.

W. W. Flannagan, of Montclair, N. H., has been elected secretary of the board.

It was decided to begin the work of inaugurating the new system at once, and in this connection the board is to make a trip throughout the country and hold hearings in the various states in order to collect reliable first-hand information and data to guide it in dividing the country into the twelve districts provided by the act and locating a federal land bank in each district. This is the same course which was pursued by the Reserve Bank Organization Committee in inaugurating the Federal Reserve System.

These hearings, it is hoped, will enable the board to proceed intelligently in the work of organization. A comprehensive and careful analysis of the farming needs of the country will require some little time, and it will probably be several months before the banks are established and ready for business, but the board is resolved, it is said to expedite the work as much as possible.

Temporary quarters have been afforded the board in the Treasury building and permanent quarters will be arranged there as soon as some other bureaus can be moved out.

The trip of the board has been arranged for now as far as Spokane, Wash., the hearing to be held there on September 4. From Spokane the board will go to Oregon and California and return across the central part of the continent. Thereafter the trip will be extended through the south.

The law under which the board was organized requires it to apportion the districts "with due regard to the farm loan needs of the country." The important problem before the board is the determination of the best means of placing all the advantages of the system at the disposal of the farmers.

Hearings will be public, and farmers and farmers' organizations have been invited to appear before the board and submit all the information which they think will assist the board in solving the problem of determining the boundaries of the districts and locating the federal land banks. Widespread interest is shown in all sections of the country by farmers. Hundreds of letters are being received by Secretary McAdoo in regard to the new law and many offers of co-operation with the board in inaugurating the new system.

COMMISSION PURCHASES MORE FOREST LAND IN WHITE MOUNTAINS.

Washington, D. C., Aug. 19.—At a meeting of the National Forest Reservation Commission held yesterday the purchase of 66,000 acres of land was approved. The land consisted of about 53,000 acres in the White mountains of New Hampshire on the watershed of the Connecticut river and about 13,000 acres in various parts of the Southern Appalachians.

With this purchase the commission has bought approximately 350,000 acres in the White mountains. The land was mostly cut over, with small bodies of merchantable spruce and hardwood in various sections.

INTERSTATE COMMERCE COMMISSION HEARINGS

No lumber or other hearings were held during the month of August by the commission outside of Washington. Following are the lumber hearings on the docket of the commission for the immediate future.

On September 6 at Cairo, Ill., before Examiner McCawley, in case No. 8911 of the Schuh-Mason Lumber Co. vs. the Mobile & Ohio et al.

On September 8, at St. Louis, Mo., before Examiner McCainley in case No. 8937 of the Belzoni Hardwood Lumber Co. vs. the Southern Railway of Mississippi et al.

On September 11, at Macon, Ga., before Examiner Burnside, in case No. 8967 of the G. H. Evans Lumber Co. et al. vs. the Central of George et al.

Also on September 11, at Macon, before Examiner Burnside, case No. 9028 of the Georgia Hardwood Association vs. the Central of Georgia et al.

INTERSTATE COMMERCE COMMISSION COMPLAINTS

A complaint has been filed with the Commission by the Lamb-Fish Lumber Co., of Charleston, Miss., against the Illinois Central and a number of other carriers.

The company states that the freight charges on hardwood lumber shipped from Charleston, Miss., to Mobile, Ala., and Pensacola, Fla., in carloads is "unjust and unreasonable." The rates to and from those points are compared with the rates charged on similar traffic from Memphis stations in Arkansas to various points of destination. They ask that the roads be made to desist from the present unreasonable charges.

INTERSTATE COMMERCE COMMISSION SUSPENSION ORDERS.

The commissioners have suspended until November 29 certain schedules which were filed with them by the Maine Central Railroad Co. stating new and individual and joint rate charges on lumber to and from New England points. The rates were to have become effective on August 25. The commissioners have delayed the date of the new rates because they wish to "enter upon a hearing, concerning the propriety of the increases and the lawfulness of the rates, charges, regulations and practices stated in the said schedules contained in said tariffs."

INTERSTATE COMMERCE COMMISSION OPINIONS

The commissioners, have, since our last issue handed down a decision in the case of the Butler County Railroad divisions, which is a supplemental proceeding in the Tap Line case. In their syllabus in this case the commissioners say:

"Petition for permission to make interline settlements on the basis of the milling-in-transit arrangements in effect prior to May 1, 1912, denied, and the complaint dismissed, the other questions presented by it having been disposed of in the cases cited in the report."

In concluding the brief, Commissioner Harlan, who wrote it says:

"The only matter set up in the joint petition that remains to be considered, therefore, is the prayer of the petitioners to be permitted to make interline settlements on the basis of the milling-in-transit arrangements in effect between them prior to May 1, 1912, on lumber and forest products moving after that date and while certain of these questions were under consideration. Such an adjustment would manifestly put the Butler County Railroad in a preferred position over other tap lines that were parties to the tap line case, and on that ground alone the petition must be denied. But, as we understand the situation, such a settlement would also place the Brooklyn Cooperage Co. in a preferred position over other tap-line shippers throughout the yellow-pine territory in the southwest.

"The petition must be dismissed, and it will be so ordered."

Personal News Notes

A. Whisnant, for many years on the staff of George M. Cornwall's forceful publication, the "Timberman" of Portland, Ore., who contributed the story of the Bend, Ore., meeting to this issue of the LUMBER WORLD REVIEW, who is known to all the Pacific coast and Inland Empire lumbermen as "Whis," will be known to the LUMBER WORLD REVIEW as the Prose-Poet of Bend. Mr. Whisnant was really on his way to Chicago to visit the editor of this paper, but the wondrous beauty and possibilities of Bend, Ore., and the discovery that the new lumber city was the center of the world of progress cut short that trip. It ended at Bend. Mr. Whisnant purchased the weekly newspaper at Bend known as the "Bend Press." If the Prose-Poet of Bend fails to make the Deschutes river valley known among all men who read English then we shall suffer a keen disappointment, an emotion not aroused in the hearts of Mr. Whisnant's friends to this date when contemplating his acts of life.

Frank C. Dooley, of the F. C. Dooley Lumber Co., Memphis, Tenn., has been making Chicago a central point lately, while calling on his numerous customers in Wisconsin and Michigan as well as in the immediate territory. Mr. Dooley was accompanied on his northern visit by his wife.

President John M. Woods, of Boston, Mass., of the National Hardwood Lumber Association, who was in Chicago on Monday of this week calling on Secretary Frank F. Fish, while on a trip to Kansas City, Mo., has announced the appointment of Earl Palmer, of Paducah, Ky., as national councillor of the association of the Chamber of Commerce of the United States of America, and of Frederick S. Underhill, of Philadelphia; Gardner I. Jones, of Boston, and Secretary F. F. Fish, as delegates to the forthcoming annual meeting of that body to be held at Washington, D. C., in February, 1917.

Mr. C. M. McWilliams, an attorney of promise of Houston, Tex., is visiting friends in Chicago this week and renewed his acquaintance with the editor of the LUMBER WORLD REVIEW. Mr. McWilliams was for many years in the lumber business, was for seven years associated with the Southern Pine Lumber Co. at Texarkana, Ark., and for a time was in the wholesale business with Martin J. Ragley, now general manager of the W. G. Ragley Lumber Co., of Ragley, La. Mr. McWilliams is and always will be at heart a lumberman—and in mind also for that matter. The lumber business in the southwest is bettered by his association with it and we certainly would welcome him to former associations if he should ever conclude to return to the trade.

The thing which interests the lumber business collaterally—and collaterally is directly in this day and time—is the announcement of Frank E. Long, president of the Farmers' Review, of Chicago, that E. B. Moon has been added to the staff of that publication as director of the department of community development and trade betterment, who will continue the work of helping the retail merchants and farmers of Illinois build up better towns and communities. This is a work which the Farmers' Review has been carrying on for several years. Mr. Moon is a successful retail merchant and his counsel and research work will be very helpful We hope he will endeavor to teach the retail lumber trade something; that will test his ability in fine shape.

Mr. Hugh McVey, for the last three years advertising counselor for Successful Farming, of Des Moines, Ia., and who is very well and favorably known to the lumber trade of the United States and especially to the yellow pine manufacturers and the members of the Southern Pine Association, has recently left the position he occupied with Successful Farming and allied himself in a like capacity with Arthur Capper's papers. These publications are: The Missouri Valley Farmer, Farmers' Mail and Breeze, Nebraska Farm Journal, Missouri Ruralist, Oklahoma Farmer, The Topeka Daily Capital, The Household and Capper's Weekly. The lumbermen of the country have used these papers of Mr. Capper's to good effect, it is understood, and they will undoubtedly now feel more thoroughly in touch with the Capper papers than ever before since Mr. McVey's affiliation.

HYMENEAL

MITCHELL-GLEASON.

Carles Tennant Mitchell, prominent Cadillac lumber manufacturer, son of the late William W. Mitchell, and Miss Mary Gleason, daughter of Mr. and Mrs. P. H. Gleason of Cadillac, were united in marriage at 8:00 o'clock Thursday evening, August 17, at St. Anne's rectory, Rev. F. M. Lefebvre performing the ceremony.

Mr. Mitchell is president at the Mitchell Bros. Co., Cadillac Chemical Co., Mitchell-Diggins Iron Co., and St. John Table Co., vice president of the Cobbs & Mitchell Co., and is also heavily interested in timber lands in the west.

Mrs. Mitchell was graduated from the local high school, later attended the Ferris Institute and the State Normal School at Ypsilanti, from which she was graduated, has been a teached in the public schools for several years and had been chosen principal of the McKinley school for the coming year.

They will be at home after the first of October at 205 East Cass Street, Cadillac, Michigan.

The congratulations and good wishes of a host of friends have been extended to the happy couple.

OBITUARY

JOHN HENRY.

The directors of the E. C. Mills Timber & Trading Co., of Vancouver, B. C., announce the death on Monday, July 17, 1916, of John Henry, who was one of the founders of that company and its president since its incorporation.

L. P. PARKER.

Loomis Putman Parker, president of the Chickasaw Hotel Co., operating the Gayoso, Chisca and Peabody hotels at Memphis, Tenn., died at the Hotel Gayoso, Memphis, on Tuesday, July 11th. Mr. Parker operated the Halliday House at Cairo for several years prior to his removal to Memphis and that house became famous throughout the west and south under his management. His success in building up the Memphis hotels has been no less conspicuous. Appropriate announcement cards were sent out by the directors of the Chickasaw Hotel Co. expressive of their sorrow in Mr. Parker's death.

DEATH BY ACCIDENT OF GEORGE T. LOCK.

New Orleans, La., Aug. 8.—George T. Lock, son of Captain George Lock, of Lake Charles, La., was instantly killed August 6 while going in his automobile from Houston, Tex., to Galveston, when the machine capsized and pinned Mr. Lock beneath it, crushing his skull. At the time of the accident Mr. Lock was going at a high rate of speed and in endeavoring to pass another automobile he drove too near the edge of the shell road and the car overturned.

Mr. Lock was a native of Lake Charles and became identified in his early youth with the Lock-Moore Lumber Co., which had been organized by his father and Colonel Charles H. Moore, of Galveston. In addition to his lumber activities, Mr. Lock was president of the Clooney Construction & Towing Co., operating the largest ship yard in the southwest, and was also president of the First National Bank of Lake Charles, to which position he succeeded when his father retired from business last winter. He was also president of the Lock-Moore Lumber Co., and was interested in many activities for the public good. Only recently he had arranged with the war department at Washington for the widening and deepening of the Kalamazoo-Sabine section of the Intercoastal canal at his own expense, subject to future reimbursement.

Accompanying Mr. Lock at the time of the accident was his brother-in-law, Olin Moss, who was painfully but not seriously injured.

HOME-COMING JUBILEE AT LUFKIN.

Lufkin, Tex., Aug. 10.—The Hoo-Hoo band has issued an invitation to all former residents of Lufkin and Angeline county, lumbermen and all, to lay aside all business and social cares and attend the great home-coming jubilee at Lufkin, September 7, 8 and 9.

The invitation will be widely accepted and the home-coming and reunion of the famous Hoo-Hoo band will be a joyful occasion.

Plans are being made for a concatenation as the concluding feature of the program.

Elkins, W. Va.—The Hardman-Decker Lumber Co.; $25,000 capital. Troy E. Hardman, A. G. Hardman, B. M. Poocer and others.

Louisville, Ky.—Southern Sales Co.; $10,000 capital. Emil Anderson, Reinhold Anderson and Charles Anderson.

Oldtown, Me.—Oldtown Veneer Co.; $75,000 capital. William H. Powell, Ira D. Eastman, John Conners and others.

Atlanta, Ga.—W. B. Disbro Lumber Co.; $25,000 capital. W. B. Disbro and Fred C. Disbro.

Gary, Ind.—The Lake County Lumber & Supply Co.; $60,000 capital. John C. Richter, Harry W. Richter and M. L. Kline.

West Allis, Wis.—Baldwin Lumber Co.; $25,000 capital. L. M. Baldwin, E. Baldwin, H. Baldwin.

Newark, N. J.—Western Pacific Lumber Co.; $300,000 capital. John Stevenson, Portland, Ore.; Martin W. Hillmyer of Newark and Harry A. Silvey of Brooklyn.

New York, N. Y.—Flora America Plywood Co., acquire timber lands and to manufacture wood and pulp articles; $2,000,000 capital. Abraham Schiff, Arnold C. Hanson, Kerr Easton, all of New York.

Preston County, W. Va.—Cheat River Lumber Co.; $250,000 capital. W. M. Chambers, of Fairmont, W. Va., E. Hamstrom and Thos. Kearns, of Pittsburgh, Pa., and others.

Menasha, Wis.—The Jaeger-Dawen Co., lumber, fuel and building materials; $50,000 capital. Peter R. Jaeger, Mathias Dawen and others.

Demopolis, Ala.—Commercial Hardwood Co.; $50,000 capital. Clarence Kirven, president; H. L. Wood, vice-president.

Montgomery, Ala.—Williams & Massey Lumber Co.; $10,000 capital. J. C. Williams, J. E. Massey and J. M. Massey.

Manatee, Fla.—Rushton Lumber Co.; $25,000 capital. M. G. Rushton, president-treasurer; Milton F. Rushton, vice-president; F. B. Rushton, secretary.

Alexandria, La.—Alexandria Lumber & Supply Co.; $20,000 capital. Robert Stack, president; E. W. Brown, vice-president; J. C. Fingerle, secretary-treasurer.

Huntsville, Ala.—Huntsville Hardwood Manufacturing Co.; $2,000 capital. W. M. Wellman, Lee O. Irwin and W. H. Hollingsworth.

Mobile, Ala.—Acme Manufacturing Co.; $5,000 capital. R. H. Condie, president and treasurer.

Luxora, Ark.—Keiser Cooperage Co.; $15,000 capital. Charles Wunderlich, president; George J. Wunderlich, vice-president; Alvin Wunderlich, secretary and treasurer.

San Francisco, Cal.—M. A. Burns Lumber Co.; $300,000 capital.

Miami, Fla.—Miami Lumber Co.; $20,000 capital.

Camak, Ga.—Shortleaf Pine Co.; $12,000 capital. W. S. Wilson, president; D. O. McBrayer, W. B. Whiteside and others.

Chicago, Ill.—Croft Lumber Co.; $100,000 capital. Charles T. Lang, A. A. Parsons, John L. Wells.

Indianapolis, Ind.—N. L. Horall Lumber Co.; $5,000 capital. T. M. Brown, N. L. Horall, P. P. Wetmore.

Portland, Mich.—Builders' Lumber & Supply Co.; $12,000 capital.

Beaufort, N. C.—Sterling Lumber Co.; $100,000 capital.

Spokane, Wash.—Inland Empire Lumber Co.; $300,000 capital.

Tacoma, Wash.—Clover Creek Lumber Co.; $25,000 capital.

New York, N. Y.—Schnitter-Grenn Lumber Co.; $8,000 capital. B. Grossfield, M. Grossfield, J. Sanacony.

New Mills

Falls Crook, B. C.—The Alberta Lumber Co. will erect a mill here to replace plant destroyed by fire some time ago.

Oconto, Wis.—The W. E. Williams Co., of Traverse City, Mich., will erect a plant here for the manufacture of hardwood flooring; the yearly output will be about 9,000,000 feet.

Hamlet, N. C.—Makepiece Sash & Door Co. will build a plant.

Beaumont, Tex.—McBride-Law will build a plant to manufacture windows, doors and frames, etc.

Belzoni, Miss.—Russe & Burgess, of Memphis, Tenn., will build band sawmill at this place or Tehula.

Goldsboro, N. C.—Virginia Lumber & Box Co. will build band and re-band mill building to have daily capacity of 75,000 feet.

Shortleaf, Ala.—The Commercial Hardwood Co. will build sawmill.

Glenwood, Fla.—Hond Lumber Co. will rebuild sawmill and dry kiln lately noted burned, which will have a daily capacity of 40,000 feet.

Alexandria, La.—Alexandria Lumber & Supply Co. will build planing mill and lumber sheds.

Hattiesburg, Miss.—Anderson-Tully Co., of Vicksburg, Miss., will build sawmill.

Natchez, Miss.—R. F. Learned & Son will build a sawmill.

Business Changes

Paducah, Ky.—The Sherrill-King Mill & Lumber Co. has been taken over by C. H. King and son, Fain King, who will continue the business under the name of the King Mill & Lumber Co. C. H. and A. S. Sherrill will retire.

Nashville, Tenn.—The Farris Hardwood Lumber Co. will increase its capital from $75,000 to $110,000.

Marshfield, Wis.—The Booth-Campbell Retail Lumber Co. has purchased the retail lumber yards of H. F. Roehrig of Arpin and D. A. McCoy of Pittsville.

Orient, Ia.—A. C. Eatinger sold his interest in the lumber and hardware stock to the Eatinger Lumber Co.

Salem, Nebr.—Joseph Windle, Jr., has purchased the business of the Salem Lumber Co.

Little Rock, Ark.—The Arkmo Lumber Co. has increased its capital to $100,000.

Fayette, Ia. A. F. Dellit has sold out to the Eagle Lumber & Coal Co.

Belpre, Kans.—J. G. English has sold out to the Kansas Lumber Co.

Paducah, Ky.—J. K. Ferguson has retired from the Ferguson & Palmer Co.

Primrose, Neb.—V. H. Smatlan has sold out to the T. B. Hord Co.

North Tonawanda, N. Y.—The Pope Saw Mill & Lumber Co. is closing out.

Velva, N. D.—The Rogers Lumber Co. has sold out to Anderson & De Lay.

Bird City, Kans.—The Citizens' Lumber Co. has been succeeded by the Bird City Equity Mercantile Exchange.

Murray, Ky.—The Hughes & Irvan Lumber Co. has been succeeded by Hood & Fain.

Forest Hill, La.—J. L. Peninnger of the E. S. Duck Lumber Co. has sold out his interests.

New Orleans, La.—Charles R. Currie, secretary, and P. F. Dunn, assistant treasurer of the Ruddock-Orleans Cypress Co., have bought the company's timber holdings and leased the mill plant and equipment in New Orleans. The business will be conducted as heretofore.

Little Falls, N. J.—The William D. Wilson Co. has been succeeded by the Van Ness Lumber Co.

Cincinnati, O.—The hardwood lumber firms of Bennett & Witte and O. P. Hurd & Co., of Cairo, Ill., have been merged. The firm will be conducted as Bennett & Witte, with headquarters in this city.

Bluefield, W. Va.—The McClellan-West Lumber Co. has removed its offices to the Land Title building, Philadelphia, Pa.

Muscoda, Wis.—W. S. Heddles has succeeded the Heddles Lumber Co.

Stevens Point, Wis.—The Clifford Lumber Co. has sold its sawmill, planing mill and extensive yards along the Wisconsin river and stock of lumber to the Vetter Manufacturing Co.

Thatcher, Ariz.—The Mt. Graham Lumber Co. has leased its plant to the F. C. Fisher Lumber Co.

Kankakee, Ill.—The Unifile Manufacturing Co. has sold out to the Pugh Stores Co.

New Castle, Ind.—J. D. Case has sold out to Chas. J. Elliott.

Outlook, Mont.—The Kulaas Lumber Co. has sold out to the Johnson Amund Lumber Co.

Syracuse, N. Y.—Chas. E. Zimmerman has sold out to Edw. L. Seiter.

Waiteville, W. Va.—The Virginia Hardwood Lumber Co. succeeds the Craig County Lumber Corporation.

Chino, Cal.—Wm. Sullivan has been succeeded by the Chino Lumber Co.

Turon, Kans.—J. K. Fortna & Son have sold out to A. B. Everly.

Port Hope, Mich.—Herman Bros. Lumber Co. has sold out to the Port Hope Lumber Co.

St. Paul, Minn.—Koehler & Hinrichs now known as the Koehler & Hinrichs Mercantile Co.

Crosby, N. D.—The Kulaas Lumber Co. has sold out to the Wells Lumber Co.

Warrenton, Va.—The Warrenton Planing Mill Co. has increased its capital to $20,000.

Hayward, Wis.—The Willow River Lumber Co. has increased its capital to $500,000.

Los Angeles, Cal.—The Hingman Lumber Co. has sold out to the Woodhead Lumber Co.

Roseville, Cal.—Slocum & Osborn have sold out to the Diamond Match Co., of Chico.

Roseville, Cal.—J. H. Smart has sold out to the Adams-Johnson Lumber Co., of Oakland.

Farmland, Ill.—John L. Mills has sold out to the Randolph County Lumber Co.

Marlboro, N. J.—M. N. Smith & Son have moved their general office to Elizabeth.

Newark, N. J.—Aubertin-Schneider Co. has changed its name to Schneider-Smith Co.

Beaverton, Ore.—Beedle & Waite have sold out to the Jones Lumber Co.

Fires

Napavine, Wash.—Dry kiln and contents of the Napavine Lumber & Manufacturing Co. burned, loss $3,500, covered by insurance.

Goldendale, Wash.—The E. C. Trost planing mill buildings, machinery and a quantity of finished stock burned; loss $7,000 with insurance of $3,000.

Skidmore, Tex.—Lumber yard and other property belonging to H. R. Michalke burned; loss estimated at $30,000.

Trumbull, Neb.—Yards of the Samuelson Lumber Co. burned; loss $20,000.

News Miscellany of the Lumber World

Gulf Coast News

NEW ORLEANS, LA.

New Orleans, La., Aug. 22.—A. G. T. Moore, assistant secretary of the Southern Pine Association, will go to Birmingham, Ala., tonight to assist in a fight being made by citizens of that city to have rescinded an ordinance which forbids the use of shingle roofs on buildings within the municipal limits.

According to a cable message received here, W. J. Drewry, European representative of the Southern Pine Association, sailed from Bordeaux, France, on last Saturday. Mr. Drewry is expected to reach New Orleans week after next. After his arrival here a meeting of the export committee of the association will be held.

Announcement from Washington that the new navy bill passed last week by congress included an appropriation for extensive improvements at the New Orleans navy yard, so that the yard will be equipped for the construction of warships, aroused considerable interest in lumber circles here. A large amount of lumber will be used in the new work, which will be carried on simultaneously also at a number of other yards in various parts of the country, the total expenditure on yards to be $6,000,000.

News received here is to the effect that the United States government has recently placed with Texas mills orders for 10 to 15 million feet of yellow pine for barracks, mess hall and, it is rumored, "winter quarters," for the troops now stationed on the Texas-Mexico line.

Inquiries are now being made, or will be shortly, for 15 million to 20 million more feet. All this lumber is being bought west of the river, and mills of this section are not sharing in Uncle Sam's "war" bounty.

Announcement is made by local representatives of the Lamb-Fish Lumber Co. that, beginning at once, the big Lamb-Fish mill at Charleston, Miss., will run night and day shifts, operating twenty-four hours a day. This is the first time in the history of the mill, which is the largest hardwood plant in the world, that it has been made necessary to operate night runs. Large contracts recently entered into are said to have necessitated operation at full capacity. To take care of business now in sight it is said it will be necessary to run day and night steadily for two years.

Great interest has been aroused among Louisiana lumber producers and dealers by the announcement from Washington that the item in the agricultural appropriation bill has been retained by senate and house conferees authorizing an appropriation to investigate the cause of waste in the lumber industry.

Railroad car shortage is causing some inconvenience, but no serious trouble.

The New Orleans Association of Commerce announces that a hearty response has met its recent suggestion that important railroad, lumber, land and other interests of the Mississippi Valley hold a conference here for the purpose of discussing trade conditions and means for deveolping business in all its branches. Until all interests have been heard from, the date of the conference will not be fixed.

Inland Empire News

SPOKANE, WASH.

Spokane, Wash., Aug. 19.—The Milwaukee Lumber Co. of Spokane has commenced work on its nine mile flume. It is estimated this flume will make a market for 300,000,000 feet of saw timber besides poles, posts and piling and wood. According to the contract made by the company with the settlers the flume is to be completed by May, 1917, and is to be used by all the settlers. All timber is to be conveyed by means of the flume at a uniform toll charge.

The cables of the Kaniksu Boom & Navigation Co. at Priest River, Idaho, east of Spokane, parted last week, releasing over a million feet of logs and poles, the force of which almost completely demolished the sorting works.

G. A. Branson, logging contractor, has completed his contract with the St. Maries Lumber Co. at St. Maries, Idaho, the contract calling for 11,000,000 feet of sawlogs and cedar poles, which were cut from a tract near Santa.

An important factor which is helping all lines of business in Spokane and the tributary territory is the record production from the mines of this section.

In the territory within the 250-mile radius of Spokane, which is the acknowledged financial, mining and transportation center of this vast area, the 1916 metal production will be worth not less than $75,000,000, gross, and this sum will be gradually increased in the coming years, as all of the operating properties have an immense reserve tonnage, while scores of properties now being developed will be rated among the producers in the next few months.

* * *

BOISE, IDAHO

Boise, Idaho, Aug. 19.—In a recent trip to northern Idaho Governor Moses Alexander of this state was most impressed by the extent and efficiency of the lumber industry, particularly as carried on by the Potlatch Lumber Co. at the town of Potlatch, south of Spokane. In an interview Governor Alexander said:

"The word 'Potlatch' in my opinion signifies the investment in this state of $50,000,000 and it is growing more valuable from day to day. The price of lumber everywhere is high and the demand good, and the lumber company is dividing the good things with its employees, as their wages are good and their environment pleasant and comfortable."

The forestry department is offering for sale about 20,000,000 feet of saw timber in the Meadow Creek region near Bonners Ferry, Idaho, embracing about 950 acres, and consisting of white and yellow pine, larch and cedar.

Bonners Ferry has fully recovered from the setback it received from the floods last spring, and activity in the lumbering industry in that section is the greatest in years, according to James C. Bush, assessor of Boundary county, who was in Boise this week to appear before the state board of equalization in the fight of the timber and railroad interests to have their valuations in Boundary county cut $350,000. There are a number of big outfits now operating lumber camps in Boundary county. A 12-mile railroad has been built up Meadow creek to take care of the shipping of logs, as the Beardsmore people do their sawing at Priest River, and the White interests ship their logs to Laclede.

The activity in the lumber industry has given impetus to other lines of business, and several new business buildings are under construction or have recently been completed.

Middle States News

BUFFALO, N. Y.

Buffalo, N. Y., Aug. 23.—Building permits for July showed a total of $1,135,000 for this city, as compared with $1,494,000 in the same month of last year. The figures have been running very close to 1915 for the first seven months of this year.

While the lumber jobbers as a rule report business somewhat better, they are handling their stock with more care than they used to. This is shown in the further falling off in the lake trade. Lake freights are high and shippers who have been in that trade a long time are saying that all-rail transportation in the long run is fully as cheap

This is 1916 Not 1816

Only of comparatively late years have we of the lumber and timber industry begun to adopt modern methods. In all too many cases we have not yet begun.

The latest types of management, machinery, manufacturing methods, reclamation of by-products, merchandising and advertising still have been adopted all too grudgingly.

So in the buying, selling and estimating of timberlands the 36 years' experience of James D. Lacey & Company represent by far the most successful effort to improve on the methods of a century ago, a LACEY REPORT remains the one real guarantee of virtually accurate knowledge of stumpage values, and the International Files of James D. Lacey & Company constitute by far the greatest existing body of facts concerning timberland (both in and out of the market).

All our facilities are at your service in any timberland transaction. It often transpires that we know more about a tract of timber than the owner of it.

We should be pleased to send you our Booklet, "Pointers."

Seattle (White Bld

as it is by water. This means, among other things, more direct shipment to customers without breaking bulk, or by using the transit privilege and less stock carried in Buffalo yards. The lake trade means first shipment to the lake by rail and often shipment from the lake to the Buffalo yard before it goes into pile, and since the big profits in yard handling have disappeared the direct shipment plan is going to prevail more than ever before. Yards are needed for quick shipment in emergencies and they will be continued, but the style of handling is adapting itself more and more to the all-rail method, which cuts out the lakes.

Yellow pine has become the dominant wood in the entire east. It was at one time thought that gum would do this, but it is observed now that when yellow pine goes up or down all other woods are affected. High and fairly prohibitive ocean freights have prevented the expected wholesale exporting of yellow pine lumber and kept the prices much lower than they otherwise would have been.

G. Elias & Bro. of Buffalo, were the lowest bidders for furnishing timber and plank for use on the state canals, western division. Their bid was $20,685.50. The same firm also bid on other division work, but competitors were lower.

Edward E. Case, a prominent lumberman at Watertown for many years, died there on August 12, aged 68 years. He succeeded his father in the lumber business and for a time had a partner, the late John Folsom, but for 28 years was sole proprietor, founding the Case Lumber & Roofing Co.

Ohio Valley News

LOUISVILLE, KY.

Louisville, Ky., Aug. 23.—The Louisville Veneer Mill has made arrangements to improve its plant by the addition of new lumber kilns and mechanical veneer drying equipment. The office is also being enlarged. The concern some time ago added a line of glue-room machinery, which replaced the old equipment. It has purchased some adjoining property on which to locate the new buildings required by the additions.

The C. C. Mengel & Bro. Co. has received word that its new four-mast sailing vessel, the "C. C. Mengel, jr.," has been launched from the shipyard at Bath, Me., where it has been under construction, and that a companion sailor, the "Sam C. Mengel," would be completed shortly. These boats, which are equipped with auxiliary steam power, will be used to transport mahogany logs from Africa.

Retail lumber-yards in Louisville have been having a good season, though hardly a big one. Nevertheless, the volume of business is ahead of what it was last year, and while not many large structures have been erected here, there has been much small residence work, which has given the retailers opportunity for a consistent demand.

The Forest Lumber Co., Lexington, Ky., is preparing to equip a sawmill which will be electrically operated. The company will put in a six-foot bandmill, and will also add a dimension mill for the manufacture of walnut gunstocks and wood novelties of various kinds. The plan is also to operate a rehandling yard in connection with the sawmill.

* * *

EVANSVILLE, IND.

Evansville, Ind., Aug. 18.—The West Side Lumber Co. of this city, with a capital stock of $50,000, filed articles of incorporation with the secretary of state at Indianapolis a few days ago, the incorporators being Charles A. Wolflin, Elmer D. Luhring and Paul W. Luhring. The company will establish a lumber supply yard at the corner of Virginia street and St. Joseph avenue, in this city, work to start at once and the company expects to be ready for business early in September. Mr. Wolflin and the Messrs. Luhring are among the best known lumber men in this section.

The W. M. Simpson Lumber Co. has purchased the lumber business and yard of T. B. Wright, jr., at Mt. Carmel, Ill., and has taken charge of the same. The new company has selected Mr. Miller, of Evansville, as the manager of the Mt. Carmel branch business and it will be largely extended.

Mr. and Mrs. William R. Thurman, of Mobile, Ala., has just announced the engagement of their daughter, Miss Mary Edna Thurman, to Paul W. Luhring, of Evansville, the wedding to take place on August 22, at the home of the parents of the bride-elect in Mobile. Mr. Luhring is associated with the Wolflin-Luhring Lumber Co. and the West Side Lumber Co. of this city and is Vicegerent Snark of Hoo-Hoo in southern Indiana. He is one of the most popular young lumbermen in southern Indiana and is prominent in the club life of Evansville.

The building permits in Evansville for the month of July were $242,381 as compared to $396,770 for the same month of last year.

The tow-boat "Slack-Parrett," while enroute up the Ohio river a few days ago struck a snag near Newburg, Ind., ten miles above here and sank a barge that contained one million feet of poplar lumber. The barge was finally raised by the United States snagboat, E. A. Woodruff and all the lumber was saved.

Northern States News

WESTBORO, WIS.

Westboro, Wis., Aug. 21.—The big mill of the Westboro Lumber Co. here is pounding along on regular time and with only a slightly less than normal force. The woods work, however, is hampered by a lack of men. If the lumber jacks know that this company served four kinds of pie and seven different varieties of cake, besides the four or five different kinds of bread, iced tea and the meats and condiments to make up a Lucullan feast, there is no doubt but they would literally besiege the company's offices for a job.

J. J. Lingle, president of the Westboro Lumber Co., is running a new Studebaker car and says that he is really beginning to like the sport.

Orders for lumber have shown some increase during the last week, but a scarcity of freight cars is being developed and one knows not what may happen next. Prices are a shade firmer and even No. 3 is showing a gain.

* * *

RIB LAKE, WIS.

Rib Lake, Wis., Aug. 21.—The new saw mill of the Rib Lake Lumber Co. here is now under cover and the machinery is beginning to arrive. However, some of the more important machines are delayed in delivery because of the scarcity of steel and the slow movement of freight combined. Manager Geo. N. Harder states that the mill will not be ready to operate much before November 1 and the new stock will not be in shape to deliver before May 15. The new mill is 240x80 feet in floor area, will have two bands and probably a gang and resaw and will be one of the largest and best mills in Wisconsin.

Manager Harder has very little lumber for sale but says the inquiry is good.

* * *

RHINELANDER, WIS.

Rhinelander, Wis., Aug. 21.—The saw mill of the Brown Bros.' Lumber Co. here has been sold to the Brown Land & Lumber Co. here and is now being logged and operated by the new owner. Luther E. Brown and his brother, Webster A. Brown, are the owners of the Brown Land & Lumber Co., which is a co-partnership. The company has been in existence seven years and is building up a large business.

The new saw mill of the Fountain-Campbell Lumber Co., at Ladysmith, west of here, is approaching completion. It will be a modern plant in every particular. The owners are well known lumbermen of Oshkosh.

C. C. Collins, of the C. C. Collins Lumber Co., this city, has been spending the week end at his old time home in Madison, Wis.

* * *

MINNEAPOLIS, MINN.

Minneapolis, Minn., Aug. 8.—Building operations in Minneapolis the first seven months closely approach the record of a normal twelvemonth. These steady gains in the city building line have been reflected in a lively lumber trade.

B. C. Bowman, of the H. S. Bowman Lumber Co., Minneapolis, after spending two weeks in Canada inspecting the large interests of the firm, reports trade quiet for wholesale and retail dealers, but prospects promising. Scarcity of laborers is hampering all lines of industry, he said, but the farmers are hopeful because the government is to release soldiers to help in the harvesting of the grain this fall.

Southwestern News

KANSAS CITY, MO.

Kansas City, Mo., Aug. 23.—The car shortage is the most important news to lumbermen at the present time. That the scarcity of railroad equipment will be more severe this season than ever before in the history of the southwest is the opinion of local railroad operating officials and transportation men. They believe that it will be felt more keenly in the southwest than in other parts of the country.

C. L. Mason, superintendent of the Santa Fe system here said that the shortage, which has been apparent for some time was causing some shippers to order more cars than they needed and some other railroad men expressed similar opinions but practically all admitted the scarcity of cars.

Lumbermen here are feeling good over the stories they hear from the rural districts about the prosperity of the farmer, with both wheat and corn at record prices, and all kinds of live stock at figures that were never before equalled for all kinds of live stock at one time. Retailers are in good spirits when they have time to visit wholesale offices here.

* * *

LITTLE ROCK, ARK.

Little Rock, Ark., Aug. 23.—Timber laborers in and around Knobel, Arkansas, are enjoying plenty of work and good wages now. Day laborers are receiving as high as $2.25 per day, while those working under special contracts are making as high as $5.00 per day. All the timber mills of that vicinity are reported as running on full time.

The Henry Wrape Stave Co., according to a report from Searcy, is running its plant at that place now on a night and day shift. This activity is attributed to the unusually large supply of raw material now on hand.

The new plant of the McLean-Arkansas Lumber Co. which is being erected just east of Argenta, across the Arkansas River from Little Rock, is being rushed to completion by a competent force of workmen. It is predicted that the plant will be ready for operation some time before the first of October.

The Arkmo Lumber Co., of Little Rock, which owns and operates a line of retail lumber yards in Arkansas and Missouri, recently filed notice with the secretary of state of Arkansas that it had increased its capital stock from $75,000.00 to $100,000.00. W. W. Fuess of Little Rock is president of the company, and the other members of the board of directors are: A. C. Becker, G. A. Becker, C. K. Nicoll and E. E. Waugeline.

* * *

SHREVEPORT, LA.

Shreveport, La., Aug. 18.—A commission appointed by Governor Pleasant of Louisiana is busy with plans to have this state represented by a comprehensive display of its products at the Mississippi Centennial at Gulfport, Miss., in 1917-18. Owing to the fact that the lumber industry is one of the main industries of Louisiana, lumber products are expected to occupy prominent space in the exhibit.

The dairy industry is going to receive a splendid boost as a result of plans of Louisiana lumber manufacturers to distribute plans for dairies during the state fair. There will be a model dairy in operation, built of lumber furnished by the lumbermen, and visitors to this building will receive copies of plans showing them how to erect similar structures on their farms.

Central Southern News

BIRMINGHAM, ALA.

Birmingham, Ala., Aug. 21.—A $100,000 cooperage factory will be established in Montgomery, Ala., and will begin operations September 1. The plant will be built by J. C. Tuberville & Sons, who are at present operating a plant at Jasper, Ala. It is said that the Tuberville will abandon their plant at Jasper when their plant is established there. The highest class barrels will be manufactured, barrels that will hold syrups, oils and other liquids. The factory at Jasper has been in operation since 1913, and during that time has turned out two million pieces of stave wood.

A. Brown is moving from Roanoke to Ragland. He has considerable timber there and will establish a sawmill.

The A. P. McGowan Lumber and Export Co. is a new firm at Andalusia, Ala. Mr. A. P. McGowan, an experienced lumberman, is at the head of the business. They will cater both to domestic and foreign trade.

The veneer plant of the Bacon-Underwood Co. at Stockton, Ala., closed by the July hurricane, has completed repairs and is now operating.

Frank Malchow, who now owns a box factory at Huntsville, Ala., is looking for a location for his factory. He will probably move to Cullman.

The Kaul Lumber Co., which owns a large tract of land in Bibe, Perry, Hale and Tuscaloosa counties, has placed several hundred cattle of fine beef and milk strains on its lands and it is offering money prizes in order to induce the raising of fine cattle in Alabama.

Pacific Coast News

TACOMA, WASH.

Tacoma, August. 19.—Tacoma mills are figuring on another large inquiry from the Chicago, Burlington & Quincy railroad, which is again in the market for large quantities of Douglas fir lumber. The order will total between 6,000,000 and 8,000,000 feet of car material and timbers. The Burlington has been a heavy and persistent buyer of fir lumber during the past six months and this latest inquiry brings the total of its business to nearly 35,000,000 feet of fir purchased during the first eight months of the year. The contracts for the latest order, which will probably be distributed among the larger mills of the northwest, will be let in the near future.

A new shipyard for the construction of lumber schooners and other vessels will probably be built in Tacoma by John Martinolich, a ship-builder of Dockton, on Vashon Island, who is considering the construction of a new plant nearer the city which will take care of orders for large ships. Mr. Martinolich's plans have not yet been completed but he has announced that if negotiations now under way are completed that the yard will be built on the Tacoma tideflats.

Retail lumbermen of the Pacific northwest gathered in Tacoma on August 8 to discuss business conditions and to make plans for the fall trade. The most important matter decided was the abolishment of all night work in retail yards to aid in the work of curtailment started by the large manufacturing mills. No night work will be done for at least two months according to an agreement made among the retailers.

* * *

SEATTLE, WASH.

Seattle, Wash., Aug. 19.—According to the Puget Sound Log Selling & Grading Bureau there is not a very plentiful supply of logs on hand but with the general resumption of operations by the camps it is declared there will be plenty soon. It, however, has been stated by millmen that they could buy logs on the Sound for fifty cents under the market. This is particularly true at northern Washington points. On Willapa Harbor there is said to be a plentiful supply, with the market prices about as follows: Camp run delivered $8.50 to $9.00; Cedar $9.00 to $9.50. On Puget Sound the ruling prices are declared to be $6.00, $9.00 and $12.00.

There is some railroad buying in sight the largest inquiry so far developing being that of the Burlington which is asking for prices on about 5,000,000 feet. Some of the large mills still are cutting and shipping orders for the Great Northern placed early in the summer. These orders are believed to total somewhere about 25,000,000 feet and are chiefly for timbers to be used in snowshed and bridge construction work in the Cascade mountains.

The Bloedel Donovan Lumber Mills have an order for from 80,000 to 100,000 railroad ties to be shipped in October to Europe for use by the allies in constructing tracks behind the trenches. This order will total in the neighborhood of 3,000,000 board feet.

Bids opened at the United States engineer's office here for 714,600 feet of lumber showed thirty-two firms had submitted figures. Sullivan & Forbes of Portland was the lowest bidder at $7,040.10. The highest and lowest bids showed a range of $2,087.46.

PAEPCKE LEICHT LUMBER COMPANY
CHICAGO

RED GUM is one of our specialties; we have it in large quantities.

EVERY care is taken at our various mills to produce stock of high quality.

DRYING properly is very essential—we pile our product accordingly.

GREAT care is exercised in sawing, edging, trimming and piling.

UNIFORM grading by efficient inspection force, applied to all shipments.

MANY satisfied customers, indicate the quality and service we can give you.

The Current Trend of the Lumber Market

General Market Review

There has not been a startling event in the Chicago lumber trade for the last two weeks. In these "dog days"—continued as they have been through August—everything has moved with summer lassitude and the consumer of lumber has not hunted with vim and vigor, and he who has lumber to sell has not made frantic efforts to sell it.

On the principle that where there is effort there is result and where there is a will there's a way one would not expect much, really, from a consideration of selling activities or buying activities, during the two weeks just ended, but in this case, at least, expectations amount to deliveries.

Just as this issue of our paper goes to press the cool breezes have come back with some prospect of remaining and there is an added activity to the movement of business in all lines.

The promise of an increase in the tone of the market made two weeks ago, seems really now about to be verified. There is a pronounced scarcity of labor all over the northern producing districts of the United States and lumber is as hard hit and as embarrassed as any other producing line, and probably more than any other.

If the northern manufacturers have not curtailed voluntarily the result has been the same for the curtailment has been done for them.

That which was a mere feeling two weeks or four weeks ago in regard to a shortage of many items in the lower grades of lumber, both in consumption in this market and distribution therefrom has now become a pronounced certainty.

There does not seem to be any doubt at this writing but that the railroad strike has been at least temporarily averted.

The news from Washington is so spotted that it would be a brave and plunging prophet who would make a positive statement as to what would be the permanent outcome of all the "backing and filling" that has gone on at the national capitol during the last ten days. If there is a respite from the strike terror, the entire country will enjoy the respite, even if it does have to go to the electric chair later.

There is an overwhelming car shortage. Columns of figures might be printed to prove it, were figures necessary.

So there we have the elements that make markets, in lumber—as well as in other things—and in this case each elevating and helpful condition is counterbalanced by an opposite. The more comfortable weather, adding to activity in selling and in consuming is encouraging until we find that there is an universal shortage of labor in most of the northern territories where lumber is made. The flush of hope that has come of a possible settlement of the strike, is counterbalanced by a car shortage which it seems that no brotherhood of workmen or association of railroad executives or of mediators can control.

So there are the ingredients of the prescription and the product of it in market terms is that there is going to be a lot less timber to move when the manufacturers are ready to move it, and fewer cars to move it with when the consumers want it; and so there is no doubt but that there should be a general rise in values of the lumber to be consumed in this market between now and the close of navigation.

NORTHERN AND WESTERN PINE.

There is a continued large demand for low grade northern pine, almost more than for any of the other grades. Manufacturers are firmer in their opinion as to the advance in values in this line of manufacture and in an increase in orders.

The mills of Wisconsin have had their troubles, of course, with the labor problem, which has furnished them their curtail[illegible]t it is understood that their blood-bro[illegible]Inland Empire have done much in[illegible] by decreasing their runs until the orders are rising visibly above production.

SOUTHERN PINE.

Southern yellow pine is holding its fairly profitable own. A man, the other day, who thought he knew what he was talking about, and probably did, insisted that the average mill value of shipments of yellow pine at the present time is around $14 a thousand. Being well advertised and continuously very much in the lime light of publicity, southern yellow pine is getting some benefit out of nearly any item of demand that is in sight.

A surprising thing to this paper is that the general improvement in the southern pine market has not spilled over into other lines of lumber and helped those lines along and into better things.

The current report from 162 pine mills shows that orders exceed normal production 14.18 percent and that shipments only exceed production 3.83 percent and that now actual production is below normal 10.04 percent, being a little rise in production but not enough to affect the market.

NORTHERN AND SOUTHERN HARDWOODS.

If we do not miss our guess—and really it is considerable more than a guess—the hardwood mills are about to find themselves in the predicament of the poker player who depends always on betting his money on a full hand—thus forgetting that it takes two to make a bargain and while his hand is good enough to win almost anything, there may not be anything worth "backing up" in the hands of the other fellow. The hardwood manufacturer is about to be in the predicament, therefore, of being confronted by an enormous demand for his product and but little dry product to fill the bill. However, we make the statement it is true, without doubt that there is to be a general shortage of dry stock in hardwood lumber.

Gum, ash, maple are all gaining in strength and value. The demand from the furniture factories of both Indiana and Michigan is good. The automobile manufacturers are buying readily of maple ash and elm. It could hardly be necessary to quote actual prices on hardwoods just at this juncture. Red gum, another highly advertised wood, seems to be in good condition. The stocks of oak are low and prices firm. Birch is being advertised largely and is coming into a wider field of use than heretofore.

CYPRESS.

During all this curtailment of production the cypress manufacturer has kept right on making lumber and there has not been in the last six months, any curtailment, slump in prices or decrease in sales. Taking the mills of the Southern Cypress Manufacturers Association, they had 46,000,000 feet of cypress less on hand July 1 than January 1. In addition to this, prices on July 1 were higher than January 1, 1916.

The consumption of cypress is pretty general all over the country and it is being continuously sold at a profit by the manufacturer.

HEMLOCK.

The demand for hemlock in Chicago is not a thing to cause much comment in that it is at all extraordinary on regard to volume, but it is worth while as regards the increase in prices.

The hemlock manufacturers are open in their statement that their advertising has enabled them to dispose of their product at an increased figure over former prices, and what is also valuable, has enabled them to dispose of their lumber in greater volume as well.

SHINGLES AND LATH.

The shingle demand is very good, coming as it is time for fall building. The advertising campaign that has been carried on during the last six months by the manufacturers has created a greater respect for shingles, for in order to keep pace with their advertising statements they have paid more attention to manufacture of their product. Both the "ins" and the "outs"—those who have belonged to the association who are doing the advertising and those who do not—have all reaped the benefit. A good authority on shingle values has just stated to us that "Clears" are $1.90, mill basis, and "Extra Stars," $1.60.

New England Markets

A leading lumberman of New England makes these thoughtful comments on the general conditions prevailing in the lumber market: "Overproduction at the mills, in the end, makes a buyers' market.

BOSTON, MASS.

"There is no business in this country that is carried on with the same lack of system as that of lumber. Prices vary 10 to 15 percent. There is too great an opportunity under the present system of grading to manipulate values. The mill that buys high-class logs where the percentage of firsts will run high cannot compete with the mill that has low priced logs. All lumber should be graded according to its clearness, not according to the defects. A board absolutely clear should be in a grade by itself and firsts and seconds can be graded then according to the defects.

"For a number of years there has been a great uncertainty in the hardwood business and the greatest gain has been with mills cutting from fifteen to twenty-five thousand a day rather than mills that produced twenty-five to seventy-five thousand.

"The uses of boards and plank in high grades of hardwoods have been greatly reduced. Large numbers of manufacturers are using rotary cut cheap woods and veneering in plain oak, quartered oak or walnut. They claim it makes better work and can produce uniform color, figure and quality. It has become more difficult to sell the lower grades than formerly. The constant raise in price of different grades of hardwoods and the lowering of the standard grades, have created many substitutes and veneered mahogany furniture has taken the place largely of the quartered oak which was formerly accepted as a high-class cabinet wood.

"Overproduction is causing the ruin of the business and now that the foreign markets are closed it is working great hardship in the hardwood trade."

* * *

A lumberman of Springfield writes of local conditions as follows: "There is much building construction under way here and throughout New England. Notwithstanding the embargoes which for so long interfered with trade, this has been one of the best seasons for the lumber trade in many years.

SPRINGFIELD, MASS.

"Dealers report an excellent demand for southern pine, and the demand for hardwoods continues good from the outlying territory.

"Transportation complications and labor troubles continue to vex the lumber market of this territory, but prospects for good trade continue fair."

Central Southern Markets

The lumber market in Nashville is thus described: "Business in the local lumber market has shown little change the past two weeks. Lumber firms report the volume of trade as satisfactory for this season of the year.

NASHVILLE, TENN.

"The demand is good for oaks, particularly red oak, and it is predicted that there will be a shortage in this department unless there is some falling off from present requirements. Poplar is in good demand. Higher grades of chestnut are not moving freely, but demand is fair for the low grades. Ash and hickory are in demand.

"Furniture concerns are said to be making numerous inquiries for supplies. Buyers are said to

Digitized by Google

have been anxious to secure stocks on account of the threatened railroad strike.

"Prices are well maintained on practically all kinds of hardwood. It is stated that stocks in this territory are considerably below the average, and this causes holders to be firm in their views as to the future of the market."

* * *

BIRMINGHAM, ALA.

Conditions at Birmingham are reported thus: "Lumber conditions in this district are improving as the weeks pass. The demand is greater than it has been for some time and the prices obtained are more in keeping with good business than they have been for some time. Almost all classes of lumber are wanted, but railroad car material is specially in good demand; in fact, dealers say the demand has never been better than this year.

"Recent floods in this state greatly hampered the lumber business, but this trouble has been overcome and the business is taking an upward trend."

Northern States Markets

CHEBOYGAN, MICH.

A well known lumberman of Michigan expresses this opinion: "Where we thought we were going to have a very bright year, up until about May 1, we were very much surprised to have the market take the turn it did. We have found it very dull ever since, but are inclined to think that it is now taking a turn for the better and we look to see a bigger demand and the lumber market advance from now on. As no one is able to get out the amount of lumber he should and as everything else is advancing we see nothing that can prevent the lumber market from getting its share of it before long."

* * *

MINNEAPOLIS, MINN.

We are in receipt of this market report from Minneapolis: Crop damage has been a decided retardant in northern pine trade. Country retailers have been holding back and will not come forward with any considerable orders until informed by the half-bushel measure just what the spring wheat yield is to be. Naturally the farmers are busy haying and harvesting, and so the yards do not feel any great drain on their extremely low stocks. Most yards could not stand many big orders without calling upon manufacturers to ship them new stocks. The demand for box material has allowed manufacturers an excellent outlet for low grade pine. Prices are holding firm.

"City building operations continue heavy and the demands for interior finish and millwork of all kinds is good. Prices have remained firm, even through the brief lull and now there are considerable estimates being figured in all factories, indicating good fall business.

"There is a reasonable amount of buying in the hardwood lines. Local factory demand has not been large, but is steady and prices have been well balanced. All southern hardwoods are in good demand, especially oak. Low grades also sell well as box trade demands have been good."

* * *

COLUMBUS, OHIO

A lumberman of Columbus sends this report of the local trade: "The demand for hardwoods is good for this time of year, being strong for both building and factory consumption. Prices are firm.

"Some improvement is reported in the demand for yellow pine, but buying is only for immediate needs. Prices are stronger but still unsatisfactory.

"Prospects for fall trade are good in central Ohio territory, and factories report heavy orders, so that good lumber business is indicated."

* * *

OMAHA, NEB.

Conditions in the Omaha district are thus described: "The continued extremely hot and dry period, which has held Nebraska in common with all other sections of the country in its grip for nearly six weeks, has evidently been broken by frequent and welcome rains extending over the larger part of the state. In some sections the moisture and reduced temperature came too late to prevent serious damage to the corn crop, the extent of which it is impossible as yet to estimate.

"The lumber trade is on a quiet basis, as far several weeks past, and most buyers are waiting until next month to add to their supplies, unless the lumber is wanted for immediate use. The number of inquiries for stock is on the increase, especially in the building-lumber line, and this is due to the adidtional strength which has lately developed in prices.

"Wholesalers are looking for a good fall trade and say that their customers' stocks have been allowed to run down a good deal this summer. Wholesale stocks, too, are not as large as they sometimes are at this time of year."

Inland Empire Markets

KLAMATH FALLS, ORE.

A prominent manufacturer of Oregon writes us as follows: "We find that our upper grade stock is being called for very satisfactorily and that both the Inland Empire and California mills are oversold in No. 1, No. 2 and No. 3 shop and we expect quite a marked shortage in this item for the fall trade.

"The demand for box lumber in the California market is the largest that we have had for quite a considerable time and there is a critical shortage of this character of lumber.

"We, therefore, are looking for a stiffening of prices for fall buying."

* * *

SPOKANE, WASH.

This good report comes to us from the Spokane district: "Business for the current year is showing satisfactory tendencies and the men engaged in the lumber business are all optimistic.

"A large number of Washington and Oregon lumber mills which have been idle for from two to three weeks are about to resume. During the temporary shutdown many plants have made repairs and improvements.

"The outlook for lumber through the northwest is fine. Crops are reported excellent all over the middle west and we are looking forward to splendid business this fall. The lumbermen have been sort of holding in so far as mill run is concerned and have been working off the over production, but stocks now are pretty well down and there is practically no over production through our territory.

"Spokane lumbermen have been given an important foothold in the territory of New Mexico, Oklahoma and Texas by a favorable lumber rate decision handed down by the Interstate Commerce Commission which holds that proposed increased rates on lumber and lumber articles from points in Oregon, Washington, Idaho and Montana and western Canada to points in New Mexico, Oklaeffects proposed increases of from one to eight cents a hundred on lumber from the Pacific northwest.

South Atlantic Market

JACKSONVILLE, FLA.

A lumberman writes from Jacksonville as follows: "While the lumber situation here can hardly be called satisfactory, judged by the amount of business offering and general trade conditions, the situation will gradually improve and prices will advance within a reasonable time.

"Many mills have not yet resumed cutting because of repairs needed after the severe floods and storms. The railroads are buying for repair and construction work, and local trade is active to meet the demand for rebuilding and repair work.

"There is little lumber moving by boat, most shipments now being by rail."

Ohio Valley Markets

EVANSVILLE, IND.

We received this report of trade condition in the Evansville district: "Trade with the hardwood lumber manufacturers of southern Indiana, western Kentucky, and southern Illinois is still rather sluggish. Inquiries are slow, and prices have undergone no change. Manufacturers assert though, that thus far this has been a better summer period than last year. The furniture factories are all running on good time, and the demand for gum has been good, owing to

the fact that the furniture manufacturers in this section were in the market for a good deal of this lumber.

"The recent heavy rains in this vicinity have relieved crop conditions. The corn in the bottom land is still in the formative stage where plenty of rain is necessary. Now the drought has been broken, crop conditions will improve."

* * *

LOUISVILLE, KY.

A correspondent well informed on market conditions in Louisville writes us as follows: "Business conditions are good, demand having been strong and the volume of shipments above the average for this time of the year. The furniture trade is in a particularly good position to buy, as demand from retail merchants has absorbed all of the stock on hand and resulted in increased pressure being put on factory facilities. This has meant quick purchases of additional material, and in addition to supplying business for lumbermen, has added to the rush in the veneer and panel lines, which are having the best season in half a dozen years. The automobile trade has also helped, as the call for material for the construction of frames has been good right along.

"Building operations are reaching the point where hardwoods for interior trim are wanted, and the volume of this business is now more of a factor than it has been. Dry stocks of lumber are not large, weather conditions in the south having retarded seasoning, and this is helping to add strength to the market.

"Prices are generally steady to higher, gum, elm, ash and a few other woods having taken on some advances recently.

"Walnut is in good call, and poplar and chestnut are moving well. Oak is in fair demand, quartered oak being dull in grades above No. 1 common. There is a moderate movement in plain oak, though the condition of the market is not regarded as altogether satisfactory."

* * *

CAIRO, ILL.

A well known lumberman expresses confidence in the market, as follows: "The market has been subjected to so many unexpected turns and changes in the past few years that we have ceased to prophesy.

"Our greatest difficulty now and in the past has been not understanding our real position. This is true both when the market is good and when it is bad. During the fall of 1915 and the spring of 1916, we were getting fine prices for lumber and lumber was hard to get. There was a tenseness unjustified by the real consumption, the result of which was that lumber prices went to a point unjustified. This caused a misunderstanding, the result of which was that the business was not handled in harmony with the real call for material. On the other hand, we are better off today than most people seem to think we are. Prices accepted for lumber do not truly reflect the stage of the business.

"In my estimation, we are on a better basis than present sales would indicate and that as soon as we can make our soundings again and find out where we are, there will be improvement.

"Notwithstanding the law of supply and demand, the fact is that the lumber market is pretty much a mental condition."

Gulf Coast Markets

NEW ORLEANS, LA.

A correspondent sends the following report of the New Orleans market: "Considerable advance in prices has marked the steady upward progress of the yellow pine lumber market during the past two weeks. No radical change has occurred except on No. 2 boards and dimension. A $2 a thousand advance on boards has been noted within the fortnight and dimension has gone up about the same.

"A generally optimistic view of the outlook prevails.

"The car shortage is developing to serious proportions not generally realized. It is believed the scarcity of rolling stock will have the same effect this fall, however, that it did this past spring, when it tended to keep prices up even where there were other inducements for them to be lowered.

"Cypress dealers report a considerable increase in demand for yard stocks and tank material. Prices are about what they have been for some weeks. Buying is reported in fair volume as far west as Iowa and Missouri, though the bulk of orders continues to come from the central states.

"Except for a considerable amount of buying by the United States government of materials for use in the construction of houses on the Panama canal zone, the export lumber situation continues the quietest ever known here. Trade with Europe is absolutely dead, the European governments apparently being stocked up with materials for all immediate needs, and not even an inquiry has been received here in some days. Ocean freight rates continue high, being, nominally, now $60, compared with an $8 rate before the war."

* * *

HATTIESBURG, MISS.

We have this report of the timber situation from Hattiesburg: "The car situation is giving the mills in this section some worry at the present time. Though right now the supply is fairly good.

"The railroads advise that the mills may look for a severe shortage early in September. If a severe shortage does come it will work a great hardship on the manufacturers as the market is becoming stronger each week and prices on practically all classes of stocks are stiffening. The mills generally have plenty of orders and new iron clad price lists are being issued, and their order files are in such condition that they will be able to hold firm on their prices for several weeks.

"Planing mill stocks are in very good demand. B and better flooring has probably shown better advance than any other item during the last sixty days. Dimension is very active with 16 foot lengths in extra good demand. Timbers of all kinds continue in excellent demand. The demand for shingles is exceptionally good at the present time.

"The local demand right now is better than it has been at any time for several years and shingle departments of mills located here are selling practically their entire output in this city."

* * *

ORANGE, TEX.

A lumberman writes us from Orange as follows: "Improvement is noted in all lines during the two weeks just passed. The export trade is considerably in excess of bottoms available for moving lumber. The railroads are buying more freely, and the demand from the interior is steadily improving.

"A decided stiffening of prices has resulted from the increased demand."

* * *

BEAUMONT, TEX.

A lumberman writing from Beaumont has this to say of lumber conditions there: "There has been a decided improvement in the lumber market during the past two weeks, both as to demand and prices, as was to be expected from general business conditions.

"The retail trade is buying well, but the movement is somewhat hampered by car shortage. There is rather more than normal activity in building here and in the interior of the state.

"There is a steady movement of lumber for the export and coastwise trade and for use on the border.

"Lumbermen in general look forward to a good fall business."

Southwestern Markets

ST. LOUIS, MO.

A manufacturer writes us from St. Louis as follows: "The facts of the situation with regard to yellow pine, seem to be, that all the lumber for which cars can be obtained by the southern mills during the next few months, can be sold at any price within reason asked for it. There is a severe car shortage and also a marked lumber shortage.

"The market is advancing daily; it is more than ordinarily difficult to place orders; and, where reasonable intelligence is used, yellow pine should be sold for the balance of this year, at a minimum of $18.50 f. o. b. mill price."

Another St. Louis lumberman says: "The local demand is good, and building throughout the city is active with prospects of continuing during the fall months.

"The demand for yellow pine is stronger and prices better. The factories and railroads are ordering more freely than two weeks ago.

"Slight change is noted in the movement of hardwoods either as to volume or price. Ash and oak, both plain and quartered, are in good demand.

"Dealers report the demand for cypress and white pine as improving as the season advances."

Digitized by Google

HOUSTON, TEX.

A prominent lumber dealer of Houston writes as follows: "The mills in this locality are generally running on short time and reducing stock, as orders are plentiful. There has been no great change in prices but they are undeniably stiffening.

"Government orders have had much to do toward strengthening the market in this part of the state, but the line yards are buying well and a good fall trade is indicated."

* * *

KANSAS CITY, MO.

The lumber situation in Kansas City is reported as follows: "Yellow pine prices advance here with a good deal of regularity each week. They are on the average a dollar higher than two weeks ago. The gains are well distributed throughout the list, with the common lumber perhaps getting a trifle the best of it. However, flooring has been especially strong and there are many other items of finished lumber that have made gains that compare favorably with the advances in dimension. Orders have been coming in more freely than they were two weeks ago. Many mills are hard pressed for cars and it is the man that can promise prompt delivery that gets the business instead of the man who can quote the lowest price. Yellow pine men are optimistic. They believe that barring a rail strike there will be one of the best falls they have had in a decade.

"Cypress has been selling freely with the general run of orders still for mixed cars but a big increase in the number of orders. A few orders from millwork factories have called for several cars but the bulk of the business is in small quantities. Trade from practically all districts is good. The places where damaged corn crops were expected to cut down business seem to be less affected than expected.

"Hardwoods are moving excellently for the season. Retail yards in the southwest are using more hardwoods each year. Some districts where little hardwood was sold previously are doing a relatively big business.

"On the whole, lumbermen here are well pleased with the present outlook for business."

Middle States Markets

NEW YORK, N. Y.

This report of the metropolitan market has been received: "There has been no advance in the market since our last report, and it can scarcely be expected before September. While there is much building getting under way, the lumber for use in this construction has all been contracted for, and the buying by the retail yards for the fall trade has not yet begun. Permits for fall building are more numerous than usual.

"Lumbermen agree that the tone of the market is firm and that indications of a good fall trade are plentiful."

* * *

PA.

A well known lumberman of Philadelphia writes as follows: "Trade is good here considering the season. We expect a midsummer dullness, but building has been active all summer, especially in the suburbs where many homes of moderate cost are going up.

"The lumber using industries are busy, and general conditions warrant the confidence of lumbermen in a good fall trade and a general advance in prices.

"All hardwoods are selling well with oak and birch especially strong. North Carolina pine and yellow pine are in increased demand and prices are strengthening.

"Handlers of cypress report a steadily improving market for the wood."

* * *

BUFFALO, N. Y.

A correspondent well informed on lumber conditions in the Buffalo district: "A good deal better inquiry has lately been developing in yellow pine and retailers show some concern over the rise in prices which has occurred as the result of the curtailment of production. Jobbers who have no direct mill connections are in the same position of uncertainty. When they come to place orders they find that prices are up 50 cents to $1 from a few weeks ago. The demand for stock has not started up briskly as yet, but it looks as though many orders would be placed in the near future.

"The stronger yellow pine market has been of benefit to hemlock and not only has any temporary weakness been checked, but an actual advance has occurred at the mills, which are now asking 50 cents more a thousand on car shipments. Lake lumber is holding firm, with no recent advance in price reported. The local wholesalers have been bringing in a fairly large quantity of lake stock so far this season and they generally report that trade has been good for this time of year.

"The hardwood trade has been steady of late, with no special rush developing at any time. The three woods in which the demand is most active are oak, maple and ash. Thick stock is being called for in fairly good volume and prices are holding firm. Maple flooring has shown much strength lately, all the mills now holding prices up to a firm schedule. The demand for flooring has been fully up to last year. The general factory trade in hardwoods is quite satisfactory for this season.

"The shingle market holds steady and the demand is up to the normal. A larger number of shingles are coming forward by lake than was the case early in the season, yet the number received has been greatly below the ordinary. Stars have shown some advance in price."

Pacific Coast Markets

TACOMA, WASH.

We have received from Tacoma the following report: "While the volume of business handled by the Tacoma lumber mills has not materially increased during the past two weeks the market remains reasonably firm and the general tendency is still toward optimism and higher prices. Transactions have not been heavy but in spite of the threatened strike the railroads are still buying and the movement of lumber to the middle west continues to be fair. Prices have not changed on any of the more important items on the list and the mills are still holding down on production to prevent another break in the market.

"Shingles have stiffened considerably since the early part of the month and a general advance in prices has been made. Stars are selling in some cases as high as $1.65, an advance of 15 cents, and clears are quoted by some mills at $2. These prices, however, are above the average and the general advance will run less than 10 cents on both stars and clears. Shingle manufacturers are greatly encouraged by the recent showing and look for a continuation of the present large demand.

"In general it may be said that there has been no recession during the past two weeks and that the outlook remains distinctly better."

* * *

SAN FRANCISCO, CAL.

A correspondent well informed on lumber conditions on the Pacific coast writes us as follows: "The demand for lumber for building purposes in California is well below the normal for this season of the year, the building records of almost all of the large cities of the state showing a falling off in operations. The strike of longshoremen, which interfered with the handling of lumber during June and July, is over, but lumber is not being brought down the coast in such quantities as formerly, receipts of fir and spruce by water at the present time being at the rate of only about 30,000,000 feet a month at San Francisco, as compared with 50,000,000 or 60,000,000 feet in normal times.

"The lumber yards of San Francisco, which were largely closed during the longshoremen's strike, have been re-opened. The lumber interests have not been a party to the arrangements made for the settlement of this strike and are conducting their yards on the open shop basis. Business is being carried on without any trouble, but the general air of discontent prevailing here in laboring circles is affecting trade.

"The demand for redwood during the past few weeks has shown considerable more life relatively than the demand for pine and fir and receipts by water at San Francisco during the last two weeks in July were almost record breakers. During this period a total of 4,723,000 feet was received from Mendocino county, 1,170,000 feet from Humboldt and 160,000 from Sonoma county. The extensive sales campaign on redwood lumber is commencing to be felt and the domestic demand is increasing."

Positions

WANTED.

Good all-around box mill man. Write, with references. BOX B, St. Maries, Idaho.

SALES MANAGER.

Experienced (over twenty years) sales manager would like to correspond with concern with a view to position as sales manager. Has handled southern pine, white pine, cypress and Pacific coast woods. About 40, married, and will go to any section. Address "MO," care LUMBER WORLD REVIEW.

WANTED—POSITION AS SALES MANAGER.

A qualified sales manager, with yellow pine manufacturing experience, a clean record, with results, ample endorsements from former employers and well and favorably known to the lumber fraternity and has recently completed a special investigation in certain wood industries for the government with a view to trade extension, is now at liberty and desires to re-embark in the selling of yellow pine.

I do not claim the ability to set the world afire, but I can deliver the goods, as I have done heretofore.

Manufacturers know that the dependable man is not to be found every day.

If you are interested in my proposition, please address J. R., care LUMBER WORLD REVIEW.

WANTED—SALES MANAGER.

With moderate capital for new screen door factory in Michigan. Experience in sales department necessary. Position will be open in August, 1916. Correspondence invited. Address "T. M." care LUMBER WORLD REVIEW, 1740 Transportation Building, Chicago, Ill.

WANTED—POSITIONS FOR SALESMEN.

Lumber concerns desiring traveling salesmen will do well to correspond with T. H. Nelson, secretary Central Association of Traveling Lumber & Sash & Door Salesmen, State Life Building, Indianapolis, Ind.

THE LUMBER WORLD REVIEW ESTIMATE BOOK should be in the hands of every dealer. It make a complete record of your sales and deliveries. Size of book, 8½x14 in. It contains 200 leaves, 100 original and 100 duplicate. Price $2 the copy, ½ dozen, $10; 1 dozen, $18. Sent prepaid on receipt of price. LUMBER WORLD REVIEW, Chicago.

ALEXANDRIA LUMBER CO.'S PLANT DAMAGED BY STORM.

New Orleans, La., Aug. 23.—Advices received here from Alexandria, La., are to the effect that the Alexandria Lumber Company's plant at Pineville sustained severe damage in a rain and wind storm that passed over that section Monday afternoon. The wind wrecked the blow-pipe at the plant, unroofed portions of the sawmill, and damaged the dressed and rough lumber sheds. The damage is covered by insurance. Several residences in Pineville were also damaged [illegible] number of trees uprooted or blown d

The disturbance appears to h

THE LEGACY OF THE EXPOSITION.

Much might be written of the legacy to the American people and to the world of that now historic event, the Panama-Pacific International Exposition, but the heading above, The Legacy of the Exposition, is the title of an attractive volume gotten out by the management of the exposition as a memento of that great national event, and to preserve in general distribution the letters of over seven hundred prominent people appraising the worth of the exposition, statesmen, educators, scientists, leaders in the professions and in other lines of endeavor, all are gathered and attractively presented, making a delightful volume

OVERLOOKED BY PAUL BUNYAN.

Albuquerque, N. M., July 17.—A tree six feet through at the stump and containing nine huge sawlogs was recently cut on the Coconino National Forest of Arizona, according to a report received from the forest supervisor at Flagstaff. Five of the logs were decayed, but nevertheless the tree contained over 9,000 board feet of sound lumber—enough to build a good sized home.

"Paul Bunyan must have overlooked this tree," was the comment of the supervisor in reporting its demise. Paul Bunyan, as all lumbermen know, was the mythical giant lumberjack who cut the biggest trees, ate the biggest pancakes and drove the largest oxen known to history.

ACTIVITIES IN AND ABOUT MEMPHIS.

Memphis, Tenn., Aug. 22.—Wood paving blocks are now being laid on Main Street between Linden and Calhoun avenues and work will shortly begin in replacing the cobblestones on Front Street between Court and Monroe avenues with wood paving blocks. There are a few stretches of street in the city which are still paved with these cobblestones, but they are rapidly giving way to the use of wood paving blocks which are regarded as far superior material.

A considerable portion of the down town district is now paved with these wooden blocks, particularly on Madison and Union avenues. The contract involves a considerable sum of money.

Geo. C. Brown & Co., with offices in Memphis and hardwood mill at Proctor, Ark., has filed an amendment to its charter whereby the capital stock will be increased from $150,000 to $300,000. This is the second time Geo. C. Brown & Co. have increased their capital stock since moving their headquarters to Memphis. The increase is made with a view to enlarging its facilities for handling its business which is growing rapidly. It has been able for some time to work at full capacity and is still able to keep its entire machinery going.

Winter & Ford, well known timber and mill operators, have leased a tract of land at Starkeville, Miss., and will establish thereon a factory for making ax handles. This new industry will create an excellent demand for hickory of which a good supply has already been secured by the owners of this enterprise.

Advices from Belzoni, Miss., indicate that the Belzoni Commercial Club is busy [illegible]ns for securing the new mill to be ere[illegible] or Tchula by Russe & Burgess.

LUMBER NEWS NOTES FROM SAN FRANCISCO.

San Francisco, Cal., Aug. 19.—Fruit shipments are breaking all former records and the late demand for box shooks has been the heaviest ever experienced. California box factories have been operating to capacity and now that the fresh fruit shipping season is about at an end are busy on box orders to handle the dried and canned packs. The California pine mills making a specialty of box lumber have been very busy of late.

Coast-wise lumber rates have stiffened, despite the falling off in the demand for lumber in California, and steam schooners are now carrying lumber from Columbia river points to San Francisco at $6 a thousand feet. The rate to Los Angeles and other ports in the southern part of the state is $7 a thousand.

Two log rafts have been brought down the coast from the Columbia river to San Francisco this season by the Hammond Lumber Co., each of these containing about 8,000,000 feet.

The Fife Shipping Co., controlled by Balfour, Guthrie & Co., is prepairing to place seven lumber schooners in the off-shore trade. Vessels are being constructed for the new firm.

The new steam schooner Oregon, built at Aberdeen for Wilson Bros. of San Francisco, arrived at the home port recently to have engines and boilers installed, and brought down a cargo of 500,000 feet of lumber.

The auxiliary schooner City of Portland, under charter to the Charles R. McCormick Co., of San Francisco, passed this port recently en route to Australia with the largest lumber cargo ever carried in a wooden vessel, there being 2,008,433 feet of mining timbers aboard.

EXTENSIVE IMPROVEMENTS AND NEW SHINGLE MILL ON NORTHWEST PACIFIC COAST.

Centralia, Wash., Aug. 15.—Henry W. Bale, head of the Woodlawn Mill & Boom Co., of Hoquiam, has announced that the new shingle mill of this concern began operations early in August. T. R. Tilley is superintendent. The new mill is equipped with the latest machinery and operated by individual motors supplied with electricity from a turbine engine.

Extensive improvements, including three dry kilns and a new office, the total cots of which will be about $5,000, are being made at the Aberdeen Lumber & Shingle Co.'s plant. The new kiln will give the company a capacity for kiln drying of 120,000 feet of lumber daily, double the present kiln capacity. This will bring the kiln drying output of the mill within 50,000 feet of the average daily cut and thus permit the mill to ship almost entirely by rail if rail business is preferred to cargo shipments.

The Manley-Moore Co., which is testing this method, has a five-year contract with the forest service and is cutting government timber on the Rainier National forest at an elevation of 4,000 feet above sea level, the highest elevation of any logging works operating in western Washington. Two years ago they installed an inclined railway over a mile long, and so arranged that a carload of logs coming down hauls an empty car up. On the maximum grade of this incline the track rises 57 feet in going forward 100.

The Palmer Lumber & Manufacturing Co., of Chehalis, has just installed one of the latest automatic fire alarm systems which covers the entire plant and is connected with the central fire station.

Electric Power Reduces Mill Costs

If you would build a lighter mill building, but one story in height, consider electric power from G-E apparatus.

For a low upkeep and more continuous operation due to lessened vibration and definite limit to the power which can be applied to each machine use G-E apparatus.

Reduced fire hazard follows the separation of lath mill, picking table and hog house from saw mill which is possible with electric power.

To use much less power due to greatly lessened friction losses drive each machine with a G-E motor.

Let us refer you to satisfied users. Send for bulletin No. 4962, today.

A New Book

LOGGING

The Principles and General Methods of Operation in the United States

By Ralph Clement Bryant, F.E., M.A., Manufacturers' Association Professor of Lumbering, Yale University.

8vo, xviii 590 pages, 133 figures.

Cloth, $3.50 Net

The information which is contained in this book can be applied by the lumberman in his daily work.

The chief facilities and methods for the movement of timber from the stump to the manufacturing plant, especially logging railroads, are discussed at length.

Greatest emphasis has been laid on features about which there is not much written material available.

It is because we have been so helpful in placing before lumber dealers the excellent ideas and better methods in lumber distribution and selling that have been thought out by our staff of thoroughly trained men, that shrewd lumber dealers attribute no small part of their success to the fact that they have accepted our co-operation. Our executives and mill workers are experts who really do know lumber and who are familiar with the problems that confront the lumber dealer and the lumber industry. Therefore, they are prepared to serve you in a manner that is most beneficial to you.

OUR METHODS HELP THE DEALER TO WIN OUT

One very important feature of our business is our one-man inspection system. By this system, one man regularly visits all of our six large mills and carefully inspects and assorts the lumber so that absolute uniformity of grades and quality is assured. Thus, a shipment of yellow pine lumber purchased from us, even though forwarded from more than one of our mills, contains no off-grade lumber. This one-man inspection system is obviously superior to any method whereby many men, with varying judgments, are employed to perform this important work.

UNIFORMITY F-J OF GRADES AND QUALITY
TRADE MARK

It costs you no more in the beginning and it's cheaper in the end

It will be greatly to your advantage to send for our somewhat different price list. It quotes the prices on all grades of yellow pine lumber DELIVERED.

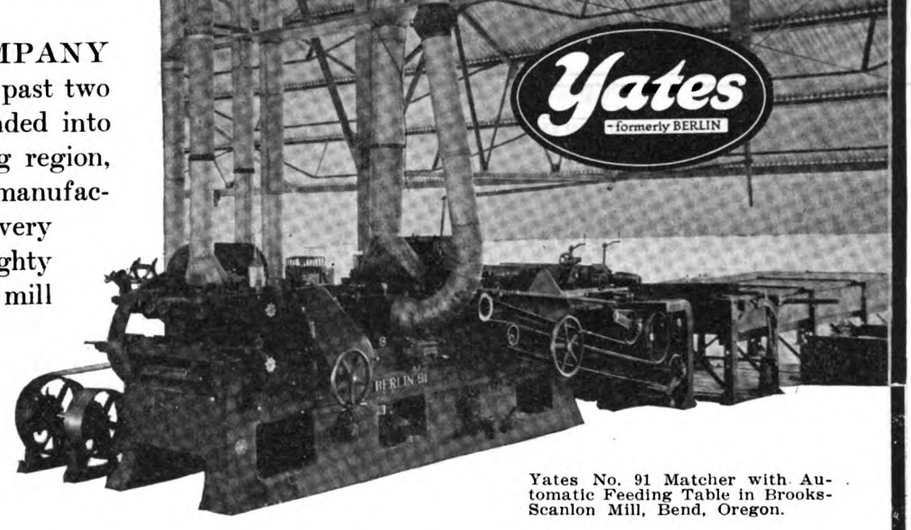
The Invariable Choice of the Man Who Knows

A GREAT LUMBER COMPANY that has operated mills for the past two decades—whose activities have extended into nearly every great lumber producing region, and whose experience includes the manufacture of lumber from practically every variety of timber, should be a mighty good judge of real merit in planing mill machinery.

—And when that company after purchasing not less than fifteen Yates (formerly Berlin) Matchers during the past ten years, selects a



Yates No. 91 Matcher with Automatic Feeding Table in Brooks-Scanlon Mill, Bend, Oregon.

Yates Planer and Matcher

for its latest operations in the famous new lumber center at Bend, Oregon, there must be something exceptionally meritorious about Yates Matchers.

The name of the Brooks-Scanlon Lumber Co. is as familiar in lumberdom as that of Carnegie in the iron and steel industry. Read what Mr. J. P. Keyes, general manager of Brooks-Scanlon interests at Bend says about their latest Yates Planer and Matcher shown above.

Gentlemen:

In reply to yours of the 18th, we are pleased to state that the No. 91 Matcher is giving excellent results in surfacing stock two or four sides at a feed of 250 feet per minute and in running pattern stock, such as shiplap, drop siding, etc., at 150 lin. feet per minute. The machine has been giving us no trouble in operation and its work, at the speed mentioned, is, we think, beyond criticism.

Yours truly,
BROOKS-SCANLON LUMBER COMPANY,
J. P. Keyes, Gen. Mgr.

To P. B. Yates Machine Co.

Note particularly that Mr. Keyes reports that the "91" "Gives us no trouble in operation." That means a lot in the operation of high speed matchers, where every minute's delay means hundreds of feet loss in production.

Write for our circular "No. 91". It tells why the Yates is the best buy in the Matcher field.

We are members of the Maple Flooring Manufacturers' Association

Maple, Beech and Birch Flooring

In addition to our large production of the standard thickness 13/16 inch flooring, we make annually between two and three million feet of 3/8 inch thick.

This Thin "Electric" flooring is put up in a variety of sizes, woods and selected features to supply the varied requirements of the home builder.

When used in new buildings it is laid over a smooth subfloor. But a great deal of it is laid over old floors to modernize older buildings.

Our superior lumber and manufacturing efficiency make the "Electric" a standard of comparison. Why take a chance? Order the standard.

Practical instructions for laying, finishing and taking care of hardwood floors are yours for the asking.

He Who Looks Before He Leaps

Aren't you expecting a pretty good retail trade this fall? For a time at least the railroad strike is off our minds, crops are good with big prices for the farmer, war troubles gradually straightening out and the whole country prosperous. Don't things look rather good to you?

It is a fact, however, that the very volume of the fall business will get the retail dealers into trouble, as few are prepared to meet it. The lesson of a car shortage is hard to learn and people will get caught. The fact that we are already short of equipment indicates what the situation will be with us when the crops begin to move in big volume. There will be a call for lumber which can not be quickly supplied and both you and we will suffer, as some substitute materials will be used.

Even the threat of a railroad strike has had its effect upon the movement of freight. Has it ever occurred to you how far behind the railroads would get if for only one day not a car moved? And yet, in effect, that is what has happened, as the embargoes of a few days upon perishable shipments caused a decreased movement which must now be made up despite the fact that all roads are moving freight up to their capacity.

We harp on this subject for the reason that we see trouble ahead. We wish you to have the lumber you will need, and we dislike being blamed when the shortage is on in earnest for delays which are not our fault.

Let us insist, for the protection of both you and ourselves, that you delay no longer, but that you order ahead to meet what your trade will demand.

COLEMAN FEED ROLLER (that never wears out)

Give your edgerman a chance

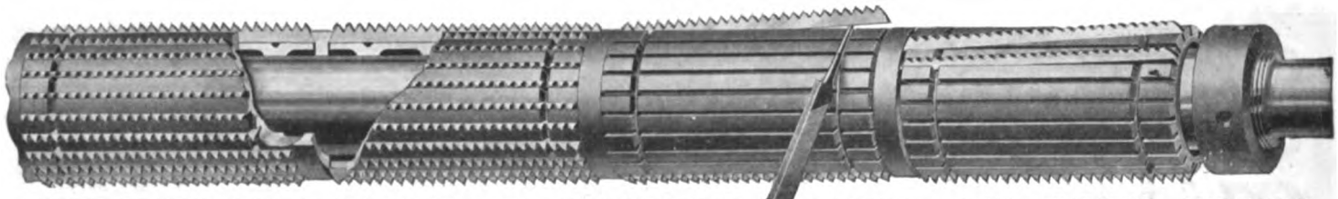
Did you ever stop to think what your edgerman is up against? He has to turn his stock over, examine it, and shift his saws to rip his stock to the best advantage. He has *got to* get the stock through the edger as fast as it comes to him, and it sure comes plenty fast since the sawyer's power outfit has about doubled the sawyer's output.

The edger feed rollers, which are just as essential as the saws, are still the same old fluted or saw-toothed chunks of iron or steel. Possibly they have "detachable" teeth which it takes three days to detach and replace. Such rollers have to be sharpened (*if* you get around to it) when the mill is shut down. Consequently the edgerman is feeding the stock by the "armstrong method" over dull rollers most of the time.

Yet the edgerman is responsible for the grade of a large part of your output, and gets duly "cussed" for making crooked lumber, narrow ends, and "common" which might be "clear."

When you put up to a man more than he can do WELL, *he is costing you money*. Give *your* edgerman COLEMAN rollers.

The COLEMAN FEED ROLLER does away with crooked lines and the overplus of low grades because it can be RESHARPENED (right in its bearings) any day AT NOON and so is *always sharp*. The body never wears out, so there are no replacements.



WE'LL "PROVE UP" BY 30 DAYS' FREE TRIAL ON YOUR EDGER

GIRDLING THE EARTH WITH HOUSES

THE STORY OF VOLUME:

The volume of lumber produced in the mills of this company each year is sufficient to build a good-sized house every mile round the earth.

Stop and think what it means to buy **quality lumber** from a company that can so standardize its quality as to keep up a demand for a quantity it must manufacture, sufficient to build one good-sized house every mile round the earth.

Think what it means to have an annual demand for **quality lumber** in such an aggregate as to form a train shipment of twenty-four thousand three hundred and sixty-six cars, each car billed to a lumber buyer or on an export order.

Imagine a train of cars one hundred and eighty-four miles long. That represents the annual output of the Long-Bell Lumber Company's mills.

The largest yellow pine milling capacity under the control of a single organization is the Long-Bell Lumber Company, with capacity for manufacturing over one and a half million feet of lumber per day.

With three hundred working days the capacity shows an output of over four hundred and fifty million feet per annum.

This enormous production of **quality lumber** is possible to be manufactured by one organization only because of the company's efficient management.

It is only possible to manufacture **quality lumber** representing over one and a half million feet per day because of the demand by dealers and consumers in this and foreign countries which is increasing in volume every year.

There is a reason why the Long-Bell Lumber Company manufactures an increased quantity every year and is able to sell its daily output of one and a half million feet.

THAT REASON IS QUALITY

The standardization of lumber began with the Long-Bell Lumber Company a great many years ago.

A **quality standard** was established which made a reputation while it built up the volume and this standard of quality has been guarded with care by the mill managers who are jealous of the splendid reputation thus attained.

But more than all this the record made by the Long-Bell mills for PROMPT SHIPMENT has caused dealers, all over the world, to repeat and continue to repeat their hurry-up orders once they have had a taste of this **quality lumber** and these quick delivery shipments.

Think of a record established by one lumber organization which shows an average time of eight and a half days from the arrival of orders at the mills until the cars were loaded, on the entire 1915 year's production.

It is YOU, Mr. Dealer, who gets the benefits of this **quality lumber** and these record shipments.

It is you, Mr. Lumber Dealer, who makes it possible for these mills to produce **quality lumber** and get it out for you on record time. The Long-Bell Lumber Company is mindful at all times of your needs, your requirements, and your customers' demands.

A large lumber mill organization can increase its business only by the most refined attention to the minutest detail of the finished product.

A leader of quality and volume can only maintain its supremacy by its attention to these details, and so careful and so watchful are the mill managers and their foremen in their constant scrutiny of every step of the progress of lumber manufacturing from the log to the car door that you may be assured your cars of lumber at all times will bear YOUR most careful scrutiny.

There is a salesman in your territory, authorized to quote you the lowest prices we are making on Long and Short Leaf Yellow Pine, Forked Leaf Brand Oak Flooring, Oak lumber, Straight or Mixed car lots, etc.

An inquiry by postal, wire or letter brings a quotation or salesman to you when you want one.

QUALITY
SERVICE
CAPACITY

MEANS MUCH TO RETAILERS:--

The "Exchange" mill companies spend a substantial additional amount more than necessary to make QUALITY stock, uniform grades, highest manufacture and closest inspection. We do not *add* the word QUALITY to our stock:—WE BUILD IT IN. *Costs us more.*

SERVICE:—Our selling organization follows closely the policy of taking orders for stock on hand only, for immediate release, and as a result, most of our orders for regular stock are completed within one to five days after receipt at mills. (70 per cent of all kinds of orders in January 1916 were shipped during January). *Costs us more.*

CAPACITY great enough, but not too big. 9 plants cut about 750 to 800,000 feet of lumber per day, and every foot of it good lumber.

All this means IN-BUILT VALUE TO THE DEALER. *Costs us more to produce,* but our claim departments are very little expense to us, and we are able to sell with less expense to our mills, because the right kind of stock is quite a bit of a salesman itself, and works without charge. Besides, the satisfaction of doing business on a SQUARE, ROCK SOLID—HONEST—FAIR BASIS is certainly SOME satisfaction.

IF YOU HAVEN'T LINED UP ALREADY FOR "EXCHANGE QUALITY-SERVICE-CAPACITY," YOU'LL FIND A NEW MEDICINE FOR SICK Profit and Loss accounts, and increased satisfaction in selling the best, in commencing NOW.

NORTH CAROLINA PINE

This is a real Shortleaf variety of Southern Pine, grown in the Coastal Plain of Virginia and the Carolinas, where climatic and soil conditions contribute to bring the trees to perfection, and cause the product to be truly the Wood of Universal Uses.

Carpenters like it because it works so easy—does not gum up the tools with pitch.

Contractors like it because it saves time in cutting, fitting and finishing—and time is money with them.

Home Owners like it because of its utility and beauty, its susceptibility to paints and stains, and its good wearing qualities.

The Lady of the House likes it because of its artistic effects, and its "homey" atmosphere.

Dealers like it because it is easy to get—and easy to sell at a good profit.

You will like it, too, if you will put in a car or two for trial.

The mills named below manufacture thoroughly kiln-dried, carefully graded NORTH CAROLINA PINE, and will be glad to serve you:

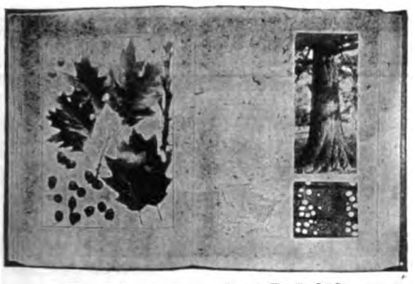
Hough's American Woods

A unique and most useful publication illustrated by actual specimens, showing 3 sections of each wood, mounted in separable pages, with full text.
Its author has been awarded the special Elliott Cresson gold medal on account of its production.



Hand book Opened at Red Oak

Hough's Handbook of Trees

Is photo-descriptive and will enable one without a knowledge of botany to recognize the trees at any season of the year. Most useful for one wishing to know the trees.

If interested in woods or trees from whatever standpoint, write for information and sample specimens. See our exhibit at the Panama Exposition, Mezzanine Floor of Palace of Education.

Romeyn B. Hough Co.

Box 21 Lowville, N. Y

American Forest Trees

By the late Henry H. Gibson
Edited by Hu Maxwell, Wood Utilization Expert

The book is beautifully printed, and is handsomely bound in half leather, dark green roan back and corners, with basket cloth sides, silk head-bands, gold stamping on the back, and gilt top.
The work is illustrated in sepia with more than 100 full-page halftones from photographs covering all the chief commercial varieties of virgin forest timber growing in the United States, and also with numerous engravings from drawings showing leaf and flower forms, etc.
The price of the work is $6.00, delivered by express or mail.

"It Systematizes His Thought and Acts".

When You Teach a Clerk the Cash Register "Habit" You Systematize Him All Over

The habit of making a permanent, accurate record of *every* transaction is a good habit. It makes a salesman efficient in a much wider sphere than the mere operation of a machine.

Cures Bad Habits

It systematizes his thoughts and acts—cures him of the fatal habit of trusting to memory—prevents his "putting off" to a later time the duty which should be done now.

Stimulates Ambition

And when you give each clerk his own individual cash drawer you strengthen his sense of responsibility and stimulate his ambition to make a record as an efficient salesman.

He knows that his work will be compared, nightly, with that of his fellow-clerks—the number of sales, average amount of sale, total cash receipts, total charge transactions, total profit to the merchant on his day's work.

It gives him backbone, increases his sales—to a marked degree.

What Causes Most Failures

Failure to get the money for what they sell—or in leaks after the money comes into the store—wrecks more retail stores than all other causes combined.

Everybody Better Off

Sales increase immediately whenever a multiple cash drawer register is installed; leak-losses stop; the whole tone of the store is improved.

And when the proprietor is wise enough to reward salespeople whose average sales and collection records excel those of their fellow-salesmen, the spirit of friendly rivalry becomes permanent and the store enters a new era of prosperity.

Let us tell you more about the sales boosting power of this new and better system of store accounting.

The National Cash Register Company
Dayton, Ohio

The National Cash Register Co., Dayton, O.
Please give me some facts and figures as to how your new system of Registers will increase sales and stop the leaks. This request, of course, does not obligate me to buy.

Industrial Lumber Company

Elizabeth, La.

Edw. E. Krauss Sales Manager

IN THE EARLY DAYS

lumber was a word used to describe things that were useless or of little value. The Lombards were the money lenders of the middle ages. A Lombard-room was a room used by pawn brokers to store their pledges consisting of household goods and things of cumbersome or bulky nature. Later such space was termed "lumber room." Lumber, therefore, represented in those days nothing of consequence.

NOW

we know lumber as timber sawn into the form of beams, joists, boards, planks, and especially that which is smaller than heavy timber. The word brings to mind boards of even running thickness and width, clear, straight, strong, durable, with grain or figure, according to species, that will harmonize with any setting. Lumber now occupies a place in civilization that makes it indispensable to mankind, keeping step with every progressive move in manufacture. Ours is the lumber of the modern kind.

We know that we know lumber as it is now known.

We want you to know that we not only know lumber but know how to make it.

One little order will prove we can make good.

THE "INEVITABLE" STRIKE DID NOT OCCUR—but we fear worse happened—and now, for the first time—just as if it was important that anyone SHOULD know, we will, in a few words—state our REAL POSITION in this matter.

We believe in working at these things in the open and in an aggressive way, and at the very beginning of a promise of trouble, and not in a throwing up of hands, like panicky passengers at a train robbery with an acknowledgement that "Here is the end," "Let's quit" or—what is worse—"Come on! This thing is all over anyway, but let us destroy ourselves in a mad rush upon the masked batteries of the enemy."

We say all these things now because at the end of this fight, which was celebrated by the President of the United States signing the Eight-Hour Day bill with four gold pens—there began—a bigger, and deeper, and more FAR-REACHING struggle than the OTHER has been.

This thing which has happened in Washington is not PEACE; it is a TRUCE.

John T. McCutcheon was correct when he gave birth to the cartoon showing the burden of this proposition being piled upon the backs of the less important labor element of the country and the "people."

The "Chicago Herald" says: "Whether the legislation just passed will hold good in the courts remains to be seen. There are indications that the railroads will not accept the law without having it passed on and confirmed by the highest tribunal. But that prospect brings us once more into the region of orderly settlement of disputed questions by due and familiar processes. It has no place with the night-mare which the forced congressional action on Saturday brought to an end. The Adamson act is not peace, but only a truce, giving us time to ascertain what are the facts and to devise effective measures for future adjustment of such situations without destructive warfare and a truly national calamity and with fair consideration of all the interests involved. It is not so much 'relief for the railways' that is wanted and that is imperatively demanded as protection and security for the whole people."

That thought of the "Herald" is only the warm, comfortable feeling of the man who has just missed having his life crushed out by reaching the "safety isle" in the middle of the street, one thousandth part of a second prior to the passage of a joy-riding automobile, but does NOT seem to realize that he is only on a "safety isle" and that there is, YET—in either direction—a wide expanse of danger zone that he must pass before he is really SAFE!

Right now is the time, when the National Chambers of Commerce and Bureaus of Investigation and Lumber Associations and individual lumbermen, who are also patriots, and that submerged minority who still believe in the Golden Rule, should REALLY begin to do something against the NEXT national upheaval and not wait—as we have done in the past—for an opportunity to lock the door after the horse is gone and the thief has triumphed.

The Chamber of Commerce of the United States believes so thoroughly in the prowess of the work of the man in the flesh in governing the currents of national affairs as opposed to publicity propaganda and such feeble things as editorial effort that it would do well to devote the rest of its natural life to inducing an unlimited number of honest business men to enter politics for the purpose of assuming the burdens of government RATHER than to continue its efforts at reforming the politician who now exists.

Believe the Strike Should Have Occurred!

THE GREAT PUBLIC WILL NEVER KNOW how nearly ready the railroad contingent was for the strike to occur.

It would be idle to attempt to endeavor to assert what would have happened if the strike had occurred, but we cannot pass from this subject and do justice to a great and stalwart minority, which includes men like E. P. Ripley, without quoting the wholesome suggestion made by a St. Louis editor on the morning of August 27, in that avowed Democratic publication "The St. Louis Republic."

THERE was a man with a great idea and we are personally sorry for his sake—whoever he may be—that the great strike did not occur at 7 o'clock on the morning of September 4.

Under the caption "The Rivers Would Feed Us," the St. Louis editor wrote as follows:

"If a general railroad strike should begin with the beginning of the present week, the duty of the officials of the city of St. Louis, its captains of industry and trade and its great commercial organizations would be clear.

"That which located this city where it stands was the central position of the city with respect to the entire river system of the central basin of the American continent. The railroad is a recent comer here; three-fifths of the drama of St. Louis life has been enacted without its aid. Still the mighty Missouri comes down to us through the fields of one of the most fertile valleys of the world, while the upper Mississippi links us by an open and easy highway with the smiling harvest fields and orchards of Illinois, Iowa and Wisconsin. Missouri, an imperial domain in herself, is networked with rivers, all of which converge on St. Louis.

"A general railway strike would mean a revival of water transportation in a manner and because of a need never foreseen by any river enthusiast of the past quarter-century. The food question cannot trouble this community. The rivers nourished St. Louis's infancy and stand ready to nourish its maturity; and the season of the year is most propitious for the provisioning of the metropolis of the Mississippi valley by that form of transportation which belongs to this community as to no other city of the new world."

There, indeed, would have been a wonderful testing out of the value of the navigable streams of the United States and probably an eternal vindication of all the plans for river betterment which politics has killed in the last ten years.

In default, however, of there having BEEN a strike which would have enabled us to measure the benefit of river transportation and the like, let us be glad of one thing, at LEAST—that all this suspense has been provocative of good—providing we don't go to sleep again by taking this "rising bell" for "curfew."

You think this a SENSATIONAL statement, "Mr. Let-Well-Enough-Alone?" All right, if you do. That attitude should be your PRIVILEGE. Better take our prophecy though—at its face value—than to emulate the example of the poor old Arkansas traveler who always had a leaky roof, because he did not NEED to mend it when the sky was clear and he could NOT mend it while the rain came down.

LaFollette Attacks "Webb" Bill.

AS LONG AS LaFollette remains in the United States senate and there is not—as there should be—some provision in the District of Columbia for impounding and restraining mad men, as certain four-footed animals are impounded and restrained in all parts of the civilized world during dog days, then there is always a chance that the most virtuous efforts of the most upright law makers to pass any constructive legislation will be poisoned at the last moment by the bite of the voice of such pseudo-reformers as LaFollette!

We have direct information in the shape of a letter to us from the President of the United States which shows that he is just as eager that the Webb bill—the text of which we print in full elsewhere—should pass the senate, as APPARENTLY he has been that the railway trainmen should have an 8-hour day. A fac-simile of the letter from the President is printed elsewhere in this issue.

The President even took time to write to Senators Kern and Simmons on his way to Hodgensville, Ky., on September 3, urging—as he put it—"immediate action on the Webb bill allowing American exporters to establish common selling agencies abroad."

The passage of the Webb bill would mean the blossoming of all the work which the Federal Trade Commission, in conjunction with the Forest Service, in conjunction with the Bureau of Foreign & Domestic Commerce, and in conjunction with the National Lumber Manufacturers' Association, has worked upon during the last year—and YET—just NOW, in the last day or two of the session of this congress, even following the remarkable vote of 200 to 24 with which the House of Representatives endorsed this bill, LaFollette, of Wisconsin, declares that he is prepared, along with a colleague of his, by name Reed, of Missouri, to filibuster to the extent "of a speech three weeks long," if such an endurance feat be necessary to kill the Webb bill.

And yet, even upon the heels of such an announcement from Washington, we are informed that the sometime lumbering state of Wisconsin, the safe and sane state of Upham and Bragg and Philipp and many another man of national reputation and record for probity and virtue at home, shows by "RETURNS UP TO MIDNIGHT UNITED STATES SENATOR ROBERT M. LA FOLLETTE HAS BEEN RENOMINATED IN THE REPUBLICAN PRIMARIES."

No, we are not talking politics, we are just talking about LaFollette, a man who had the temerity once on a time to rise up in the United States senate and state that a reputable citizen had lied instead of endeavoring by evidence to PROVE that such a thing was true.

We do not consider that we are talking politics when there is any sort of chance to inveigh against LaFollette.

In this connection the "Chicago Herald," in its leading editorial of September 6, says just the proper things, so we will close this statement of fact with a swipe of the paste-brush. Here is what the "Herald" says, under the editorial caption "Still Throwing Monkey Wrenches":

"Senator LaFollette has again appeared as the deliberate projector of a monkey wrench into the wheels of desirable and necessary legislation. He has given notice that the Webb bill shall not reach the president. In this purely obstructive enterprise he is joined by Senator Reed of Missouri. They announce that they are ready to talk about that bill for 'two, three or four weeks,' if need be, in order to 'talk it to death.'

"Now it is universally known that unless American business can be released in the foreign field from restrictions which, however desirable within this country, are irrelevant outside, it will have very little chance against the sort of competition which European governments tolerate and even encourage and which will certainly be resumed the moment the European war ends.

"Apparently Mr. LaFollette fears his 'trust-busting' record will be impaired unless he maintains the shield of the Sherman act over all other peoples as well as our own, without regard to the fact that the others have governments competent to protect them should they feel the need of protection against American trade and traders. And apparently Senator Reed aspires to obtain for a Democrat some share of Mr. LaFollette's laurels.

"The senatorial commissions of Messrs. LaFollette and Reed expire on March 3 next. Possibly the voters of Wisconsin and Missouri may recognize that a senator who persists in throwing monkey wrenches is detrimental to the nation and in the long run must be detrimental to the state which inflicts him upon the nation. Let us hope they will."

The Curtailment Question.

WE ARE GOING TO GIVE THE CURTAILMENT question a rest in the issue of September 10 and in the mean time wind up the weights on both sides of the clock and get ready for a timely article upon the subject in our issue of September 25.

We have printed our list of curtailment statements until we very much fear that some of them have—in a sense—become a "joke" and we are going to TRY and wrestle with this problem in a very direct way between now and the going to press of our publication for our issue of September 25 to see if just a little "reasoning with the brethren" won't induce some of our friends to come out into the open for the purpose of making a few interesting and enlightening statements about what is going on in the way of "curtailing" production.

Oh, no; we have not given up! We are just NOW engaged in running some screw threads around an elongated and circular piece of steel and when the screws are finished we expect to find some way of using them in an inquisition that will gather some evidence. Oh, no; not to be cruel, but just to get real facts, you know. There IS a way!

In the Realm of the Lumber Manufacturer

Paper No. XXIII

The Great Four-Sided Governmental-Lumber Conference in Chicago—The Opinions of Many Men Concerning "After the War" Business—A Great New Mill on the Pacific Coast

By BOLLING ARTHUR JOHNSON

There is so much to follow in this important department of this issue of the LUMBER WORLD REVIEW that the introduction must be crowded into only "a stick or two" of type.

The most important joint meeting of governmental bureaus and lumbermen, held to date—whether or not any good comes out of it, in following out the purpose of its assembling—was the meeting held on the sixth floor of the Federal building in Chicago, on August 21, where twenty-six lumber associations and three bureaus of the government were represented, in several hours of conference, concerning what the government of the United States might do to help in the reconstruction of our foreign trade to meet the demands of Europe "after the war is over." We printed the story of this recent event in our issue of August 25.

A little while ago Harris, Winthrop & Co. of New York and Chicago assumed to collect the opinions of leading minds of America on the subject of "After the War, What?" concerning European trade.

This book has been in circulation for at least six weeks yet we have seen no reference made to it, in any trade publication in the country. We find that it contains interviews with many men very close to the lumber trade who have permitted their names to be used, and some evidently close to the trade who also have said some wise things.

Also in this department we illustrate most practically by pen and camera the starting of another great new lumber proposition on the Pacific coast, which demonstrates that SUCCESS in an undertaking depends most largely on eliminating from it any element of FEAR as to the OUTCOME.

Surely the business of the manufacture of lumber ought never to fall short of success if great NEW propositions like the Snoqualmie Falls Lumber Co. may be opened up in the face of all of the troubles that would seem to assail us.

We submit that this patchwork quilt of information ILLUSTRATES in its ENTIRETY the great problem which governmental bureaus and the associations of lumber manufacturers have before them in controlling "supply and demand."

INTERVIEWS CONCERNING "AFTER THE WAR" BUSINESS.

On the 13th of June, 1916, E. W. Tickle of Tickle, Bell & Co., London, England, very active in the Rotary Club movement the world around, wrote a letter to Hugh P. Baker of Syracuse, N. Y., concerning a proposed sectional conference to be formed at the International Rotary Clubs' meeting at Cincinnati. We quote a few sentences from this Rotary enthusiast, Mr. Ticker, of Liverpool:

"There's a good—and overwhelmingly good—time coming for the lumbermen of your country and ours, when once this cataclysm is behind us, perchance before the actual end of the bloodshed arrives; because if once the German army has to vacate the present scene of warfare in northern France and Belgium then the first duties of the respective governments of these mangled territories will be to rehabilitate as quickly as possible the shattered industries which formerly headquartered there, for as you know these were the heart-centers of the commerce and industries of our allies. Think of the hundreds of factories and workshops and the myriads of homes to be rebuilt, and then try and estimate the lumber bill that will be wanted for immediate delivery, when once the job is taken in hand.

"Is America getting ready for the day? I think not, when I see the diminished stock-lists coming in from the lumber manufacturers in various quarters of your many states. I have one in my pocket now, in which many of the most regular sellers are conspicuous by their absence, or take an advertisement in one of your lumber journals of May 25, to hand this mail, and in 4/4 lumber you find dots instead of figures in first and second quartered white oak, 6 inch and up, and 10 inch and 11 inch and 12 inch and up, and also in first and second plain red gum and in No. 1 common red gum.

"These are typical.

"I have tried in half a dozen quarters to get anything from 10 to 20 cars Fas 12 inch and up poplar, giving shippers the option of thickness of from one inch to five inches and yet not a single one of the firms approached had any dry 12 inch and up to offer.

"If there is one thing American lumbermen must do, it is to be ready 'on the tick of the clock' for theirs is a higher grade and a higher priced stock and the distance is great, so that reliability and promptitude must be the weapons with which to combat comparative cheapness and propinquity. Tell our American manufacturers that if they will construe into all their transactions with Europe the principles and ideals to which they are 'attested men' in Rotary, and will read their grading rules by the light of the Rotary beacon, 'He profits most—who serves best' there will be no greater problem in the European export trade than they meet in selling in their own home market, if they want freight rates or shipping data, any of your many first class forwarding organizations (of which, to British minds, the American Express Co., stands out as a type) will be only too glad to supply the information; this advice is necessary because we find only too often if we approach concerns unaccustomed to exporting that our requests for quotation C. I. F. (cost plus insurance plus freight) are replied to F. O. B. Seaboard, and it is well nigh impossible to ascertain eastbound Atlantic freights over here.

"There, however, are details upon which we can give individual advice if Rotary friends write wanting to know about the European market.

"If Rotary men want to enter the export trade, where will they receive a more cordial or interested welcome than from Rotary men here, there is nothing finer in business than a truly Rotary deal, and if folks only realized this to the full how much pleasanter commercial life would be, and under such conditions the arbitrator and the umpire I guess would not be overworked."

LEADING "IRON WORKS" MAN OF TEXAS WRITES.

D. D. Peden, Houston, Tex., vice-president and treasurer Peden Iron & Steel Co., says:

"The general conditions in this section at the present time are exceedingly good.

"Of course, in some parts of Texas more rain is needed badly and the recent cold spell did a little harm to some of the early corn and also to a little fruit in certain parts of the state; however, this is only a very slight detriment and the state generally is in very good condition and our business has been better of late than it has been for a good long while."

FROM A LUMBERMAN KNOWN NATIONALLY.

Hovey C. Clarke of Minneapolis, Minn., of the Shevlin-Clark-Carpenter interests, says:

"In returning your list of questions answered, would like to add that in my opinion the average voter has become convinced that his own material comfort and prosperity depend largely on the material prosperity of the railroads.

"Even in those sections where the socialistic idea has been prevalent, recent elections and the notes in the local press all tend to show that baiting the railroads has become unpopular.

"The material wealth of the northwest has been greatly enhanced in the last fifteen years by wealth that comes from the ground, and as nearly all have shared in this material prosperity property owners are more numerous, and the property rights therefore more respected.

"One man's guess is as good as another's as to how the ending of the war will affect business in this country, but if the whole business world is educated to a plan of preparedness by reduction of liabilities and increase of live assets, we will be ready for any change that may take place. I believe that the business world in the United States is doing this."

FROM THE LARGEST INDIVIDUAL TIMBER OWNER.

T. B. Walker, Minneapolis, Minn., says:

"I think not less than 8 percent should be allowed to the railroads, of which no more than a maximum of 2 percent should go to the employees, leaving a full 6 percent advance for maintenance, betterments and profits."

WHAT THE LATE JAMES J. HILL THOUGHT ABOUT IT.

The late James J. Hill held the following opinion:

"The question of economic preparedness is, for us, mainly a question of capital and labor. The first and greatest need of this country in the coming era is payrolls; payrolls for all those at work; for those whose occupation will be interrupted and for those others who will come again into active competition with the men who lay down the rifle to go back to the factory, the mine, and the farm. If the black shadow which the war has cast upon the future generations of Europe is not to darken our national life also, we must be prepared to meet these new conditions, not with political oratory, but with the economic weapons by which alone they can be mastered.

"The man interested in this above all others is the workingman. It is his future that is

Digitized by Google

threatened by peoples and by facts which are indifferent to and uncontrolled by our laws and look only to self-preservation. His salvation lies in securing continuous work. It depends on the steady and willing payroll. And the payroll can exist only so long as the capital from which it must be furnished sees safe and reasonably profitable opportunities of investment in our domestic productive enterprises.

"Capital may be a shy bird for some time to come. The ratio of credit to capital being now so disproportionate, the latter can pick and choose. It is generally believed that interest rates must rise after the new era has come. In any case, it is certain that many investors will prefer to put their capital into a 5 percent bond of a great nation, then at peace and sure to pay, rather than into some home enterprise surrounded with severe restrictions, constantly subject to regulation and attack, limited in its profits by law, but left unsecured against the assaults of hard years and fluctuating industrial conditions in a time where the wisest man can do little more than hazard a sagacious guess.

R. B. GOODMAN OFFERS A FEW THOUGHTS.

R. B. Goodman, of Goodman, Wis., prominent in association work, and known nationally to the lumber trade, wrote as follows:

"Concerning the lumber business, conditions after the war are most problematical and will be materially affected by its duration. It is generally believed by lumbermen that an early peace would bring about a large demand for lumber in Europe, the benefit of which to lumbermen would be dependent upon ocean freights, and any marked increase in exports of lumber would probably be deferred from three to six months after the close of the war on this account.

"The most recent figures show a considerable increase in the consumption of lumber due to the high prices of other building material now obtaining, especially structural steel, the scarcity of which is bringing structural timbers into demand, and is reviving standard mill construction, which obtains an extremely low insurance rate. The National Lumber Manufacturers' Association, the Southern Pine Association and the manufacturers of fir in the west, and hemlock in the lake states, are co-operating in the development of this trade along trained engineering lines. On the other hand, it is apparent that the high price of building material, especially steel, tends to decrease the amount of building, and in this way decreases the amount of wood used in conjunction with these materials.

"There is no unemployment of labor in this section, and very serious apprehension as to shortage of labor during the coming winter.

"Labor is contented with the wages now being paid as these generally through the section have been advanced quite recently.

"The lumber industry is not governed by the same economic considerations that affect other industries. When labor is plentiful a slight increase in the price of lumber immediately increases the amount of production, which results in an actual decrease in price within from three to six months. Just now it looks as if, in spite of the advancing prices and the increased use of lumber, the evil of over-production was imminent, and at the present time there is much difference of opinion as to whether the increased cost of supplies and labor and the probable shortage in the latter will effect a natural curtailment of production sufficient to maintain a stable market. I believe, however, that present prices for lumber will be maintained throughout the year, with the tendency to increase rather than decrease.

"I consider the danger in the present situation lies in the uncertainty as to how the many abnormal conditions now prevailing in certain lines will affect other lines. The certainty of increased cost of production through higher costs of labor and material, and the uncertainty of realizing these high production costs at the end of the production process, which in some lines of industry, particularly in lumber, means a period of many months. In some instances more than one year elapses from the time the tree is cut until the lumber is marketable."

A FEW WORDS FROM THE "WEST COAST."

J. H. Bloedel, president of the West Coast Lumbermen's Association, says:

"Peace in Europe will increase the demand for lumber because of the necessity for reconstruction purposes, and because of the probability of lower shipping rates.

"There has been only a slight increase in the selling price of lumber. It has been affected only adversely by the war in Europe, but prosperity in the east and middle west has reinstated the demand within the last six months.

"The lumber business is 60 percent of the trade volume in the states of Washington and Oregon and has been considerably depreciated since the inception of the war, until six months ago. There is only a moderate amount of new building and new ventures planned.

"The vote in favor of a tariff commission was presented by the Chamber of Commerce of North America, favoring the tariff commission.

FROM A FINANCIER— ALSO A LUMBERMAN.

Calvin Fentress, treasurer of Lyon, Gary & Co., Chicago, says:

"It is quite difficult to answer some of your questions with a simple affirmative or negative. I am therefore writing to explain more fully the answers in question.

"Being in the lumber business, I feel that there will be an enormous amount of reconstruction in Europe after the war, which will benefit lumber, and even if that did not come, the fact that we could get boats to move our products should materially improve conditions with us.

"The high price of steel is favorably affecting the consumption of lumber, and I believe it will continue to do so.

"There is much difference of opinion in regard to inflation. Personally, I do not think there is any inflation of credit at this time, but I do think that the increased supplies of money have lowered the purchasing value of money and account to some extent for the high prices now prevailing.

"I think generally, that shippers believe the railroads were entitled to the advances that they have had, but any further advance, with railway earnings showing favorably as at present, would be opposed fairly strongly.

"I fear that the foreign policy of our government has considerably dulled the average man's sense of nationalism."

AN "INCOG" VOICE FROM NEW ENGLAND.

The president of a large wholesale lumber concern in New England writes as follows:

"I believe even though the war should stop pretty soon in Europe, and, therefore, this country lose its respective war orders, nevertheless, the feeling of security in this country would be very much increased and our people would develop their own industries to a greater extent than they have, and in that way use up the surplus money they have on hand. I also believe that the railroads would be stimulated to put their rolling stock and roadbeds in better condition and that enterprises here in the states would be enlarged because of this additional feeling of security, the lack of which has held them back since the war commenced. They have been held back previously by lack of funds and lack of confidence in the situation."

A "WHOLESALE" VOICE FROM NORTH TONAWANDA.

R. T. Jones, North Tonawanda, N. Y., wholesale lumber dealer, says:

"While I consider the conditions of the country fundamentally strong, in a business as well as a financial way, there are many commodities which are inflated by the war conditions and at the close of the war in Europe there will undoubtedly be a period of readjustment which will halt business and disturb credit, and until this period is passed, no certainty of the business future can be depended upon."

A FIRM BUT ANONYMOUS VOICE FROM PITTSBURGH, PA.

A prominent lumberman in Pittsburgh, Pa., who requests that his name not be used in connection with his answer, says:

"I have been in business for thirty-five years, have had many thousands of employees under me in that time, and I believe that this country should be as careful of the investments and the lives of its citizens abroad in any country in the world as a business man would be careful of the interests of his employees and his property which his employees operate and control. It is a well known fact that neither the lives of Americans nor their property have been respected in Mexico, and many other countries, and I feel that a much stronger and more aggressive policy should have been pursued, and I do not believe that it would have entangled us with any foreign country."

FROM AN IOWA SASH & DOOR MANUFACTURER.

G. M. Curtis, of Clinton, Iowa, president of the Curtis Lumber & Millwork Co., says:

"Undoubtedly some people are discouraged and have put off building on account of the large advances in cost, and the number of these will grow with further advances, but the building boom over the country generally has hardly started, and there is such a large number of people who have been postponing their building during the period of quiet times that, in our judgment, building operations will show gains over the last two or three years for some time to come.

"In a general way, labor in this neighborhood and others in which we have plants located, is fairly content with wages and conditions, but stories of large profits in industry generally are bound to cause more or less uneasiness among the men who work by the day, and while in our sections we are not directly affected greatly by immigration, the general shortage of labor throughout the country will compel adjustments in wages in all sections sooner or later.

"The people with whom we have come in contact seem to recognize the possible advantage in the Federal Reserve Law, but have the feeling that the country is not getting the maximum benefit up to date.

"Opinion is less unanimous on the subject of a rate increase, than on most of the others you have introduced. I believe that shippers generally are disposed to favor the granting of rate increases where the need of better earnings is definitely established. They feel that these advances would be inevitable if the present controversy with railway employees should result in an advance in wages, but they do not believe that the demands of the men are justified."

Digitized by Google

A FEW OPINIONS FROM A KANSAS CITY MANUFACTURER.

F. J. Moss, of Kansas City, Mo., president of the American Sash & Door Co., says:

"Our business will be benefited by peace in Europe.

"Prices on lumber which enters largely into our product are not above normal so that in that class of building requiring lumber there is no reason why the consumption should be appreciably reduced. However, it is true that in the case of steel structures the high price of steel and iron products has materially curtailed development work.

"Factories in our line in this district are not as yet running normal for this time of the year. We believe that 20 percent would fully represent the amount of unemployment.

"Regret to state that we see but little disposition among wage earners to be more saving.

"Public sentiment in this section is strong in favor of preparedness.

"In our opinion unless adequate protection is afforded by the government to American citizens, there is no likelihood of expanding our foreign trade.

FROM A MAN EXPERIENCED IN FREIGHT RATE MAKING.

F. R. Pierce, of St. Louis, Mo., president of the Louis Werner Saw Mill Co., says:

"The consumption of our product is not reduced by the relatively higher prices now prevailing, as the prices of our product are below normal. Peace throughout the world would permit the exporting of lumber, which is now practically stopped on account of the prohibitive ocean rates. This would relieve the domestic market of a surplus which is holding values down to practically cost of production.

"We have never known labor to be entirely content with the wages received by it. It seems to us that, at this moment there is less than the usual amount of dissatisfaction on this score.

"We find building throughout the country much restricted by the constant fear that hangs over the people of international complications, with direful possibilities. If this fear were removed, there would be very active construction along all lines.

"All business men with whom we have talked, and who have given the subject any consideration, are enthusiastically in favor of a tariff commission, and most of them in favor of a commission having superior powers to any as yet proposed by the various suggestions along this line.

"Any advance in railway freights will be resisted until such time as the Valuation Bureau of the government has made its complete and final report. It is generally held, among our thinking people, that, until that time, all discussion as to the adequacy or inadequacy of freight rates is mere guess-work."

FROM AN EXPERIENCED EXPORTER OF LUMBER.

George D. Burgess, of Memphis, Tenn., a prominent lumberman, says:

"Referring to several of these questions, would say that our business is export, or rather was prior to the war. In 1913, which was the last full year we had, 92 percent of the goods we manufactured and handled went to Europe. We anticipate a great demand for our products at the termination of the war.

"In this part of the country our labor is largely negro and as you are probably aware there is less serious trouble with this class of labor.

"Lumber manufacturers are very much opposed to any increase in freight rates. At Memphis we have a very strong organization which has fought the railroads for several years on this proposition. We do not believe they are entitled to an arbitrary advance such as the railroad companies have been fighting for."

FROM A VIRGINIA LUMBERMAN-THINKER.

John M. Gibbs, general manager of the Fosburgh Lumber Co., of Norfolk, Va., says:

"There has not been a feeling of antagonism by the people in this section toward railroads, and as a matter of fact and to be more specific, the manufacturers of lumber in this city and section some time ago went on record as favoring a horizontal increase of 5 percent in the freight rates from this section. Some of the railroads increased their rates practically 10 percent, which caused a storm of protest, particularly among the shippers who are selling goods in the territory of Pittsburgh. Notwithstanding this, there is not strong antagonism, as there is every indication of being able to secure more equitable freight rates on lumber and other forest products from this section to the Pittsburgh section. We do not feel that further advances should be made.

"We employ negro labor exclusively. He is a queer compound and cannot be understood unless there is contact six days in the week. It takes just so much for a negro to live and all above his actual living expenses is, in the main, squandered in the indulgence of vices. Of course, all negroes are fond of cutlery. Of course, the cost of living has materially increased, but the wage rate has also increased so that the negro is today as well paid as ever and perhaps is receiving a wider margin between earnings and necessities than ever before."

FROM A RAILROAD PRESIDENT WHO HAULS MUCH LUMBER.

John M. Parker, of Crossett, Ark., general manager of the Arkansas & Louisiana Midland Railway Lumber Co., says:

"My observations are limited to the southern part of Arkansas and the northern part of Louisiana, through which our short line railroad extends. I notice in this particular territory evidence of a coming prosperity. There is more optimism among the people than there has been for a long time. More new land is being put under cultivation, and to a limited extent, improved methods of farming are being adopted as against the old obsolete methods that have been in vogue here since the war. A great many silos are being constructed, and there is more live stock raising than this country has had for a long time.

"In one little town, a county seat of about 2,500 inhabitants, a merchant has sold in the last ninety days, twelve carloads of Ford automobiles. In another sawmill town within ten miles of there, in the last sixty days, something like twenty automobiles have been purchased and something over forty carloads have been sold in a town of 10,000 inhabitants in northern Louisiana, the terminus of our line. In talking with some of the bankers in this territory, they say they are not able to satisfy themselves yet as to whether this speaks for prosperity or for extravagance. To my mind, it represents a sort of feeling on the part of the people at large that plenty of good times are ahead for the country and they are taking on new courage, and while some of them are probably going into their principal to buy automobiles, many of them are doing so on the increased earnings. In some instances probably, they are prospective, but at the same time it shows the confidence the people have in the future business outlook.

"Our railroad earnings in the last four months have very materially increased, owing to the expansion of business.

"There is a very general movement in both Arkansas and Louisiana for good roads and large sums of money are being spent and others being arranged for through improvement districts, all looking to the betterment of transportation facilities. The building of new roads, thus reducing the cost to the farmer of transportation to a market, represents a saving that in itself will be very considerable and will add to the prosperity of the territory besides opening up large amounts of, at present, idle land.

"The effect that peace of the warring nations would have upon this territory is very problematical, but it seems to be the general opinion that possibly a temporary check might come to the business of the country, but it will be of short duration. I believe the opinion of the people in this territory does not as a general rule agree with our president's policy in reference to Mexico. There does not seem to be a question of doubt that if the country expects any extension of our foreign trade, the American government must be at all times prepared to protect its citizens and their property interests outside of the United States.

FROM A SOUTHWESTERN LUMBERMAN.

John H. Kirby, of Houston, Texas, president of the Kirby Lumber Co., says:

"We are engaged exclusively in the manufacture of yellow pine lumber. The war in Europe has had and is having a very depressing effect upon our business because the normal consumption of our product in Europe has been cut off. There is some present demand over there for lumber but the lack of ships makes it impossible to supply that demand. Scarcity of tonnage also makes it impossible to do our normal volume of business with South American and Central American and the West Indian markets. Peace in Europe would, therefore, have a direct beneficial effect upon our business.

"In answering your questions I have tried to reflect what I understand to be public sentiment in this section of the country and not my individual views.

"Personally I do not think the Federal Reserve Law is based upon correct principles.

"I do not believe in an ambitious program of preparedness. This country has no need of a large standing army and no need of 'the greatest navy on earth.' About the only need we have of a navy is as a safeguard to our merchant marine and just so long as our laws forbid the establishing of the latter just that long we will be without national necessity for any enlargement of our present naval power."

New Plant of the Snoqualmie Falls Lumber Co., King Co., Wash.

As measured by the mountain road speed of the average automobile, two hours, or thirty miles, in an easterly direction from Seattle is located one of the most beautiful of the great waterfalls of the country, Snoqualmie Falls, 268 feet in height. The gradual ascent of the fine road winding through a beautiful agricultural country, interspersed with lakes and rivers, to the more rugged slopes of the foothills of the

Digitized by Google

Cascade mountains, partly through the virgin forests of Douglas fir and red cedar timber, hardly prepares the tourist for the rugged grandeur of the canyon which is the setting for this crystal gem. Its presence is not suspected until a short walk from the roadway brings it into view, and the roar of the plunging waters, muffled in the narrow gorge, is heard for the first time. It is one of the attractions for every tourist to the Pacific northwest, and is destined to be known in name at least to many lumbermen who may never have the opportunity to visit it.

(Cress-Dale Photo Co., Seattle.)
SNOQUALMIE FALLS, 268 FEET HIGH, LOCATED 30 MILES EAST OF SEATTLE, WASH., IN THE FOOT OF THE CASCADE MOUNTAINS.

A little more than a mile north, months of preliminary work in the clearing and leveling of a site of more than a hundred acres is now showing for the first time visual evidence of the erection of a modern sawmill plant which will be conducted under the name of the Snoqualmie Falls Lumber Co. The machine shop, boarding house—which, by the way, partakes more of the appearance of a good sized hotel, but is not so denominated because of the many instances in which hotels in sawmill communities have proved to be unprofitable ventures—a few new houses and the old camp, with the cement foundation for the sawmill and the log dump completed for the handling of the logs from the clearing, are all that as yet indicate the magnificent modern plant and town which will be completed early in the next year. Great piles of stumps and refuse timbers, some of them partly burned, give evidence of the vast amount of work required in the clearing, but the entire site, except the hillsides where the residences will be erected, and in which part of the original stand of timber has been left for shade trees, is clean and level, and offers no impediment to rapid work from now on.

As a sidelight on the expense implied in land clearing in western Washington stand these stump piles, 50 to 60 feet in height and covering a circle 150 feet in diameter at the base, each representing the refuse from six acres of timber land which cost $300 per acre to clear, and contracted at $125 per pile for the burning alone. This is somewhat greater than would be necessary for farming purposes, partly because it was desirable to complete the work quickly and very cleanly.

While the site of the manufacturing plant is level, the town itself will be located on the easy slopes adjacent, while on three sides the gradual rises of the foothills lead to lofty mountain ranges, the most noted being Mount Si, to the east, the skyline of which presents the outline of an upturned Indian face. It is a typical mountain valley, ideally adapted to the purpose intended.

The extent of the enterprise is indicated by the size of the site prepared, and it is only necessary to add at the present time that the sawmill will have a capacity of approximately 200,000 feet per day, or double that with a night shift. All the other component parts of the plant will be in proportion, and later a cedar lumber mill and a shingle mill will be added. The plant will be electrically driven throughout, and the power plant will provide current for the logging operations with electric machinery, this feature having been decided on as the most economical and with the least danger of forest fires.

The timber tributary is located on about 45,000 acres, and will average between 60,000 and 80,000 feet per acre. It is located at moderate altitudes and can be reached by the logging railroads with a maximum of 3 percent grades. The railroad is now under construction, and will reach the first of the timber under five miles, with an ultimate length in the main line of twenty-five miles.

The officers of the Snoqualmie Falls Lumber Co. are: Geo. S. Long, Tacoma, president; O. D. Fisher, Seattle, vice-president and treasurer; W. L. McCormick, Tacoma, secretary; W. W. Warren, Seattle, general manager.

(Cress-Dale Photo Co., Seattle.)
STUMP PILES LIKE THIS, 50 TO 60 FEET IN HEIGHT, 150 FEET IN DIAMETER TO EVERY 6 ACRES OF GROUND CLEARED FOR SNOQUALMIE FALLS LUMBER CO. MILL SITE.

W. W. Warren, for many years manager of the Louisiana Long Leaf Lumber Co., Fisher and Victoria, La., is in direct charge of the enterprise, and his many friends will be pleased to know that he is enjoying the best of health in the salubrious climate of the Pacific northwest, while the hard work in the planning and management of the great enterprise only makes his genial disposition the more evident. The plant will commence operations in the early spring of 1917, and will ship its lumber via the Northern Pacific, which will build a spur and bridge across the Snoqualmie river to the plant, and the Chicago, Milwaukee & St. Paul, which encircles the plant with its North Bend branch.

Observations in the Realm of the Retailer

One and a Half Story Bungalow to Cost About $2,500

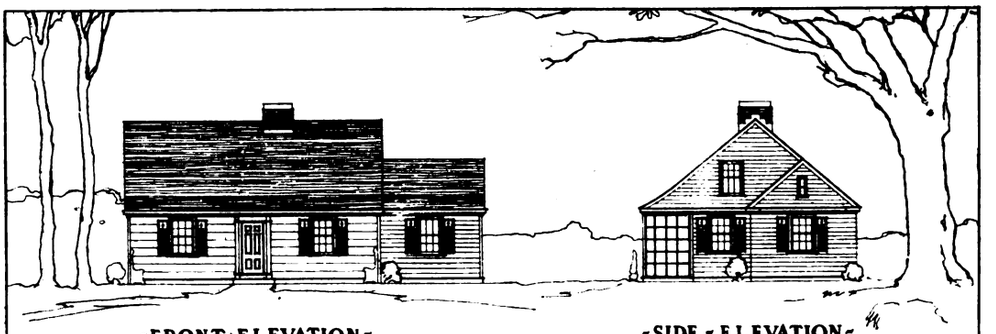
A SERIES OF ARCHITECTURAL DESIGNS OF HOUSES PLANNED TO BE BUILT OF ARKANSAS SOFT PINE.

Recently the Arkansas Soft Pine Bureau issued through the medium of the press of the American Lithograph Co., one of the most beautiful architectural books which has ever been given out to the lumber trade of America, entitled "NOT A HOUSE BUT A HOME."

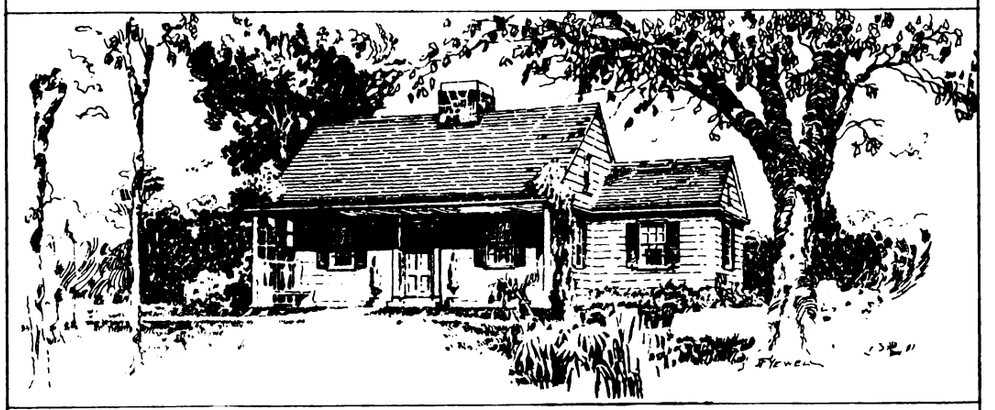
Through the courtesy of R. H. Brooks, who has charge of the advertising of the Bureau, we have secured the privilege of republishing these articles in the LUMBER WORLD REVIEW, and we are running them in our general department, "Observations in the Realm of the Retailer," believing that if there is one thing in which all retail lumbermen MUST be interested it is in SUCH a series of PLANS, and we want to suggest that every retail lumberman who receives the LUMBER WORLD REVIEW file away the copies which contain these plans, or cut them out and paste them in his scrap book.

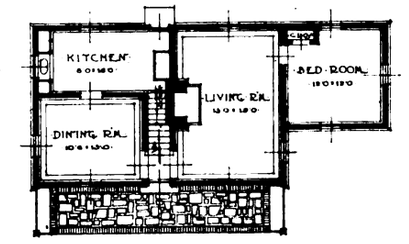
We do not know whether "Not a House But a Home" is out of print or not, but it probably is; and if that be true this may be the only opportunity there is to secure these etchings of the house plans.

EDITOR.

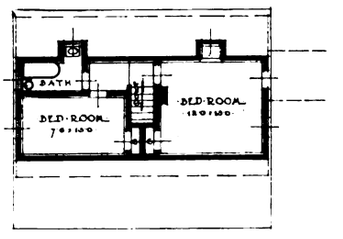


-FRONT-ELEVATION- -SIDE-ELEVATION-





-FIRST-FLOOR-PLAN-



-SECOND-FLOOR-PLAN-

This house is designed for all-the-year occupancy, with a cellar, heating plant, etc. The exterior should be covered with shingles, except the small portion of the main front between the two trellises and seats; this should be covered with shiplapped siding, laid flush. The whole building should be painted white, with green blinds, and with a dull, light brown or gray roof.

There would be no wooden floor on the piazza, but to make the building perfect, this should be laid of broken flag stones within a brick border, and this method of laying the porch floor is not only very picturesque and practical, but is also very cheap, since broken flags can be obtained for the asking in all our cities and towns.

Both the first and second stories would have double floors, and would be plastered throughout, except the ceilings over the dining-room and living-room, where the beams of the second floor construction should be surfaced, and the surface side of the under flooring should be laid down, so that the agreeable effect of a beamed ceiling would be obtained in those two rooms. The plaster in the living room and dining-room should be sand finished, and tinted in soft dull tones. The fire-place should be built of brick, with a plain wooden shelf supported on small wooden brackets, and the trim in the living-room and kitchen should be stained and waxed in colors to match the furniture and curtains desired. The arrangement of bedrooms leaves the second floor to the family, with a bedroom on the first floor for occasional guest's occupancy. A delightful way to face this house is toward the street, but if the lot is a narrow one, the bedroom end can be placed toward the rear, and a path run down one side to the front door and on the other side to the kitchen door.

TABLE OF CARPENTER MATERIAL.

NOTE—All amounts given do not allow for waste. Where there is doubt about widths of material the areas to be covered are given in square feet. Trim should be allowed for both sides of all openings.

Lumber.

*Framing (joists, studs, etc.).....7,000 ft. B. M.
*Sheathing and rough floor.....2,620 sq. ft.
Shingles for walls.....6,000
*Shiplap clapboards ..... 240 sq. ft.
*Shingle strips .....3,040 lin. ft.
Shingles for roof.....8,000
*Lattice, four pieces.
Windows (cellar), three, 2 ft. 6 in. x 2 ft. 6 in.
Windows D. H., 16 pairs.
Blinds (slat) 10 pairs.
*Finish floor ..... 960 sq. ft.
*Porch ceiling..... 185 sq. ft.

Millwork.

*Cornice .....142 lin. ft.
*Rake cornice..... 88 lin. ft.
*Dormer cornice..... 20 lin. ft.
*Water table .....130 lin. ft.
*Porch posts, two each, 6 in. x 6 in. x 12 ft. 6 in.
*Porch pilasters, two, 2 in. x 6 in. x 12 ft. 6 in.
Doors, entrance, one with special frame.
Doors with trim.....11
Trimmed openings..... 4
*Base .....364 lin. ft.
*Picture mold .....190 lin. ft.
*Stairs, cellar to second floor.

Fitting Up.

*Cellar Partitions.
*Drain board and two dressers.
*One mantel.
*Shelving for closets.
*Two seats.

**Materials noted with asterisk should be of Arkansas Soft Pine.*

General Boyle's Brief Sums Up the Lumbermen's Case

Washington, D. C., Aug. 22.—The second half of the brief of L. C. Boyle, counsel for the National Lumber Manufacturers' Association filed to-day sums up the entire matter as to the faults in the present law and the remedies sought through the aid of the Federal Trade Commission.

Mr. Boyle concludes that from the record now before the commission the following facts have been made clear.

"The industry has for years labored under an absurd public prejudice that there existed a lumber trust." As to this Mr. Boyle states that the prime necessity is that the atmosphere should be cleared upon this point.

"Whatever may be the fact as to the wisdom or unwisdom of turning over to private ownership so large a portion of our forest domain, the fact is evident that the margin between cost and legitimate market value of stumpage is ever growing smaller, and the present status of the tree, from a purely commercial standpoint, is involved in the manufacture and distribution of lumber products."

Mr. Boyle states that the speculative condition which formerly obtained in the lumber industry is entirely in the past. The business of the hour, said Mr. Boyle, is to utilize to the utmost our tree crop.

"In its mechanical evolution the industry is highly efficient, its weakness lies in the merchandising end of the business. The immediate problem is to so order the distribution of lumber that markets may be served, not flooded. Overproduction spells waste and makes conservation impossible.

"That there are too many mills making lumber may be conceded. In its ultimate evolution large and efficient units of production may solve the problems of utilization, cost of production and market stability. A fact and not a theory, however, now confronts us. The mills are here—and the majority represents honest investment. That which might be achieved by a few ideally financed and efficiently organized plants making all our lumber, can at least be approximated by groups effectively co-operating. The inefficient and overloaded must and will be eliminated, and this because lumber competes with substitute materials, hence market prices of necessity must be in line with legitimate investment properly administered. A study of the industrial growth of steel, fiber boxes, cement, composition roofing, metal shingles, brick, etc., makes clear the fact that displacement processes have made deep inroads. It is also evident

GEN. L. C. BOYLE, of Kansas City, Mo.

that no monopoly or undue trade restraint in wood uses could take place that does not include a control of these displacement materials.

"Due to the pioneer character of the industry the individualistic rather than the co-operative spirit has dominated its development. This fact has not only handicapped the economics in manufacturing processes, but has been a stumbling block to efficient merchandising.

"For the first time in its history facts that cover the status of the industry have been given to the public and this in a manner to inspire full confidence. Rightly understood, the public is as much interested as is the industry in a correct solution of the economic problem presented. In a large sense a nation's wealth is measured by its natural resources. Any effort to eliminate the useless waste of such resource should challenge the hearty support of public opinion."

After discussing the legal status of the Sherman anti-trust law as applied to the lumber business, Mr. Boyle takes the position that the most important problem is to correct its economic fault. He said "the distinct and outstanding question to be considered involves the making of lumber and selling to the trade." His findings of fact are as follows:

"1. The commission's pronouncement should make plain the fact that no monopoly exists or could exist in lumber manufacture.

"2. That the major woods are competitive in the same general markets and hence no group of mills in any section could reasonably enhance lumber prices in such markets.

"3. Due to the number of units involved in production the industry at frequent periods overproduces itself. This results in the sale of lumber products below cost and under such conditions enormous forest waste takes place.

"4. That the record discloses no over-capitalization of plants; that is, the element of watered stock does not exist in the industry.

"5. Other than the fact that lumber products in one district at frequent periods invade the natural markets of other lumber districts and are sold at below cost—this impelled by economic conditions—the record discloses no unfair trade practices as such. By this is meant that we find no interlocking directories; no price discrimination; no tying contracts, or, no practices commonly designated as unfair trade methods. The basic fault being overproduction forcing sales below cost."

MR. DREWRY TALKS OF EUROPEAN OPPORTUNITIES FOR SOUTHERN PINE.

New Orleans, La., Sept. 5.—W. J. Drewry, European representative of the Southern Pine Association, who for some months has been in charge of the association's exhibit at the exposition of a reconstructed city, held in Paris, returned to New Orleans Saturday with a message of cheer for lumbermen as to business opportunities in Europe at present, and with a promise of infinitely greater things when hostilities cease.

Speaking of the immediate opportunity for trade expansion in Europe, Mr. Drewry said:

"This is the time of all times for southern lumbermen to go after the European trade; they are literally crying for lumber in Europe, and will be for three or four years after the conclusion of the war. The governments of the allies are getting the lumber ordered directly for them, as they are moving it themselves, but the manufacturers who have ordered lumber indirectly intended for government use are having trouble getting their lumber, owing to the scarcity of ships.

"It behooves the southern lumbermen to immediately arrange for bottoms to transport their product to Europe. The results of my investigation will be reported by me at a meeting of lumbermen, to be held in Chicago during this week. I will return to New Orleans at the end of the week, and at that time we will arrange for a meeting of export lumbermen of the south, to be held within the next two or three weeks.

"With the close of the war—and in England and France there is a confident belief that next June will find the conflict at —there will be a huge demand for lumber. Russia is the only European country that can supply Europe with lumber, and it will be some time, three to five years, at least, before they will be able to make a showing in the lumber market. The reason is simple. They will not have the men to send into the forests to get out the timber.

"This gives the United States its greatest opportunity, and it is during these three to five years that we must act, for when Russia gets back into the lumber game the taxes on imported lumber will increase. It is the chance for southern lumbermen to make fortunes. They have realized it, and while there are already a great many southern exporters I expect a great increase after the meeting to be held shortly in New Orleans.

"Both France and England are greatly interested in our wood block paving, and at the request of the Southern Pine Association I made a special investigation of the paving conditions in London and Paris. London has much wood paving, from Australian wood, while Paris is paved with wood from southern France. Both are inferior to our yellow pine. Paris has been unable to do any street work since the war began, and her streets are in horrible condition. It will be necessary to completely repave Paris at the end of the war. London has much good paving, but most of its streets are in bad condition, and an immense amount of paving will be required there.

"My work in Europe brought me directly in touch with the men at the head of government affairs. I saw them in the interest of the Southern Pine Association, and it would not be appropriate for me to make any comment on casual remarks made to me by them regarding the war situation."

CREOSOTED WOOD BLOCK WINS.

The activities of the National Lumber Manufacturers' Association and its work in behalf of lumber are well illustrated in a recent transaction. The trade extension department of the association learned on August 14 that the officials of Highland Park, Mich., were contemplating the laying of 55,000 square yards of paving. It was stated that the mayor of the city was in favor of asphalt, while the members of the council were about equally divided as between the various kinds of paving. Secretary Kellogg wired this information to the Southern Pine Association at New Orleans, and on August 16 it sent F. P. Hamilton, its wood block paving expert, who arrived in Chicago, August 16, and proceeded at once to Highland Park. There he took up the matter with the authorities, and, aided by local lumbermen, he succeeded in convincing the council of the superiority of creosoted wood block paving, so that 55,000 yards, or the equivalent of 2,000,000 feet of yellow pine, will be used, where, if this action had not been taken some other kind of paving would have been laid.

DEPARTMENT STORE LUMBER YARD.

Philadelphia, Pa., Sept. 6.—The famous Wanamaker stores in New York and Philadelphia have swung into line on the miniature lumber yard, and in their advertisements are playing it up as a chance for the boys to get "lumber with which to make things." Their interesting advertisement makes this suggestion for lumber uses:

"From this day on the Wanamaker Toy World will contain a miniature lumber yard for boys and men who use tools. This lumber can be bought in any quantity desired and almost any size.

General News of Associations and Clubs

THE TWENTY-FIFTH HOO-HOO ANNUAL.

As the LUMBER WORLD REVIEW goes to press the opening ceremonies of the twenty-fifth annual of the Concatenated Order of Hoo-Hoo are in progress at the Hotel Chisca, Memphis, Tenn. A large number of the members of the order are gathered in the city by the mighty Mississippi as the guests of the open-hearted lumbermen of Memphis. They are looked after by an efficient entertainment committee, of which S. C. Major is chairman, and whose members are composed of such prominent lumbermen as W. H. Russe, R. E. Montgomery, H. B. Weiss, J. M. Pritchard, J. A. Riechman, F. E. Stonebraker, Ralph May and P. A. Gates.

WEST COAST ORDER FILE.

The weekly report of order file and shipments compiled by the West Coast Lumber Manufacturers' Association for the week ended August 26, gives the figures from 116 mills which report for the rail trade as follows:

	Cars
Unfilled orders, Aug. 19	6,239
Orders accepted week ended Aug. 26	2,223
Total	8,462
Orders shipped week ended Aug. 26	2,009
Balance orders unfilled	6,453

The report for the cargo trade was as follows:

	Domestic, Feet	Export, Feet
Unfilled orders Aug. 19	39,839,558	49,336,512
Orders accepted for week	7,966,805	2,156,000
Total	47,806,363	51,492,512
Shipments week ended Aug. 26	4,035,979	1,668,000
Orders unfilled	43,770,384	49,824,512

The normal production of the 116 mills reporting is 70,058,614 feet a week, while the actual production during the week ended August 26 was 69,969,336 feet, showing practically normal output. A severe car shortage is reported in several districts, which had the effect of curtailing shipments considerably.

The ladies' entertainment committee is composed of the following: Mrs. Ralph May, chairman; Mrs. J. D. Allen, jr., Mrs. J. M. Pritchard, Mrs. George O. Friedel, Mrs. R. A. Taylor, Mrs. S. M. Nickey, Mrs. W. H. Russe, Mrs. R. E. Montgomery and Mrs. L. E. Glass.

The concatenation committee is headed by John W. Dickson, "the noblest Roman of them all," and his associates are such active members of the Hoo-Hoo order as Max Sondheimer, C. C. Reed, R. A. Taylor, R. E. Bright, J. M. Clements, K. A. Smith, G W. Fooshe and M. W. Waynesburg.

J. M. Pritchard is chairman of the program and printing committee, and he is assisted by R. E. Montgomery, R. T. Cooper, George C. Eheman and J. T. Kendall.

The annual of Hoo-Hoo at Memphis is well financed, owing to the activities of the committee having that matter in charge, and which was composed of P. A. Gates, chairman; H. B. Weiss, J. W. McClure, George O. Friedel, L. E. Glass, Phil Pidgeon, J. W. Gladding, T. R. Winfield and C. J. Goodman.

The program of entertainment, which was published in full in the LUMBER WORLD REVIEW of August 25, provides for the general opening of the gathering and the annual reports for the first day, Saturday, September 9. The second day will be devoted to church-going in the morning and an automobile ride in the afternoon. The session Monday will be enlivened by a lecture by Dr. Stanley L. Krebs, and the business session will include the reports of committees and discussion for the good of the order. The regular business will be disposed of on Tuesday, and will conclude with the election of officers. The Osirian Cloister will hold its annual session immediately after the adjournment of the Hoo-Hoo gathering on Tuesday.

CONVENTION DATES.

October 24-25—Western Forestry & Conservation Association, Portland, Ore. Annual forestry industrial conference.

October 25-26 27—Southern Logging Congress, New Orleans, La. Annual meeting.

October 26-27—Pacific Logging Congress, Portland, Ore. Annual meeting.

November 11 — Southern California Retail Lumber Dealers' Association, Los Angeles, Cal. Annual meeting.

January 24-26, 1917—Southwestern Lumbermen's Association, Muehlebach Hotel, Kansas City, Mo. Annual Meeting.

SHIPMENTS OF PINE AND LARCH.

Kalispell, Mont., Sept. 1.—Shipments of lumber for the year 1916, as reported by members of the Montana Larch and Pine Manufacturers' Association, were 18,145,703 feet, as compared with 15,814,823 feet for the corresponding month of 1915, an increase of 2,330,830 feet, or 14.7 percent. The distribution of July shipments shows extensive increases into the states of North Dakota and Montana. The aggregate shipments for the first seven months of 1916 were 111,930,152 feet, as compared with 68,603,465 feet for the first seven months of 1915, an increase of 43,326,687 feet or 63.1 percent. The members show a stock on hand, August 1, 1916, of 101,169,000 feet, as compared with 106,726,000 feet on hand August 1, 1915.

MONTANA LUMBER MANUFACTURERS' ASSOCIATION ORGANIZED.

Kalispell, Mont., Sept. 1.—At a meeting of its members August 5, 1916, the Montana Larch and Pine Manufacturers' Association was disbanded.

The lumbermen of this district organized in the year 1902, under the name of the Flathead Lumbermen's Board of Trade. The name was changed in 1907 to the Montana Larch and Pine Manufacturers' Association, whose membership included practically all the mills in northwestern Montana, located on the Great Northern railway.

A new organization has been perfected under the name of the Montana Lumber Manufacturers' Association, whose membership includes the lumber manufacturers located on the Great Northern, Northern Pacific and Chicago, Milwaukee & St. Paul railways. The officers of the new organization are as follows:

C. B. March, president, Kalispell, Mont.; W. R. Ballord, vice-president, Somers, Mont.; J. F. Fennesy, treasurer, Libby, Mont.; Kenneth Ross, Bonner, Mont., and H. G. Miller, Essex, Mont., executive committee.

The membership is composed of the following lumber concerns: Kalispell Lumber Co., Kalispell, Mont.; State Lumber Co., Columbia Falls, Mont.; Libby Lumber Co., Libby, Mont.; Somers Lumber Co., Somers, Mont.; Anaconda Copper Mining Co., Bonner, Mont.; Polleys Lumber Co., Missoula, Mont.; Mann Lumber Co., Henderson, Mont., and Western Lumber Co., Milltown, Mont. There are several other lumber maufacturing concerns in western Montana whose membership will be solicited.

The field of the new association covers practically all western Montana, and the annual output of its members aggregates approximately 400,000,000 feet. Members of the new organization will affiliate with the Western Pine Manufacturers' Association grading bureau. The headquarters of the association are at Kalispell, Mont., where suitable offices have been secured.

BOX MEN IN SEMI-ANNUAL CONVENTION.

Buffalo, N. Y., Sept. 8.—The seventeenth semi-annual convention of the National Association of Box Manufacturers was held at the Iroquois hotel, August 23-25, and discussed various matters of interest to the members. Costs and cost systems, standardization of boxes, the reclassification case, safety appliances, trade extension and uniform selling contracts all came in for addresses and discussions.

The association has a membership of 125 out of about 700 box manufacturers who might become members. The report of Secretary F. C. Gifford will be put into printed from and distributed to several hundred non-members in the hope of interesting them in joining.

SOUTHERN PINE WEEKLY BAROMETER.

The weekly trade barometer, compiled by the Southern Pine Association and issued September 4, gives the figures from 152 sawmills for the week ended Friday, September 1, as follows:

	Cars	Feet
Orders on hand	19,846	391,918,808
Orders received during week	4,815	95,086,620
Total	24,661	487,005,428
Shipments during week	4,699	92,795,852
Balance orders on hand	19,962	394,209,576

The report shows that the production is 10.75 percent below normal; that the shipments are 0.93 percent above normal and that the orders are 3.42 percent above normal. The increase in the orders compared with the previous week's report was 2,290,768 feet, or 0.59 percent. The weekly reports for the months of July and August, including that for September 1, are as follows:

Week Ended	Mills Reporting	Average Orders Feet	Average Shipm't Feet	Total Unfilled Cars
July 7	147	401,980	383,801	16,444
July 14	147	539,383	531,275	16,379
July 21	150	697,933	504,758	18,130
July 28	158	894,095	617,704	20,590
Aug. 4	154	687,671	638,443	30,552
Aug. 11	165	703,996	643,840	23,020
Aug. 18	162	704,955	641,079	22,674
Aug. 25	164	669,024	659,150	23,487
Sept. 1	152	625,570	610,499	19,962

GRAND RAPIDS LUMBERMEN HOLD OUTING.

The eighth annual picnic of the Grand Rapids Lumbermen's Association, of Grand Rapids, Mich., was held at Waukazoo, on the shores of Black lake near Holland, Mich., on Saturday, August 19. The members of the association were taken from Grand Rapids on two special cars on the Michigan railway, leaving at 8:45 a. m., and arrived at Black lake at 11 o'clock. The first event was a baseball game between teams captained by Charles Dregge and Herbert Schneider, which ended in a victory for Mr. Schneider's team by a margin of 6 to 5.

Digitized by Google

The afternoon was devoted to games, and all were decidedly interesting. At 4 o'clock in the afternoon the picnickers were taken in launches to Macatawa Park, where they frolicked in Lake Michigan until dinner was served at the Macatawa Yacht Club, and in the evening there was a dance in the club rooms.

The affair, which was highly successful in every way, was in charge of a committee composed of Arthur M. Manning, president of the club; Glenn Fitzgibbons, W. H. Boland, Herbert Schneider and Arthur D. Wolf.

DISPLAYS AT STATE FAIRS AND EXPOSITIONS.

The National Lumber Manufacturers' Association is making some of the most complete and comprehensive exhibits of the products of wood that have ever been seen at these gatherings. A most attractive feature of each exhibit is the models for various farm buildings which have been prepared with care and show their construction in detail. The plans for these models were secured from the foremost agricultural schools of the United States. One of the most interesting of these models is the "general purpose barn," which shows improved methods of housing cattle and horses, modern ventilation, creosoted blocks for stall floors, creosoted sills and the new type of end and side bracing which gives strength with a minimum amount of material. Other parts of the state and county fair exhibits, which are generally identical, show portable swine houses, poultry houses, implement sheds, dairy houses, corn cribs and granaries. Transparencies are shown giving the radial and tangential sections of forty-eight of the principal commercial woods of the United States. An instructive part of the various exhibits is the literature pertaining to the various woods. The names of the various pamphlets issued by the associations of lumber manufacturers are lettered on large panels and anyone who wants one of these has only to ask for it. All of these are practical and instructive pamphlets.

The exhibits referred to have already been shown at the county fair at Austin, Minn., from August 29 to August 31 inclusive and at the Minnesota State Fair at Hamline, September 4 to September 9, inclusive, both of these exhibits having been in charge of W. H. Bell.

During the last week an exhibit has been made at the Rochester Industrial Exposition, Rochester, N. Y., in charge of H. S. Sackett; at the Indiana State Fair at Indianapolis, in charge of Alexander Hamilton, and at the Nebraska State Fair at Lincoln, which was in charge of the Long-Bell Lumber Co.

During the coming week an exhibit will be made at the Wisconsin State Fair, West Allis, from September 11 to September 16, in charge of W. H. Bell. A corresponding exhibit will be made at the Kansas Fair at Topeka the coming week, in charge of the Long-Bell Lumber Co.

Other events are as follows:

Illinois State Fair, Springfield, September 16 to September 23, in charge of W. H. Bell.

Southwestern Dairy Show, at Kansas City, Mo., September 18 to September 23, in charge of the Long-Bell Lumber Co.

Colorado State Fair, at Pueblo, September 18 to September 23, in charge of the Long-Bell Lumber Co.

Door County Fair, at Sawyer, Wis., from September 19 to September 21, in charge of H. R. Isherwood.

Missouri State Fair, Sedalia, from September 23 to September 30, in charge of W. H. Bell.

New Jersey State Fair, at Trenton, from September 25 to September 29, in charge of State Forester Wilber.

Oklahoma State Fair, at Oklahoma City, from September 25 to September 30, in charge of the Long-Bell Lumber Co.

Texas State Fair, at Dallas, from October 14 to October 29, in charge of W. H. Bell.

WEST COAST LUMBERMEN'S ASSOCIATION MEETS AT BRIDAL VEIL.

Portland, Ore., Aug. 25.—Traveling in automobiles forty miles out the old Oregon trail, now, for many miles, a grand scenic highway costing $50,000 per mile, one hundred representative lumbermen of the Pacific northwest were today guests of the Bridal Veil Lumbering Co. in the cooling shadows of the timber-clad Cascades. It was the regular monthly meeting of the West Coast Lumbermen's Association, with thrillingly pleasant variations.

At Bridal Veil the visiting lumbermen showed the officers of the Bridal Veil Lumbering Co. how to appreciate ho[illegible] by completely wrecking one of the finest planked-salmon dinners ever concocted by persons proficient in that sort of gastronomic uncertainty.

In return the officers of the Bridal Veil company exhibited a fine lumber manufacturing property run by water power. The visitors saw in operation a water turbine with a stream one and a half inches in diameter, delivering 400 horsepower; a baby turbine, with a stream the size of a lead pencil, delivering twenty-five horsepower, and twelve other equally interesting turbines, many connected directly to the machines, furnishing combined power for the manufacturing of 150,000 feet of lumber in ten hours.

Scarcely less interesting was the fire protection service of the plant, comprising two giant monitors delivering forty-two tons of water per minute through a three-inch tip and throwing the water 500 feet.

The association at its meeting adopted resolutions urging the committee of railroad presidents, then in conference with President Wilson, at Washington, D. C., to stand pat on the principle of arbitrating the railway wage dispute. In the consideration and adoption of this resolution there was no lack of appreciation of the gigantic problems confronting President Wilson, the railroad presidents, the railroad employees and the country. The lumbermen felt that the proposition to advance freight rates to absorb increased railroad operating costs, and all for the benefit of the organized railway trainmen, would paralyze the lumber industry of the northwest, now greatly depressed on account of restricted markets. There were appreciative words for President Wilson personally, but the vote on the resolution was unanimous.

In accordance with the instructions of the meeting, Secretary Babcock wired Hale Holden, chairman of the committee of railroad presidents, as follows:

"Resolved, That the West Coast Lumbermen's Association, representing eighty-five percent of the lumber production of the Pacific northwest, unanimously requests the committee of railroad presidents acting in the present wage controversy, to adhere strictly to the principle of arbitration in the proposed settlement with railroad employes, this association pledging the committee its unanimous support of its membership in a positive stand for this principle; be it further

"Resolved, That this association unanimously ratify and approve the telegram sent to President Woodrow Wilson on August 23, by J. H. Bloedel, president of this association, which telegram is as follows:

" 'The West Coast Lumbermen's Association, representing the lumber industry of the Pacific northwest, employing 40,000 men in sawmills and 95,000 men in all allied industries, including sawmills, logging camps, shingle mills and woodworking factories; shipping approximately 200,000 carloads of forest products annually, protests against any increase in the cost of railroad operations.

" 'Our industry is depressed owing to inability to expand into new fields, on account of our long distances from consuming markets, and on account of freight rates, which are proportionately greater than those of competitors.

" 'We have been working for a reduction in existing freight rates, in order to get increased distributing markets, but an increase in railroad operating costs will not only forestall the probability of such reduction, but will possibly mean an increase in lumber freight rates from north Pacific producing points to eastern and local markets.

" 'We respectfully urge that the wage difficulties between the railroad employees and the railroads be submitted to arbitration wherein the interests of the whole public may be properly represented and protected.' "

Secretary Babcock, just back from the foreign trade conference, held in Chicago, on August 21, submitted a report covering that conference, the association not taking action pending a report from the committee of lumbermen appointed at the Chicago conference to work out details of the government's proposed co-operative plan for developing a demand for American lumber, in export markets.

Immediately following the association meeting there were several informal discussions of marketing conditions. It was the opinion that uncertainty regarding the railroad strike and regarding crop results was retarding buying. The general idea was that mill stocks were slightly increasing and many manufacturers, speaking along lines of individual manufacturing policy, favored vigorously curtailed production, until such time as the law of supply and demand should adjust conditions.

RITE-GRADE SHINGLE MANUFACTURERS MEET AT ABERDEEN.

Aberdeen, Wash., Aug. 25.—Rite-grade shingle manufacturers met at Aberdeen on Saturday, August 19. Most of the members arrived in Aberdeen in time for breakfast Saturday morning, and afterwards visited the Grays Harbor Shingle Co. and the Wilcox Shingle Co.'s mills, where rigid inspection was made of the manufacture of Rite-Grade red cedar shingles.

After the inspection at the mills, the delegation were driven to the Aberdeen Town and Country Club where they were the guests of W. J. Patterson of F. G. Deming Lumber & Shingle Co., Markham, Wash. Mr. Patterson as host made a speech of welcome to the visiting mill men, responded to by several of the visitors.

After lunch, E. C. Miller, president of Gray's Harbor Shingle Co., announced that a cup was to be presented by him to the winner of the afternoon golf game. This cup was won by J. E. Sampson of the W. L. Smith Lumber & Shingle Co., of Seattle. Mr. Sampson was a "dark horse," as it was fully expected that either Mr. Patterson or Mr. Merritt, of the Hunting-Merritt Lumber Co., Ltd., would win it. Both of these gentlemen were scratched. Although making the nine in 42 and 43 respectively, Mr. Sampson was able to get a stroke or two under, showing that the handicap committee knew their business by providing such a close contest.

After lunch, E. C. Miller, president of the Gray's deen to attend a dinner and business meeting at the Washington Hotel. At the dinner the members were the guests of E. C. Miller, president of Gray's Harbor Shingle Co. After the various details of business were discussed and settled, the meeting developed into an enthusiastic expression from all members as to their satisfaction with the Rite-Grade movement. They were all enthusiastic at results which had been achieved in the past and were prepared to push Rite-Grade harder than ever for the fall business. Proofs of the fall advertising campaign were submitted and approved and letters read from interested parties from all parts of the world inquiring for Rite-Grade red cedar shingles.

RITE-GRADE SHINGLE MEN IN ATTENDANCE AT THE ABERDEEN MEETING, AUGUST 19.

FEDERAL EFFORT FOR EXPORT TRADE

Effort to Pass Webb Bill Fails at this Session—June Report Bureau Foreign Commerce Showing Deplorable Export Trade—Text of Webb Bill—Requirements of the "To Be" Trade Commissioners—Our Webb Bill Effort

The universal desire of the lumber interests of the United States that the so-called Webb bill—that law, which, when passed, will permit lumber manufacturers in this country to combine in their efforts to handle the foreign trade in this country—has been the one thing of universal interest since the possibility of accomplishing such an undertaking was born of the efforts of the Federal Trade Commission, which began in July, 1915, to discover some way in which the foreign trade in lumber might find some relief.

No interest in lumber, in an association way—or in an individual way, for that matter—has been in any sense derelict in advocating and urging the passage of this bill.

If any argument has been needed to indicate that something must be done—legislative or otherwise—to save the foreign trade in lumber, any fair-minded man who is not a pernicious politician of the LaFollette stripe, can easily achieve information by perusing, for three minutes, the June report of the Bureau of Foreign and Domestic Commerce—from which we reprint herewith the whole division related to "Wood and manufactures of."

That report tells the sad story that an export lumber trade, which amounted to over ONE HUNDRED AND THREE MILLION DOLLARS ANNUALLY prior to the war in Europe, has now shrunk to a shade above SIXTY MILLION DOLLARS ANNUALLY.

The Bureau of Foreign and Domestic Commerce has spent a considerable volume of money in its endeavor, prior to this time, to find what were the reasons for and against the use of lumber in foreign parts, by sending trained observers to find the facts, and is even now co-operating with the lumbermen of the United States, and with the Forest Service and with the Federal Trade Commission, to send into Europe several trade commissioners to ascertain just what are the wants of Europe in regard to lumber.

It is rather a startling coincidence, all around, that all of the many efforts to relieve the lumber trade of the country by remedial legislation should be brought to a climax in one day, September 8, 1916, and just in time for the LUMBER WORLD REVIEW—which has been the most active quantity in a lumber newspaper way to further all these plans—to print in one article the text of the Webb bill, which we are all fighting for: the report of the Bureau of Foreign and Domestic Commerce, which indicates why we are fighting, and what we are fighting for, and the announcement of the Bureau of Foreign and Domestic Commerce as to the requirements of the men who will be chosen from those who present themselves for examination on September 22, to represent jointly the government and the lumber interests concerning lumber requirements in Europe.

THE "WEBB" BILL.

The so-called "Webb" bill is the result of the work, really of the Federal Trade Commission, and was introduced by Edwin Y. Webb, of North Carolina, chairman of the judiciary committee, in the house of representatives, as H. R. 17350, on August 8, 1916, and referred to the committee on judiciary, and ordered to be printed. On August 15, 1916, it was committed to the committee of the whole house on the state of the Union, and ordered to be printed.

Before discussing the LAST and eleventh hour rush of the lumber interests in their desire to help the president pass the constructive legislation known as the Webb bill, we desire to print herewith for the exact information of our readers, the full text of that bill:

A BILL

TO PROMOTE EXPORT TRADE, AND FOR OTHER PURPOSES.

BE IT ENACTED BY THE SENATE AND HOUSE OF REPRESENTATIVES OF THE UNITED STATES OF AMERICA, IN CONGRESS, ASSEMBLED, that the words "export trade," wherever used in this act mean solely trade or commerce in goods, wares, or merchandise exported, or in the course of being exported from the United States or any territory thereof to any foreign nation; but the words "export trade" shall not be deemed to include the production or manufacture within the United States, or any territory thereof, of such goods, wares or merchandise, or any act in the course of such production or manufacture.

"That the words, 'trade within the United States,' wherever used in this act mean trade or commerce among the several states or in any territory of the United States, or of the

District of Columbia, or between any such territory and another, or between any such territory or territories and any state or states, or the District of Columbia, or between the District of Columbia and any state or states.

"The word 'association' wherever used in this act means any corporation or combination, by contract or otherwise, of two or more persons, partnerships, or corporations.

"Section 2. That nothing contained in the act entitled 'An Act to Protect Trade and Commerce Against Unlawful Restraint and Monopolies, approved July second, eighteen hundred and ninety, shall be construed as declaring to be illegal an association entered into for the sole purpose of engaging in export trade and actually engaged in such trade or an agreement made or act done in the course of export trade by such association, provided such association, agreement, or act is not in restraint of trade within the United States.

"Section 3. That nothing contained in Section 7 of the act entitled 'An Act to Supplement Existing Laws Against Unlawful Restraints and Monopolies, and for Other Purposes,' approved October fifteenth, nineteen hundred and fourteen, shall be construed to forbid the acquisition or ownership by any corporation of the whole or any part of the stock or other capital of any corporation organized solely for the purpose of engaging in export trade, and actually engaged solely in such export trade, unless the effect of such acquisition or ownership may be to restrain trade or substantially lessen competition within the United States in articles of the kind exported by the association whose stock is acquired or controlled.

FINAL WORD FROM OUR WASHINGTON CORRESPONDENT, LYNN M. LAMM, STAFF CORRESPONDENT OF THE LUMBER WORLD REVIEW, CONCERNING THE HOLDING OVER OF THE WEBB BILL UNTIL THE NEXT SESSION.

Washington, D. C., 11 A. M.,
Sept. 8, 1916.

Lumber World Review,
608 S. Dearborn Street,
Chicago, Ill.

Congress adjourned this morning at 10 o'clock. No action was taken on the Webb bill by the Senate and it will therefore go over until the December session.

LYNN M. LAMM.

"Section 4. That the prohibition against 'unfair methods of competition' and the remedies provided for enforcing said prohibition contained in the act entitled 'An Act to Create a Federal Trade Commission, to Define its Powers and Duties, and for Other Purposes,' approved September twenty-sixth, nineteen hundred and fourteen, shall be construed as extending to unfair methods of competition used in export trade against competitors engaged in export trade, even though the acts constituting such unfair methods are done without the territorial jurisdiction of the United States.

"Section 5. That every association now engaged solely in export trade, within sixty days after the passage of the act, and every association entered into hereafter for the sole purpose of engaging in export trade, within thirty days after its creation, shall file with the Federal Trade Commission a verified written statement setting forth the location of its offices or places of business, and the names and addresses of all of its officers, and all of its stockholders or members; and if a corporation, a copy of its certificate or articles of incorporation and by-laws; and if unincorporated, a copy of its articles or contract of association, and on the first day of January of each year thereafter it shall make a like statement of the location of its offices or places of business and the names and addresses of all of its officers and all of its stockholders or members and of all amendments and changes in its articles or certificate of incorporation or [illegible]rticles or contract of association, a[illegible]cts, agreements and understandings had with any foreign or domestic association in regard to the conduct of or practices in foreign trade. Any association which shall fail so to do shall not have the benefit of the provisions of Section 2 and Section 3 of this act, and it shall also forfeit to the United States the sum of $100 for each and every day of the continuance of such failure, which forfeiture shall be payable into the treasury of the United States, and shall be recoverable in a civil suit in the name of the United States, brought in the district where the association has its principal office, or in any district in which it shall do business. It shall be the duty of the various district attorneys, under the direction of the Attorney General of the United States, to prosecute for the recovery of the forfeiture. The costs and expenses of such prosecution shall be paid out of the appropriation for the expenses of the courts of the United States."

OUR OWN MODEST "WEBB" BILL EFFORT.

The LUMBER WORLD REVIEW learned on Monday of this week that President Wilson was anxious to see the Webb bill pushed through the senate at this session, and at once started a little campaign help in this direction, by first sending a wire to the president of the United States as follows:

"Chicago, 6:30 P. M., Sept. 4, 1916.

"President Woodrow Wilson,
"Washington, D. C.

"As editor and publisher of the LUMBER WORLD REVIEW, speaking as I can for a majority of the lumber manufacturing interests of the United States, the unanimous desire is that the momentum which congress has just achieved in creating labor legislation be now utilized to pass the Webb bill through the senate before this session of congress adjourns. Lumber is the second largest industry in the United States and plans for lumber exportation, which should amount to three billion feet annually, are at a standstill until the Webb bill becomes a law. The lumber interests depend upon your quick action in this matter. What may we expect?

"BOLLING ARTHUR JOHNSON."

At the same time we sent a wire to the secretaries of the various lumber manufacturers' associations as follows:

"Chicago, 7 P. M., Sept. 4, 1916.

"Have direct information President Wilson willing to push Webb bill through senate immediately. Consider it desirable you get every business interest in your section to wire the president urging this action now, rather than wait until December. Transmit by night press wire to me news features of what you have done.

"BOLLING ARTHUR JOHNSON."

THE PRESIDENT'S ANSWER AND "OTHERS."

We print a facsimile of the president's friendly answer herewith in this article, also the LAST WORD on the subject for this session from our Staff Correspondent in Washington, L. M. Lamm.

Up to the hour of going to press, six o'clock P. M., September 8, 1916, the following replies have been received from lumber associations:

FROM THE SOUTHERN PINE ASOCIATION.

New Orleans, La., Sept. 5, 1916.

Bolling Arthur Johnson,
LUMBER WORLD REVIEW,
Chicago, Ill.

Advising subscribers as follows: We have received information that President Wilson is willing to push through the senate immediately H. R. 17350, commonly known as the Webb bill, which legalizes selling agencies for export business. Subscribers are requested to urge the president to take this action now rather than wait until December. W. J. Drewry, foreign representative of the Southern Pine Association, has returned from Europe and will attend a meeting of directors at Chicago, September 7. Mr. Drewry reports excellent prospects for the marketing of southern yellow pine in Europe.

SOUTHERN PINE ASSOCIATION.

THE WHITE HOUSE
WASHINGTON

September 5, 1916.

My dear Mr. Johnson:

The President directs me to acknowledge the receipt of your telegram of September 4th, and to say to you that he not only has this matter very much at heart, but has taken an active part in attempting to find the right solution for it. He feels confident that legislation of this sort can be accomplished, if not at this session of Congress, at any rate in time to meet the necessities of the case.

Sincerely yours,

Secretary to the President.

Mr. Bolling Arthur Johnson,
The Lumber World Review,
Chicago, Illinois.

FROM THE CALIFORNIA REDWOOD ASSOCIATION.

San Francisco, Cal., Sept. 6, 1916.

LUMBER WORLD REVIEW,
Chicago, Ill.

Thanks for message. Redwood and pine manufacturers have wired individual congressmen urging their vote for Webb bill. San Francisco Chamber of Commerce is putting big pressure on western congressmen. This bill means much to Pacific coast lumber industry and any delay would seriously interfere with the plans for developing foreign business.

CALIFORNIA REDWOOD ASSOCIATION.

FROM THE HARDWOOD MANUFACTURERS' ASSOCIATION.

Digitized by Google

Cincinnati, Ohio, Sept. 5, 1916.
Bolling Arthur Johnson,
LUMBER WORLD REVIEW,
Chicago, Ill.

The Hardwood Manufacturers' Association has already through its membership urged the passage of the Webb bill. I am promised by the local Chamber of Commerce and Lumber Exchange that the matter will be immediately taken up by them with President Wilson.

W. H. WELLER, Secretary.

FROM THE NORTH CAROLINA PINE ASSOCIATION.

Norfolk, Va., Sept. 5, 1916.
Bolling Arthur Johnson,
608 South Dearborn Street,
Chicago, Ill.

Our association has been keeping in touch with Mexico have been asked to wire their congressmen and senators urging the passage of the Webb bill and I think practically all have done so. Hope filibuster as reported morning papers can be avoided.

E. A. BLOCKLINGER, Secretary.

FROM THE NORTHERN PINE ASSOCIATION.

Minneapolis, Minn., Sept. 6, 1916.
Bolling Arthur Johnson, Editor,
LUMBER WORLD REVIEW,
Chicago, Ill.

Have notified members Webb bill passed through house, some danger may go over to next session; called attention to necessity for wiring president and senators urging passage of Webb bill this session.

H. S. CHILDS, Secretary.

ANNOUNCEMENT OF EXAMINATION FOR EUROPEAN LUMBER INVESTIGATION.

The Bureau of Foreign and Domestic Commerce, of the Department of Commerce, announces an examination to be held in the various cities of the country on September 20, 1916, for the position of Trade Commissioner to investigate lumber production in Europe and European markets for lumber. Four or five men will be appointed to make this investigation.

The salaries for these positions will not exceed $10 a day for every day in the year. In addition, all transportation expenses will be paid, and $4 per diem will be allowed for subsistence expenses.

Applicants must be citizens of the United States.

Appointees to this position must be available for two years' service.

Competitors will be examined in the following subjects, which have the relative weights indicated:

	Subjects	Weights
1.	Practical questions	3
2.	Thesis	1
3.	Languages	2
4.	Education and experience	4
	Total	10

PRACTICAL QUESTIONS: This paper will cover the three fundamental subjects of the investigation, that is, (a) forestry, or timber production; (b) manufacture of forest products; and (c) marketing of forest products. Each applicant will be required to answer questions covering two of these subjects.

THESIS: Competitors will be required to write, in the examination room, a thesis on investigation methods.

FOREIGN LANGUAGES: Competitors will be required to translate a passage in at least one of the following foreign languages: French, German, Italian, Dano-Norwegian, Swedish, Spanish and Russian.

EDUCATION AND EXPERIENCE: Competitors may prepare this statement in advance of the examination and deliver it to the examiner at the time of taking the examination. The statement must show that the applicant has had technical training or practical experience of an adequate character or has conducted extensive research in at least two of the three fundamental subjects indicated above.

Ability to write good English is an essential qualification for this position and will be judged on the basis of the written examination papers. In addition to the qualifications which the written examination will bring out, applicants should have good address and appearance and be able to address public gatherings. Candidates who successfully pass the written examination may be required to appear before an oral examining board in Washington.

Applications to take this examination should be made direct to the Bureau of Foreign and Domestic Commerce, Washington, D. C., giving a complete statement of the applicant's education, and particularly of his experience in the fundamental subjects of the examination.

the Webb bill and have been individually and collectively urging our representatives and senators to put it through this session. Replies have been encouraging, but realizing the need of an eleventh hour push we have today had wires sent the president and senators from this section impressing on them the absolute necessity for this legislation before any effective work can be done towards getting our share of the export trade. The present condition of the lumber industry shows plainly the need for a safety valve of large enough capacity to carry off the excess production. The president has given labor what they want. Let us hope he will be equally solicitous for business.

WM. B. ROPER, Secretary.

FROM CALIFORNIA PINE ASSOCIATION.

San Francisco, Cal., Sept. 6, 1916.
Bolling Arthur Johnson,
Editor, LUMBER WORLD REVIEW,
Chicago, Ill.

Telegram received. Pleased to advise that all redwood mills and all white and sugar pine mills in southern Oregon, California, Arizona and New

THIS YEAR'S CROPS AND THE BUSINESS OUTLOOK.

The annual crop report and business review of the Continental & Commercial National Bank of Chicago of September 1, gave the following estimated crops of the principal farm products:

Wheat	628,000,000 bushels
Corn	2,684,700,000 bushels
Oats	1,247,000,000 bushels
Rye	41,150,000 bushels
Hay	85,000,000 tons
Cotton	10,500,000 bales

The report shows that the world's harvest of wheat last year was the largest of record, being 4,127,000,000 bushels. This year the countries thus far harvesting their wheat show a loss of 800,000,000 bushels. In this country the spring wheat acreage was reduced 1,600,000 acres by the unfavorable weather of the early months and the entire spring wheat region promised a crop of only 168,000,000 bushels, compared with 356,000,000 bushels last year. In winter wheat the reduction of acreage was 7,000,000 acres and the usual yield was greatly curtailed by insect damage and hot weather. The result was a crop of only 460,000,000 bushels, as compared with last year's crop of 655,000,000 bushels. The total wheat crop is, therefore, 628,000,000 bushels, while last year it was 1,011,000,000 bushels. Of this, 625,000,000 bushels will be used for domestic purposes. There is, however, an estimated quantity of 145,000,000 bushels carried over from last year, making the total average surplus for export apparently 148,000,000 bushels. However, the exports in 1916 were 240,000,000 bushels and in 1915, 330,000,000 bushels. The advancing prices of wheat may decrease the home consumption and increase the quantity needed for export.

The total corn crop is estimated by the Continental & Commercial National Bank at 2,684,700,000 bushels, which is a decrease from last year of 369,300,000 bushels, or about 12 percent. The area planted to corn was reduced by 4,000,000 acres owing to the lateness of the season. The high prices of cattle and hogs is one of the inevitable results of the increased values of corn.

In oats the estimate of 1,247,000,000 bushels is the third largest crop ever raised in the country and will help supply the deficiency in other grains. The market for oats is naturally strong by reason of the high prices of wheat and corn.

The crop of barley is but 187,000,000 bushels, as compared with 237,000,000 bushels a year ago. The potato crop is up to that of last year, or about an average yield and, according to the bank's report, the production will be ample for all needs.

The hay crop will be about the same as last year, 85,000,000 tons and the quality is much better than last year. One of the fortunate features of the hay crop is that it is large in those sections where corn and oats have been damaged.

The cotton crop is disappointing and will be the smallest of any outturn in recent years, excepting 1909, when the crop was only 10,000,000 bales. Last year it was also disappointing, being 11,100,000 bales. This year the estimate is for 10,500,000 baes, or 600,000 bales less than last year. The domestic and foreign demand last year called for 13,000,000 bales and this absorbed both the last year's crop and the carry-over.

Regarding general business conditions, the Continental & Commercial National Bank says that the steel business is phenomenal. There was a temporary relaxation of foreign demand in the early summer, but recent reports indicate a healthier condition than existed earlier in the year. There is sufficient tonnage on the books to enable the steel mills to run full capacity well into 1917. The chief laggers in the business world are lumber and farm implements. Lumber showed signs of a decided revival in the early part of the current year, but this spurt did not last, owing necessarily, as suggested by some correspondents, to the inability to obtain shipping facilities for export trade. As is well known, it is the surplus production that affects market prices and with the export of lumber curtailed, necessarily the industry as a whole reflects this condition.

BROOKMIRE'S FORECAST ON BUSINESS.

An interesting study for lumbermen is that of the analysis and forecast of fundamental conditions published by the Brookmire Economic Service, of 56 Pine street, New York. The issue for September 4 states that there is a rally in banking resources after eight months of decline. The banking index in November, 1915, stood 120 degrees above normal. Since that time it has registered a climb in every month up to and including July, 1916, and at the end of the eight month period stood at only plus 25. The first four banking statements of August indicate that the average for that month was about plus 40 degrees, or fifteen degrees higher than July. This rise in the banking index is the direct and necessary result of the huge gold imports of recent months.

The review of financial conditions states that a large decrease in gold imports may be expected for the next three or four months. It is made apparent from a study of the chart accompanying the forecast, which shows that since December 1, 1915, gold exports from this country have been a steady stream, which can be depended upon to continue, regardless of the ease or tightness of money in this country, and also regardless of the foreign exchange market. At first glance it seems absurd that we should export gold when the balance of trade is so overwhelmingly in our favor, but the explanation is found in the fact that outside of Europe the balance of trade, with a few minor exceptions, is decidedly against the United States. Thus, for the twelve months ended June, 1916, the balance of trade against us in South America was $211,206,000; Asia (except Russia), $286,664,000; Africa, $21,348,000; Mexico, $49,368,000; Cuba, $101,930,000, a total of $67,416,000.

The Latest News of the Lumber World

TESTIMONIAL TO G. D. CRAIN.

Louisville, Ky., Sept. 1.—The Louisville Hardwood Club, on accepting the resignation of G. D. Crain, Jr., secretary of the club for more than six years, elected R. R. May, manager of the Louisville branch of the Southern Hardwood Traffic Association, as secretary, his term of office to commence with the weekly meeting held on Tuesday, August 29. At this meeting, which was in the nature of a farewell dinner to Mr. Crain, upon the eve of his departure for Chicago, where he has made his headquarters, Mr. May in behalf of the club presented Mr. Crain with a handsome gold watch, which was suitably engraved.

MR. CHRISTIAN MAKES CHANGE.

Tom J. Christian, who has been sales manager for the hardwood manufacturing firm of Maley & Wertz, Evansville, Ind., during the last ten and a half years, resigned his position last month, effective September 2, and has secured an interest in the Wood Mosaic Co., of New Albany, Ind., of which W. D. MacLean is the president. Mr. Christian will occupy the position of sales manager for the lumber and veneer departments of this company, and assumed his new duties September 4. He is one of the best known and most popular hardwood men in the middle west, and his many friends will wish for him a full measure of success.

INCREASED SHINGLE RECEIPTS FROM BRITISH COLUMBIA.

Notwithstanding a marked decrease in the shingle demand in United States markets, there has lately been a constant increase in importations of shingles from Canada, according to the government records. In 1912, under an import duty of 50 cents a thousand, there were imported from Canada into the United States 539,434,000 shingles; in 1915, under free trade, the importation of British Columbia shingles totaled 1,775,130,000, at an invoice valuation of $3,561,917. In 1914 there were imported from British Columbia into the United States 1,248,726,000. During the first six months of 1916 there were imported from British Columbia into the United States 762,886,000 shingles, indicating nearly as large an importation this year as in 1915, the slight falling off being easily ascribed to the decreased consumption in this country.

JULY CUT OF NORTHERN PINE.

Minneapolis, Minn., Sept. 1.—The Northern Pine Manufacturers' Association has statistics gathered from 28 mills for July, showing a small decrease in production, but an increase in shipments over amounts reported by 32 mills in July of last year. Shipments showed an increase of 10.4 percent.

WOODEN FREIGHT CARS A SAVING TO THE RAILROADS.

Seattle, Wash., Sept. 2.—Millions of dollars will be saved by the railroads of this country by reverting to wooden freight cars, with properly distributed metal parts, according to a communication received here from Ralph Budd, assistant to the president of the Great Northern railroad. He declares the saving will come through the smaller coal consumption, less wear on wheels, brasses, brake shoes and in avoiding the hauling of unnecessary weight. Lumbermen here declare the advent of the steel car was a severe loss to the Pacific northwest mills, which formerly furnished large amounts of Douglas fir car material, this wood being recognized as the lightest and strongest available for car construction. Mr. Budd says:

"There is no doubt the greatest possible economy in railroad operating is in long trains and heavy locomotives, but it does not necessarily follow that the car must be heavy. From an operating standpoint a locomotive will handle one hundred cars weighing 30,000 pounds empty, as easily as it will fifty cars each weighing 60,000 pounds empty. There is no reason why cars should be built to weigh 100,000 pounds for good [illegible] which you could not possible load more th[illegible] pounds. Cars should not weigh more [illegible] they carry. General merchandise [illegible] to eight tons per car, and to [illegible] nds' capacity to carry five to eight tons seems absurd. Increasing weight and size of a freight car does not increase its strength. From an economical standpoint the freight car built just as light as possible to carry its load is the most desirable, on account of the greatly increased number of cars which can be handled in a train."

AN OLD CONCERN REBORN.

The new incorporation of the Yawkey - Bissell Lumber Co. at Wausau, Wis., brings back to old timers in the lumber business the memory of one of the oldest and largest white pine manufacturing concerns in the Wisconsin valley. The old concern was located at Hazlehurst, Wis., and cut out its timber holdings in the vicinity of Hazlehurst something like fifteen years ago. The components of the Yawkey-Bissell Lumber Co. of the earlier days were Cyrus C. Yawkey and W. H. Bissell, of Wausau, and the reincarnation of this concern comprises in its make up those two gentlemen, together with Walter Alexander, William W. Gamble, A. P. Woodson, B. F. Hammond and Ben D. Stone, of Wausau, and Charles Edgar, formerly of Wausau, and now of Essex Fells, N. J. These are familiar and potential names, not only in the Wisconsin valley, but throughout the northern, southern and western lumbering districts, in all of which they have now, or have had, important interests.

The purchase of a tract of timber near White Lake, Langlade county, Wisconsin, comprising something like 200,000,000 feet of excellent stumpage, is the mainspring of the reassembling of these pioneer forces in lumberdom. The officers and directors of the company are as follows: W. H. Bissell, president, Wausau; W. W. Gamble, vice-president, Wausau; Aytch P. Woodson, secretary, Wausau; Cyrus C. Yawkey, treasurer, Wausau; Walter Alexander, Wausau; Charles Edgar, Essex Fells, N. J.; B. F. Hammond, Wausau; Ben D. Stone, Wausau. Mr. Edgar is particularly well remembered among the older lumbermen, as is also Walter Alexander, they comprising the old established concern of the Alexander & Edgar Lumber Co., at Eagle River, and of other manufacturing interests at points in Arkansas.

W. H. Bissell, president of the company, states that Will W. Gamble, vice-president and now head of the Rib River Lumber Co. at Rib River, Wis., will be the general manager of the new operations.

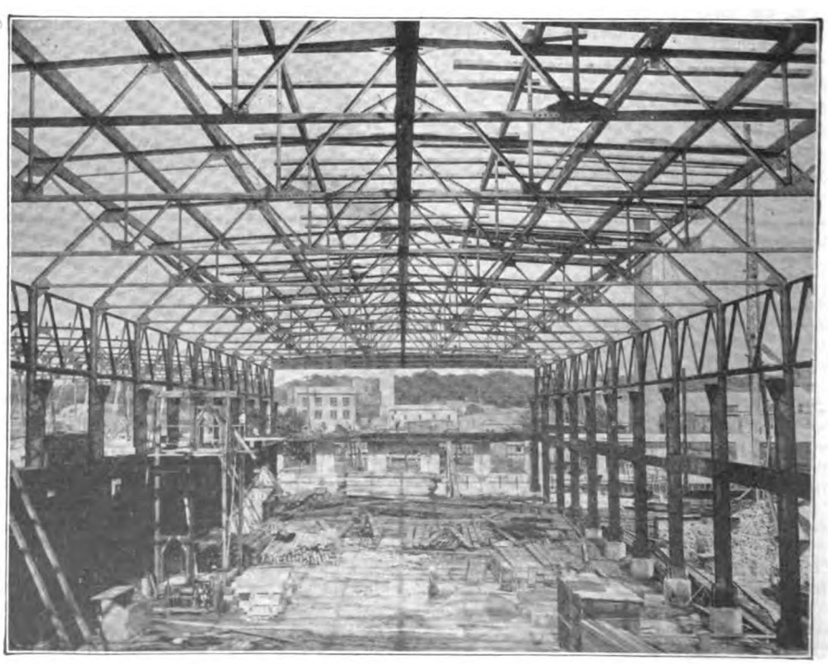
Construction work on the new plant, which is located at the town of White Lake at the junction of the Wisconsin & Northern and Chicago & Northwestern railroads, was begun this week. The mill plant will contain a band and resaw, with a production of between 25,000,000 and 30,000,000 feet annually. There will be a properly equipped planing mill sufficient to care for the product, and equipped with machinery of the latest design and most dependable pattern. The main mill building will be 50 x 172 feet in area, and it will have several large additions. It will occupy a fine mill site, right on the shore of White lake, a beautiful body of water about three-quarters of a mile long. The engines will have a capacity of 600 horsepower, which will be ample for all present needs, and will afford some leeway for future development of the plant. The timber is about one-half hardwoods, mainly basswood, birch, elm and maple; practically all of the remainder of the timber is hemlock, with a sprinkling of white pine. It is expected that the mill will be completed and ready for operation along about January.

P. B. YATES MACHINE CO. BUILDS NEW PLANT.

Beloit, Wis., Aug. 26.—To handle more efficiently a rapidly increasing volume of business and to relieve the congested condition of certain departments of its already extensive plant, the P. B. Yates Machine Co. early in the summer commenced the erection of a new factory adjacent to its present factories here.

Work on the new plant has been facilitated by favorable weather throughout the summer, and the construction work is well along toward completion.

The new building will occupy a full city block, will be 266 by 296 feet in extreme dimensions, and will contain 110,000 square feet of working floor space. This will increase the total working floor space by 38 percent and greatly facilitate the annual production of the institution. The building will be of the latest approved machine shop design, with main floor, working balconies, and saw tooth design roof. A distinctive feature of the building will be a vast craneway, sixty-four feet wide, two hundred and seventy-six feet long and thirty feet in the clear. Up and down this vaulted avenue will ply a 10-ton electric crane. Lateral craneways, with 2 and 3-ton cranes lead away from this central avenue to the interior of the shop. The balcony floor will front the main craneway, and will be



LOOKING DOWN THE MAIN CRANEWAY OF THE NEW PLANT OF THE P. B. YATES MACHINE CO., NOW IN PROCESS OF CONSTRUCTION. THIS CRANEWAY IS OF SIXTY-FOUR FEET SPAN, TWO HUNDRED AND SEVENTY-SIX FEET LONG AND THIRTY FEET IN THE CLEAR. UP AND DOWN THIS VAULTED AVENUE WILL PLY A 10-TON ELECTRIC CRANE.

provided with six loading platforms. In addition three large freight elevators will provide additional facilities for prompt handling of materials.

At the rear of the main floor are located the shipping platforms. A switch at the railroad entrance admits cars to either leg of the "Y" shaped shipping spur, which can accommodate five cars at one time. These additional shipping facilities will enable the P. B. Yates Machine Co. to load and dispatch 9 cars every day—an item which customers will doubtless appreciate.

While the erection of the plant as a whole will go on in the regular manner, concerted action will be brought to bear on certain portions of the building to have them ready for occupancy by the several departments in advance of the completion of the entire building. This will at an early date relieve the congested condition of certain departments, and prevent the disorganization that would occur were the work of occupation left until the entire building was completed.

A full force of men is at work, and the building will be ready for complete occupancy by the time cold weather sets in.

EFFORT TO RELIEVE CAR SHORTAGE.

Little Rock, Ark., Sept. 5.—A practical effort for ameliorating the threatened car shortage has been undertaken by Ray M. McWilliams, of Little Rock, general freight agent of the Iron Mountain road, and W. I. Jones, of St. Louis, general freight agent of that line. These gentlemen recently visited the principal lumber manufacturing plants in Arkansas and Louisiana for the purpose of studying conditions. They have since devised and submitted a plan to the shippers which they think may aid in increasing the supply of cars in this territory, although they admit that the relief can be but partial.

Their plan is that the shippers bill their cars going east only to East St. Louis, leaving the routing of the shipments from that point to the carriers. They state that several roads can handle these shipments from East St. Louis and that some of them have empty cars which may be traded for by giving them the routing of the goods. Of course, where shipments are routed all the way through, the delivering carrier has no option when they reach St. Louis but to turn them over to the routing given. However, if the routing is left open, the delivering carrier is in position to trade with the road over which the shipments are sent east.

LUMBER VALUES IN 1916.

Secretary R. S. Kellogg, of the National Lumber Manufacturers' Association, has sent out to his members a valuable table showing prices on various kinds of lumber in 1916, as compared with 1915, which was compiled by the Forest Service at Washington. The secretary states that while lumber has gone up in price to some extent, as compared with last year, the percentage of increase is far below that of almost any other article in the world of commerce. In fact, in some woods values are actually lower than last year, western pine being one of those. He says: "The lumber trade was in a state of depression for many years, and manufacturers were cutting and selling lumber at a loss, in order to secure money to pay fixed charges on their investments. What slight advance has been made in lumber in the past year should be compared with prices of food, clothing and other material to give the lumber trade its comparative relation to the rest of the nation's commerce." The prices prepared by the Forest Service are as follows:

	—Average Values— f. o. b. mill,	Per M.
SOFTWOODS.	1915.	1916.
Yellow pine	$12.50	15.02
Douglas fir	10.50	14.20
White pine	13.00	13.32
Hemlock	13.00	15.31
Western pine	14.50	14.01
Spruce	16.50	17.33
Cypress	20.00	21.94
Redwood	13.50	16.64
Cedar	15.50	18.12
Larch	11.00	11.91

	—Average Values— f. o. b. mill,	Per M.
HARDWOODS.	1915.	1916.
Oak	$19.00	21.76
Maple	15.00	15.53
Yellow poplar	22.50	24.21
Red gum	12.50	13.46
Chestnut	16.00	17.49
Birch	16.50	17.24
Beech	14.00	14.05
Basswood	19.00	18.66
Hickory	23.50	30.42
Elm	17.00	18.08
Ash	22.50	24.35
Cottonwood	17.50	17.15
Tupelo	12.00	14.13

AN ATTRACTIVE TIMBER LOAN.

The James D. Lacey Timber Co., of the McCormick building, this city, has lately offered to investors an unusually attractive and well secured timber loan, based on 1,100,000,000 feet of redwood timber, belonging to the C. & O. Lumber Co., of Brookings, Ore. The loan offered comprises $900,000 of first mortgage 6 percent serial gold bonds, and these are secured by the timber referred to, which is situated in Del Norte county, California, and 90 percent of it is redwood, the balance, or 10 percent, being Douglas fir. The bonds are issued on the basis of 90 cents a thousand feet, which is one-third the present value of the timber, while the sinking fund is $2 a thousand fund, and this is sufficient to retire all of the bonds when only 45 percent of the timber has been cut. As there is no fire risk in redwood timber, the security is thus regarded as first class.

The C. & O. Lumber Co. was organized in December, 1915, for the purpose of combining the properties of the Brookings Timber & Lumber Co. in Curry county, Oregon. The plant comprises a modern electric-driven mill, with all equipment, the plant being valued at $725,000.

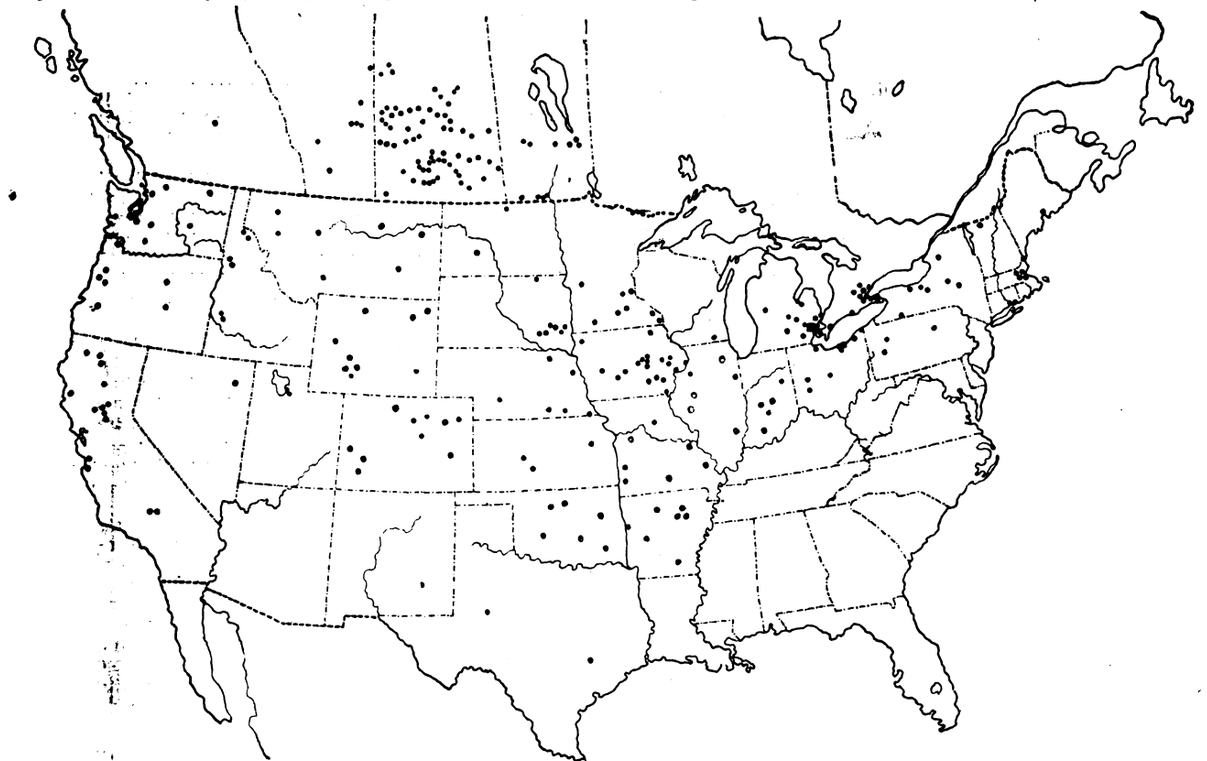
Frank D. Stout, of Chicago, is president and treasurer of the company; William Carson, of Burlington, Ia., is vice-president; John S. Owen, of Eau Claire, Wis., secretary; James H. Owen, of Brookings, Ore., is vice-president and general manager, and W. D. Brookings, of San Francisco, is vice-president and sales manager. Robert S. Brookings, of St. Louis, and N. C. Foster, of Fairchild, Wis., are directors.

The bonds are issued in denominations of $1,000 and $500 each, and mature in June and December of each year, beginning June 1, 1919, at the rate of $30,000 every six months, up to December 1, 1922, when they mature at the rate of $35,000 each six months, continuing at that rate up to December 1, 1930, with a final payment of $95,000 June 1, 1931.

ACTUAL SALES OF HARDWOOD LUMBER.

The monthly report of sales of hardwood lumber during July was issued by the Hardwood Manufacturers' Association of the United States, on August 15. The principal feature of the report is the strong demand shown for plain oak, as compared with the other woods. The report gives a splendid record of values on this commodity. For instance, inch firsts and seconds, plain white oak, regular widths and lengths, brought during the month from $61 to $62, delivered in Detroit, while No. 1 common brought around $36, delivered in Detroit, and from $33 to $37, delivered in Chicago. Plain red oak brought in the neighborhood of $54 to $56.50, delivered in Chicago. Eastern mills, however, were obtaining for the same grade around $61, delivered in Detroit. Southern mills sold considerable No. 1 common red oak at $33, delivered in Chicago or Indianapolis.

Quartered white oak sales were reported in inch at $77, delivered in St. Louis, and up to $81, delivered in Des Moines, Ia. Sales of 10-inch and up widths, with regular lengths, were made in Chicago on the basis of $104, delivered. No. 1 common quartered sold in Chicago at from $46 to $50. Sales of inch sound wormy chestnut were reported in Chicago at $24.50, and of cottonwood box boards at $45.50. Firsts and seconds sap gum were delivered in considerable quantities in Chicago in July, on the basis of $26 to $28, while firsts and seconds, red gum, is reported to have sold, Chicago delivery, around $43. Firsts and seconds inch poplar was an active commodity, many sales being reported for New York delivery on the basis of $60 to $61 and around $58, delivered in Pittsburgh.



THE MAP SHOWS THE WIDE DISTRIBUTION OF "RITE-GRADE" SHINGLES IN THE UNITED STATES AND CANADA.

FOUR MONTHS' DISTRIBUTION OF RITE-GRADE RED CEDAR SHINGLES.

Every dot on the map represents a "Rite-Grade" dealer, and as every dealer is well supplied with six foot outdoor sign, individual office shingle signs, newspaper electrotypes, plan books to attract the attention of the prospective builders, one can begin to realize the steady advertising influence which is gradually being exerted for the sale of Rite-Grade red cedar shingles. This distribution represents approximately 350 carloads, or seventy-five million red cedar shingles. Besides these actual sales, the West Coast Lumbermen's Association has received thousands upon thousands of inquiries about "Rite-Grades" from prospective builders not only in the United States, but from all parts of the world.

A NEW ORGANIZATION OF RETAILERS

Retail Dealers in Large Distributing Markets Form Potential Association—Edward Hines, of Chicago, Inaugurates New Movement—Fred. J. Robinson, of Detroit, Chosen President

As one of the more important results of the recent World's Salesmanship Congress held at Detroit, a new lumber association was organized at Chicago last week under the title of the National Retail Lumber Dealers Association, whose purpose it is to better the condition of retail lumber dealers in the large cities of the country. The organization of this congress is due in large measure to the efforts of Edward Hines, of Chicago, who was one of the speakers and an interested listener at the Detroit meeting referred to.

While attending the sessions he heard many of the big sales experts state that in their opinion the prosperity of the country depended upon the volume of home building and that it should be the patriotic duty of the salesmen to encourage the building of homes. The idea was also brought out prominently at that meeting that the local merchants of the cities and towns should be given some measure of protection by the manufacturers. This suggested to Mr. Hines the thought of an organization with the purposes above outlined as its principal objects.

When in Detroit Mr. Hines was invited by the retail lumber dealers of that city to a luncheon and made an address, in which he gave them the benefit of this idea. It met with instant encouragement. Later Mr. Hines went to Pittsburgh, where he met a committee of the lumber dealers and again outlined his idea, which was received most favorably. Upon returning to Chicago he consulted with his associate, L. L. Barth, and at his suggestion Mr. Barth visited the cities of Cincinnati, St. Louis, Louisville, Indianapolis and Milwaukee, where he submitted the plan to the retail lumbermen of those markets and an equally enthusiastic reception was given to the project by the lumbermen of those cities. Accordingly a conference was called, the lumbermen of each city being asked to send their own committees and this resulted in the conference which was begun last Thursday at the Congress hotel. The lumbermen responded with from five to seven delegates from each of the large markets and the meeting was composed of the most representative retail lumbermen of the principal cities of the United States. In all there were eighty-five present from outside of Chicago.

At the opening of the session at 10 o'clock Thursday morning Mr. Hines called the conference to order and explained the purposes of the meeting. Fred J. Robinson, of the Lowrie & Robinson Lumber Co., Detroit, was selected as chairman of the conference and J. V. O'Brien, secretary of the Cleveland Board of Lumber Dealers, was chosen secretary.

A committee of one member from each state, of which Mr. Hines was made chairman, was selected for the purpose of waiting on the meeting of manufacturers, which was being held in an adjoining room at the same hotel. This latter meeting was made up of representative manufacturers of yellow pine, white pine, hemlock and officials of the National Lumber Manufacturers' Association.

The retailers' committee presented to the manufacturers the purposes that the retail lumber dealers were seeking and they met with their instant approval. A joint session of the two bodies was then held at which there was considerable discussion of ideas looking to the general betterment of the lumber business and particularly with the object of devising ways and means of stopping the practice of buying lumber in transit cars. Also it was decided that the retail lumber business should be recognized as a public necessity in order to serve the public properly and promptly.

Many features of the trade that needed improvement were taken up and thoroughly discussed, after which the retailers again went into executive session. At this session a committee was appointed for the purpose of formulating plans and drawing up articles of constitution and by-laws with which to effect a permanent organization.

This committee was as follows: Julius Seidel, Julius Seidel Lumber Co., St. Louis, Mo., chairman.

Fred J. Schroeder, John Schroeder Lumber Co., Milwaukee, Wis.

A. M. Melone, Melone-Bovey Lumber Co., Minneapolis, Minn.

Edwin M. Hill, Pittsburgh, Pa.

R. B. Burns, Burns Lumber Co., St. Paul, Minn.

Fred Wuichet, Gebhart-Wuichet Lumber Co., Dayton, Ohio.

W. M. Delaplante, Buffalo, N. Y.

J. H. Doppes, J. B. Doppes' Sons Lumber Co., Cincinnati, Ohio.

Guy Gray, Gray Lumber Co., Cleveland, Ohio.

C. D. Huyette, H. W. Harding Lumber Co., Detroit, Mich.

L. L. Seibel, Kansas City, Mo.

Henry Koehler, Henry Koehler & Co., Louisville, Ky.

E. L. Thornton, Thornton-Claney Lumber Co., Chicago, Ill.

O. L. Huey, Capitol Lumber Co., Indianapolis, Ind.

Edward Hines, Edward Hines Lumber Co., Chicago.

This committee reported at the afternoon session of the congress on Friday and a summary of its work will be published hereafter.

The election of officers under the permanent organization resulted as follows:

President, Fred J. Robinson, Detroit, Mich.

First Vice-President, Julius Seidel, St. Louis, Mo.

Second Vice-President, E. M. Diebold, Pittsburgh, Pa.

A secretary will be elected later.

R. B. Burns, of St. Paul, Minn., took occasion to highly compliment Edward Hines, stating that no other individual in the lumber trade could have brought together so many prominent lumbermen for a single purpose in so short a space of time

---

A RECENT RHINELANDER DEAL.

Rhinelander, Wis., Sept. 4.—The recent sale of the saw mill plant of the Brown Bros.' Lumber Co. here to the Brown Land & Lumber Co., has created general interest throughout this section, as while the transfer of the property is a distinct deal and the ownership is still vested in members of the old lumbering family of Brown, it marks the passing of the former heads of the concern as active lumber manufacturers.

The Brown Bros. Lumber Co., composed of Anderson W. Brown, president, E. O. Brown, secretary, and Hon. W. E. Brown, erected the sawmill in 1882 and it has been operated steadily ever since. A disastrous fire visited the plant in 1905, destroying the entire stock of lumber, but the mill was left intact. It has now cut the last of the Brown Bros. Lumber Co.'s timber and the new concern, having provided itself with a comfortable amount of stumpage, will begin sawing its own logs very shortly. It proposes to add to its stumpage holdings from time to time and will also contract extensively with loggers, there being an assured supply for many years.

The sale did not include the stock of lumber on hand and this the vendors will have a year to remove from half of the yard, it being understood that the old company will retain the other half for the present at least. There is ground for the report that it will continue in the lumber business, perhaps in a wholesale way.

Both Luther E. Brown and Webster A. Brown are sons of Anderson W. Brown. They are young men of exceptional ability and energy. It is greatly to their credit that although their father is rated as a wealthy man and the family is one of the soundest from a financial standpoint of any in the north, they have built up the large business of the Brown Land & Lumber Co. without any outside aid whatever.

CHICAGO HOO-HOO HOLD SPLENDID MEETING.

The loyal Hoo-Hoo of the Chicago district held a most interesting and inspiring concatenation on the evening of Friday, September 1, at the rooms of the Lumbermen's Association of Chicago in the Lumber Exchange building. There were about fifty present at the dinner, which preceded the concatenation, and the repast was punctuated by some good singing, led by George J. Pope, of the D. S. Pate Lumber Co., and until recently president of the association. The affair was arranged for by M. E. Botts, Vicegerent Snark.

J. L. Lane, one of the early members of the Hoo-Hoo order, was master of ceremonies. As soon as the repast was concluded Mr. Lane made a brief address, in which he told of his connection with the order in its early days. He called upon Bolling Arthur Johnson, founder of the order, who made an interesting and humorous talk regarding the early days of the order and its progress from the time when it was instituted in Gurdon, Ark., in 1892.

Herman H. Hettler, president of the Lumbermen's Association of Chicago, was called upon for a speech, and made a point of the good fellowship which seemed to characterize the lumbermen's order. All of the addresses were interesting, and were warmly received.

At the concatenation, which followed, the officers who officiated were as below:

Bolling Arthur Johnson, Snark.
Edw. A. Lang, Senior Hoo-Hoo.
Harry B. Darlington, Junior Hoo-Hoo.
George Wilson Jones, Scrivenoter.
Royal S. Kellogg, Bojum.
A. L. Ford, Jabberwock.
Tom A. Moore, Custocatian.
Stacy C. Bennett, Arcanoper.
F. M. Baker, Gurdon.

The following candidates were initiated:

Herman Henry Hettler, president of the Lumbermen's Association of Chicago, and president of the H. H. Hettler Lumber Co., Chicago; Harry C. Williams, Harry Lee Potter, Ernest Albert Sterling, manager trade extension bureau, National Lumber Manufacturers' Association; Charles S. B. Smith, retail lumber dealer; George Glenn King, manager credit department, Lumbermen's Association of Chicago; Lambert J. Pomeroy, manager Landeck Lumber Co.

At the close of the concatenation the officiating snark, Mr. Johnson, called the attention of the members to the annual meeting, to be held at Memphis, September 9, and urged all present to be in attendance, or if found impossible to be there, to send a letter or a telegram.

It was decided as the sense of the meeting that Julius Seidel, of St. Louis, Snark of the Universe, should be re-elected, and the scrivenoter was instructed to notify Secretary E. D. Tennant of that fact.

HOO-HOO IN UTAH.

Salt Lake City, Utah, Sept. 1.—Thanks to T. H. Hudson, treasurer of Morrison, Merrill & Co., this city, and Vicegerent Snark for Utah, there was a splendid concatentation of Hoo-Hoo held in the Commercial Club rooms here on August 18. Mr. Hudson had most efficient help from the loyal Hoo-Hoo of this vicinity, and through the efforts of all combined they made it one of the most successful meetings ever held in this section.

Those who officiated were the following: Thomas H. Hudson, Snark; Chas. E. Murphy, Senior Hoo-Hoo; George E. Merrill, Junior Hoo-Hoo; Ray H. Felt, Bojum; H. M. Rhodes, Scrivenoter; H. M. Culbertson, Jabberwock; Wm. Service, Custocatian; W. E. Losee, Arcanoper; W. S. Burton, Gurdon; S. W. Morrison, Director.

There were fifteen candidates, all representative lumbermen, as follows: Richard Stanley Johns, Bingham Coal & Lumber Co., Bingham; Howard Marcus Jones, Morrison, Merrill & Co.; Peter Alexander Shaver, Sugar House Lumber Co.; Frank E. Losee, McConaughy-Losee Lumber Co.; George Cottan Chase, Parker-Warner Lumber Co., Tooele; Frank McLean, Morrison, Merrill & Co.; Richard Wheat, Eastern & Western Lumber Co.; Carl D. Shufelt, Rio Grande Lumber Co.; Irvin Lowery, Utah Lumber Co.; Joseph Richard Shelton, Sugar House Lumber Co.; William David Oliver, Rio Grande Lumber Co.; Walter Montgomery Bird, Morrison, Merrill & Co.; Henry Milton Leggart, Sugar House Lumber Co.; Earl Tucker, Bingham Coal & Lumber Co., Bingham; Frederick Carl Kanzler, Utah Lumber Co.

Personal News Notes

Jacob Slimmer, of this city, will remove his retail lumber yard from West Twenty-Second near Jefferson to 2247 South Loomis Street, which will give him about double his present yard space.

The Creosoted Materials Co., Inc., has succeeded the Creosoted Wood Block Paving Co., at 301 Queen & Crescent building, New Orleans, La. R. S. Manley is president and D. E. Roach, secretary-treasurer of the new company.

J. A. McIntosh, manager of the Stuart Lumber Co., Brinson, Ga., has been lately visiting his associate, George J. Pope, of the D. S. Pate Lumber Co., this city. Mr. McIntosh recently spent considerable time in Detroit visiting a daughter.

Harry C. Walker, of Columbus, Ohio, representative in this territory of the Standard Lumber Co. of Sonora, Cal., was a recent visitor in Chicago. He reported that trade conditions were fairly good in his line.

John M. Richards, manager of the Idaho White Pine Manufacturers' Agency of Spokane, Chicago and Pittsburgh, has removed his headquarters office from Spokane to the McKnight building, Minneapolis, Minn., and is thereby enabled to keep in closer touch with the eastern trade.

Secretary Frank F. Fish, of the National Hardwood Lumber Association, this city, is spending a three weeks' vacation in the lake region surrounding Hayward, Wis. Mr. Fish is "some angler" and doubtless he will have a few stories to tell upon his return.

Clarence Boyle, Inc., has removed his offices to 1205 Lumber Exchange from 1211, the same floor. Mr. Boyle has larger offices which will better accommodate his increasing business. He has recently been on a selling trip in Indiana and Michigan and reported having had a good trade.

Charles J. Kinzel, head of the Kinzel Lumber Co. at Merrill, Wis., was in Chicago recently on a business trip. Mr. Kinzel's mill has been shut down several weeks for the purpose of overhauling and is expected to start up this week, having lately secured a considerable supply of logs. He stated that the outlook for business in the northern Wisconsin district was excellent.

The W. R. Pickering Lumber Co. of Kansas City, Mo., has located Chicago offices at 807 Lumber Exchange in charge of W. L. Godley, formerly of Kansas City, who has been selling lumber in this territory for the Pickering interests for several months. Mr. Godley is a valued accession to the lumber trade of Chicago.

Henry M. Stack, secretary and manager of the Stack Lumber Co. at Masonville, Mich., was in Chicago Tuesday of last week while on a trip to Indiana points. Mr. Stack has been able to keep his mill running constantly this summer, although some difficulty was experienced for a time in keeping together a crew of men. He states that shipments are active and that prices are improving.

W. J. Harrigan, president and general manager of the Scotch Lumber Co., Fulton, Ala., and who is also vice-president of the Milwaukee Lumber Co., of St. Maries, Ida., has been lately making his annual visit to his old home at Rhinelander, Wis., and other points in that section, where he formerly operated extensively in the lumber business. Mr. Harrigan was very warmly greeted by his numerous old friends in the north during his visit.

Bert E. Cook, sales representative in this territory for the Missouri Lumber & Land Exchange Co. of Kansas City, Mo., has joined with Lou M. Bayne, of Ottawa, Ill., formerly president of the Illinois Lumber & Builders' Supply Dealers' Association, in organizing the L. M. Bayne Lumber Co. with headquarters at Ottawa, with Mr. Cook as president and Mr. Bayne as secretary and treasurer. The new corporation is operating three retail yards, one at Grand Ridge, La Salle county, Ill.; one at Strawn, Livingston county, Ill., a third at Emington in the same county. Mr. Cook will continue in his capacity as Chicago representative of the Missouri Lumber & Land Exchange Co. and will be assisted by K. E. McGill, who will cover the territory in northern Indiana.

C. H. Ketridge, the venerable writer of the retail department of the Mississippi Valley Lumberman, who makes his home at Evanston, Ill., Chicago's leading suburb, arrived home from a trip to the Inland Empire, where he went to visit his son and to see the country. Mr. Ketridge was returning east from Spokane by way of Denver and while on the train was taken ill with ptomaine poisoning. He was taken to a hospital at Denver and after a few days' treatment was able to resume his journey, arriving at his home in Evanston, August 14. While he has been distinctly better during the last three weeks, he has not been able to leave the house, but his many friends in the lumber trade and the members of the lumber press are all boosting for him and hope for his early reappearance in his accustomed walks.

R. C. Clark, the local representative of the Tremont Lumber Co., Winnfield, La., who has an office in room 608 Harris Trust building, Chicago, telephone Central 217—and we are including the telephone number in this personal notice so it will be easy for his friends to call him up and confirm the statement—is soliciting his trade now from the vantage point of an Oldsmobile, we believe it is. Anyway, he has a nice, new, glittering, fast moving automobile, and is making great use of it, and naturally from the start of the difficulty has not had much fear personally of getting tied up anywhere on account of an impending strike. There is a good thought in Mr. Clark's move, and we should think nearly anyone who has to get around to see the Chicago lumber trade would find it necessary to ride in a machine in order to accomplish work and do it well.

CHANGE AT MINNEAPOLIS.

The Bartelme Co., of Minneapolis, Minn., which is composed of Tonnies T. Bartelme and F. M. Bartelme, sons of Ferdinand E. Bartelme, president of the Keith Lumber Co., this city, has disposed of its retail lumber yard at 730 Hennepin avenue, Minneapolis, to the Bartelme-Lloyd Co., Inc. The new company not only takes over the entire stock of lumber, but the equipment pertaining thereto and the retail yard and buildings. The Bartelme Co. has built up a large retail business at this location and the new company is formed for the purpose of handling this department, while the wholesale business will continue as before.

OBITUARY

F. E. PARKER'S TRAGIC DEATH.

Members of the lumber trade throughout the country were shocked beyond expression by the

THE LATE F. E. PARKER, OF BAY CITY, MICH.

telegraphic news in the daily press last Monday stating that Franklin E. Parker, of Bay City, Mich., had been shot and killed by a highwayman on the streets of that city. Later details have been furnished by Secretary E. F. Perry, of the National Wholesale Lumber Dealers' Association, New York, of which organization Mr. Parker was formerly president. He said that the deceased was walking in the residential district of Bay City, about 10:30 o'clock Sunday evening, September 3, when he was confronted at a street corner by two men, who ordered him to throw up his hands. He refused to do so, and two bullets were fired into his breast. He died at 8 o'clock on Monday evening September 4.

Franklin E. Parker was born in Bangor, Me., in 1865. He attended the public schools and was graduated at Harvard college. He distinguished himself in athletics, and was one of the members of the famous Harvard boat crew during his undergraduate period. He first became associated in the lumber business with the Eddy-Sheldon Co., of Bay City, and when that concern joined with the Mershon interests at Saginaw he was made president of the Mershon-Eddy-Parker Co., which for many years has been one of best known lumber concerns in the middle west. About a year ago he resigned from that institution to accept the position of vice-president and managing director of W. C. Edwards & Co., Ltd., of Ottawa, Ont., a concern which is among the largest timber holding and lumber manufacturing institutions in Canada. Mr. Parker continued his residence, however, at Bay City.

Mr. Parker became associated with the National Wholesale Lumber Dealers' Association at the time of its organization, and in 1906 was elected a member of the board of trustees, in which capacity he continued for ten years. He served on many important committees, was very active in the work of the association, and at the time of his death was chairman of the board of managers of the bureau of information. In 1910 he was elected vice-president of the association, and two years later was elected its president, an office which he filled with creditable vigor and enthusiasm. He was greatly respected by all the members of the organization, as well as by lumbermen everywhere with whom he came in contact.

Upon learning of Mr. Parker's tragic death, President W. W. Knight, of the National Wholesale Lumber Dealers' Association, appointed a committee of members to attend the funeral at Bay City, representing not only the association, but the scope of his friendship among the representative lumbermen of the country. The names of the committee follow: W. W. Knight, president, Indianapolis, Ind.; M. E. Preisch, vice-president, North Tonawanda, N. Y.; E. F. Perry, secretary, New York; Gordon C. Edwards, W. C. Edwards & Co., Ltd., Ottawa, Ont.; N. H. Walcott, L. H. Gage Lumber Co., Providence, R. I.; F. R. Babcock, Babcock Lumber Co., Pittsburgh, Pa.; R. C. Lippincott, Philadelphia, Pa.; Lewis Dill, Lewis Dill & Co., Baltimore, Md.; J. M. Hastings, J. M. Hastings Lumber Co., Pittsburgh, Pa.; Robert W. Higbie, Robert W. Higbie Co., New York city; George F. Craig, George F. Craig & Sons, Philadelphia, Pa.; C. H. Prescott, Saginaw Bay Co., Cleveland, O.; Lewis C. Slade, Saginaw, Mich.

DEATH OF ROWLAND H. ERVING.

Rowland H. Erving, president of the West Penn Lumber Co., Pittsburgh, Pa., and for many years a leading factor in the Pennsylvania wholesale trade, and equally well known in northern lumber manufacturing circles, died August 11 at the residence of his mother-in-law, Mrs. James McKay, in Pittsburgh. Mr. Erving had closed his Pittsburgh residence, and was about to leave for his summer home at Beaumaris, Canada, when he was taken ill at the home of his mother-in-law. He held his own at first, but during the latter part of his illness failed rapidly.

Mr. Erving was born at Mt. Clemens, Mich., forty-eight years ago. While still a young man he became connected with Henry Stephens, then located at St. Helens, Mich. Later he was associated with Miller & Lewis, of Bay City, Mich. In 1889 he went to Pittsburgh, where he had a situation with E. V. Babcock & Co. as salesman. He continued with that firm until 1895, when he aided in the organization of the wholesale firm of Flint, Erving & Lindsay, at Pittsburgh. In 1900 this concern was succeeded by Flint, Erving & Stoner. In 1913 the members of this concern formed the West Penn Lumber Co., of which Mr. Erving was made president, and built up a successful business. Mr. Erving became well acquainted with the lumbermen of northern Wisconsin and Michigan through his frequent visits to the mills of that section, from which he purchased large quantities of lumber. During the last winter and spring he attended several meetings of the Northern Hemlock and Hardwood Manufacturers' Association, and with his friend, E. H. Daley, of the E. H. Daley Lumber Co., New York, was a conspicuous figure at the meetings. He was a courteous and genial gentleman, and was recognized as an excellent authority on lumber matters.

Mr. Erving is survived by his widow, who was Miss Carrie Isabel McKay, and by three sons, James McKay Erving, Rowland H. Erving, jr., and Robert William Erving. He is also survived by a brother, George B. Erving, of Detroit, Mich., and by four sisters, Mrs. V. N. Dennison, of Detroit; Mrs. M. E. Greer, of Royal Oak, Mich., and Misses Jennie and Carrie Erving, of the same city.

Lumber World Review, Washington Bureau, 208 District National Bank Building

L. M. LAMM, Staff Correspondent

COMMISSIONER DAVIES' REPORT COVERING THE TRUST LAWS.

Washington, D. C., Sept. 2.—An interesting report has been transmitted by Joseph E. Davies, one of the Federal Trade Commissioners, in his former capacity as Commissioner of Corporations covering the trust laws of the United States and foreign countries and unfair competition.

In this monograph Mr. Davies goes deeply into the effect of legislation on business organizations and the suppression of competition; the scope of the Sherman anti-trust laws, and the indications of recent decision in connection therewith. Three deductions are made from the more recent decisions; the first is that it is adapted to prevent all kinds of contracts or combinations which directly or hurtfully restrain trade or commerce subject to federal control or which monopolizes or attempts to monopolize it, although the means of restraint employed are so various and changing, that, says the report, "it would be difficult to define all of them specifically, by statute." The second made is that the present judicial interpretation of interstate commerce is such as to leave practically no twilight zone which cannot be reached either by federal or state law. Third, that combinations of persons in whatever walks of life insofar as they are engaged in such commerce are within the scope of the provisions of the Sherman anti-trust law; and in particular that combinations of manufacturers engaged in such commerce are comprehended by the law notwithstanding that an early decision of the supreme court gave rise to some doubts as to the extent to which manufacturing combinations were contrary to the law.

Other points touched on in the report are recent federal anti-trust legislation; state anti-trust laws, the trust laws in foreign countries, the relation of the Federal Trade Commission to unfair competition and its control over the same; the meaning of unfair methods of competition, not only as it has been determined by the department of justice but as it is regarded by business men economic writers and public men in the United States. It likewise covers unfair competition in foreign countries and the relation of unfair competition to monopolistic practices.

The problem of monopoly is not confined to the present day or to our own country. This is evidenced by an exposition contained in the report covering legislation which has been enacted from the time of the Tudors in England down to the latest amendment of our own anti-trust laws.

The most rapid growth of trusts in this country was between the years 1898 when eight large trusts were formed down through 1899 when twenty-six companies were formed into 1900 when four companies were formed and down into 1901 which showed up with six, the six being the largest of the trusts formed in the United States.

The creation of the Federal Trade Commission and supplemental anti-trust legislation in 1914 was the result of public agitation for the modification of the Sherman law, growing out of the very drastic decisions of the supreme court in the years just preceding.

The conclusion of Mr. Davies is that the general purposes of trade association activities are laudable and beneficial not only to their members but to the public welfare; nor is there any question of legality as to many of their professed activities, so far as they are constructed in a bona fide manner; for example, their activities in standardizing materials and products, in devising more reliable cost accounting methods, in communicating technical industrial information, and in promoting friendly social intercourse.

POMERENE BILL BECOMES A LAW.

Washington, D. C., Sept. 7.—The Pomerene bill, affording federal protection against fraudulent bills of lading, signed by the president last week, is a great step in the interest of American business engaged in interstate and foreign commerce. For the first time, it establishes the carrier's liability for the validity of order bills of lading issued by its agents. It will put an end to the present uncertain and unsatisfactory conditions in this important feature of the commerce of the United States.

Secretary McAdoo, as president of the International High Commission, urgently recommended that congress enact the measure which has had the hearty support of the present administration from the outset. The secretary's particular attention was drawn to the bill as a result of the meeting of the commission in Buenos Aires in April last. One of the purposes of the commission is to secure the simplification and uniformity of inter-American commercial law and the Buenos Aires conference gave special consideration to the question of safeguarding bills of lading with ample protection. As soon as the secretary returned to the United States, he took up the Pomerene bill wtih members of congress, urging its passage, and its enactment is one of the most important of the practical benefits resulting from the activities of the commission to improve financial and commercial relations between the United States and Latin America.

THE SEPTEMBER CROP REPORT.

The monthly crop report compiled by the government as of September 1, 1916, was given out for publication Friday, September 8th, at 1:15 p. m.

It shows a decrease in the spring wheat estimate of 43,000,000 bushels from the August report, meaning a spring wheat crop of 156,000,000 bushels, as compared with a crop of 357,000,000 bushels last year. Were it not for the large carry-over from the 1915 crop, the United States would not have a bushel of wheat for export this year.

The corn crop is estimated September 1 at 2,710,000,000 bushels, as compared with 2,777,000,000 bushels indicated August 1 and a crop of 3,055,000,000 bushels last year.

The oats crop is 1,231,000,000 bushels as against 1,274,000,000 bushels indicated August 1.

The potato crop August 1 was forecasted at 364,000,000 bushels. On September 1 it was estimated at 318,000,000 bushels, a loss of 46,000,000 bushels.

EXAMINATION FOR FOREST ENGINEER ANNOUNCED BY CIVIL SERVICE COMMISSION.

Washington, D. C., Sept. 5.—Announcement has just been made here that the United States Civil Service Commission will hold an examination on October 4 and 5 for assistant engineer in forest products. From the register of eligibles resulting from this examination certification will be made to fill a vacancy in this position at the Forest Products Laboratory, at Madison, Wis. Speaking of the work the commission says:

"The Forest Products Laboratory deals with economic and technical problems concerning the utilization of the products of the forest of the United States. The work is conducted largely by experimental and research methods and consists principally of investigations of the mechanical and physical properties of wood, processes for the preservation of wood against decay and other destructive agents, practical problems of the pulp and paper industry, the wood distillation industry, other industries utilizing wood by chemical means, and the naval stores industry." The position pays from $900 to $1,200 per annum.

INTERSTATE COMMERCE COMMISSION HEARINGS

The following lumber hearings are now on the docket of the commission between the date of this issue and the next:

On September 11, at Macon, Ga., before Examiner Burnside, in case No. 8967 of the G. H. Evans Lumber Co. et. al. vs. the Central of Georgia et. al. Also on the same date case No. 9028 of the Georgia Hardwood Lumber Association vs. the same road.

On September 16, at Salina, Kans., before Examiner McCawley, in case No. 8924 of the J. L. Kruger Lumber Co. vs. the St. Louis & San Francisco et. al.

On September 18, at Helena, Mont., before Examiner Waters, in case No. 8942 of the Libby Lumber Co. vs. the Great Northern.

On September 18, at Nashville, Tenn., before Examiner Gibson, in case No. 8065 of the Anderson-Tully Co. et. al. vs. the Illinois Central et. al.

On September 25, at New Orleans, La., before Examiner Burnside in I. & S. Docket No. 864, taking up lumber rates from New York.

On September 25, at South Bend, Ind., before Examiner Spethman, in case No. 8882 of the C. C. Shafer Lumber Co. vs. the St. Louis, Iron Mountain & Southern et. al.

INTERSTATE COMMERCE COMMISSION APPLICATIONS.

The commissioners have authorized the Chicago, Rock Island & Pacific to establish a rate on lumber and articles taking the same rates or arbitraries higher from Hamburg and Monticello, Ark., to Memphis, Tenn., via their longer routes, the same as the rate contemporaneously in effect on like traffic from and to the same points via the more direct line of the St. Louis, Iron Mountain & Southern.

The commissioners have refused the same road their application which asked for authority to continue a proportional rate of 24 cents per 100 pounds for the transportation of lumber from El Paso, Texas, to Leavenworth, Kans., and Beverly, Mo.

INTERSTATE COMMERCE COMMISSION SUSPENSION ORDERS.

The commissioners have suspended until December 30 the operation of certain schedules asking increases for the transportation of lumber from Louisiana stations. The tariffs were filed by the Louisiana Western, the Lake Charles & Northern and Morgan's Louisiana & Texas R. R. & Steamship Co.

The commissioners have also suspended until December 30 the operation of certain schedules which contained proposed increases in transcontinental commodity rates to and from the Pacific coast points. These schedules were the subject of an informal hearing held before the Board of Suspension here August 14 to 19, inclusive, on applications of shippers from various parts of the country for suspension thereof.

The operation of the second paragraph of Rule 18, page 12 of Official Classification No. 54, I. C. C., No. 12, of R. C. Fyfe, agent, has been suspended until December 30.

The proposed rule provides that the charge for a less-than-carload shipment must not exceed the charge for a minimum carload of freight at the carload rating. The charge for a car fully loaded must not exceed the charge for the same lot of freight if taken as a less-than-carload shipment. If, in instances of shipments tendered in less than carload lots, but upon which the carload rate and minimum is applied; and the loading or unloading service is performed by carriers' agent, a charge of 1¼ cents per 100 pounds will be made for such loading and like charge for unloading, such charge to be based upon the established carload minimum weight. The present rule does not provide that such charge of 1¼ cents per 100 pounds must be based upon the established carload minimum weight.

The commissioners have also suspended until January 2, 1917, the operation of Rule 4-A of the Louisville & Nashville I. C. C. tariff No. A-13296. The suspended rules provides for an increase of 1¼ cents per 100 pounds in rates on lumber, carloads, from Falco, Ariz., to all points in central freight association territory.

Business Changes, Incorporations and Fires

New Mills

Pyatt, Ark.—The Redus Lumber Co. will rebuild planing mill recently burned.

Stephenson, Miss.—The Foster Creek Lumber & Manufacturing Co., of Madison, Wis., has let contract for sawmill plant to the Prescott Co., of Menominee, Mich.

St. George, S. C.—Farr-Barnes Lumber Co. will build planing mill.

Knoxville, Tenn.—J. Marion Miller, of the Miller Lumber Co., has purchased a large tract of timber land; will build large sawmill.

Clanton, Ala.—The planing mill of John M. Robinson, which was recently burned, will be rebuilt at once.

White Lake, Wis.—The Yawkey-Bissell Lumber Co., of Wausau, has started the erection of a large sawmill, comprising a band and resaw with a daily capacity of 70,000 feet of softwoods or 50,000 feet of hardwoods.

Crossett, Ark.—The Crossett Lumber Co. will install a new double band mill for the manufacture of hardwood lumber, which will have a daily capacity of 150,000 feet.

Stockton, Cal.—F. T. Fisher and A. H. Fisher will build a planing mill here.

La Fayette, Ind.—The La Fayette Lumber Co., newly organized, will build a planing mill.

Whitesburg, Ky.—S. M. Bradley, of Morehead, Ky., George S. Clark and Joseph Cundiff will build a sawmill.

New Concerns

Montreal, Que.—Provincial Lumber Co. (Ltd.); $20,000 capital.

Vancouver, B. C.—Johnson Straits Timber & Trading Co.; $500,000 capital.

Spooner, Wis.—Crocker Lumber Co.; $20,000 capital.

Tacoma, Wash.—Elsworth-Bishop Logging Co.; $25,000 capital.

Jacksboro, Tenn.—Zickgrof-Jensen Lumber Co.; $50,000 capital. W. C. Zickgrof, N. Jensen and others.

Cincinnati, O.—Springer-Wood Co.; $200,000 capital. M. E. Springer, H. C. Wood and others.

Tippecanoe City, O.—The Miami County Lumber Co.; $5,000 capital. Peter Kuntz, sr., Peter Kuntz, jr., Martin Kuntz, Edward H. Timmer and others.

Geiger, Ala.—American Veneer Co.; $25,000 capital.

Roselake, Ida.—Mica Creek Timber Co.; $100,000 capital.

Shortleaf, Ala.—The Commercial Hardwood Co., $50,000 capital; $15,000 paid in.

West Jefferson, N. C.—The Hice Manufacturing Co., to manufacture and sell building material, deal in timber and timber lands, etc.; $25,000 capital. J. W. Hice, R. L. Hice, M. C. Parsons and others.

Richmond, Va.—The Clark-Rhodes Lumber Co.; $50,000 capital. P. E. Clark, president and treasurer; I. Rhodes, secretary.

Jersey City, N. J.—Pacific Lumber & Navigation Co.; $100,000 capital. R. A. Van Voorhis, A. R. Oakley and Paul Brilsch.

Troy, N. Y.—Cutting-Block Lumber Corporation; $360,000 capital. R. Cutting, C. C. Wager and others.

New York, N. Y.—Falcon Chicle & Lumber Exploitation Corporation; $100,000 capital. F. Garcia, J. O. Perez, A. Lamont, of New York.

Staunton, Va.—Augusta Wood Products Corporation; $50,000 capital. E. A. Eager, president; F. M. Brown, secretary, both of Philadelphia.

Augusta, Me.—Nupro-Gum Co.; $200,000 capital. Ernest L. McLean, S. L. Fogg, Frank E. Southard, E. J. Noble and E. M. Leavitt.

Chicago, Ill.—The Inland Empire Lumber Co. Henry L. Porter, president, and Dorr Skeels, vice-president; O. L. Willis, manager.

Paris, Tex.—Boland Lumber Co.; $10,000 capital. Thomas E. Boland, J. M. Braswell and E. A. Lyon.

Palestine, Ill.—Palestine Lumber Co.; $25,000 capital.

Fort Worth, Tex.—R. H. Kemp Lumber Co.; $204,000 capital. R. H. Kemp, Arthur Deffebach and A. D. Boice.

Kenova, W. Va.—Kenova Hardwood Flooring Co.; $50,000 capital. W. O. Haughton, M. M. Moore and others.

Tacoma, Wash.—Marine Lumber Co.; $100,000 capital. F. A. Leach, F. H. Skewis.

Milwaukee, Wis.—The Federal Window Co., to manufacture sash and doors; $200,000 capital. G. W. Carrothers, E. M. McVicker and E. G. Nehls.

Chicago, Ill.—Burnaby Bros. Lumber Co.; $25,000 capital. Frank H. Burnaby, Lela Berriman, Fred H. Burnaby.

Gary, Ind.—Broadway Lumber & Supply Co.; $60,000 capital. H. W. Richter, J. C. Richter and M. L. Kline.

Salisbury, Md.—The Benjamin & Graham Co., Inc.; $30,000 capital. Samuel A. Graham, president; William S. Moore, vice-president; A. F. Benjamin, secretary, treasurer and manager, and William A. Outten, superintendent.

Palmetto, N. C.—Cape Fear Lumber Co.; $50,000 capital. R. H. Roth, of Philadelphia; L. R. Lewis, of Beverly, N. J., and others.

Fires

Clanton, Ala.—Planing mill of John M. Robinson burned; loss $15,000.

Cleveland, O.—The big planing mill of the Mills-Carlton Lumber Co. and a section of the Peters Mill Work & Lumber Co.'s plant was burned; loss $175,000.

Caledonia, N. Y.—The large lumber shed of the Henderson Lumber Co. burned; loss $5,000, partly covered by insurance.

Cedar Rapids, Ia.—Yards of the Canfield Lumber Co. burned; $25,000 loss.

Salem, Mo.—Planing mill and lumber yard of the Roberts-Judson Lumber Co. burned; $25,000 loss, $8,000 insurance.

Shelldrake, Mich.—Sawmill and other property belonging to the Bartlett Lumber Co. damaged by fire to the extent of $80,000 to $100,000.

Harrison, Ida.—The sawmill of the Duluth Lumber Co. burned; loss $45,000; insurance $15,000.

Fesserton, Ont.—The plant of the Fesserton Timber Co. burned; loss $80,000, partly covered by insurance.

Argenta, Ark.—The plant of the McBride Stave Co. burned; loss $5,000. No insurance.

Business Changes

Buhl, Ida.—The Milner-Perrine Lumber Co. has been succeeded by the Nibley-Channel Lumber Co., with headquarters at Twin Falls.

Hazlehurst, Miss.—E. J. Roberts has sold his interterest in the Hazlehurst Box Factory to W. S. Slaughters.

Rhinelander, Wis.—The Brown Bros. Lumber Co. has disposed of its mill plant to the Brown Land & Lumber Co.

Menasha, Wis.—The Menasha Wooden Ware Co. has been reorganized on account of the death of C. R. Smith, and new officers and directors elected as follows: F. D. Lake, president; W. H. Miner, vice-president; J. D. Schmerein, secretary; W. M. Elliott, treasurer; Carlton R. Smith, assistant secretary; C. J. Oberweiser, assistant treasurer; H. S. Smith, F. D. Lake, W. H. Miner, Mowry Smith and J. D. Schmerein, directors.

Landrum, S. C.—The Finger Lumber Co. has increased its capital from $6,000 to $30,000.

Philadelphia, Pa.—The Henrico Lumber Co. has increased its capital from $100,000 to $300,000.

Springfield, O.—Goode & Hayward have been succeeded by the L. M. Goode Lumber Co.

Chardon, O.—F. B. Sarles has sold his interest in the Chardon Lumber Co. to J. M. Johnson.

Temvik, N. D.—The Temvik Lumbor Yard has been succeeded by the Thompson Yards, with headquarters at Minneapolis, Minn.

Loveland, Nunn, Timnath and Windsor, Colo.—The Gilcrest Lumber Co. has sold out to the Boise-Payette Lumber Co., with purchasing department at Boise, Ida.

Grand Ridge and Utica, Ill.—L. M. Bayne has been succeeded by the L. M. Bayne Lumber Co.

North Anson, Me.—The New Castle Lumber Co. has changed its name to the North Anson Manufacturing Co.

Neepawa, Manitoba.—Thos. Harrison & Son have sold out to the Dutton-Wall Lumber Co., with purchasing department at Winnipeg.

Mobile, Ala.—The Kirby Lumber Co., of Houston, Tex., has opened an office here.

Bloomfield, Ky.—J. A. Allen has sold out to the Long-Bell Lumber Co., of Kansas City, Mo.

Graf, Neb.—N. M. Davidson has sold out to Clarence R. Wright.

Memphis, Tenn.—George C. Brown & Co. (Inc.) has increased its capital to $300,000.

Nashville, Tenn.—The Morford Lumber Co. has sold out to the J. M. Whitson Lumber Co.

Mondamin, Ia.—A. Spooner & Son have sold out to the Brown Lumber & Coal Co.

Garfield, Kan.—The A. H. Hill Lumber Co. has sold out to Marquardt Bros.

Moran, Kan.—G. L. Merrill has sold out to the W. J. Rumbel Lumber Co.

New Orleans, La.—The Creosoted Materials Co., Inc., has succeeded the Creosoted Wood Block Paving Co., of which R. S. Manley is president and D. E. Roach, secretary-treasurer.

Minneapolis, Minn.—The Bartelme-Lloyd Co. has purchased the retail yard, together with equipment and entire stock of hardwood lumber, of the Bartelme Co., of 730 East Hennepin avenue.

Bentonville, Ark.—The Benton County Lumber Co. has increased its capital from $15,000 to $35,000.

Willows, Cal.—The Diamond Match Co. has bought out the Brown & Doane Lumber Co.; also the Woodland plant of Brown & Doane.

Holbrook, Ariz.—The Carbon City Lumber Co. has been succeeded by the Cooley Lumber Co.

Johns Wood, Mich.—The H. C. Johnson Co. has been succeeded by the Kreetan Co.

Lavina, Mont.—The Gunnary-Collins Lumber Co. has sold out to J. F. Slegle.

Greensboro, N. C.—The South Atlantic Lumber Co. has removed its main office to New York.

McCanna, N. D.—J. C. McWilliams has been succeeded by J. F. Sheehan.

Memphis, Tenn.—The C. M. Kellogg Lumber Co. is moving its yard to Cairo, Ill.

Ilimo, Mo.—A. B. and D. B. Perkins have been succeeded by E. H. Moore.

Galesville, Wis.—The Galesville Lumber Co. has been succeeded by the C. L. Colman Lumber Co., of La Crosse.

Viola, Wis.—The Nuzum-Hunter Lumber Co. has been succeeded by the John E. Nuzum & Sons Co.

Marion, Ala.—The firm of Christenberry & Wood has been dissolved. The business will hereafter be conducted by R. E. Christenberry.

New Orleans, La.—S. T. Alcus & Co. have bought the plant of the Tylertown Box & Manufacturing Co. at Tylertown, Miss.

Nashville, Tenn.—Baker, Jacobs & Co. have changed name to Henderson, Baker & Co.

Pine Bluff, Ark.—C. C. Handley, E. A. Howell and J. Jordan, jr., bought from G. M. Anson, L. N. Anson and F. E. Donohue, 55 percent of the corporate stock of the Arkansas Oak Flooring Co.

Wabash, Ark.—The Howe Lumber Co. has removed its headquarters to Helena, Ark.

Cincinnati, O.—Duhlmeier Bros. have changed the style of their firm name to Duhlmeier Bros. & Co.

Bluefields, W. Va.—The McClellan-West Lumber Co. has removed its headquarters to Philadelphia, Pa.; mill at Fayerdale, Va.

News Miscellany of the Lumber World

Ohio Valley News

Louisville, Ky., Sept. 8.—The Hillerich & Bradsby Co., successors to the old house of J. F. Hillerich & Sons Co., for years a large bat manufacturing concern, has announced that in addition to manufacturing the old line of goods the company will start manufacturing a full line of golf clubs, including about twenty-five models. In drivers nothing but choice persimmon heads will be used, while all shafts will be of selected, second growth, air dried hickory. The company will specialize on cork grips.

LOUISVILLE, KY.

A long felt need has been filled in the organization of the Louisville Industrial Traffic Managers' Association, a department of the Louisville Board of Trade, organized for the purpose of discussing matters of importance to shippers, demurrage, car service, etc. Meetings are held twice a month by the body. The Churchill-Milton Lumber Co., the Wilson Furniture Co., the Mengel Box Co., and a number of other lumber handling concerns are represented.

J. E. Barton, for many years Kentucky State Forester, has been reappointed for a term of four years by the State Board of Forestry. Mr. Barton has done excellent work while in office, and lumbermen of the state generally favored the reappointment. Incidentally the state board has authorized the distribution of trees from state nurseries for use on public highways, the distribution to be made through Mr. Barton, and to responsible parties.

As the result of the embargo placed on all freight shipments by the roads entering Louisville, at the time of the threatened trainmen's strike, many of the local concerns were unable to load any shipments for several days, and as a result of the congestion, cars have been scarce, and shipments delayed somewhat. Several roads refused to take shipments at all during the last few days of August, while others accepted shipments only subject to delay.

* * *

Evansville, Ind., Aug. 22.—The Evansville Band Mill Co., with F. M. Cutsinger, G. H. Foote of Indianapolis and Joseph Waltman of Evansville as directors, was incorporated at Indianapolis. The company will operate the mill formerly owned by Young & Cutsinger at the C. & E. I. railroad and Columbia street. It will manufacture hardwood lumber. Operations will begin in about thirty days as soon as repairs have been made.

EVANSVILLE, IND.

J. C. Greer, of the J. C. Greer Lumber Co., reports his company's stave mills at Louisa, Tenn., Cumberland Furnace, Tenn., and Lone Oak, Tenn., being operated on full time and business good.

F. J. Moore of Hoquiam, Wash., is in Evansville, endeavoring to promote a new by-product that can be made with veneer. He is working with George O. Worland of the Evansville Veneer Works and it is stated that special machinery is being installed at the Evansville plant to give the new product a thorough tryout.

The first meeting of the Evansville Lumbermen's Club will meet Tuesday evening, September 12, at the New Vendome Hotel.

South Atlantic News

Mobile, Ala., Sept. 6.—Zimmerman Manufacturing Co., of Jackson, is increasing its dry kiln capacity. The company has now under construction—two kilns 20x104 ft., with capacity of 30,000 ft. per day. The kilns are being built by L. Moore Dry Kiln Co., of Jacksonville, Fla.

MOBILE, ALA.

The mammoth planing mill of the Robertson Planing Mills Co., at Clanton, which was recently destroyed by fire will be rebuilt at once.

During the month of July there was exported through the Mobile district lumber in the following amounts, expressed in money:

Yellow pine lumber and timber, $281,236; hardwood, $19,348; ties, $41,235; manufactures of wood, $179,815, and rosin, $54,715.

The outward movement of wood came with a rush during the latter half of August, and has exceeded any shipments for the year. Daily records were broken Friday, the 25th, when fifty-five cars of lumber came into Mobile over the Louisville and Nashville. Other railroads are also doing a big business now hauling lumber into Mobile for export.

Northern States News

Minneapolis, Minn., Sept. 8.—Building operations for the first eight months show a healthy lead over the corresponding period of 1915. The total for last year of $16,349,940 will be smashed in the next four months, lumbermen predict, for Minneapolis has joined the year 'round class in outdoor work, and the season never closes.

MINNEAPOLIS, MINN.

The big sawmill of the Northland Pine Co., Minneapolis, which was shut down temporarily by the bursting of a flywheel, is again operating at full blast. The company has enough logs in the millpond and in drive down the Mississippi river to keep going until freeze-up.

Otto Neumann has severed his connection with the Neumann-Carpenter Lumber Co., which operates a line of retail yards in North Dakota and maintains headquarters in Minneapolis. Mr. Neumann has sold his stock to C. H. Carpenter, and with Mrs. Neumann plans to travel for a time, after which he expects again to go into the retail lumber business.

Retail lumbermen and building material dealers of Minneapolis had their annual outing, August 31, at the Water Cress club house near this city. Roast corn and watermelons alternated as the star attractions.

Retail lumbermen in Minneapolis gained some knowledge of what sections of the city has furnished, and hence may continue to furnish, the best market for lumber, in figures made public by the city assessor, showing the value of assessable real estate for 1916 as $411,026,105, an increase of $25,340,663 over 1915. The thirteenth ward, the great home-building district, showed an increase of $1,017,750.

Great and varied interest has been displayed by visitors to the Minnesota State Fair, where the lumber interests have been represented by a unique exhibit consisting of a number of model houses complete in every detail.

William E. Sears has been appointed sales manager for the Curtis-Yale-Howard Co., sash and door manufacturers of Minneapolis.

Middle States News

Buffalo, N. Y., Sept. 8.—The general lumber situation here is that hardwood dealers are complaining of most woods except maple and mahogany, largely because the furniture manufacturers are not very active. The main difficulty is that yard stock as such is not very profitable, because prices sometimes sag after it is put in. The white pine dealers are fairly active. One of them said this week that he had a pretty good trade in all grades and was not looking for much change right away. There is a scarcity of lath. This market is turning over from the old white pine and taking to hemlock and that in turn is in competition with the lower-priced spruce from Canada. One difficulty with lath is that handling is expensive and men are scarce.

BUFFALO, N. Y.

Digitized by Google

As soon as ocean freights get below $50 there will be an increase in certain movements that way, but the present rates are practically prohibitive. It is said that as soon as the war is over it is expected that promoters and exploiters of timberland propositions will be in the field again, and now that South American trade is being organized the outlook for timber propositions there is being looked into.

Taylor & Crate are getting ready to develop their recently-purchased hardwood yard on Elmwood Avenue, near Hertel, but it is expected to be some months yet before the yard is ready for use.

The steamers L. Edward Hines and Norwalk have been made ready here for ocean navigation, having been bought some time ago by the Otis Mfg. Co., rebuilt and fitted with condensers. These two vessels, both of which were built about 25 years ago, have had a long service on the Great Lakes and are now in good seaworthy shape for salt water.

Building work in Buffalo has been on a large scale during the past month and the year as a whole compares favorably thus far with last year. A large amount of factory extension work has been carried on this year and some of the city's leading industries are preparing to do business on a larger scale as the result of prosperity caused by the war.

Reports to the effect that shingle shipments on the lakes are to be curtailed early this year are denied by the Great Lakes Transit Co., which says the traffic will go on steadily to the end of the lake season.

Gulf Coast News

NEW ORLEANS, LA.

New Orleans, La., Sept. 6.—Although no definite steps have yet been taken in this direction, it is rumored that the dock board is planning to put down yellow pine sheet piling manufactured under the A. A. Martinez patent along the river frontage of the public cotton warehouses here. If this work is undertaken, it will necessitate the use of nearly 2,000,000 feet of yellow pine.

Ed. Hemenway, of this city, has been awarded contract for lighthouse service to put in bulkheads at the New Basin canal light on Lake Pontchartrain, near here. About 75,000 feet of Martinez interlocking wood sheet piling will be used along with timber entering into the construction.

The Adey-Johnston Lumber Co. of this city announces that it has just concluded a contract for furnishing the Boston and Maine railroad 100,000 hewn heart pine cross ties. Delivery probably will be made by schooner to Boston.

Announcement is made of the placing of an additional order for 700,000 feet of cross ties with the J. J. Newman Lumber Co. of Hattiesburg, Miss., by the Chicago Surface Lines, for immediate delivery. This will make a total of 2,240,000 feet purchased by the Chicago street car companies from the Newman plant this season. All the material was manufactured at Hattiesburg and Sumrall, Miss.

Announcement is made here that the Hurst saw mill, recently built at Henderson Point, two miles west of Pass Christian, Miss., will commence operations this week. The mill's product will be sent to New Orleans.

It is officially announced that the Robinson Lumber Co. of this city has chartered the steamer June, a vessel of about 1,000 tons recently completed at Tacoma, Wash., and that the June would shortly be placed in the lumber-carrying trade between New Orleans and Latin-American ports.

* * *

BEAUMONT, TEX.

Beaumont, Tex., Sept. 2.—The feature of the lumber market in Beaumont the past week was the receipt of another big government order by the Beaumont Lumber Co. This order was for 800,000 feet of yellow pine lumber, mostly boards, and it was sent to the local office by Ben S. Woodhead, president of the company, who has been in El Paso for several weeks. The new order arrived the day the last shipment of the 1,000,000-foot order was shipped to El Paso. The first shipment of the new order went forward Friday.

All of this material is being supplied by the mills, whose output is handled by the Beaumont Lumber Co., and is being used in the United States army camps near El Paso and at other points along the border.

The pine lumber shipped from Beaumont is used in preparing the army camps in and about El Paso. The Beaumont Lumber Co. has received some of the big orders because it was in a position to ship quickly.

A portion of the 800,000-foot order secured by Mr. Woodhead was on its way sixty hours after the order was issued. The rest of it is now being loaded at the Beaumont Lumber Co.'s mills and will be shipped by the end of the week.

The company has had no serious difficulty in quickly getting cars to handle these unusual shipments.

The 800,000-foot order now being filled will go forward in from fifty to fifty-five cars.

ORANGE, TEX.

Orange, Tex., Sept. 2.—The Keechi, steamer of the Gulf Export and Transportation Co., reached Havana, Cuba, Wednesday. A considerable cargo for Tampico will be on hand ready for the trip as soon as the Keechie returns from Havana.

The Keechi and two barges carried over three-quarters of a million feet of lumber to Cuba on this trip. The barges were loaded at Orange, and the Keechi went from Beaumont to Orange on her first trip up the Sabine channel and picked up the barges there.

The Orange lumber manufacturers have the assurance of at least five steamships to load at this port with lumber within the next two or three weeks.

This means there will be about seven and a half million feet of lumber exported, besides the regular business.

Saw mill workers visiting Orange recently declare that the Texla saw mill, fifteen miles north of Orange, is one of the steadiest running plants in southeast Texas. The plant is being operated now day and night, averaging twenty-one hours' operations out of every twenty-four for the week.

Inland Empire News

SPOKANE, WASH.

Spokane, Wash., Sept. 5.—Reports reaching Spokane this week state that the Milwaukee railroad has a force of surveyors seeking a route for an extension of its line from Elk River, Idaho, to the Pierce country and that it is found that the road can be built within an expenditure of $1,500,000, construction may begin early next year.

The unusual gain of 49 percent was registered in the clearings of the Spokane banks for the last week, as compared with those of the corresponding week last year, and for the same period the transactions through the various banking institutions of the city moved up to a total that topped those of one year ago by almost 37 percent.

The sawmill for the Export Lumber Co., at Harrison, Idaho, is now in operation and sawing 125,000 feet of lumber daily. F. Herrick of the Milwaukee Lumber Co. is president of the new concern, E. E. Goodwin is superintendent, A. B. Carson is sales manager, and Joe Lavigne, formerly with the Milwaukee Lumber Co., is master mechanic. This sawmill, formerly the property of the Lane Lumber Co., has been enlarged, in fact is practically a new mill and the plant is said to be one of the best in the Spokane country. The planing mill is also being enlarged to meet the requirements of the increased capacity of the mill.

Announcement was made at Winchester, Idaho, this week, that the sawmill and camps of the Craig Mountain Lumber Co. will be closed down for a period of three weeks while repairs to the milling plant are being made. The planing mill will be operated continuously. The company now has a large supply of lumber and logs on hand. The lumber in the yards and sheds will make possible for the company to fill orders in any quantities during the period the mill is shut down.

THAT NEXT CAR!

make it

Rite-Grade

and

get the whole country-side talking about your "real red cedar shingles!"

This Is What They Say

From a Dealer in Redding, Cal.

From our present experience we do not see how any dealer can do without these shingles. So many shingles have been packed and shipped and branded without any care as to grade in the past that it is now a pleasure to be able to assure a customer that he is getting just what he buys. Also, under no condition would we do without the Bungalow Books and the Distinctive American Homes and Farm Buildings. We learn by experience that it is best to keep and sell the best, and find them all right and we are much pleased with them.

From a Dealer in Cottonwood, Idaho.

Have got your letter yesterday, and also one some time ago, in regard to Rite-Grade Red Shingles, and got my second car today. I must say they are dandy. My customers are asking me every day, "Ben, when are you going to get some more of them Shingles?" So I am telephoning them tonight. I thank you for the advertising sign, and the Shingle, the roof of ages. These shingles are packed and branded to the grade and it is a pleasure to sell to our customers.

From a Dealer in St. Peter, Minn.

We bought 25 M of the Rite-Grade Shingles just to see what they looked like and to see if they were enough better than the other shingles to stand the extra cost. We sold three thousand of them before we had the car unloaded and have sold them all since and have an order for some more. Think they are all right and a good deal.

40 Mills want your Orders for Rite-Grade Red Cedar Shingles, *and so does your Wholesaler.* Make that next car Rite-Grade.
